New York's Little Joke on New York

A Study of the Prohibition Referendum—An Oasis That Proved to Be a Mirage

By JOHN BOLSTER HATCH

TEN days from now such New Yorkers as are interested will journey to the polls o cast their votes on that state's ır-famed prohibition refer-ndum.

But few are interested. 'he drys are not. They can ee no legal aspect to the eferendum, no issue to be-ome excited over, no result f value whichever way the alloting goes. So they re-ıain calmly at the task on and—the selection of dry ongressmen—while ! the ets perform their Indian ance all by themselves.

It takes two to make a ame. The wets have tried aliantly to arouse the drys' agging interest. They have houted at them through the ewspapers. They have eaten their drums and lared their trumpets. They ave jumped from dark orners and said, 'Boo!' in loud and provocative oice.

They have uttered the enerable you-chase-me-hen-I'll-chase-you chal-enge. But through it all he drys have remained trangely unmoved. And ou can't have a game ith all the players on one ide.

'As a device for getting he wet-dry issue off the acks of candidates for of-ce,' writes Clinton W. Gil-ert in the New York *Evening Post*, 'the ref-rendum on prohibition s proving a disap-ointment. When this ear's elections are over we shall probably hear very little more of such tests of popular sentiment, although a few months ago it looked as if in 1928 we might have a nation-wide referendum on the Volstead Act, even though no one could think of a legal way to hold one.'

Mr. Gilbert, author of the *Mirrors of Washington*, is regarded as one of the cleverest political writers in America. He continues:

'The prohibition referendum started in New York, where the Republicans were going to put up a wet ticket, and it was hoped that dry Republicans might be satisfied to express their ardor for prohibition by voting dry on a referendum, and so be content, though dry, to vote for wet candidates. Perhaps it will have that effect to a certain extent, but it has not prevented the drys from desiring an independent ticket of their own, which is exactly what the proponents of the referendum sought to avoid.

'The idea seemed so good when it was first proposed that it was adopted in several other states in the hope that it would give voters an opportunity to vote wet or dry without having to desert their party to do so. Here was a way, everybody thought, for wet candidates to hold dry votes or dry candidates to hold wet votes. No politician likes an issue that cuts across party lines, and here was a beautiful scheme to hold parties together in spite of such an issue. (Concluded on page 29)

THE attitude of many of New York's citizens toward the prohibition referendum is well illustrated by the resolution adopted by the Citizen's Committee of One Thousand, which numbers among its members such persons as John D. Rockefeller, Jr., Bishop William T. Manning, Rabbi Stephen S. Wise, Dr. John R. Mott, Louis Marshall, Dr. S. Parkes Cadman, Homer S. Cumming and Rear Admiral William S. Sims. The resolution reads in part:

WHEREAS:

The meaning and intent of said question is obscure, deceptive and confusing.

Any action on said question by the voters will be futile.

Said question provides for asking Congress to take an action, which, if taken, would be unconstitutional and illegal.

The submission of said referendum question is not an attempt, legally and in an orderly and constitutional manner, to change existing national law . . .

BE IT RESOLVED:

That the attitude of this committee is that this referendum is not entitled to the sincere and respectful consideration and action of the law-abiding voters of New York State: that it deserves their rebuke as being deceptive, insincere and subversive of representative and constitutional government . . .

Steam Shovels Still in Evidence as the Sesqui Nears Its End

Work Proceeds Apace for Taxpayers Foot the Bill

AN EXHIBITION of political bag-holding rivaling anything in municipal history is about to be staged in Philadelphia. It should start with the conclusion of the Sesqui-Centennial on December 1, but at this writing only a prophet could say when it will end. The performers will be the taxpayers of Philadelphia, and the audience will consist of the millions of citizens elsewhere who did not attend the Sesqui-Centennial because they suspected its motives and did not believe its promoters.

Foundations for the new exhibition were laid at various times during the present year, when by personal subscription and through the city treasury the people of Philadelphia contributed upward of $20,000,000 to the Sesqui-Centennial. But the crowning touch was added when elected representatives of the taxpayers agreed, by unanimous vote, that the city council 'will by loans or otherwise provide at as early a date as possible the necessary and reasonable amounts required to liquidate the cost of building and improvements in, upon and about the exposition grounds.'

To understand what this means it is necessary to explain that the costs in question were contracted for by a private corporation known as the Sesqui-Centennial Exhibition Association. The mayor of Philadelphia is president of this association, one of his directors is vice-president, and all of his directors as well as the president of the city council are members of the association's board of directors and its executive committee. They are members, however, by vote of the association's members, just as stockholders in any other corporation elect their officers. They are not in the association as official representatives of the city.

Acting as corporation executives, these men and their associates have run up a deficit of $3,700,000 in the Sesqui-Centennial Exposition. Then, in the capacity of elected representatives of the taxpayers, they have voted to put up this sum and whatever else may be necessary to liquidate any improvements the private corporation may make on the exposition grounds. And no provision whatever has been made for official supervision of this expenditure.

—Wide World Photo.

In defending court actions the Sesqui lawyers were compelled to admit that the money from the Sunday crowds was the main object.

That is the outside story of the Sesqui-Centennial Exhibition. Everybody in Philadelphia knows it. The inside story is not quite so apparent. It is known only to persons who have taken the trouble to visit the Sesqui site, look around and put two and two together. It is quite clear to thousands of visitors from other cities and states that have gone away laughing at the steam shovels working on the swamps,

—Ledger Photo Servi

The Sesqui failed pr marily because t news got out that i promoters were tr ing to make mon out of patriotis The historic aspe of the show is su ordinated to t commercial.

but the peopl who will hold th bag seem to b unaware that it empty.

Mayor W. Freelan Kendrick, of Philade phia, promised Presider Coolidge with a great blare publicity that the Sesqui-Cente nial Exhibition would be finished b July 4. *It is still unfinished at this wri ing—early in September. The stea shovels are evidence to this effect.* One them is operating in a tremendous fie at the northwest corner of the Sesq site. The western end of this field identified on the official Sesqui-Ce tennial map as the 'arena.' Actuall at this writing, it is a swamp. Th eastern end of the field has been fille in, and large forces of men and tean are at work grading it.

The Sesqui-Centennial site occupi a thousand acres. Some of this lan is owned by the city and is known League Island Park. Most of it, hov ever, is still privately owned. It held by the city under lease for th life of the exhibition, with the provi that owners shall not be assessed f the value of improvements. Now happens that a thousand acres is decidedly large space, and in spite the $20,000,000 and more already sun

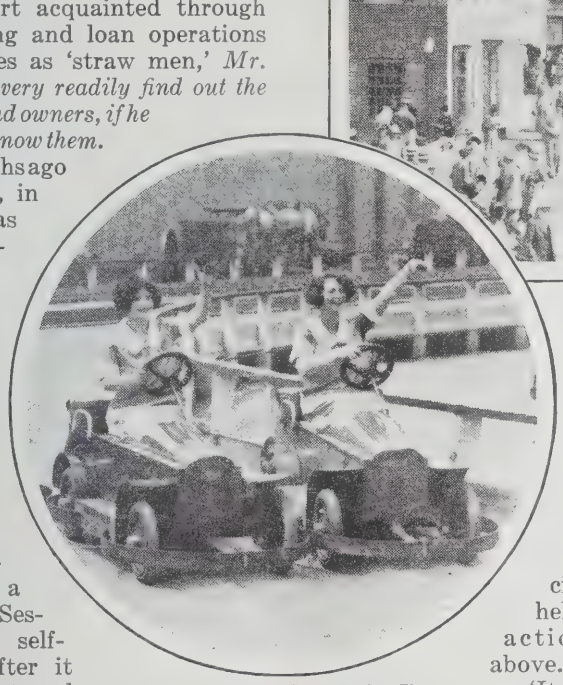
The Sesqui-Centennial Exhibition Association—a private corporation—is continuing to spend large sums on steam shovels and workmen because the taxpayers are footing the bill.

n the project, vast reas of this space are ill unoccupied. The stances between uildings is so great at a special type of ectric sight-seeing r was developed by e Philadelphia Rap- Transit Company.

The inside story of e Sesqui-Centennial veals itself in the uery: Why are the ty officials of Phila- lphia, acting as ex- utives of a private rporation, continu- g to fill in and other- ise improve land at cannot possibly used? The answer obvious. The squi-Centennial Exhibition Associa- on is continuing to spend large sums steam shovels and workmen be- use the taxpayers of Philadelphia are oting the bill. The purpose of this penditure, of course, is patriotic—all e directors have said so.

Another query naturally arises at is point. Who are the landowners ho will profit by the return of im- oved property in exchange for swamp? happens that Albert M. Greenfield, puted to be the largest real-estate eculator in Philadelphia, is an associate the mayor and other city officials on e directorate and the executive com- ittee of the Sesqui Association. As a al-estate expert acquainted through ars of building and loan operations ith such figures as 'straw men,' *Mr. reenfield could very readily find out the mes of these land owners, if he es not already know them.*

Several months ago e city officials, in eir capacity as rporation ex- cutives, an- ounced that 2,000,000 ould be equired to pport the esqui over e dull peri- d. The mon- was voted y the city offi- als with the as- rance that in a w weeks the Ses- ui would be self- pporting. After it ad all been spent, and fter the association ad run up another def- it, a council of war as held. It was de- ded that the only way t was to tell the pub- c all the bad news.



—Brown Brothers Photo.

Before the Sesqui amusements were thrown open on Sundays it was always the custom of the police to prevent professional baseball. But the police could not close the ball parks while permitting the jazz parks at the Sesqui to remain open. A bitter legal row over the open Sunday is still in the courts. The attorney-general of Pennsylvania is now trying to compel the city authorities to obey the law.

Announcement then was made that a deficit of $3,700,000 existed. It was explained that when $2,000,000 was asked, a great deal more was needed, but the directors hoped it would come in at the gate. It was also announced that a total of $5,000,000 probably would be needed to complete all the work undertaken. And a special session of the city council was held to take the action outlined above.

'It is unfortunate,' said Councilman Clarence K. Crossan, 'that the council was not in closer touch with the building activities of the Sesqui last spring. This need of money is surprising, especially as it comes so soon after the director general of the exposition assured us when he came to ask a $2,000,000 appropriation that no more money would be needed.

'The exposition has suffered severely because of the constantly increasing scope of the project, which made its completion by the scheduled opening date humanly impossible.'

Having let this cat out of the bag, Mr. Crossan proceeded to vote for the resolution. The 'increasing scope' to which he referred is a rather significant item in the history of the Sesqui. Originally the scope was even larger, and Colonel David C. Collier, who made the San Diego Exposition a success, was brought in as director general.

–Brown Brothers Photo.

It is probable that the Sesqui will have closed before Philadelphia taxpayers begin to appreciate the burden that has been placed upon them.

But Colonel Collier couldn't get along with the mayor's personal friend, William S. Abrahams, who was director of concessions. The scope was reduced to a point where Colonel Collier couldn't see anything left to exhibit; so he resigned.

But the moment Collier was out the exposition began to expand again —with the mayor in personal charge and assuming all responsibility. It kept on expanding all summer as acre after acre of swamp was filled in—at public expense. It kept on expanding even after many exhibitors who had paid for space in the vast buildings looked over the project and decided not to exhibit. Large areas of vacant space still exist in (*Concluded on page 21*)

'Coin' Harvey—
Prophet of Monte Ne

Who Would Build a Pyramid in the Ozarks to Tell Posterity Why Our Civilization Has Failed

By CHAS. J. FINGER

AS A boy, listening to teachers, I had a private opinion that the minor prophets were men of a rueful and melancholy cast whose only pleasure lay in disillusionment; which opinion stayed with me until, one day, someone said that there were prophets very much like physicians, who, diagnosing a case, insisted that a certain course of conduct would exacerbate the disease, or kill the patient. At that, a light fell on me, and a minor prophet named Hosea suddenly took on very human and modern attributes as a genuine patriot, instead of a sort of crank given to reproaches, to exhortations and threats. Indeed, in predicting evil because of the selfishness of the rulers of his day, he appealed to me as one stirring up sluggish consciences, and restoring faith in the potency of cherished ideals.

From that moment I understood something of the emotional fervor of the minor prophets. There was another, Amos. Looking into the matter, I seemed to see him as one altogether sane instead of a fanatic making wild onslaughts upon established institutions, what with his foretelling the obliteration of a kingdom because of its blindness, and his predicting grief and disaster in the way of slavery, and subjugation if people refused to fight the fight for social sanity. Since then, I have been interested in prophets, the more because once, when in an executive capacity, dreaming hectic dreams of ambition and full of the delight of triumph and success, I encountered a prophet who was an expert accountant. And he, who had a certain trick of forcing you to know that two and two made four, and not, as you might have hoped, nine—he, I say, predicted certain disasters as a result of overburdening a corporation with bonded indebtedness, which predictions came true, and with dire results.

Mark you, minor prophets still walk the earth. Who shall say that Jules Verne was not somewhat of a forecaster? And what of H. G. Wells? And what of Coxey, though in his day he was denounced as a mere notoriety hunter doing things disturbing and disquieting to people? And what of the prophet of Monte Ne, a latter-day Amos, in the Ozark country, a man of some wealth and position looking upon himself seriously as one with a heaven-given message who has penetrated the inner secret of things economic? William Hope Harvey is his name. And, be it understood, he has done things, tremendous things by way of vigorous affirmation of his ideal. Nor is it any idle stretch of fancy when I say that he believes himself to have touched hands with the gods; scaled Mount Olympus. I turn to his first book, *Coin's Financial School*, to find this on the title-page:

'I thank thee O, Father, Lor of Heaven and Earth, becaus thou hast hid these things fro the wise and prudent, and ha revealed them unto babes.'

Now one who considers him self in that kind of light mus be perfectly confident that he i in possession of a high an splendid secret, or else is very cheat and a charlatan c charlatans, which last Harve certainly is not. And a ma who believes himself in pos session of a high and splendi secret, and who sees gloriou visions, which you may ca wild or not, as you choose, i very apt to do extraordinar things. So, commencing at thos things visible and concrete there is this which I would wis to show truthfully an exactly as you might se for yourself.

But I do not write c the appearance and per sonality of the man, wh is a plain ordinary citize who pays his debts, on kindly disposed, self-pos sessed in manner, of a kin to stand toil and endurance and discipline; the sort t go resolutely about hi affairs quite unconcerne if misunderstood and un appreciated. His age i seventy-five, and when called upon him last Satu day he had just undergon an operation to reliev some trouble in his foo caused while steering boat on his lake.

Monte Ne is set in cup in the hills not fa from the town of Roger in Arkansas. But suppos you approach the place a I did first. Suppose you walk down th mountain side from the town of Jaspe one of the few county seats in thi country untouched by railroad c interurban. You pass through narro valleys and clefts in the mountains you are where great crags rise straigh and bare; you are sometimes in a worl of stone that rises ridge on ridge lik waves of the sea. You meet countr folk of a kind rare enough nowaday people grave of manner doing thei business quietly, working and livin hard, taming the wilderness in a da when most people forget that there is a edge of civilization; forget that ther are still, on the nation's canvas, hunter and trappers and wild and solitar figures; Kit Carsons and Daniel Boones

)uckboards and pack horses and places where are fearless and indomitable nen.

In good time, walking across country as I did, you come to a place where you stand on a high ridge, at your feet a broad valley through which winds the White River like a silver ribbon, the flanks of the mountain richly wooded, here and there geometric patterns because of cornfields, the blue depths of far hills, the serenity of orchards, nearer heights all forest-clad, houses in the folds of ridges, and pastures of a sort to set you singing with joy.

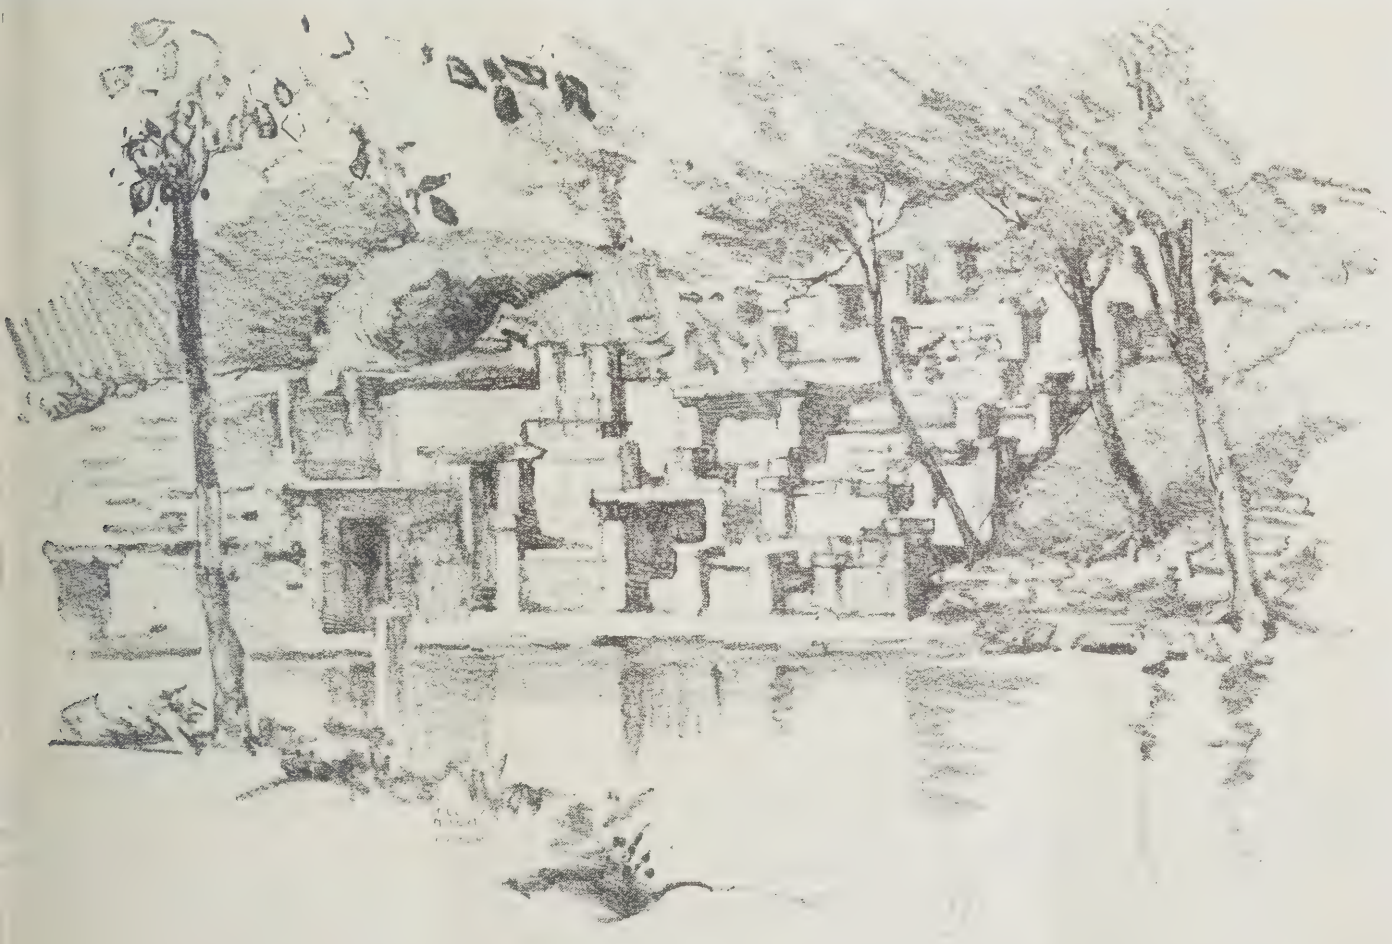
WHEN first I stood there, wondering at the beauty of the place, wondering still more who had cleared a space on the hilltop and made a rock platform on the promontory so that the shining valley might be seen, I put a question to a lad who sat there. He made answer thus: 'Who done it? Who but Mr. Harvey! He done everything hereabouts.' The lad said that in a tone of amused surprise as though all the world should have known that only one man could be so impelled. He added, presently: 'He likes to come here and jes' sit and look.' So it was simply evident that in the prophet of Monte Ne was a man whose sense of the beautiful had not been atrophied.

Now if you go a certain way from that promontory platform, passing along a tree-covered road, you find yourself after three miles or so in a great amphitheater, through which runs a stream. By that stream is what seems to be an ancient ruin, at first glance, with high fragments of walls, with great doorways and window spaces through which you look to see what appears to be a courtyard in which tall sycamores grow. You might take it for a castle the glory of which has faded, until your eye took in other things; blocks of stones squared by masons, but lying as if hastily flung down; stone rubble piles which are mounds almost grass covered; glimpses of roofless halls; passages and great fireplaces. What it seems to be, then, is a temple forsaken in the building, one of stimulating beauty, though unfinished. And in it you have another Harvey gesture, which I choose to call a vigorous affirmation of an ideal.

BUT there is more. You pass over a bridge; you follow the banks of the stream of cool-green water; you see a cement-built bridge of ambitious design on the right, another to the left; you see something shining white through loopholes of foliage. Then, at a turn, you come in sight of a lake with a wonder on its further bank, more wonderful because of the reflected glory of it in the pool. For the slope of the hill has been terraced and built upon, in a style of architecture new, yet somehow strangely familiar. Familiar because of characteristic things here and there reminiscent of Rome perhaps, or of Montrose, or of something bringing to mind a part of Edinburgh castle. Part of the structure is finished, a wall wing here, a stone seat there.

OTHERWHERES you have glimpses of stairways of stone, of galleries, of parapets, of vaults, of openings the purport of which you cannot guess.

With eye and mind tamed to seize upon salient features you see other things; a thousand-foot boring to solid rock, excavation holes, an elaborate system of subterranean drainage and other evidences of foresight. For a pyramid is in the building, but not a pyramid setting forth the virtues and praises of any modern Ptolemy Epiphanes. It is more of a gigantic Rosetta Stone, a key for some Letronne of the far future, who on entering will find the means to reconstruct a picture of this civilization of ours at a time when it shall have utterly and completely passed away. Because, you must understand, the prophet (Continued on page 24)



For the slope of the hill has been terraced and built upon, in a style of architecture new, yet somehow strangely familiar

Painless Taxation—

The Refuge of Quack Politicians

There Is Only One Way to Effect Tax Reduction: *Reduce Expenditures*

By SAMUEL CROWTHER

I CHANCED to be dining with the governor of a southern state about a month after he had taken office. His legislature was in session and he was worried. Governors are always worried when their legislators are gathered in the state capitol—they do have a way of going wild, for they do not meet often enough nor long enough to get running smoothly. They never get beyond the first five hundred miles. A bunch of young country lawyers all wanting to go home as Daniel Websters or Henry Clays is not easily seasoned.

The governor knew his job—he had been in both politics and business for years. But he was worried.

'Of course I do not want to say anything about my predecessor,' he said to me, 'but I will say he was too clever a financier for this world. I am beginning to think that he was not really trying when he ran against me—that he wished on me the honor of being governor of this sovereign state. He was a friend of the people and he borrowed money by the barrel for schools and roads. Certainly he was popular. I think we have enough schools and colleges and universities in this state to house the whole population.

'He not only borrowed but he reduced the tax rate. He made the budget balance by including all possible future revenues as moneys in hand. It was a trick budget but you do not have to be much of an orator to persuade a legislature that taxes can be low.

'Now this is what I am up against: I have to find the real facts of our financial situation and then I have to tell them to the legislature and the people. That is not hard—although I have been working day and night for several weeks just trying to find the true figures. But this is hard: Those figures say that our taxes will have to be tripled. The taxes will have to go to a point where they will constitute a general hardship.

'I have talked to the party leaders and they are all for keeping the tax off the people and putting it on the corporations. We are taxing the railroads to the limit now and taxing corporations means taxing the X Tobacco Company, which is the only big corporation we have. It pays big excise taxes and this the political men know, and they think it also could pay a big state tax. They will not realize that the consumer of the tobacco and not the company pays the excise tax.

'Put a big tax on that company and it will move out of the state—taking with it a large payroll. But if the boys go home with a heavy tax levy, they know they will never come back here again. They will be friends of the "interests" and not of the people.'

The governor gave the legislature the facts, but he had to compromise on the taxation. He raised the taxes on the corporation to just the point where it would be cheaper for it to stay than to move, he raised the taxes on the people with a gloved hand, and he borrowed more money. He took the practical course toward getting a state that had spent more than it could afford out of a hole.

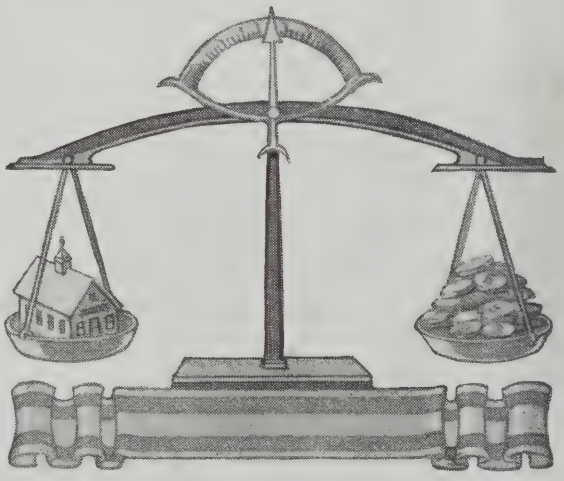
Hundreds of other communities are doing likewise. One of the favorite devices is to advertise low taxes and industrial advantages and then change the tax laws after some companies have been snared. For of course a political body cannot make a contract not to change its tax rate. Most of the railroads were lured across states by grants of land and promises of small taxes. Now that the roads are built and cannot get out, they are being taxed. Ten years ago they paid less than half a million a day in taxes; now they pay over a million a day.

Tax forms about eight per cent of the freight rate. The taxes paid by the railroads have for several years exceeded their dividends and thus they cannot raise money by the sale of stock.

They have to borrow every penny for improvements—which means they are being forced to erect pyramids of loans which will some day topple over.

This whole business of shifting taxes is about over—there are not enough shifters. And there is a growing realization that painless taxes are dangerous taxes. New York several years ago passed a law exempting new dwelling construction from taxes over a period of years and up to a certain cost. The Metropolitan Life Insurance Company, to meet the housing emergency, began the erection of a large number of apartments to rent at eight dollars a month room—which for New York City is a low rental. The controller of the company testi

(Concluded on page 20)



WE HAVE been trying to tax the other fellow. I know one school district which has thirty-six pupils, but also it has in it a great public utility plant which generates and sends electricity all over the state. That district just spent $56,000 for a gymnasium for those thirty-six pupils. It is a nice gym—excepting that only the district officers know that it is a gym, for it is fitted up as a community house or club. But it had to be a gymnasium—there was no provision in the law to permit issuing bonds for a community house!

The people do not care what they spend—the public utility pays two-thirds of the taxes. This little community shifts its taxes—but the amount is not large enough to bother the utility company.

The Greatest Need of the U. S. Navy

An Adequate Merchant Marine

By
CURTIS D. WILBUR

SECRETARY OF THE NAVY

Below—*Part of the Pacific fleet, which recently was on review in maneuvers off the West Coast.*

FIVE years ago representatives from the great nations assembled in the city of Washington nd evolved the first con-ete plan in the world's story for the limitation naval armament. Such n achievement was born s a result of mutual de-re for peace and under-anding, and of a sincere fort on the part of re-ponsible governments to ssen the burden of taxa-on upon their people by reventing competitive ar-ıament.

The Washington Con-rence was a decided up-ard step in the progress our civilization.

The year following the onference, the Navy eague of the United States ponsored the first Navy ay.

Their purpose in in-ugurating Navy Day was give the American people n opportunity to become etter acquainted with their Navy nd its personnel—its manifold achieve-ıents, glorious history and traditions, nd its needs.

The result of the Navy Day bservance has been that, probably, ur people are more familiar today ith their Navy and its problems than t any time since the early days of the epublic, when the larger part of the population lived near the coast and great numbers were seafaring people.

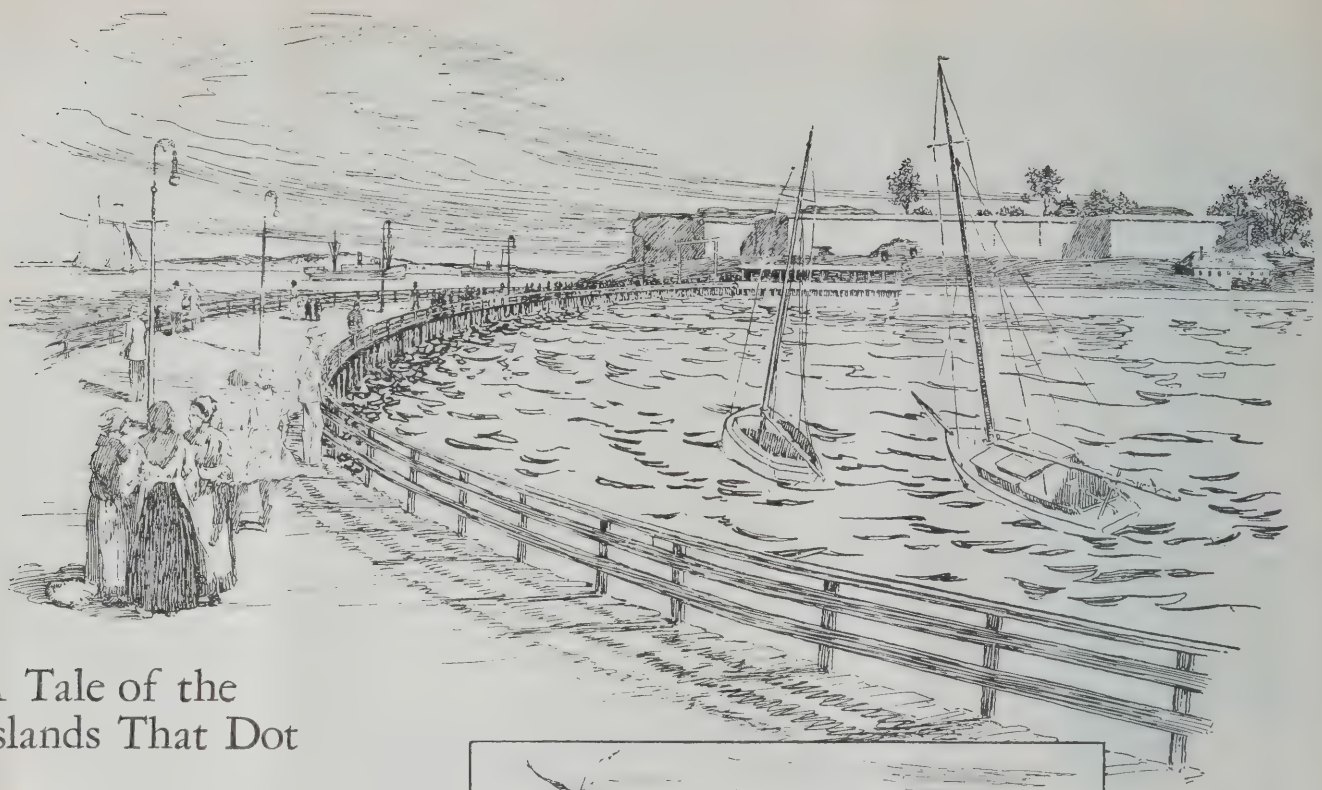
October 27 was selected as Navy Day because it marks the anniversary of the birth of President Roosevelt, who strongly supported the perpetuation of our country's institutions and to the maintenance and advance of American sea power. Navy Day, 1926, has for its especial object that of emphasizing the importance to national prosperity and national security of an adequate American merchant marine.

There are three elements in the sea power of any nation—the navy, naval bases, and the merchant marine. The first and second elements are in part fixed by the Washington agreement. We cannot build capital ships nor aircraft carriers except as allowed by these treaties, nor can we change the *status quo* of our Far Eastern bases under these treaties. The third element in American sea power is commercial, and no country engaged in fostering a merchant marine can justly be accused of military or naval aggression. Our merchant marine is of great importance to our national welfare. Our legislative and executive bodies are committed to the policy of insuring at all times the uninterrupted flow of America's excess products of farm and factory to the markets of the world.

For a period of fifteen years during the Napoleonic Wars infant America was the greatest over-sea carrying nation of the world, and from 1795 to 1810 the United States Merchant Marine carried about 90 per cent of the world's over-sea commerce. The devastation of the War of 1812 and of our early wars and our early embargo acts, combined with the effects of the Civil War, depleted our merchant marine so that after one hundred years American ships were carrying but a small percentage of the world's commerce.

The Boer War even failed to stir the country to a full appreciation of the necessity of having at all times an adequate merchant marine; although at this time an American industrial depression occurred because England's great ocean carriers were diverted from their usual transatlantic routes to transport men and supplies to the army in South Africa.

Three years after the opening of the World War we were *(Concluded on page 22)*



A Tale of the Islands That Dot

BOSTON HARBOR

By MAY B. WHITING

Drawings by PAUL FRANKLIN SEAVEY

On Castle Island. Insert—'Nix's Mate.'

EVERY landlubber and sailorman in Boston knows Castle Island, its green slopes with the old gray fortress in the center, and its seaward vistas. A bridge across the flats connects it with the mainland, and if you step lively you can walk around the path by the shore in fifteen minutes. But for one to whom the sea means all that life has missed of romance, it takes at least an hour.

Because of its position at the very threshold of the city, Castle Island was early fortified. In 1633 a fort with mud walls was erected and Johnson in his *Wonder-Working Providence of Sion's Saviour* says that it was 'of very good use to awe any insolent persons, who, putting confidence in their ships, offer injury to the people.' Indeed, this humble fortress exacted the same etiquette as if it housed a prince, and the proud vessels that came sailing in were often loath to do it homage.

One day there arrived three ships from Ipswich, England, bearing more than three hundred passengers, and the last one in showed no signs of coming to anchor when it was hailed by the Castle boat, so the gunner prepared to fire a shot across her bows. But his touchhole was wet, and the ship going at greater speed than he reckoned with the wind and the tide, his shot took effect in the shrouds and killed a passenger, 'an honest gentleman.' An inquest was held and the governor sent two magistrates down the harbor to officiate. After viewing the body and solemnly weighing the evidence, they brought in a verdict that the victim had come to his death 'by the Providence of God.'

Richard Morris was lieutenant of the Castle at the time, but he refused to fly the English colors bearing the red cross, which, like Endicott, he considered heathenish. He was also bold enough to espouse the rights of Mistress Anne Hutchinson, who scandalized the ministers by having an opinion of her own on religious matters, and he was disarmed and finally banished from the colony. The mud walls of the fort tumbled down, too, perhaps, as the historian says, because there was too much burnt oyster shell in them for lime, and the Castle fell on evil days. In June, 1643, the town was startled by the appearance of a fine ship of 140 tons bearing down the harbor. It was la Tour coming from his stronghold in Maine to solicit help against his enemies.

La Tour was peaceable enough. His men were allowed to exercise on the drilling field and he was given opportunity to confer with captains and merchants. But the ministers of the neighboring congregations were shocked at such liberty, and for some (Concluded on page 23)

MR. FORD'S PAGE

THE people see in piecemeal what they desire and need, and think that they will attain it piecemeal. But as all matters of social consequence are related it sometimes happens that the thing not sought comes as a necessary forerunner of the rest, or the thing definitely sought comes in by a different door than was opened for it.

There have been a number of such surprises even in the short story of this nation. And the examples that may be chosen are instructive of the way that events arrive. Once in this country the doctrine of States Rights divided the nation. It was supported on one side and denied on the other with a partisan vigor not since approached. Indeed, it was at the heart of the war which divided the States for a time. And though it was said to be wrong, it was nevertheless right. The party that lost was still right in its defeat. There was a wrong emphasis, there was a wrong intention as to the use of the Right once it had been established by violence, there was a wrong separation of it from kindred and dependent political truths, but it maintained itself in the thought of the nation because it had essential right at the heart of it.

We now see that States Rights was not the pillar on which the Nation could be reared, just as Federal right had no existence except the States, exercising their right, gave and defined it. And we have lived to see, sixty years after the close of the military struggle, the chief of the Federal party state the doctrine of States Rights as part of the truth of our national solidarity. It came, but it came in its proper place and with its proper weight.

There was also, years ago, a great agitation in this country for a new financial method of building roads. Roads were to be built for the sake of illustrating a new method of finance and to provide labor for a then unemployed people. The ideas that roads were of value to the nation, that they could be financed without creating interest-bearing debt of crushing proportions, that they could usefully employ idle labor in the land, were true ideas. But great undertakings are never entered upon to demonstrate something apart from themselves. They must come in their time, for a pressing need, they must come in their own right, even though it be only dirt roads.

Well, the roads came. But how? Because the automobile came. No one foresaw the automobile. At the very moment the agitation was at its highest, there was being worked out in obscurity the mechanism which would put the whole road question on a new basis, and force roads through the very necessity for them. There still remains the question of finance which will also, in its time, find its solution.

Today we have a farming problem. It is being handled on the supposition that things will always remain as they are. There are suggestions of subsidizing the farmer with public funds. There are suggestions of making the whole matter turn on methods of marketing. There are suggestions of restricting the crops and using artificial tariff methods to keep an unnatural price level. All these plans are founded on the assumption that things are going to remain as they are, that the conditions of the world as they affect farming are fixed.

GREAT undertakings must mature in their time to supply some pressing need. The roads came because modern transportation demanded them. Farming is being handled on the supposition that things must remain as they are; but agriculture is now becoming the base of the new chemical era. The farms will be linked up with great industries, and a greater importation and production than we have dreamed of will be necessary. So also with finance. All that is good in money will be used for the enlargement of human opportunity, not for the furthering of selfish aims. The objectives that are being separately sought will simultaneously arrive.

What is happening? In a few years, instead of finding means to stop the flow of grain into our country, we shall be calling upon the world for greater importations. The present solutions of marketing plans and financial aids will be swept away as the stagecoach disappeared before the railways. Agriculture is now becoming the base of the new chemical era. What we have thus far done with coal tar, we shall soon be doing with cellulose. The farms will be linked up with great industries, and a greater production and importation than we have dreamed will be necessary.

There will be a solution of the money problem, too, though perhaps no one now sees just how it will come. But it must come. The very pressure of real wealth on the signs of wealth will burst the signs into something bigger and more useful. Whatever is good in Money as it is will be extended into something better.

The new idea, when it arrives, will break the restrictions, and enter by a door that perhaps few have dreamed existed. The enemy of money is wealth, and wealth is gaining the ascendancy over money every day. It has steadily shoved money into the background, and with it the money control of the nation's wealth.

The objectives that are being separately sought, the end of war, the conquest of poverty, the abolition of disease, the enlargement of human opportunity in every sphere, will arrive together.

'Ford Ideals,' 452 pages, cloth bound, contains 98 of these articles. Postpaid $1.00.

Kenyon on Official Etiquette

THE decision of the United States Circuit Court of Appeals, reversing the federal District Court of Wyoming in the suit to cancel the Sinclair lease on Teapot Dome, is heartening. The lower court held that no fraud had been proved. The upper court reverses this opinion and orders the trial court to cancel the lease. All three of the sitting judges concur, Judge William S. Kenyon writing the sixty-five-page opinion. Without equivocation the court holds that fraud and deceit run through the whole transaction. No charge of corruption is made by the court against any public official except Albert B. Fall. The contention of the Government that Fall received a pecuniary consideration for the execution of the lease on the part of the United States is sustained. The court says:

> 'The entire transaction is tainted with favoritism, collusion and corruption, defeating the proper and lawful functions of government. Nothing is so essential to the perpetuity of representative government as fidelity of public officials.'

The loss of half a billion dollars' worth of property by the Government is important but not vital. We lost many times that amount in the World War and survived the experience. The decision of the court restoring the property to the Government is of far less consequence to America than the high legal and moral standards set for future dealings by Government officials.

The decision of the lower court was discouraging. It denied the government an extension of time within which to produce witnesses who had run away and refused to reopen the case for the taking of their testimony after they had returned to the United States.

But the upper court clears all this away. Legal hair-splittings and cunning concealments are ignored. The circuit judges reason almost like ordinary laymen. The case is decided upon the broad, sensible lines of the law of conspiracy, according to which conspiracy is inferred from all the surrounding facts and circumstances, without demanding impossible direct proofs of it.

Official conduct in America is measured by a new yardstick in this decision. Good faith must be present in such transactions and evidence of wrongdoing cannot run like a scarlet thread through it without vitiating the entire matter. Democracy cannot survive unless officials are honest. That public office be regarded as a trusteeship must be the rule.

Such broad-visioned patriotism on the part of judges speaking from the bench goes far toward confirming thinking men in their belief that the bulwark of our liberties rests with our courts. While such tribunals exist, America will 'muddle through.' The new sixty-five-page book, *Kenyon on Official Etiquette*, is heartily commended to the prayerful attention of all public officials!

Our New Diplomacy

AN INTERESTING departure from America's traditional policy of non-interference in the internal affairs of European nations apparently has been undertaken by John B. Stetson, Jr., United States minister to Poland. Mr. Stetson's enterprising action came in connection with the overthrow of the Bartel government, when the Polish Diet refused to sanction the government's budget. Bartel resigned—but he resigned *after* a hurried visit had been made him by Mr. Stetson. A Warsaw dispatch to the New York *World* describes the circumstances:

> More unexpected even than the resignation—in view of the time and occasion—was the unprecedented visit of the American minister, John B. Stetson, Jr., and French Ambassador Larouche to Premier Bartel in the midst of the crisis . . . Well-informed circles here, while expressing surprise at this apparent foreign intervention in a Polish domestic crisis, admit that France's treaty relations with Poland and America's financial interest in the country through recent investments here might easily account for such action.

This is interesting. It is so interesting, in fact, that Americans would like to know more. News from Poland in recent months has been of such a hazy character that citizens of this country are eager for more complete information. They would like to know, for instance, whether the 'financial interest' refers to the reported $100,000,000 loan made Poland by the Bankers Trust Company of New York. They would like to know more of the tobacco monopoly which accompanied the transaction. They would like to know something official

about the 'American commission' under Professor E. W. Kemmerer, which visited Poland as soon as the deal was consummated to 'reorganize' that nation's finances. They would like to know more about the charges laid against this commission and the Bank of Poland by the Nationalistic Socialists, who, according to the New York *Times*, 'accused them (Kemmerer et al.) of giving in to foreign capitalists.'

And above all the American people would like to know more about this new American diplomacy. They are wondering whether Mr. Stetson's action marks the dawn of a new era, wherein American ambassadors will tread gingerly along in the footsteps of America's international bankers.

Speaking of Jazz

THE strangest of all arguments in favor of jazz is that of its widespread popularity. Was not the belief in witches widespread and popular? Was not the belief in dried spiders as a cure for headache popular? Was not the belief in the flatness of the earth widespread and popular? Have not all human fashions been widespread and popular? Fashion implies change. Human experience is that man goes to music for rest, for solace, for quiet. But jazz is excitement, and no man, except a madman, is or wants to be permanently excited. The radio program makers are satisfied that real music is what the people want, so real music is being broadcast. The very mushroom growth of jazz is enough to predict its ephemerality.

New Light on the Dawes Plan

THERE are, it seems, certain things yet to be explained about the operation of the much-lauded Dawes Plan. One of these is the little matter of international bankers' loans, always more or less of mystery because of the manner in which they are arranged. J. H. Keynes, the famous British economist, discusses these loans—and their effect—in a remarkably frank article in *The Nation & Athenaeum*. Between September 1, 1924, and June 30, 1926, he points out, German issues on the international loan market amounted in round figures to £175,500,000—of which the Dawes Loan provided £42,000,000 and various American loans, £110,000,000. But during this same period Germany paid in reparations only about £100,000,000. Even allowing for adjustments and deductions, Mr. Keynes concludes that Germany's net foreign loans were about equal to the Dawes payments.

'In this case,' he declares, 'practically the whole amount of reparations so far have been provided by the foreign lender, and mainly by the United States.' But this indication of the immensity of the bankers' loans is only one feature. Virtually all the transactions—reparations and inter-allied debts—Keynes says, are being conducted mainly on paper. He continues:

'The sums written on paper mount up, of course, at compound interest. Germany is paying on the average about 7½ per cent net for her foreign loans. Thus the interest on the debts incurred in the last two years comes to about £10,000,000 per annum. How long can the game go on? The answer lies with the American investor.

'There has lately been a revival of discussion about the cancellation of inter-allied debts . . . But the moment when cancellation will become a living topic, an unavoidable burning issue of practical politics, will be when the circular flow of paper is impeded and the artificial equilibrium is broken. It will be for the American investor in due course of time to give the word—and for the American public to find the solution.'

This is plain talk from a man who knows what he is talking about. The crisis is approaching when the nations of Europe will be unable to pay both the private loans and the debts owed the United States Government. Then will be the time for the American investor—*the international banker*—to give the word. Then will be the time for the American taxpayer to step forward and shoulder the entire burden of inter-allied debts, so that the international banker may collect *his* money—and interest—in full!

The Unknown Great

WHEN you come to think of it there are men, and many of them, who did things of value, but whose names are lost in the mists of antiquity, if indeed they were ever known. What of the forgotten Florentine who was the first European to engrave on wood? And who invented the needle? Or who first taught men to use a wheel? Or who first thought of making an ice house? Who built the first chimney? Who laid the first wooden floor? Who invented glass? Who first braved the laughter of society by being the first to use a fork? Who was the unpopular citizen who, for health's sake, put through the law requiring every one going out of town in a horse-drawn vehicle to take with him a load of garbage? Those and others of the unknown great surely shaped things to definite ends, though they fashioned neither epics nor dramatic tragedies.

Our Greatest Football Fable

The All-American TEAM

Picking mythical All-American teams has become a national pastime and it causes more arguments, debates and discussions than any political problem.

Drawings by W. O. FITZGERALD

PICKING mythical All-American teams has become a national pastime. It is the great indoor sport of the late autumn and early winter seasons. It causes more arguments, debates and dissensions than any political problem. It has, since the miraculous development of football, gathered astounding volume.

The late Walter Camp started it. Mr. Camp, years and years ago, wanted to create interest in the sport that he, more than any other individual, was instrumental in developing. Football was not hitting the popular chord as hard as its sponsors hoped and Mr. Camp conceived the idea of selecting at the close of each season eleven players who, in his opinion, were the best at their positions.

Football developed and the annual All-America selections of Mr. Camp played their part valiantly in this development. Five years ago Mr. Camp concluded that they had served their purpose and talked of abandoning the habit, but by that time Mr. Camp's mythical team had become a sort of national institution and he discovered himself to be the slave of his creation.

WHILE the authorities in control of football had never given official sanction to Mr. Camp's selections they were nationally regarded as the decision of the supreme court of the sport. To be selected by Mr. Camp was the secret ambition of every football player of any prominence and skill.

Since Mr. Camp's teams aroused national interest he had, naturally, many imitators. *Collier's Weekly* for years and years printed Mr. Camp's teams and his analysis of players and résumé of the season's play. And when football was adopted by the public at large, other publications, weeklies and monthlies, began printing mythical teams. While Mr. Camp's selections were always labeled the All-America, his imitators advertised theirs as All-American teams. The newspapers took up the fad and the press of the nation became deluged with All-American selections by coaches, players, officials, sports writers and general observers.

When Mr. Camp died it was thought by some that the habit would pass, but instead Mr. Camp's death stimulated the fad. In 1925 there were more selections and at least a dozen men and groups of men vainly clutching for the mantle that fell from the shoulders of Mr. Camp.

Those who have a genuine interest in the welfare of football sought for years to eliminate the mythical teams. They point out that while the selections mean nothing in deciding a dispute of the individual superiority of one football player over another they do manage to do a great deal of harm to the game for the simple and obvious reason that they raise the individual above the team. Now, there is no popular sport that so depends upon team play. Here perfect coördination in both the individual and the team is necessary for success. Football demands self-sacrifice. It requires unselfishness. The individual becomes submerged into the whole. Effort in football is successful only when it is united. A runner advancing the ball has the coördinated help of his ten team-mates and it is really the ten that gain the ground while he carries the ball.

This virtue of football has been expounded for years by its sponsors. It is for this reason that the game is considered a valuable part of the collegiate layout. It teaches valuable lessons to the youths who play it and these lessons make for better citizens. The high points of football play serve well for sermons on character building.

The mythical team idea is contrary to these principles. It extols the individual and ignores the whole. Every football player realizes that his success has been made possible by the united effort of ten other men on the field.

How much the success of the individual depends on the whole was never better illustrated than in the case of Harold (Red) Grange of the University of Illinois. Grange was one of the greatest of all broken field runners, probably the greatest. Robert C. Zuppke, coach of Illinois, realized his possibilities. Zuppke began building for Grange. To let Grange exercise his individual talents he had to be brought to the other side of the scrimmage line and helped through the secondary defense zone of opposing teams. To get him past that scrimmage line Zuppke developed one of the best blocking teams the Middle West has seen. When Grange's signal was called, the Illinois team blocked; and it was so well schooled in blocking that it succeeded in carrying Grange past the secondary zone of every opposing eleven that Illinois met in 1923 and 1924.

MOST of the regulars that had boosted Grange to fame were missing from the Illinois lineup last year. Zuppke had green material. The blocking that his previous teams executed was lacking. And Grange was stopped as a result. During the first half of the 1925 season Grange proved an ordinary back. Opposing linemen and opposing backs, blocked out of Grange's

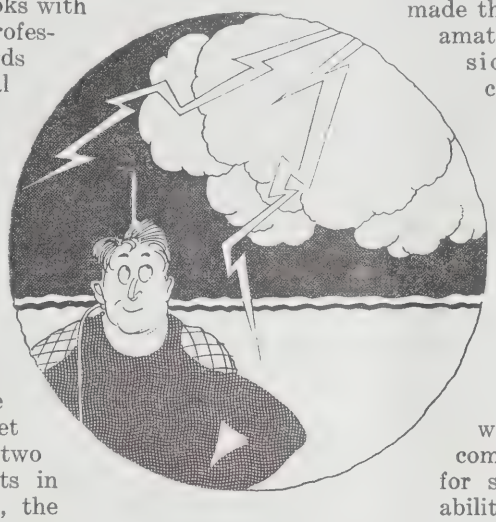
path for two years, were getting past the Illinois interference and throwing him, often for losses. Later in the season, when Zuppke had developed better blocking, Grange did better.

Grange then entered the professional field. But as a professional Grange could not perform the remarkable ball-carrying feats that he had shown while wearing the orange and blue of Illinois. Some tried to explain this with the assertion that Grange found much harder opposition on the professional fields than he had encountered in his college games but this was somewhat beside the point. If the opposition was harder then surely Grange had the benefit, also, of superior aid, for his team was one of the best in the professional ranks.

THE reason for his failure lay in lack of coöperation. Where the collegian plays for glory and the love of alma mater the professional plays for money. Since Grange was receiving from 30 to 50 times as much a game as his team-mates were getting it was only natural that they should balk on exerting themselves to make Grange successful. The harder they worked the more money he got, since he received a percentage of the gate receipts. They, while working harder, got nothing extra for themselves. At Illinois ten men threw everything they had in physical and nervous resources into the game to make Grange succeed. His success was their success and the success of their university. All was for the common cause. That is college football. All for the individual is professional football. In the professional ranks it is a case of every man more or less for himself.

The sponsors of football need only the case of Grange to drive home their point. He illustrates every angle of it. He proves, more than any player, just how much of the individual success in football is supplied by the coördinated efforts of eleven men. He also proves the evil results of putting too much emphasis on the individual, a habit that the naming of All-American elevens has developed.

The college man, and especially the collegian whose passion for football runs high, looks with horror upon the professionals. He regards them as commercial pirates who are preying upon his creation. After the collegian built up a sport the commercial amusement promoters stepped in and capitalized it. He created and developed the game and when he had set it up as one of the two most popular sports in the United States, the amusement promoter came along and started to exploit that sport, and to translate it into cash and profits for his own pockets.



To be selected by Walter Camp was the secret ambition of every football player of any prominence and skill.

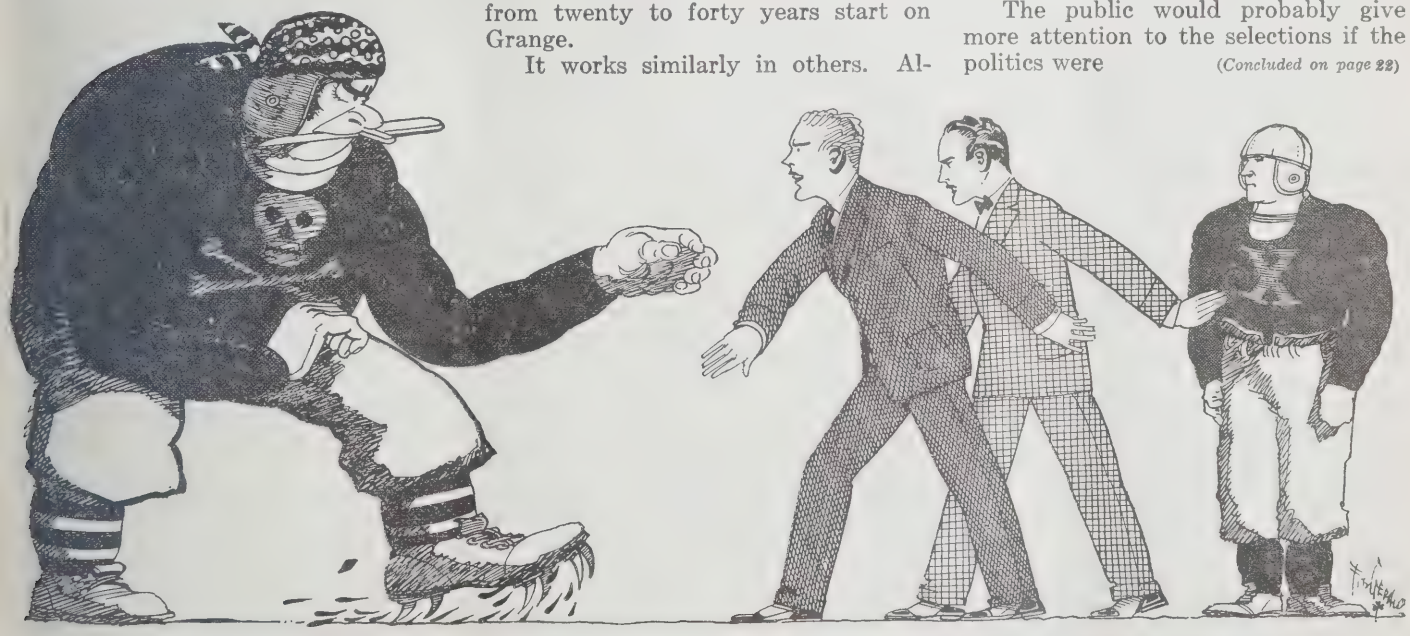
Here is where the All-American idea worked into the hands of the promoters. The All-American scheme takes units of the whole and sets them above the field. Grange is an example. Grange received more publicity during his three years at Illinois than any football player had ever had in the newspapers. His name became better known than the name of any single player in all football history. It became a name better known than that of any team, with the possible exception of a dozen that had anywhere from twenty to forty years start on Grange.

It works similarly in others. Although none of remaining players (and there are several thousand of them) received anywhere near the publicity that Grange got, among them were quite a number that found their names in the headlines regularly. The big newspaper and magazine play was for the individual and after the newspapers and magazines built up the players in public esteem and made them sports idols as amateurs, the professional promoters cashed in on this publicity.

This persistent All-American habit wrecks the competitive value of football while it feeds the professional football promoters. Instead of working for the whole, players become inclined to work for self. A player of ability, desirous of being placed on one of the mythical teams, works for himself, rather than for the team. He advances his own ability in preference to using that ability in the advancement of the common cause.

Outside of the All-America selections of the late Mr. Camp, no real value has ever been attached to any of the hundreds of others. They are interesting, as reading matter, but they mean nothing to the public. They are never significant of anything. They do nothing for the good of the game and a great deal to harm the game by causing ill feeling among many players that are ignored. Jealousies result in dissension and the sport suffers.

The public would probably give more attention to the selections if the politics were (*Concluded on page 22*)



The college man looks with horror upon the professionals, regarding them as commercial pirates who are preying upon his creation.

The 'Jeannette' in the pack.

Death Writes Finis to
The Tragic Story of

THE *JEANNETTE* EXPEDITION

PART II

By BURT M. McCONNELL

THE retreat of the shipwrecked De Long expedition over the jagged ice fields of the Arctic Ocean to the Siberian mainland is the most stupendous undertaking in Arctic history. Every mile gained meant seven miles traveled by men and nine miles by dog teams. De Long himself, in selecting roads and closing up the rear, traveled three times over the trail night and morning.

After a month of this gruelling work, De Long climbed a hummock twenty feet above the water level one day, and saw land and water approximately fifteen miles away. The next day the surgeon of the expedition picked up a live butterfly. De Long must have felt as Columbus did at his first glimpse of land birds near the coast of North America. Just at the time when the rough ice had worn out their boot soles, one of the men killed a walrus, and its tough hide was divided up among them. A few days later one of the men killed a polar bear. The fresh meat was also a pleasant change for the men and dogs.

On July 29, De Long and his party landed on the island which he had seen, and named it Bennett Island. They found it to be of volcanic origin, with a large vein of bituminous coal. There was also an extinct volcano, and two large glaciers. One hundred feet above sea level and five hundred feet up the slope, they found considerable driftwood, probably carried there in the course of years by the gradual upheaval of the land.

De Long now ascertained their position to be 76° 38′ N. Their journey had barely begun, yet only half of their sixty days' provisions remained. The members of the party, with the exception of one man, however, were in good health.

After resting on the island for several days, and being delayed for a short time by a westerly gale, the party embarked in the three boats, and on the first day made five miles. The first cutter, in charge of Captain De Long, held twelve men; the second cutter, in charge of Lieutenant Chipp, carried nine; and Chief Engineer Melville also carried nine in the whaleboat. Before leaving the island, De Long felt obliged to have ten of their poorest dogs shot because of the amount of food they consumed, and after they got under way four more strayed off, so that there were only eight dogs remaining.

On August 7, they again made five miles, and as the ice was gradually loosening up and there was a real danger that they might become separated, Captain De Long gave Engineer Melville, in command of the whaleboat, instructions to endeavor to keep close to his (De Long's) boat, but that if Melville became separated, to make his way south until he should strike the north coast of Siberia, follow it as far as the Lena River, and ascend the river to the first Russian settlement. The boats were so heavily loaded that the slightest motion caused the water to wash in over the gunwales, so it was decided to lighten them materially by shooting all but two of the remaining dogs.

The party now averaged about seven miles a day through the loose ice, sometimes being compelled to haul up the boats and drag them over a floe half a mile wide to the water beyond. By August 22, when they came within sight of the New Siberian Islands, they ran out of both coffee and

tobacco, so they substituted tea for coffee and smoked coffee grounds or coffee grounds and tea leaves mixed. On the 30th they landed, and felt for the first time in two years good firm ground beneath their feet. But they were under way early the next morning, and sailed to the southwestward all that day and all that night.

During this time the second cutter became separated from the first cutter and the whaleboat, in the darkness.

To make matters worse, the ice closed in about them, effectually barring further progress. But the next afternoon the second cutter came within half a mile of them, and De Long seized this opportunity to give Lieutenant Chipp a written memorandum similar to the one he had furnished Melville, instructing him, in case they should become separated again, to make the best of his way to the nearest settlement on the Lena River. They were at that time about ten miles from the nearest land, with a fresh southeast gale blowing. This gale, alternating at times with a blinding snowstorm, continued unabated for four days. Late in the evening of September 6, the three boats again got under way, the first cutter outsailing the second despite a double-reefed sail. Everybody was cold, wet, and miserable. On coming to a tiny island a few miles from the mainland, a hunting party was sent ashore and soon brought in a deer. De Long camped immediately, for here was food, fuel, and fresh water.

When they started the next morning, it was before a fresh easterly wind. At nine that night De Long lost sight of the whaleboat ahead, and at ten lost sight of the second cutter astern. By that time the wind had freshened to a gale, and the sea was running so high that it was impossible to slacken speed.

The crews of each boat were compelled to bale for their lives.

The next day there was a heavy northeast gale until six at night, when it moderated. In the tremendous sea the first cutter shipped a good deal of water, but managed to ride out the gale. All contact, of course, had been lost with both the whaleboat and the second cutter. The whaleboat, compelled to crowd on sail to keep from being overwhelmed by the waves, disappeared in the darkness. She flew before the wind until well toward the end of the next day, when she ran into a haven in the Lena Delta, and made her way to the nearest settlement. The natives gave the party food and shelter, and directed Engineer (later Rear Admiral) Melville to Verkhoyansk.

Lieutenant Chipp, with his little band of eight in the smaller and slower cutter, was swept far to the east of De Long and his party and, in the raging gale and high seas, his cutter was swamped. Not one of the Chipp party ever reached shore.

Captain De Long, in the first cutter, was running so close before the wind, in order not to outrun Lieutenant Chipp, that the sail gybed, tore out the mast, and both sail and mast fell over the side. The cutter shipped so much water before a sea anchor could be made and matters straightened out, that another big wave would have swamped the boat. But De Long and his men were spared—for the moment.

It was now the middle of September, and ice was beginning to form overnight. The explorers saw land to the southward, and tried to reach it, but the ice held them. Yet, when they stepped out to drag the cutter, the ice broke. By poling, dragging, and rowing they managed, after four days of arduous toil, to approach within a mile and a half of shore, where the cutter ran aground.

After waiting in vain for the tide to rise, and endeavoring unsuccessfully to find deeper water, it was decided to unload the vessel and wade ashore. When daylight came, (Continued on page 26)

The Dances *of* Olden Times

Being a Discourse on the Grace *That Once Marked the* Ballroom

By MARY HARROD NORTHEND

MUCH interest is manifest today in the revival of the old-time dances. They bring a return to the grace and dignity which are characteristic of the minuet, the gavotte and other old favorites—dances which will bring with them some of the stately grandeurs of colonial days. Of these the minuet is the most attractive. Like many of the popular dances of olden times, it first appeared in France, having been introduced into Paris about the year 1650. So popular did it become that it was soon adopted by the French nobility, and kings and queens took pleasure in its dignified but graceful movements. For more than a century and a half this was the leading dance in all the great capitals of Europe. There is no dance which has the sentiment and poetry of the exquisite minuet—'Dance of Little Steps.' The very name suggests rhythm, courtly etiquette, grace of motion, elegance of costume!

Top—Forward and back. Center—Pas Marche Step—also used in turning partners. Lower left—A poise of the dance. Lower right—Resting after the dance.

There were many kinds of minuets, and their movements were so intricate that instruction books on the science of choregraphy were issued, with diagrams and notes explaining the required steps and figures. It is singular to note that the oldest book on the minuet, printed in 1713, was written by a monk, Thornot Arkeau. Dancing masters reaped large harvests in giving lessons to aspiring pupils. Any one who could not dance th minuet was not consid ered eligible for the bes society of the 17th an 18th Centuries.

The greatest men too it up, as is shown b Lord Chesterfield urgin his son not to neglect th instructions of the fa mous Marcel, calling th art 'a most statesman like accomplishment.'

During the reign c the minuet the custo came into favor c naming the ope ing dance given great balls in honor some famous person event. This occurre after the minuet was i troduced into Americ and was the reason was taught under many different names.

This dance was n the only one used state occasions, for far back as the 16 Century the 'Pavan was a favorite court dance. So authorities claim that the name w taken from Padua, where the dan originated, while others claim it w derived directly from the Latin wo *pavo*, meaning peacock. The latt theory is more probable, for the dan consisted of strutting about the flo to display the fine clothes worn by t dancers.

Above—*The Star Movement—Four ladies cross right hands, give left hand to partner and promenade around to place.*

Oval—*Virginia Reel—Showing the execution of the first call 'Head lady and foot gentlman forward and back.'*

Another of the old-world dances which was often seen in the ball-rooms of France and of England was the gavotte. Dauphiné was the home of this dance and it was from the Gavots, as the peasants of Gap were called, that it took its name. Its first appearance at the royal court was in the 16th Century. At that time entertainments were frequently held for the amusement of the king and his friends, at which peasants from the various provinces danced in their national costumes. It was through this that the gavotte first became known.

When the gay, rollicking gavotte was adopted by Marie Antoinette as a society dance, it was greatly modified and became a slow, stately measure, somewhat similar to the minuet. It was due to her patronage that the gavotte gained attention at the French Court and in all the European capitals.

No more enthusiastic or graceful dancer ever paced or tripped the minuet than this unfortunate queen.

Curtsying—The bow and curtsy is quite effective in the dance. In the original minuet bow and curtsy is used only at the beginning and close of the number.

Says Lacroix: 'The Porcherons and Courtille dancing places retained their renown until the Revolution and Marie Antoinette was taken there more than once by her brother-in-law, the Comte d'Artois, her incognito being respected by the visitors who happened to recognize her. The Queen often said that she had never enjoyed herself so much as on the night of Shrove Tuesday when she was present at the course which brought the ball to a close, a wild fandarole in which the dancers, joining hands, whirled around the room at full speed.'

As the more stately old dances began to lose something of their popularity they were replaced by the quadrille. This was originally known as la contredanse and is supposed to have come from Normandy to England with William the Conqueror. In the year 1600 this dance was well known all over Europe, but gradually lost prestige, but reappeared in 1745. At that time it was presented in a

popular opera-ballet and the society leaders of Paris were so fascinated by it that in a very short time it passed from the stage to the ballroom.

A little later the name, 'la contredanse,' was dropped and the dance became the quadrille, which is literal French for a little square. It became a favorite with the dancers of England and the Continent. The dance of that period was, of course, much different from our modern quadrille, but nevertheless it was a step away from the dignified and courtly dances which had prevailed up to that time.

Though the Continent was the home of many of the popular dances of olden times, there are a few at least that had their origin elsewhere. For example, the various contra-dances which figured in so large a majority of the balls and merrymakings during the 18th Century and early years of the 19th, were first danced in England. There the name 'contra-dance,' referring to the position of the dancers, was corrupted into 'country dance,' and it was this term that was generally adopted.

There were many country dances, all of which were based on practically the same form, although each had its own characteristic step. One instruction book written by Nathaniel Kynaston offered 'Twenty-four New Country Dances for the Year 1711,' while a more ambitious author published a work in seven volumes entitled 'Compleat Country Dancing Master; containing about 1200 Dances.'

Even in staid New England the merry contra-dances were to be found and such favorites as 'High Betty Martin,' 'Old Father George,' 'Petty Coates' and 'Miss Foster's Delight' figured in many splendid ballrooms and at such jolly affairs as husking bees and barn raisings.

The Sir Roger de Coverley is a good example of these old country dances. This was one of the most popular of all the figures of the period and dates back to the year 1685. As the contra-dances grew in favor, the Sir Roger de Coverley was adopted by the inner circle of London society, and it was frequently danced at Almack's, an exclusive resort.

The first of the American colonies to adopt this dance was Virginia and there it was rechristened the 'Virginia Reel.' As such it became known throughout the country.

Among the old-time dances that have been revived is the cotillion. This dance was invented by French peasants. They usually wore short garments while dancing it. From this custom the figure took its name, 'Cotillion' literally meaning a short skirt. Colonial hostesses adopted this unique dance and Newport was the scene of many a gay cotillion.

The names of most of the popular dances have a very interesting origin. The lancers is a variety of the quadrille, improvised by a company of lancers for their own amusement while seated in their saddles. The polka is a Polish dance and its name comes from the Bohemian word, *Pulka*, meaning half, and refers to the half step which occurs in this lively dance, of which the more graceful schottische is a variation. The Mazurka is the national dance of Poland.

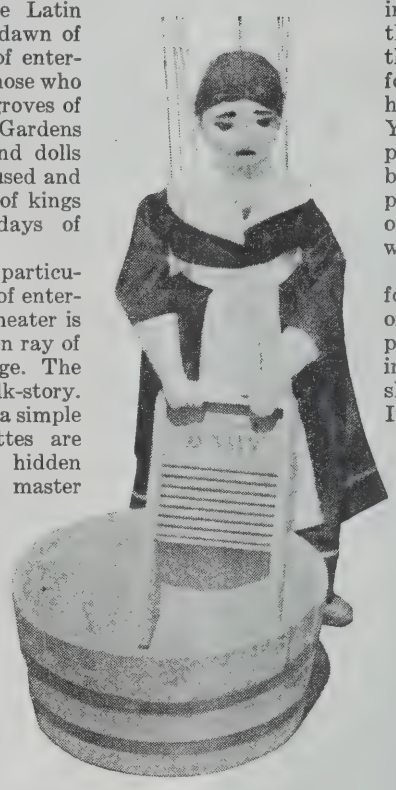
In Greek and Roman mythology the fascination of the dance, in its varied manifestations, has been fully acknowledged. Dancing at its best is an art, quite as much as music and poetry.

The Lure *of the* Puppet

Marionettes Date from the Dawn of Civilization

THE origin of the marionettes, so popular with the Latin world, goes back to the dawn of civilization. This form of entertainment was known to those who frequented the fragrant groves of Nippur and the Hanging Gardens of Babylon. Puppets and dolls made of baked earth amused and entertained the children of kings in Egypt before the days of Tut-ankh-amen.

Today the Italians are particularly partial to this form of entertainment. Usually the theater is darkened save for a golden ray of light which floods the stage. The play may be an Sicilian folk-story. A hidden accordion plays a simple melody. The marionettes are operated by means of hidden strings by the puppet master above the stage. The emotional audience often gives way to its feelings. Giulio Romano, the corner bootblack, sobs and sways in emotion as the villain clasps the lovely heroine in his arms, and chortles with delight when the hero shoves his papier maché knife through the villain's throat.



One of the marionettes created by a group of persons in Los Angeles, California.

At bottom of page—Enchanting puppets used in the presentation of Russian folk tales.

In America Tony Sarg, writer and artist, is the foremost puppet master. If one would see the marionettes perform in their best manner he should see those operated by Sarg. There is nothing secret about their operation. In fact, Sarg appears on the stage among his creations. The showman appears gigantic, a veritable Colossus, on the stage alongside the tiny figures which in contrast assume the size of human beings. One would think that the appearance of a human among the puppets would dwarf them, but the opposite is true. Mr. McIsaac, in his splendid book, *The Tony Sarg Marionet Book*, recounts that this illusion was at first as much of a surprise to Sarg as it was to his audience. When he appeared on the stage with marionettes for the first time in response to a vociferous encore from his delighted audience, he led a charming marionette in the cast of the 'Green Suit.' It was at the closing of the initial performance at the Neighborhood Playhouse, in New York. The dolls are built proportionate to the scenic background and this explains why Sarg seemed ten or twelve feet high and to weigh six hundred pounds.

Punch, the abbreviated form of Punchinello, is one of the most popular of the puppets and the chief figure in the 'Punch and Judy' show. This show is of Italian origin and so old that its history is lost in obscurity. F. Galiani adopts the theory which derives it from the name of Puccio d'Aniello, a vintager of Acerra near Naples, who, having by his wit and grotesque appearance vanquished some strolling comedians in their own sphere, was induced to join the troop, and whose place, by reason of his popularity, was supplied after his death by a masked actor who imitated his dress and manner.

Puppet shows were common among the Greeks, from whom the Romans received them. Xenophon, Aristotle, Gellius, Horace and others mention them. In the American Italian colonies the dialog is largely extemporized. The favorite themes have to do with the legends of the court of Charlemagne.

In the French plays also, one is aware of characters and plots which are centuries old, and of methods which, in another sense, cannot age. The French simpleton and glutton, and the French angry housewife are among the most popular characters. The stories are for the most part simpler than fairy tales.

A dog defends his master from attack; the attacker returns and kills the dog; the master bewails the death of his faithful ally and the gendarme arrests the killer.

NEW THIRTEENTH EDITION 1926

ENCYCLOPAEDIA BRITANNICA

In the Popular NEW FORM at a Saving of 40%

NOW EVERYONE can easily afford to own the new Britannica. For the new Thirteenth Edition—complete up to this very hour—has now been issued in the NEW FORM (32 volumes bound as 16) at a saving of 40%.

Here, in convenient and economical form, is the full record of man's achievement. Here are new facts, not hitherto published or even revealed. For example, Henry Ford writes on mass production and other genuises on their unique successes.

A Master Stroke of Genius

When this New Form method of binding was first introduced, in 1924, it was acclaimed throughout the world as a master stroke of genius. More than 60,000 sets of the Britannica were sold in this popular form.

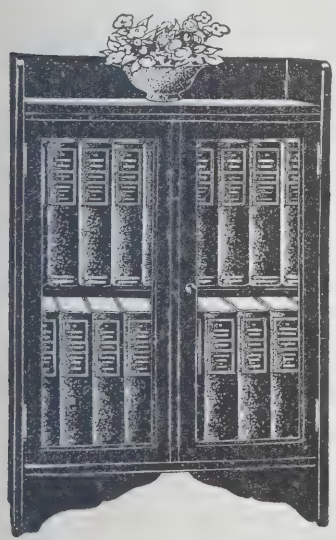
A Real Opportunity

Now, when this same opportunity is offered to subscribers to the new Thirteenth Edition, the demand is bound to surpass all previous records. The 16 double volumes are printed from the same large type plates used in printing the more expensive Cambridge Issue. In this way thousands of dollars are saved, because we do not have to reset 33,000 pages of type.

A Few of the Contributors

HENRY FORD
ANDREW W. MELLON
WILLIAM M. JARDINE
Judge BENJAMIN LINDSAY
JAMES JOHN DAVIS
GEORGE EASTMAN
Gen. L. C. ANDREWS
RAMSAY MACDONALD
SIGMUND FREUD
SENATOR MARCONI
JOSEPH CAILLAUX
ALBERT EINSTEIN
Dr. ADOLF LORENZ
CHAS. ALBERT BROWNE
SAMUEL CROWTHERS
EDWIN OAKES JORDAN
GEORGE BERNARD SHAW

The above is but a partial list of the 2500 contributors who have made this great work possible.



They are printed on the famous Britannica Opacity paper—a very thin, high-grade, opaque paper of beautiful whiteness and great toughness and durability.

The thickness of each double volume is only about 2½ inches; the page size, 8 5/16 x 10⅞ inches.

Nothing Omitted

This is NOT an abridged edition. Nothing has been omitted — nothing altered. Line for line, word for word, illustration for illustration, the contents of this New Form Britannica are identical with the contents of the higher priced Cambridge Issue, yet it costs YOU but a trifle more than HALF THE PRICE. Its practical value to you cannot be measured in dollars and cents.

What the New Form Thirteenth Edition Is

You get the same 45,000 separate articles, by more than 2,500 world-famous authorities covering every branch and every avenue of human activity, from the beginning of the world, right down to this very hour.

You get the full record of man's achievement during the "short but tremendous epoch" from 1910 to 1926—those transforming years in which the world has gained a century.

You get timely, practical information concerning all the new developments—actual figures and specifications for your immediate use.

A Vital Necessity

You can't afford to be without this new Britannica. It is a vital necessity to every man or woman intent upon getting everything possible out of life in this marvelous age of opportunity.

Prove It To Yourself

Before you risk a dollar, you can prove to yourself that this great work is indispensable to your individual advancement. We have prepared a fascinating 80-page Booklet which we'll gladly send you FREE.

Your Copy of This FREE 80-Page Booklet

will be sent you gladly on request. Please fill in and mail coupon below. This booklet contains several specimen pages from the new Britannica; describes the New Form (16 double vols.) also the Cambridge Issue (32 vols.); and explains our Easy Payment Plan by which anyone can now afford to own the new Britannica.

Send for this Booklet Now—TODAY. It's FREE. Just fill in the coupon and drop it in the mail box before the last collection tonight.

The ENCYCLOPAEDIA BRITANNICA, Inc.
342 Madison Avenue, New York DI6-G1

Please send me, by return mail, without obligation on my part, your free 80-page Specimen Book of the new 1926 ENCYCLOPAEDIA BRITANNICA (Thirteenth Edition). Also particulars of your easy terms of Payment.

The Refuge of Quack Politicians

(Concluded from page 6)

fied that without the tax exemption the rents would have been at least ten dollars a room—and the company is asking only a banking return and not a real estate return on its money. Mr. Stabler's statement showed a lot of people who thought they paid no taxes just what taxes meant in their lives, and also it showed a lot of people who did pay taxes what it meant in their bills to carry a lot of 'tax free' property.

Taxes are as non-partisan as a dollar bill—but to that fact not all the politicians have awakened.

The politicians got the wrong dope. The votes are not, as has been supposed, with the people who do not pay taxes. The man with property can no longer be treated as a lemon to be squeezed. The total presidential vote in 1924 was just under thirty millions. For the year 1923 more than seven and a half million income tax returns were made—which is half the vote cast for Coolidge, within about a million of the vote cast for Davis, and much larger than the vote cast for La Follette. But that is merely a starter.

WE HAVE nearly eighteen million automobiles—and every one of those cars pays a tax. We have ten and a half million families who own homes—every one of those homes pays a tax. Counting two votes to a family, which is reasonable, we have a home-owning vote of at least twenty-one millions. Of course many home owners also have automobiles and pay income taxes, and we have no way of weeding out the duplications, but taking the total of the income taxpayers, the automobile owners, and the home owners and cutting the total in halves for duplications still gives the taxpayers a clear majority vote. Cut the roll down by two-thirds and you still have a vote that cannot be trifled with. Taxes have become visible. They are going to stay visible.

The fuss over the nuisance taxes which led to their quick repeal was not at all due to the cost of their collection or to the fact that they were nuisances. The sole trouble with that series of taxes was that so many people had to pay them. The tariff on imports is a tax, whether it be levied for protective or purely for revenue purposes, and in the price of certain goods it may constitute a very heavy tax.

If imported goods were sold with price tags marked, say, '$15.00 plus $7.50 protective duty,' we simply would not have a tariff on imports, and both the protectionist and the free trade spellbinder could permanently go fishing. The primary and controlling difficulty with any tax is paying it. While there are no end of theories about taxation and its eventual effect on prices and the standard of living, and all of them are exceedingly well worked out, the student of taxation who weighs each theory at its worth will find when he is through that he is at exactly the point where he started. For all the theories boil down to this: What you take away isn't there any more—but it may be somewhere else.

But if our tax situation is so serious, why is the country apparently so prosperous? Simply because our industrial ingenuity, combined with our large supply of credit, has kept us ahead of taxes in enough lines of industry to preserve the level of prosperity.

ONE hears a deal about the cost of distribution, and the cost is high—most articles double in price between the maker and the consumer. Some of this disproportionate expense is due to too much handling; very little is due to extra profits being added, for the middlemen are not earning any profits worth mentioning. The factor which is never mentioned is taxes; taxes certainly represent twenty-five per cent of the cost of most of the commodities we buy.

That is why the workman pays more than his share of taxes—nearly all his earnings go for rent and commodities. The rich man can spend only a tiny fraction of his income for living. There is more than a possibility that the prevalence of installment buying may be due to taxation absorbing the surplus which high wages ought to have generated.

If prices and wages should drop, then the burden of our present taxation would be crushing. Europe will eventually get out of its financial mess by repudiating, in fact if not in word, internal debts—none of the European countries can possibly raise enough taxes to pay what they owe. This will force a lower scale of world prices which cannot fail to affect us.

But already taxes have begun to hurt. Hundreds of farms in Missouri have been sold for tax liens—the farms were confiscated to build roads. Some townships

and school districts are in default on their bonds. Farms all over the West are suffering; it is not unusual to find a tax of five dollars an acre on a farm which rents for only seven or eight dollars an acre.

On farms in Ohio, Indiana, and Iowa the business receipts in 1913, less all expenses excepting taxes, averaged $1,147 a farm. Taxes averaged $112 a farm, or 9.8 per cent of the net. Prices rose faster than taxes which averaged only 6.7 per cent in 1918. But in 1921 prices were down and taxes were climbing; the net income dropped to $771 and the taxes went up to $253 per farm, or 33 per cent of the net. Expressed in terms of commodities, it took twice as many hogs or beef cattle, or two and a half times as much corn to pay the taxes as it did before—and the farms could not double their production.

On dairy farms in Chenango County, New York, the receipts, less business expenses, in 1921 amounted to $795 a farm. Land taxes took $161, or 20 per cent, leaving $634 for the farmer's labor and the investment on an average of $12,943. On a selected number of farms in Idaho and Washington, taxes are taking one-quarter of the net receipts. In one county of Indiana taxes on a three-year average took 56 per cent of the rent. For the three years 1921-23, the sales of wheat from American farms would about pay the tax.

FARM taxes are everywhere delinquent, but foreclosures have been held off largely because the counties themselves would have to buy in. Taking 1917 as normal, one section of Kansas shows a sevenfold increase in tax delinquencies. Men who know the situation tell me that if any concerted attempt were made to collect farm taxes we should have a panic. And the politicians who are talking of farm relief are the same men who helped put on the taxes!

All of this would seem to assume that tax money paid just disappears—explodes into space like a bomb. Which is not true.

A part of taxes goes for plainly productive purposes. The roads are productive and so are the schools and the sanitary and water systems. The police and the whole machinery of law, while not productive in themselves, safeguard human rights and therefore make life easier. The army and navy expenditures are in the way of insurance funds. Of course there is a limit to this productivity.

If the public services are poorly managed—and they usually are—then all the moneys spent above what might be called the utility line are wasted. No one knows how to locate that line—an individual cannot locate the line in his own affairs without knowing his income. But we follow the opposite course in public affairs.

We do not want to do without anything that we have, and in our blind way we ask that whatever taxes are imposed be painless. We like to fool ourselves on taxes. We like the ostrich system. That is why we have so many concealed taxes—so many that we do not even know what they are, let alone what they cost us.

There is just one way out of the mess—get taxes out of partisan politics. For many years the country was upset by changes in the tariff laws—business stopped while the Congress wrangled. We can repeat that in taxes. Or we can put taxes on a common-sense revenue basis. If the Congress leads, the states will follow. And this is up to the voters.

The fourth of a series of articles by Mr. Crowther. The next will appear in an early issue.

Sesqui Nears the End

(*Concluded from page 3*)

many of the large buildings, notably in the great 'palace of liberal arts and manufactures,' just inside the main entrance.

So much attention was devoted to expansion, as a matter of fact, that one is inclined to believe there was little energy left for management. The Czecho-Slovakian building has been completed for two months at this writing. It is still locked up and empty. The official Argentine and Spanish buildings are just being started. The widely advertised statue to 'steel' is nothing more or less than an advertisement for one steel company.

A bitter legal row over the open Sunday is still in the courts. City officials tried to pass the buck for this up to the state government, and the attorney-general of Pennsylvania is now trying to compel the city authorities to obey the law prohibiting commercial amusements on Sunday. Prosecution by church forces of Sesqui officials in the magistrate's courts led to small fines —so small that the Philadelphia American League Baseball Club decided to try the open Sunday. Before the Sesqui amusements were thrown open on Sundays it was always the custom of police to prevent professional Sunday baseball. But the police could not close the ball parks while permitting the jazz rides and other amusements at the Sesqui to remain open.

All sorts of subterfuges were resorted to in an effort to get around the law. Amusements on the Gladway were thrown open to the public free of charge—but admission was charged as usual at the main gate. Later it came out that the Sesqui management was paying $10,000 to the concessionaires to operate on Sunday. The purpose of operating them was to attract the crowd. The purpose of attracting the crowd was to get the money. In all the preliminary explanations it was said the purpose of keeping open on Sunday was to give everybody opportunity to see the inspiring educational exhibits. It was a patriotic purpose. *But in defending court actions the Sesqui lawyers were compelled to admit that the money from the Sunday crowds was the main object.*

It is being said now by the mourners who failed to capitalize patriotism that the Sesqui has proved that the day of expositions is ended. Virtually everything in the educational and industrial exhibits may be seen in any large city, and some of the exhibits are commonplace even in small towns. The amusements are those of any pleasure park, with a few new quirks here and there. But the Sesqui failed primarily because the news got out that its promoters were trying to make money out of patriotism. The historic aspect of the show is subordinated to the commercial.

No other exhibition in history ever had a more auspicious start. The Sesqui was opened while Philadelphia was crowded with 250,000 Shriners. The Shriners paid admission to see gangs of men at work. Then they went home and described the swamps and the ash dumps and the mosquitoes, to say nothing of the floods after heavy rains and the sieve-like roofs of the 'palaces.'

While they were about it the Shriners got enough of Sesqui history to ascertain that a desperate battle of real-estate options had been fought over it from the beginning. It was this that delayed the beginning of construction work. Speculators made the first site chosen—along the Parkway and in Fairmount Park—altogether too expensive. It was this greedy battle also that caused a half-dozen changes in administration.

Some rather desperate efforts to head off justified criticism were made. The mayor announced one day that he intended to protest against alleged 'unfavorable statements' concerning the Sesqui by a member of the President's Cabinet. One of the women's organizations proposed a spotter system to check up on policemen who were reported to be telling the truth to visitors about the exhibition. The project did not make much of a hit with policemen when the last $2,000,000 was 'borrowed' from their payroll appropriation.

It is probable that the Sesqui will have closed before Philadelphia taxpayers begin to appreciate the burden that has been placed on them. Rumors of a rise in the tax rate have been circulating for some time. Council members are insisting this will not be necessary. The president of the city council, Charles B. Hall, has proposed a deal with the Philadelphia Rapid Transit Company in city-built subways. By increasing its payments on a city-owned elevated enough to pay for the bonds and thus release the indebtedness, the P. R. T. would get a reduced lease for the Broad Street subway now nearing completion.

October

OCTOBER shows up richly in the diary of progress and of history, also of economics, of music and of art. For historians there is the execution of André, October 2, 1780, with a mass of unwritten history to be told as compiled from the unpublished material in the Clements Library at Ann Arbor; the first Colonial Congress which met October 7, 1765, in New York; the Battle of Tours, when Charles Martel stopped the Saracens, October 10, 732, without which the civilized world might have been Moslem; the landing of Columbus, October 12, 1492; the Battle of Hastings, October 16, 1066, when the Norman tide started to flow over England; Burgoyne's surrender, October 17, 1777; the Battle of Salamis, when the Greeks defeated the Persians, October 20, 480 B. C.; the Battle of Trafalgar, October 21, 1805, when Nelson died fighting; the mastery of Pizarro in Peru confirmed, October 27, 1544.

So there is room aplenty for speculation as to what might have happened if something which did not happen had chanced to happen—thus, perhaps the whole of this North America would be under British rule had Washington surrendered to Cornwallis, October 19, 1781, instead of victory going the other way—Napoleon mastering the British in the Mediterranean—Sun worshipers imposing themselves upon Greek culture—the Mohammedans ruling Europe, and so on.

But to return to the list of events, William Morris, poet, artist, reformer, designer, printer, died October 3, 1896; Southey, the poet, died October 4, 1774; Tennyson died October 5, 1892; Oliver W. Holmes died October 7, 1894, and Poe, in 1849; Stephenson, of the steam engine, died October 12, 1859; Robert E. Lee, Confederate general, and Tycho Brahe, the astronomer, died on October 13, the first named in 1870, the second in 1601; Gounod, the composer, died October 16, 1893, and Verdi was born October 9, 1814; John Adams was born October 19, 1735, and Swift died on the same date, in 1745; Babbage, the calculator and father of the adding machine, died October 20, 1817; on the twenty-second Spohr, the violinist, was born in 1859, and Liszt, the pianist, died in 1811; October 24, Daniel Webster died in 1852, and Macaulay was born in 1800; Hogarth, the artist and satirist, died October 26, 1764; and Henry George, economist and proposer of a tax on land values as most just and equitable of all modes of taxation, died October 29, 1897. Nor should the death of Cartwright, inventor of the loom, be forgotten, as of October 30, 1823

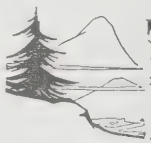
Why Tuberculosis Is Being Cured In Albuquerque

Perpetual Sunshine

There were only three days last year when the sun did not shine upon Albuquerque, according to U. S. weather reports.

Mild Winters

Albuquerque winters are so dry and mild that outdoor living can be enjoyed without cumbersome wraps every month of the year.



5000 ft. Altitude

The therapeutic limit for beneficial results. Makes possible summer nights so cool that blankets are welcome even in July and August.

Good Accommodations

More sanatoriums for the exclusive treatment of tuberculosis than any other city in the world; excellent hotels; accommodations in private homes.

Excellent Food

Truck gardens and dairies in the fertile Rio Grande valley, and the farms of California, a day's ride away, supply the best of food.

Low Humidity

Albuquerque has but one-half the rainfall of Colorado and one-fifth that of Eastern health resorts and low humidity the year around.

An Adequate Merchant Marine

(Concluded from page 7)

drawn into the maelstrom which was rapidly involving the entire world. The immediate cause of our entrance into the war was an unlawful attack upon our over-sea commerce in goods and passengers, upon which the prosperity of the nation depended.

Transportation from every section of the country to the coast was rapid, effective and assured. Once at the port terminals our troops and supplies, which the Allies needed, had to wait for over-sea transportation.

In a more hopeful world where concerted and sincere efforts are being made to limit naval armaments, the merchant ship assumes an even more important aspect than heretofore in the problem of national defense. Under a program of lessening naval armaments, if war cannot be avoided in this way, the hastily armed merchant ship will play an important part in the naval warfare of the future, so that the adaptability of such ships for armament is regulated by the treaty to prevent an unfair advantage or an undue preponderance in naval strength.

WE NEED an adequate merchant marine under the American flag to insure the uninterrupted continuation of our splendid domestic transport facilities to the markets of the world in time of peace. It is the bridge which must be constructed and maintained from the American farmer and manufacturer to their customers over the seas. We should not so greatly depend upon foreign transportation to bridge this gap.

In seeking the markets of the world there is keen competition. Our margin of prosperity should not be dependent upon conditions over which we have no control, when foreign carriers are diverted from our trade routes.

We need an adequate American merchant marine to supplement our splendid first line of defense. We should never again see our great naval fleet on a world cruise supplied by alien vessels; their supply should be under our own flag. Every great maritime power looks to its merchant marine as its naval reserve.

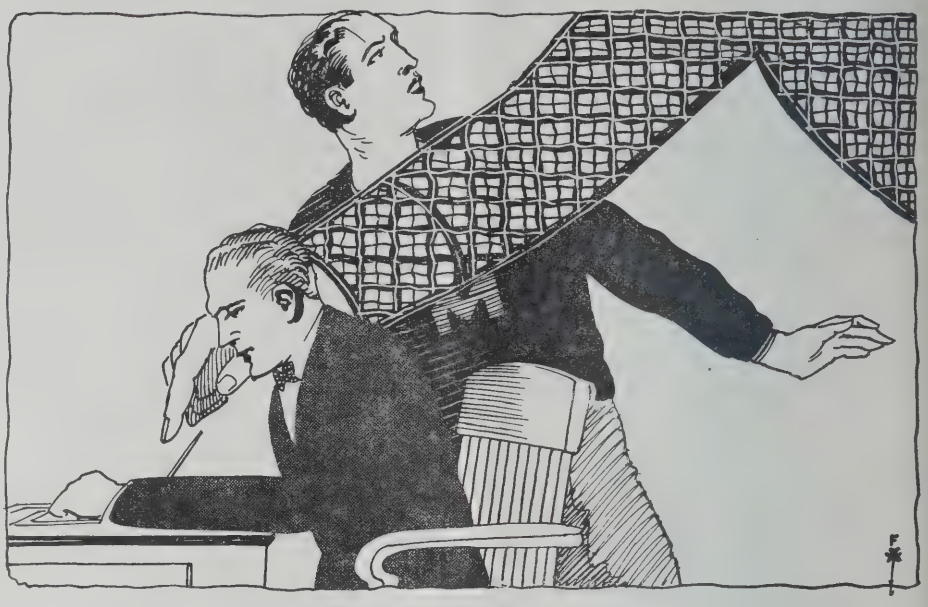
Every great maritime nation fosters, nourishes and protects its merchant marine either by direct subsidy, mail contracts, subventions, preferential duties, stock subscriptions or in some other adequate manner. We have superior terminal facilities and great harbors. Our domestic system of handling cargoes at our terminals is a decided tribute to our mechanical genius. During the late war America replaced her flag upon the high seas at an enormous expenditure of money and labor and it should be kept there.

To carry half the foreign trade of the United States in American bottoms is the purpose of the American people as declared by Congress. In June, 1926, the Senate of the United States passed a resolution requesting the Shipping Board to prepare and submit to the Senate not later than January 1, 1927, comprehensive plans for building up and maintaining an adequate merchant marine for commerce and national security.

We can therefore look with a renewed confidence to the future of the American Merchant Marine.

The All-American Team

(Concluded from page 13)



Most of the teams picked by football officials are governed by political motives.

entirely removed. Not that it makes any material or specific difference to any but the players, but eliminate the 'underground' maneuvers and the thing would be more interesting even if not authentic. The several hundred men that make these selections have, with but few exceptions, an end in view. Rather than set down the names of the best men for the various positions they aim to select those men whose selection will please certain communities or certain friends of the man making the selection.

Most of the teams picked by football officials are governed by political motives. The official wants assignments and football is such a peculiar game that an official (except in rare instances such as the Western Conference) has to depend upon the good will of coaches for his work. If a coach does does not like an official then he will see to it that the official will not be assigned to any of his games. Now, to have a player named on a mythical team is a testimonial to the ability of the coach of the team to which the player belongs. So the average official when selecting an all-star team naturally sees to it that he honors players on those teams for which he officiates or teams that he would like to officiate for.

SIMILAR wires are pulled by coaches making selections. The coach has to maintain friendly relations with certain schools. There are other schools with which he would like to form relations. The rest have no material bearing on his career.

With so many good teams and so many good players it is a simple matter to do some broad shading to attain the desired end. Clearwater College may have the best guard in its section. Saltwater College, in the same territory, may have only mediocre guards. The coach making the selections never played against Clearwater College and never expects to get a game with Clearwater but he is angling for a game with Saltwater College for the following season and so he picks one of the mediocre Saltwater guards in preference to the much better guard of Clearwater, a bitter rival of Saltwater.

The public that reads the coach's selections will forget all about them in a day or so but not Clearwater. The mistake will be remembered there. The coach is not concerned about this condition. He knows that selections are a matter of opinion and opinion is never infallible, at least where it concerns the comparative merits of individuals in football. Anyway, he will probably get on Saltwater's schedule and that, after all, was the main purpose of his choice in guards.

A TEAM may have the best pair of guards in the country or the best pair of ends, or tackles, or the finest set of backs, but only one of them will be picked. The other positions will be filled with players inferior to the one omitted but it is against an unwritten rule of All-American picking to have two ends, or two guards, or tackles or backs from the same team. Other teams must be honored as well.

And then, what man is there that can say definitely as to whether the bulk of players named on a first All-American eleven are really better than a few dozen others? It is generally conceded that two or three players are supreme in their positions, but that is only two or three. What about the others? In 1925 Oosterbaan, the Michigan end, Ed Weir, the Nebraska tackle, and Oberlander, Dartmouth halfback, were selected on practically every mythical team picked. They were the outstanding players of the year. Eight other positions were awarded to various players. Some of the best were not mentioned in All-Americans that received national circulation. While a comparative few were honored the bulk of them were ignored and the result was unpleasant. It does not help the player, the team, nor the game. There is nothing constructive about it, nothing satisfying. It can be nothing more than destructive from any of several angles.

Boston Harbor

(*Concluded from page 8*)

time the favorite subject for the Thursday lecture was intercourse with idolaters, with references to Josias and Jehosaphat and Solomon and the Queen of Sheba. No doubt Boston watched the French vessel depart with a sigh of relief.

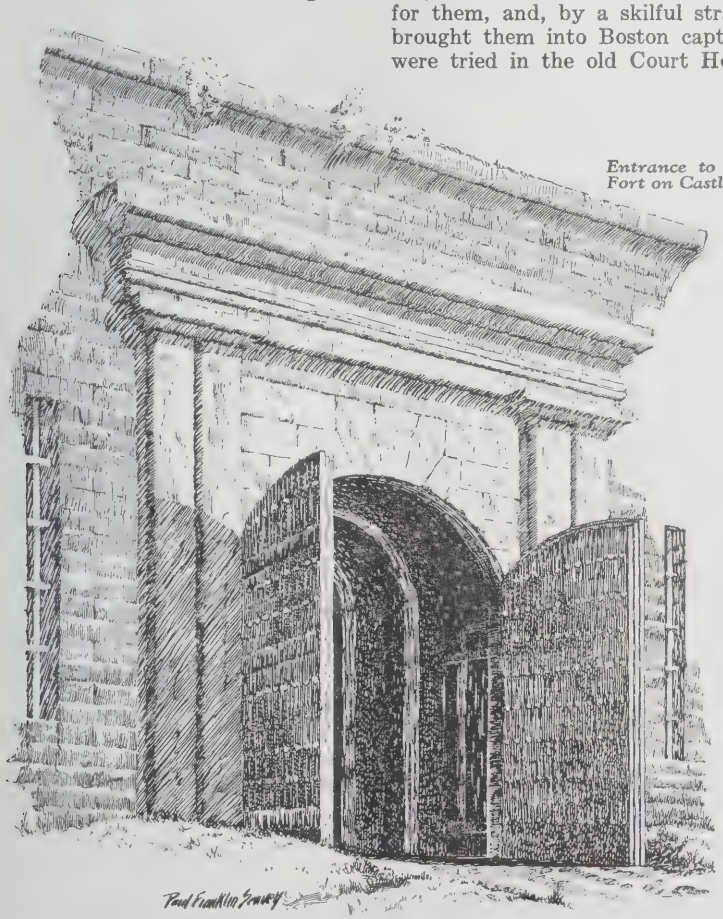
Warned by this experience, the General Court set about renewing their fortifications, and this time the walls were made of pine trees and earth, and Davenport was put in command. It must have gone against the grain for him to float the red cross from his fortress, for he had been one of Endicott's helpers when the emblem was cut from the flag in Salem in 1624, as Hawthorne vividly describes, and he had named a daughter Truecross in memory of the event.

But the earth walls were scarcely more satisfactory than those of mud, and before long they were replaced by brick and timber. For twenty years Roger Clapp was in command and he managed to inspire the General Court with a real interest in the Castle so that sixty men were garrisoned in it. There was a living room below, a lodging room above, and above that a gun room with six Saker guns and six lesser guns. But in 1672 it burned and for once the Court was prompt. Having considered the 'awful hand of God in the destruction of the Castle by fjer,' they decided to build a larger one and Colonel Wolfgang Roemer was put in charge.

There seems to have been some jealousy between Roemer and the Captain of the Castle, for Sewall writes in his diary, 'Today Roemer is treated at the Castle. Captain Fairwether asked me not to go so I went to the Roxbury lecture.' About a year later he tells of visiting the Castle to compose differences between the Captain and Roemer, and he goes on to tell how he exhorted the young men not to observe Roemer's intemperance of language, but rather his skill in building. At last the new Castle was completed, and a slab with a Latin inscription was set over the door to tell everyone about it. The General Court was much pleased and held a little official junketing party down the harbor to admire the structure.

All through provincial days the colonists seemed to take a great deal of pleasure from the islands, while today a busy city hardly knows that they are there. Just north of Castle Island is Governor's Island which was granted to Winthrop as a retreat. Here he planted the first apple and pear trees in New England, and many an old Massachusetts orchard has its origin in the Governor's nurslings. Winthrop also had pasture for his sheep on Nix's Mate, which then was quite an island, although today it is only a low-lying heap of stone topped by a white obelisk to warn shipping.

There is gruesome history connected with Nix's Mate. In July, 1726, the pirate Fly and his companions were hanged here. Fly's body was put in irons on a gibbet and those of his associates were buried beneath the gallows. Fly had been bos'n on a scow bound for Guinea on a slaving voyage, and, with a few like-minded fellows, he had seized the ship, killed the officers, and gone pirating. But one Atkindson, whose vessel they had taken as a prize, proved too much for them, and, by a skilful stratagem, he brought them into Boston captive. They were tried in the old Court House before the Admiralty Court of which Judge Sewall was a member, and promptly sentenced to be hanged.



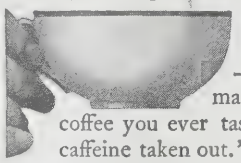
Entrance to the Old Fort on Castle Island.

And then 'great pains were taken to dispose them for a return to God.' Cotton Mather visited them in prison and left with them 'several books of piety.' But Fly remained obdurate, refusing to attend service in North Church where a consoling sermon was preached from the text, 'They Dy even without Wisdom.'

The *Boston News Letter* describes the execution and Cotton Mather published an account of the whole affair under the title, *Remarkable Relation of a Cockatrice Crushed in the Egg.*

But the islands of Boston Harbor have their bits of romance to brighten their sterner story. During the Siege of Boston, Noddle's Island, which is now East Boston and the airport, was a refuge for twenty young ladies, one of whom was the sweetheart of William Tudor, an officer in the American army. This young man used to go from Cambridge, where he was stationed, to Chelsea, tie his clothing in a bundle on the top of his head, and swim to Noddle's Island. No doubt the Hellespont is more picturesque than East Boston Channel, but we never read that Leander kept his clothes dry. It is pleasant to know that when the war was over young Tudor and his sweetheart married and lived happily ever after.

REAL COFFEE
Without Caffeine!



"Drink real coffee —full-flavored, aromatic coffee—the finest coffee you ever tasted—but with the caffeine taken out."

No one is denied the joy of coffee, in enlightened homes today! For coffee from which the caffeine has been extracted couldn't harm a child—nor keep anybody awake. It has no effect whatever on heart, nerves, or kindeys.

For coffee at its best, try Kaffee Hag. Your grocer has it; or clip coupon now.

KAFFEE HAG 10¢
1534 Davenport Ave., Cleveland
Send me postpaid, enough Kaffee Hag to make ten cups of real coffee; I enclose 10 cents (coin or stamps).

'Coin' Harvey, Prophet of Monte Ne

(Continued from page 5)

Harvey holds that all this of which we are proud and boastful must vanish, not perhaps swept away by any violent revolution, but rather decayed, self-destroyed, wasted because of our petty whimsies, and our selfishness, and our greed. It is Coin Harvey's last gesture.

SO THERE are the three symbolic things. First, evidence of a keen perception of that which is beautiful, hence a protest against what is corroding and barren and unworthy. Second, the unfinished temple in which, it was hoped, men would have banded themselves together in no timid way, their purpose the shouldering of burdens and the matching of themselves and their fellows in unflinching combat against the evils which threaten civilization. Third, the pyramid which is a kind of monument to man's weakness and shortsightedness, also a record and account of the failure and death of a civilization. Or putting it another way, one may look upon the road between the promontory and the pyramid as a kind of inverted Pilgrim's Progress. First a vision of possibility and a rejoicing in the fairness of the world. Next a realization that a worm is at the heart of the bud, therefore a calling upon man to extirpate the wounding, disabling thing. Last, the coming of the fear that the social organism was too deeply tainted for recovery, therefore the tombstone. In three words, Trust, Hope, Despair.

Projecting ourselves into the far future and seeing with the prophet's eye, this is what we would have. A continent abandoned, forest-grown again, vine-tangled and unhealthily luxuriant. Over it roam nomadic tribes, savage-faced, fierce, brutally ignorant. Of flimsy things on which we pride ourselves, railroads, buildings, airplanes, machines, museums, churches, libraries, nothing is left, for all were of perishable stuff. Perhaps there are fragments; pieces of china, some glass, here and there a thing of gold, something else enameled. But cities have long since passed away and the very memory of them is gone from the mind of man. Books and papers, all those records we so busily make, have long before become dust and been blown away. Of the vast and complex organization of society as we know it, not a sign remains. There has been complete and utter disintegration.

In Palenque is a broken gateway by which we gain a hint of a lost people, but of this civilization of ours not so much as that remains. Of all our thousand cities not a record will stand as the monolith at Tiahuanaco stands. Mountains will have worn down. The Mississippi will have formed a new land out in the Gulf. Other nations will have arisen in lands which we now look upon as barbaric. And in them will have arisen a people wiser, less selfish, braver to accept experience than any now living.

Presently voyagers from other lands will explore this continent, wondering at the emptiness of it, speculating as to why so vast a territory should be unoccupied. Perhaps there would be found a faint tradition of a lost race. Perhaps the discovery of some insignificant trifle, a broken cup or a shining fragment of glass, would lead to a suspicion, then a trail. Then, one day, in that corner of the world which geologists say is the oldest part of this continent, the discovery of a curious structure would be made. So would follow excavation work.

THE pyramid would be laid bare. The sealed chambers would be entered. And there, for the use of posterity, remote posterity, would be found a record of these, our own days. Whereupon the tale would run over the world and men would wonder at the drawing aside of the veil. They would stand amazed and stupefied to learn of a people with institutes, colleges and societies, which offered a wide and varied scheme of education, but without a systematic religion. They would learn of a people flinging zeal, genius, labor, freely into causes, yet failing to grasp the fundamental principles of economic salvation. They would learn, through the records in the pyramid, of nations overwhelmed with monstrous debts and humiliated by financial disasters, therefore torn by faction, ringing with recriminations, waiting each day for war. They would come to know of a generous people of great aspirations engaging in the most bloody of wars. They would read with astonishment of a people conscious that things were wrong, yet trusting to a broken reed which they called National Destiny and the Spirit of the Age.

And seeking further, hunting for causes, they would come to the prophecy of the pyramid-building prophet, that the evil thing was the thirst for wealth, greed, money-making: *Usury*, in a word.

For there is Coin Harvey's message, the denunciation of usury. Because the world is in debt, because the world must pay so much per cent, because interest on mortgages take precedence of other obligations, because the money lender is king, because the interest-bearing debts of four leading nations of Europe amount to more than $253,000,000,000 more than their total wealth, and because of allied things hanging upon these, this civilization of ours must come to disastrous end. Because of national debts there are monstrous outgrowths of war-like ambition and imperial pride. Because of bonded indebtedness there is the spirit of domination, of national selfishness, of revolutionary violence. Because of debt and usury there must be industrial slavery.

That there are in abundance men of genius, of devotion, of loftiness of aim, is true. That there are persistent strivings toward social and moral improvement is not to be denied. But, while the destructive demon of

You come to a place where you stand on a high ridge, at your feet a broad valley through which winds the White River like a silver ribbon.

Usury remains untouched, so long must the forces of evil crush out hopes and neutralize the best efforts. Thus saith the prophet of Monte Ne, the man who once saw the vision of a glorified earth.

But, some will say, leaping at conclusions, all of that theorizing about the danger of piled-up interest payments is nothing but the idle dream of a man with bucolic temperament. It is like the philosophizing of a Thoreau, or a Richard Jefferies, or a saint removed from the world. It is all an impossible vision of one who knows nothing of commercial life and the activities of city life. It will never do to think more of the matter, except with an amused interest. But those conclusions would be erroneous. For Harvey, in his day, has been an active man among active men, politically and otherwise. *Who's Who* lists him as lawyer and author, the docket shows him to have been something very much the right-hand man of William Jennings Bryan, if not indeed the manufacturer of Bryan's thunder. Some predicted for Harvey a career in Washington, D. C. Others spoke of him once as presidential timber.

The truth is that Harvey's philosophy grew, not out of life in the country, but life in cities. It came to fruition in those troublesome times in the 1890's when the pressure of distress and disappointed hopes led to something very much like national hysteria. For the money-lender and the speculator had sowed their evil crop and the ugly harvest was being reaped. All the wild schemes and unsound enterprises of Fisk and Gould and Tweed and their high finance gang had effect. In New York City alone the civic debt incurred in two years amounted to $100,000,000, and other cities were following suit. There had been tinkering with the tariff by way of patching up things, with consequent disturbance of prices. There had been strikes; martial law proclaimed in Illinois and other states; presidential messages regarding the hoarding of gold; presidential bond bills for the relief of the Treasury; rejection of them by Congress; state loans; agitation for and against free silver, the former growing out of Harvey's efforts; a silver convention of seventeen states west of the Mississippi to increase the use of silver, proposed and machined by Harvey; the formation of a bimetallic union, engineered by Harvey; a sound money convention at Memphis, and much more of the sort.

It might be taken for a castle the glory of which has faded, a temple forsaken in the building.

MEANWHILE, legislators often seemed to see nothing before them except to invent new taxes; but to pay new taxes in addition to the old meant pressure elsewhere, and that pressure reacted in Knights of Labor, and in combinations forcibly to increase wages whether employers could afford to increase or not; hence lockouts as well as strikes. Almost it seemed as if only money-lenders and pensioners and swindlers and government sinecurists and those who lived by their wits were the prosperous ones, while everyday men were on financial rocks. And because of piled-up interest, there were disasters in the transportation world.

That may seem far-fetched until it is remembered that money drawn from operation for interest payments meant either inferior labor or poor maintenance. Poor maintenance meant bad roadbeds and inferior equipment, and those together made for a casualty list. And everywhere were falling prices, unemployment and discouragement because of the slump.

THEN came a book on economics which sold by the million. It bore a message of hope as Henry George's *Progress and Poverty* had a few years before. The book was called *Coin's Financial School*, and William Hope Harvey was its author. How that grew into the 16-to-1 campaign is history, for Bryan made its thesis an issue. What does concern us is the fundamental idea behind the book, which was a great truth, freshly stated, but old as the Old Testament writers. It was this, a thing as certain as the multiplication table. *A debt-burdened nation cannot continue to exist, much less hope to thrive*, a saying so simple and so undeniably true as almost to be platitudinous.

Harvey was a latter-day Amos, a Savonarola, a Knox, warning people against covetousness, telling them that a man's life consisted not in the abundance of things possessed. He was like the old Buddhist reminding men that he who greedily seeks wealth is like the child who eats honey with a knife, for scarcely was the sweetness tasted than the tongue was cut. He was like a new Mahomet crying in a desert that wealth was given to be liberally bestowed but not avariciously hoarded. As to the solid thing, which caught the popular fancy where his ethics did not, it was this hard fact: that the debts of the world, public and private, have grown so great that the annual interest exceeds the total money volume of the world.

So there is the gist of 'Coin' Harvey in three words, Down with Usury. He saw a debt-burdened world, a world with the money-lender encouraging people to sell themselves into economic slavery, with, presently, a nation credit-crazy. He predicted the putting aside of the old-fashioned virtues of industry and economy and thrift. He foresaw a nation given to luxury, the luxury that destroyed Rome and a dozen other civilizations. He sought a nation strong and lion-like because composed of efficient, industrious men and women. There is the message in a nutshell.

So after the turmoil he went down to the Ozarks, and there he commenced to build that Temple of Civilization of which I have written, a place where, amidst hills and trees and thickets and greenery, wise men might plan the regeneration of a nation. But his dream was too big, and there was wild giggling, like that of the crackling of thorns under a pot. When he built a railroad to the temple, the giggling became cackling. Yet the man went on, until domestic afflictions came, and discouraging circumstances brought a strain. So the building stopped. For all that he still wrote, talked, printed, asserted his message vehemently, held most tenaciously to his beliefs. Then, in the evening of his life it seemed to him that hope was dead.

IN HIS book, *Paul's School of Statesmanship*, there is still a flash of the old-time simple, uncomplicated, uncalculating being determined to achieve a noble conquest, but there is an overlying something, a disappointment, a despondency. He writes: '. . . it is a fair presumption that it is now too late to save this civilization. In an era of political, mental and moral dementia, it is now plunging to its ruin. There is only a slight hope that Reason, Truth and Justice will be sufficiently restored to the minds of men to save it.' Hence the pyramid, 'to inform and admonish of the cause of the death of this civilization.'

The *Jeannette* Expedition

(*Continued from page 15*)

September 17, they hauled the boat through water, mud, and floating ice cakes to within half a mile of shore. From this point they carried their stores and equipment to the beach. Until far into the night they worked, wading back and forth in the icy water between the boat and land. They were now reduced to five and a half days' rations of pemmican and tea. The nearest settlement, as far as they knew, was almost a hundred miles distant.

Now began the trek that was to end in death for all but two members of the De Long party. Already used up and undernourished, with heavy loads, the men hobbled along, breaking through thin ice everywhere, occasionally up to their knees. At night they would wake up frequently, shivering with the cold. One of them, almost totally disabled, held back the others, so that their average was hardly four miles a day. On one occasion two of the hunters saw a herd of seven or eight deer, but were unable to get a shot. Meanwhile, Erickson, the disabled one, grew steadily weaker. On September 21, at a point approximately eighty-seven miles from the nearest probable settlement, they found they had but two days' rations.

—Brown Bros. Photo.

A striking view of the 'Roosevelt,' frozen in the ice at a point farther north than any ship is known to have reached. This was under Admiral Peary's command.

At this point, De Long came upon two huts and decided to send forward a couple of his best walkers to get relief. There, at least, the greater number would have heat and shelter. But the plans were changed unexpectedly late that night, when the Eskimo hunter returned with the encouraging news that he had killed two reindeer. De Long thereupon decided to remain in the hut a day or two to let his followers recuperate and to allow the hunters to bring in more deer. But they were unsuccessful, and at the end of two days, when but approximately fifty pounds of meat remained, De Long set out again and the party accomplished five more miles. On the second day they made twelve miles. Fox traps and abandoned huts were seen, but no human beings.

On September 26 but one day's rations remained. After a cold and comfortless night, and when but one meal remained, Nindemann, one of the sailors, and Alexy, the Eskimo hunter, brought in a fine buck. Here were rations for three days. They were saved again! At noon, strengthened by a substantial meal, each man shouldered about fifteen pounds of meat in addition to his ordinary load, and they set out.

They kept plodding to the southward, although De Long did not recognize the topography from his sixty-year-old chart. At length they came to a spot where one river ran to the southwest and another to the southeast, the narrower one at least a quarter of a mile wide. There were no materials at hand for building a raft, so De Long went into camp, in the hope that the river would freeze over during the night.

Finally, when but two days' rations remained, the party proceeded to ford the main river. They made twelve miles that day and ten the next. At noon on October 3 they consumed their last bit of pemmican. Nothing remained but their one dog. De Long therefore ordered him killed and dressed, but he and the surgeon did not partake of the stew that furnished their evening meal. Cold, wet, with a raw northwest wind blowing, the party spent a wretched, dreary night. Erickson became delirious, and his groans and rambling talk rang out on the still night air. By morning he was quite unconscious; they lashed him on a makeshift sled and dragged him forward with the party.

After a walk of two hours, they came upon a hut, where they built a fire and for the first time in four days warmed themselves through and through. Erickson died the next morning. There was nothing to do but bury him in the river, for the ground was frozen and they had no tools.

De Long and his men were so weak and emaciated by this time that it was with difficulty that they sewed Erickson's body up in a flap of the tent, covered him with De Long's flag, carried the body down to the river, and lowered it through a hole in the ice. The next morning they ate the last of their dog meat and used up the last of their tea. Slowly and feebly they pushed on over the barren ground, making three miles in three hours; but when four of them broke through the ice in trying to cross the river, De Long halted the party and had a fire built. Late in the afternoon the Eskimo hunter returned with one ptarmigan, with which they made soup—for thirteen hungry men.

Breakfast the next morning consisted of an ounce of alcohol in a pint of hot water.

This, however, seemed to keep off the craving for food. Finally, on October 9, when they had reached the end of their resources, De Long sent two of the seamen, Nindemann and Noros, ahead for relief, with orders to keep to the west bank of the river until they should reach a settlement. The party followed laboriously. They were fortunate enough to shoot three ptarmigan, of which they made soup, but the next morning found them with nothing to eat but scraps of their deerskin clothing and footgear. Again they broke through the ice in trying to cross a creek, and it was necessary to build a fire and dry their clothing. 'All hands weak and feeble, but cheerful,' wrote De Long in his diary that day. For the next two days their rations consisted of a spoonful of liquor in a cup of hot water at breakfast time, which exhausted the supply. Their dinners consisted of tea made of Arctic willow shoots.

For two days De Long and the survivors were cramped in a hole in the bank of the river, unable to move, while a blizzard howled about them. They were too weak to move against the wind and snow, yet they realized that staying there meant starvation. On October 14, soup made from one ptarmigan, some sweet oil, and willow tea constituted their entire food supply. The next day they had willow tea and two old boots. Here two of their men broke down and De Long was compelled to halt and camp. One of these was their dependable Eskimo hunter, Alexy, who died two days later. They were now too weak to do other than lay him on the ice of the river and cover him over with slabs of ice and snow.

Four days later, during which time they had no food whatever, two others died, leaving but nine in the party. Their bodies were carried around the corner of their temporary haven—an empty grain raft—and laid on the frozen ground. On October 14, when Nindemann and Noros had been

gone two weeks, De Long noted in his diary that everybody was pretty weak and that they had had a hard night.

On the next two days he merely noted the number of days since the sinking of the *Jeannette*—the 135th and 136th days. On October 27, in addition, there was this notation: 'Iveson broken down.' Then followed: 'October 28th, 138th day. Iveson died during the early morning. October 29th, 139th day. Dressler died during night. October 30th, 140th day. Boyd and Gortz died during night. Mr. Collins dying.'

This is the last entry in the most pathetic record of any Arctic expedition, except perhaps Greely's. There were but three men left when the entry was made—De Long, the surgeon, and Ah Sam, the Chinese cook.

No one, of course, will ever know the extreme hardship which De Long and his men endured after they became separated from the second cutter and the whaleboat, and the difficulties which they overcame. So weak were they after their terrible exposure in the boat that they could not raise their feet to break through the young ice when wading to the shore, but were compelled to push through it as they plodded feebly along. When finally they got ashore, they found the surface of the ground spongy and wet when the weather was mild, and when snow fell the walking was equally difficult. The men slipped at every step, thus doubling their exertions. The chart which they had laid down only eighty mouths to the Lena Delta, but two hundred and ten were counted by those who traversed the coast in the searches that followed the fateful voyage of the *Jeannette*. In fact, the courses are never the same in two years, and it was this fact that caused De Long and his party to move more and more to the eastward and to become entangled in the labyrinth.

It was not until Nindemann and Noros had traveled nearly one hundred and twenty miles that they fell in with Siberian natives. On the morning of their departure drifting snow filled the air. Sometimes they were compelled to wade across streams, and when they halted at night, the wind was still so high that they were unable to light a fire. So they dug a hole in a snowdrift and there they lay the night through, wet to their waists and compelled to knock their feet together every few minutes to keep them from freezing. The next day, October 11, they pushed on southward, with nothing but some Arctic willow tea and part of a boot sole to sustain them. Toward evening they came to a hut, where they built a fire and dried their clothes. They were kept indoors on the twelfth by a southwest gale, and on the thirteenth they again pushed forward, often breaking through the ice; but on the fourteenth they could not see their way through the driving snow, so they turned back to a little hut and stayed there for twenty-four hours. Their food all this time consisted of strips cut from their sealskin trousers, and washed down with some Arctic willow tea.

—*International Newsreel.*

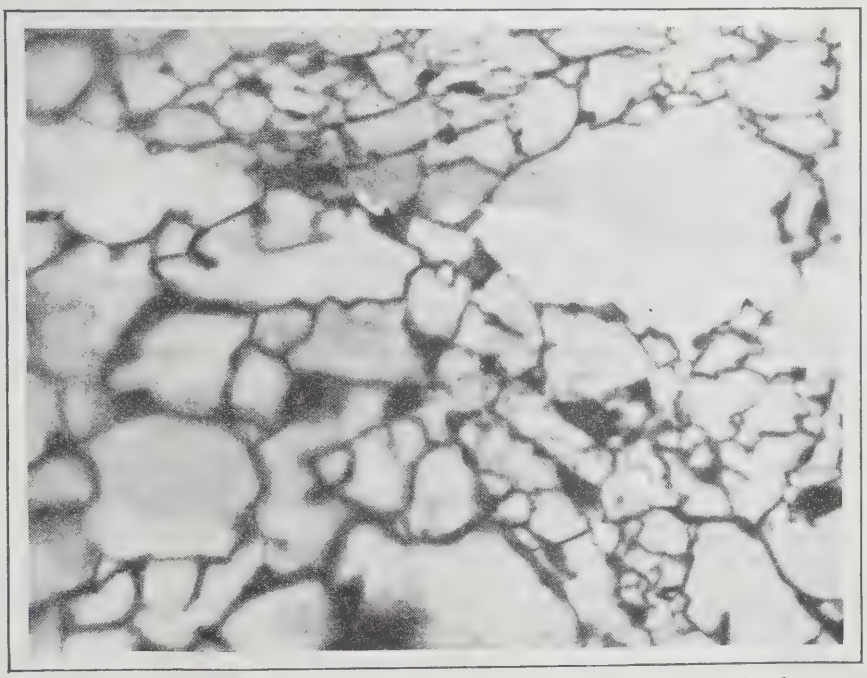
Alaska's rugged glaciers viewed from a United States Navy airplane engaged in mapping the region.

In this fashion they staggered southward, usually sleeping in a hole cut into a snowbank wherever night happened to find them, and pushing on the next morning. They were so exhausted now that they could scarcely move for more than five minutes at a time. On the nineteenth they found some mouldy fish, but this made them ill and compelled them to stay in a hut for three days.

It was here that a Siberian native found them, but they were unable to make themselves understood, and finally the native drove off with his reindeer. That evening, however, he brought back two other natives, together with food and clothing. Still unable to make themselves understood, Nindemann and Noros were taken to a native camp about fifteen miles away in the mountains, and the next morning, still unable to explain to the natives the desperate plight of their party, the two seamen were taken to the nearest Russian settlement. This was a two days' journey. Here two more days were spent in a fruitless attempt to make themselves understood.

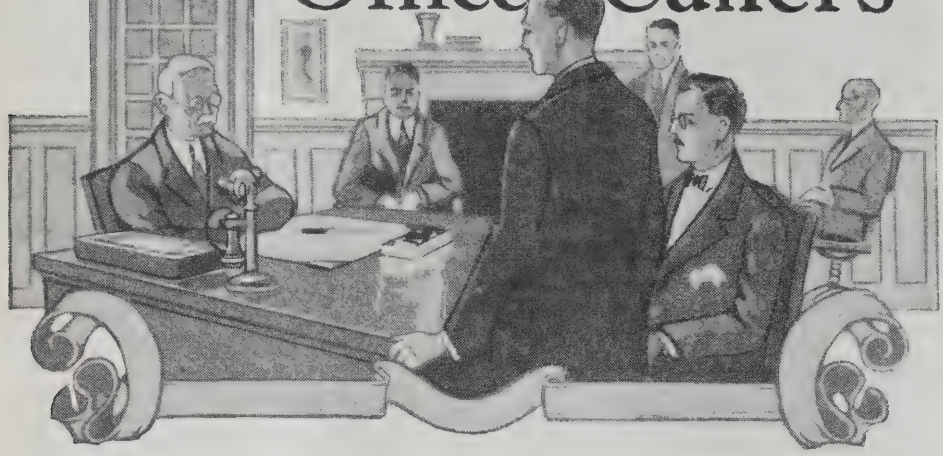
The natives finally brought in a Russian exile, but the Russian could not understand either English or German. But he took a note which Noros had written, and left at midnight, returning in the morning and requesting them to follow him shortly to Bulun. Here they found the commandant of the settlement and stayed with him that night. One of them wrote a telegram to the American minister at St. Petersburg, and the commandant left them, saying he would take the paper to the 'Captain.' Here they stayed for three days, when, on November second, Engineer Melville walked in upon them. Melville had been unable to secure a native to guide him through the intricate passages of the Lena Delta. He was frostbitten so badly that he could not walk. In twenty-three days his party traveled about 650 miles. Without knowing it, they passed close to the spot where the explorers for whom they were looking lay dead. Weather conditions rendering further search impossible, Melville took the survivors to Yakutsk, and the majority of the men were sent back overland to the United States.

Thus another Arctic expedition met disaster and defeat, disappointment and death, where it had expected to win honor and renown by overcoming the barrier of ice and snow that blocked the way to the great secret of the North.



When Commander Byrd flew in his airplane over the weird region shown in the above picture, his guiding instruments indicated that he was right over the North Pole. Here the explorer dropped the American flag in honor of the discovery. The white portions represent immense pieces of floating ice. The darker portions represent water.

Chats *with* Office Callers



The Traveler from Egypt said that it had occurred to him that we would be interested in visa fees charged abroad, owing to a recent article on the subject which appeared in THE DEARBORN INDEPENDENT. He produced a tariff of fees which he said he had picked up at the Greek Consulate at Cairo, Egypt.

Referring to this tariff, he said:

'You will note that Americans are assessed a fee of 202 piasters, which is approximately three times the highest tariff applying to Austrians and Germans. Two hundred and two piasters comes to nearly ten dollars in American money. The Austrian and the German each pays 77 piasters, while the Belgian and the Englishman each pays 48.

'It is a fact,' continued the traveler, 'that Americans pay out more in visa fees on this basis than all other nationalities combined, and efforts toward reduction of this great expenditure are certainly to be commended. I am merely one of several thousands who could cite instances of this petty robbery.'

❦ ❦ ❦

The Student was in a philosophic mood. 'Try the memory test on what you read in the newspapers,' he said. 'You—the outer man—read and read, while your other—the inner—man pitches the junk overboard and stores away in hidden compartments the odd, the valuable and the interesting. So, searching the memory shelves, I find in my own mind these, read about in the past month: In Budapest the police discovered a traffic in children, sold by half-starved parents. The little ones were bought by farmers and factory owners, the prices running from $15 to as low as $2 a child, according to age and physical condition. Sir James Colquhoun Irvine, of the University of St. Andrews, warned his audience at Williamstown that chemical warfare would be a potential factor in the future, and would result in a scrapping of the whole present machinery of war. The ancient city of Shechem has been unearthed, with the discovery of the temple of Baal announced. Thus there stuck in my mind one thing significant of the past, one of the probable future, and one of the present, in Europe.

'I did not read about the channel swimmers, nor the prize fight, nor the graft trial. There was no need to. Energetic persons on cars and in houses and in streets were eager to enlighten me and to quicken my dull perception into life. But a minor poem, by a poet so minor that he does not give his name, stuck in my mind, and the title should be "September."

'There is no rapture in the hedge,
Lacking the wild rose and the may;
The trees have lost the keener edge
Of greenness and grow tame and gray.
The birds have ceased to sing; the dream
Has vanished and become the doubt;
For Earth, having announced the theme,
Is busy with the working out.
So there are stirrings of regret
E'en in the time of mellowing;
Alas! did ever summer yet
Fulfil the promise of the spring?

❦ ❦ ❦

'As a boy I always stood in awe of the stern, earnest person,' said ***the Local Doctor*** as he sat back in his chair. 'But the old theory that the underslung jaw and prominent chin denote strength of character has been exploded. At the International Orthodontic Congress Dr. W. Stanley Wilkinson, of Melbourne, Australia, explained that a man so distinguished was merely one of those fortunate individuals whose mother insisted on his keeping his thumb out of his mouth when he was a baby. It seems that this thumb-sucking during the first six months of a child's life has a direct inhibiting action on the normal forward growth of the lower jaw. So when you see one of those sturdy chaps with a bulldog jaw, remember he owes a big debt to a thoughtful mother.'

❦ ❦ ❦

A Writer of Short Stories said that the most hopeful sign in present-day literature was the opportunity offered. 'Not in the standard magazines, necessarily, but elsewhere. For there are magazines in ever-increasing numbers, some rather obscure to be sure, but of praiseworthy merit which stand ready to give the young author or poet an audience. ***Another Broke In*** as the short-story writer continued to talk. He had seen a picture show, a story of an imaginary Wild West, in which a supposed Texan at a wedding attended church dressed in long boots, wearing an enormous Stetson; and, by way of giving point to his remarks, drew a bowie knife. In a gentlemanly and unostentatious way he roped the villain groom as the clergyman was about to pronounce the two man and wife, for, like Chaucer's *Poor Persoun*

'He waited on no pomp ne reverence,
Nor made him ne spiced conscience.'

The discussion on the triumph of ineptitude over ability in the commoner screen pictures occupied us, and we never returned to the subject of literature.

But ***The Critic*** did get in something about books for boys, and how so many of them were not a hair's breadth higher in literary tone than the *Jack Harkaway* stuff of thirty years ago, except that those of the old time were sold for a dime, while the new cost two dollars and were cloth bound.

What we did get on to, and stay on for some time, was motion pictures.

'Producers lack imagination,' declared one man. 'They hang to the filming of novels, distorting them too often; and they hang to so-called historical subjects, dragging in all kinds of impossibilities and anachronisms.'

'In Conrad's *Victory*, for example, the subtlety was lost,' said the writer.

'But suggest something,' said another.

'Well,' the first man went on, 'if you are going to ask me, I'd say that the moving picture was admirably suited for thrillers.'

'You have them in the Wild West things,' put in the author.

'No. Not that stuff. It's played out. It is the same old thing—hairbreadth escapes, wild riding, rescue of girls, villains, people eavesdropping. But there's a whole world of startling stuff in the tale of terror.'

He went on to list some of them: *Vathek* and the gloomy palace of Eblis with its tall columns and gloomy towers, and caves with reptiles with human faces, people running about with burning hearts, the caliph and his courtiers—and there's the tale of Cannobie Dick who was led by a mysterious stranger into a mountain, and in the mountain were knights, and horses, and a wonderful horn which no man dared to blow. But Dick did, and the rest of the tale is a thriller if ever there was one.

'Or what of Marryat's *Phantom Ship*, with its one-eyed pilot; the werewolf, and all that kind of thing, with the ship sometimes a mist, sometimes substantial as a house. Every moment is a crisis in it, and surprises come like pistol shots.

'And that horror, *The Monk*, by Lewis. The wandering Jew and the bleeding nun; and skull-headed women, and ghosts, and unhappy lovers, and coffins. There are horrors enough in it. I'll guarantee to lacerate nerves if people like that kind of thing.

'I tell you, the moving picture is made for that kind of stuff—gliding shadows, vanishing phantoms, invisible people, skeletons, corpses, moldering floors through which victims fall, massive doors which open at a word, headless people, armed ruffians, brigands with cat-like whiskers, lonely knights on desolate moors. I remember one, a wild story all about statues holding aloft massive swords; then, as the victim enters, stone legs advance, swords fall, and—. Good, healthy, blood-curdling horrors they were. And only the molly-coddling fellows went in for the sickly sentimentality you see on the screen today.'

New York's Little Joke on New York

(*Concluded from page 1*)

'Well, it hasn't worked.'

And that is the really sad part of the whole affair. The clever little joke turned out to be a joker. The beautiful scheme flopped. *It didn't work because the drys decided to ignore the referendum to concentrate on the candidates.* Could anything have been more unfair to a hard-working, hard-thinking politician than that? Witness this plaintive plea from the state platform of the Republican Party:

'The referendum gives *all* the opportunity to express themselves. We urge a full expression at the polls on this matter.'

What could be nicer than the wording of this? And yet the drys are so unreasonable as to emit a raucous horselaugh. Their expressing, they declare, will be *on candidates.*

This works genuine hardship on the selfsame candidates. Those who had expected to balance delicately atop the referendum pole until they could discern which way the wind was blowing, find themselves suddenly up in the air with their support gone. Those who, like Senator Wadsworth, have performed the remarkable gymnastic feat of backflopping from the dry to the wet column find themselves in a still more embarrassing position. They discover, now it is too late, that instead of firing their ammunition at a dummy referendum, the drys are firing it at *them.*

The referendum itself is one of the most obfuscate bits of legislation ever slipped across the boards in a supposedly sovereign commonwealth. It is not a law. It does not pass upon any law. If voted 'yes' unanimously it would have the effect of no law. It is, indeed, scarcely more official in texture than the straw ballots which swept the wet newspapers of the country into such a fine frenzy of enthusiasm a few months back. It has no more direct bearing upon the national prohibition law than the King of Siam's dental bill has on the internal debt of Cuba.

Webster's Dictionary defines *referendum:* 'The referring of measures already passed upon by the legislative body to the body of voters *for approval or rejection;* also the *right* so to pass on laws, or the vote by which this is done.'

There is no element of approval or rejection of the Volstead Law in this case. The voters of New York State cannot, all by their lonesome, approve or reject the Constitution of the United States or any of the national laws passed under that Constitution. Nor does the element of their *right* to do this enter in. Even the most ardent referendist does not contend this much.

But granting all this, protest the wets, the referendum will record the sentiment of the people in the greatest state in the Union! Oh, will it? Let's take a peek at the referendum and decide that little matter for ourselves. What manner of document is it? One would naturally suppose that, inasmuch as this is to record the sentiment of the people on prohibition, its wording would be so clear as to avoid the slightest possibility of misunderstanding. There is only one open-and-shut question in the whole liquor controversy:

'Do you want the return of the saloon?'

This is short. It is concise. It is clear. There is no chance for confusion. It is easily understood. It would take up little space on the ballot. And in spite of the many subterfuges wafted up by the wets to becloud the issue, the return of the saloon is the sole alternative to prohibition. Therefore one would naturally, as we said before, expect that some such question as this would be that of the referendum.

But would the wets hear of this? No! A thousand times no! *Here* is the referendum as finally evolved by one of the most astute lawyers in the nation, a man noted for his anti-prohibition leanings:

Should the Congress of the United States modify the Federal Act to enforce the 18th Amendment so that the same shall not prohibit the manufacture, sale, transportation, importation and exportation of beverages which are not in fact intoxicating, as determined in the laws of the respective states?'

ISN'T that a beauty? No wonder the wets were pleased when a wet legislature, led by a wet governor, ordered it on the ballot. Bless their hearts, they couldn't lose. The dice were loaded.

Read it over again. Analyze it phrase by phrase. What's your first reaction? Why, that a cruel stepfather Congress has taken away from its little children not only hard likker but harmless and delectable *beverages which are not in fact intoxicating.* The sly old villain. Encourage him in his underhanded plot? I should say not!

A few years ago a stage joke was going the rounds of the vaudeville houses. It

concerned a Mexican who was extolling the virtues of his homeland to the disadvantage of America. Stripped of dialect, it went something like this:

'Here in your country a lot of men you don't know and don't want to know make your laws for you. And you have to obey them. But my country: there it is different. There everybody makes his own laws; and everybody is happy.'

That's New York—if we are to believe the referendum proponents. The rest of the country can have prohibition if it so desires; but as for New York—*New York makes its own laws!*

A century and a half ago the thirteen colonies, freed from British rule, welded themselves into a *nation* through adoption of the Constitution of the United States. Through this Constitution they delegated the sole power of enacting *national* laws to Congress, specifically declaring that these laws should bind all the states and all the people. Now comes New York, through its thirsty legislature, with a proposal that these laws shall be effective only *as determined in the laws of the respective states.* Let Congress pass all the laws it wants—as long as New York can 'determine' them. *New York* shall say what *New York* shall drink; not some hick Congressman from South Dakota or South Carolina.

Let's carry this logic a bit further. Suppose the referendum applied to some Amendment to the Constitution other than the 18th. Suppose it referred to the 16th, which authorizes Congress to impose the federal income tax. Probably then it would read:

'Should the Congress modify the Federal Act relative to the national income tax so that the Government shall collect only such amounts *as determined in the laws of the respective states?'*

Or possibly they would apply the referendum to the 8th Amendment, nullifying it so that 'cruel and unusual punishment shall not be inflicted, *except as determined in the laws of the respective states.'*

Surely if a single state can assume to itself the powers of Congress in one instance, it is only logical to suppose that it can do so in countless cases. But logic and ultimate conclusions aren't bothering the referendum proponents right now. What is bothering them is the drys' recalcitrant attitude.

The vote will be 'yes.' That is foregone. Even those experts who nonchalantly predicted Dempsey's victory can come out of their hiding places to voice that forecast. The Democratic platform urges a 'yes' vote. The party leaders urge a 'yes' vote. The Republican platform urges the voters to follow their conscience. More than half of New York State's population is concentrated in New York City, where fewer than three out of ten persons are of native American descent. It can be predicted with perfect safety that New York City, under the combined guidance of Tammany Hall and Senator Wadsworth, will roll up a large 'yes' vote.

But will it mean anything? Up-state New York, where the population is largely of native stock, is regarded as preponderantly dry. Even before prohibition, fully 58.8 per cent of the actual territory of New York State was dry under local option laws. Of the municipal districts in the state, 600 out of 900 were dry.

The politicians have a real problem on their hands. Some way, any way, the referendum must be saved. It must be turned into a Big Wet Victory. And the drys won't play. How to do it—there's the rub. For the referendum has taken on the color of one of those funny little Spanish elections where only those of one side—the *ins*—vote!

I Read in the Papers

A new drive for the subvention of American shipping is destined to be made in the near future, probably at the short session of Congress. Close observers declare that the widely proclaimed effort of the Shipping Board to sell the American merchant fleet is only a precursor to this end. While members of the board are publicly optimistic over the possibilities of sale, privately they are said to be convinced that this is virtually impossible.

Ship Subsidy Drive Due in Congress

On the last day of the last session the Senate adopted a resolution offered by Senator Jones (author of the Merchant Marine Act of 1920) calling on the Shipping Board to report not later than January 1, 1927, a plan for the future development of this nation's merchant marine.

Two lines of action are suggested for maintaining the American flag on the seas. While these have not come officially from the Shipping Board, it is declared that they represent the views of its members. Both involve federal aid. The first is that Congress, through substantial appropriations, continue to support the effort to maintain the merchant marine. The other is that some form of ship subsidy be devised to induce private interests to operate.

Some observers profess to see politics in the board's recent actions offering the ships for sale. In the meantime Washington politicians are busily at work to impress upon the public the necessity for a subsidy.

ɤ ɤ ɤ

The one thing certain about the next war is that it will be fought on a credit basis —Portland *Oregonian*.

ɤ ɤ ɤ

The wild canary is a sad-colored bird, of a greenish-grayish-brownish color, a native of the Canary Islands, distinguished only by the ardor of its song. No doubt the Spaniards, who were great navigators in the 16th Century, brought some of the birds home with them; and they would naturally take them to Spanish Flanders, where they cheered the Flemish weaver at his loom. When the Flemish weavers fled to East Anglia from the fury of Antwerp they took their canaries with them, and England was enriched at the same time with the arts of the weaver and the bird-fancier.

Canaries, Wild and Tame

There were three main lines of development—in plumage, shape, and song. Weavers, like gentlemen, prefer blonds. The canary became yellow, orange, and white, under careful selection. Some varieties grew in size; others became hooped or bowed, and still others grew feathers on their feet and plumes on their heads. It is sad to relate that their morals degenerated as their appearance improved, for whereas the male bird in its natural state is a faithful husband of one wife, the caged canary has become polygamous, and has often a harem of four or five. As for song, the trainer can inspire their ecstasies by rubbing a cork upon the surface of a glass bottle, and make such musicians of them that they never seem to tire of their trills and arpeggios.

The Stone Age husband fattened his ego on the submission of his women folk; a submission which the present Lucy Stone Age husband dreams of but no longer dares to claim.—Dorothy Canfield Fisher.

ɤ ɤ ɤ

England has a new game to follow the cross-word puzzle, an ingenious one. The player starts with a single letter, adds another for the second word, another for the third, and so on, but shifting the letters to form new words, sometimes with curious results in the juxtapositions. Thus, by the addition of a letter, 'reason' becomes 'senator,' as it should—but by another addition, 'senator' becomes 'treasons.' So there is subtle interpretation for the cynics. Here is an example; a prize winner in the *Observer:*

All perfect slang is of a cunning brevity, and it should taste sweet and keen, like a nut. If it does it will make its way yet into the holy of holies where 'literary' English dwells in state. For this queenly figure has the natural sagacity of every successful ruling caste. She does not build the wall too high, and she makes good the natural losses of her establishment by opening a postern now and then and letting in the pick of the lusty upstarts of the period. No possible assemblage of academic duennas can put the kibosh upon her when she is thus prudently minded. 'Me for it,' she will say, and turn the key, and take 'blurb' to her bosom.—The Manchester *Guardian.*

Slang to Be Good Must Be Brief

The English Channel has been beaten so many times this year that it has probably begun to lie down.—Johnstown *Democrat.*

ɤ ɤ ɤ

The civilization of the future may simulate that of the past in one respect, according to the prophecy of W. S. Currier, head of the United States Weather Bureau at Toledo—men may again live underground. They may drive on underground roads, live in underground homes and work in underground offices as the result of development of the science of ventilation, he predicts. That will be the only way, he believes, to escape the vagaries of bad weather and to solve the congestion problem in the large cities. Clean air could easily be supplied the underground dwellers.

Humans May Live Underground

Man was originally driven underground in prehistoric times by wild beasts. Entire cities of troglodytes still exist in Africa, where the inhabitants are peaceful, happy and apparently healthy.

'Men juggle temperature and humidity around like so many balls and create lake breezes by powerful fan machinery,' Currier says, 'but I doubt that they can manufacture weather for the great outdoors. Of course, wonders have been accomplished within buildings, but artificially created rain, man-produced sunshine, or snow at command is a challenge that is ridiculous.

ɤ ɤ ɤ

What our great party needs in this grave crisis is a cash register with a good muffler on it.—*Ohio State Journal.*

ɤ ɤ ɤ

Many newspaper readers have wondered how so much 'movie publicity blah' finds its way into the newspapers. They have heard countless explanations, but none perhaps quite so concise or comprehensive as that inadvertently given by the press agent of a large new theater in a Middle Western city. The press agent accompanied a 250-word story on his 'astonishing' new production, with the following cryptic message:

One Way to Get Into a Theater

'The story below is offered you gratis from the new M——— Theater. If you will mail a marked copy to the undersigned, press courtesy tickets will be gladly mailed to you for the M——— Theater. IMPORTANT NOTE: In order to obtain these passes, it is necessary that a copy of your paper with this story be mailed to the undersigned.'

THE JEWISH POPULATION OF the world is estimated at 18,080,000. The United States, with 4,400,000, leads all other countries, and New York City, with 2,000,000 Jews, is the largest Jewish city in the world.

NOTES COMMENTS CRITICISMS

MR. FORD'S Page this week discusses the future solution of present problems.

Prepare yourself for the heralding of a Big Wet Victory. It's on the books for November 2. On that date New York will vote on its so-called prohibition referendum. There can be only one result; the cards are stacked and the conclusion foregone. *But it won't mean anything.* The widely celebrated referendum is a dud. It's as innocuous as near-beer. (p. 1)

Two men journeyed not long ago to a home in the Ozark Mountains. One was Charles J. Finger, well-known author. The other was Paul Honore, equally well known as the illustrator of Finger's works. But Honore has other claims to distinction. He has long been in the forefront of American artists. His murals in churches and public buildings have brought him national notice. As an artist he is noted not only for his technical skill, but for the beauty of his finished product . . . But to return to the man that Finger and Honore sought. That man was William Hope Harvey, Prophet of Monte Ne. (p. 4)

Paul Honore.

Some time in the dim future, thousands of years from now, a new race may tramp the land now called America. Its leaders will search for clues to the men who once dwelled here, for relics of their civilization. They will wonder of the vanished people, of their accomplishments, of their failures. And, wondering, they may come upon a pyramid. (p. 4)

THIS pyramid is the dream of 'Coin' Harvey. Thirty years ago his writings swayed a nation, affected a great presidential election. Harvey, the prophet, warned his people against the dangers of usury. But prosperity followed want, and his warnings were forgotten. Now, in the twilight of life, Harvey is building a pyramid in the heart of the Ozarks. Our civilization, he believes, is doomed. And he would leave a record for those who come after . . . (p. 4)

May Whiting writes, and Paul Seavey illustrates, a charming story on the historic islands of Boston Harbor. It is a tale of old heroes, and of old pirates, and old fortifications. (p. 8)

Henry P. Zirkgraf, Cleveland, Ohio: I have had plenty of time to study the merits of your magazine and have done so. I take this opportunity to inform you that I am unalterably opposed to any paper so stupid as to support a law which attempts reform by legislation. A law that is a cancer at the heart of the Constitution and an insult to the self-respecting citizens of these United States. I have weighed the merits of THE DEARBORN INDEPENDENT and found it wanting. Please discontinue my subscription.

The Reverend C. C. Lambert, Summersville, West Virginia: I want as best I may, in a word or two, to express my appreciation of the stand of THE DEARBORN INDEPENDENT in the matter of prohibition. The anarchistic temper of a lot of our papers and leading men is shameful, and it does my soul good to get my hands on a paper which has convictions worth while and the courage to express them as you do. Best wishes and long life to your magazine.

[EDITOR'S NOTE: Subscriber Lambert and Ex-Subscriber Zirkgraf are referred to page one of this issue.]

L. F. Fox, Grand Junction, Colorado: I just read 'Socialism Through the Eyes of the Churchman.' I don't believe Mr. Kennedy knows very much about Christianity and I know he doesn't know *anything* about socialism. I am surprised that you would put such trash in your valuable paper.

When William the Conqueror went from Normandy to England he took with him, among other things, a dance then known as la contredanse—later the quadrille. For a time it was submerged in the obscurity of the Middle Ages, reappearing about 1745 in all . . . but let Mary Harrod Northend tell the story of the old-time dances. She does so delightfully. Miss Northend is recognized as an outstanding authority on Colonial subjects. She has written a number of books. Incidentally, she is a kinswoman of Henry Wadsworth Longfellow. (p. 16)

Mary Harrod Northend.

TIME was when the American flag—on American merchant ships—dotted the seven seas. Those were the days when the merchant fleet was chief aid to the United States Navy. But those days are gone. Secretary of the Navy Wilbur tells why a strong merchant fleet is again needed. (p. 7)

One thing must be said for the promoters of the Sesqui-Centennial: They are persistent. Steam shovels are still in evidence on the Exposition grounds (at the time of this writing); workmen are busily engaged in filling in swamp land and grading it. What if there is slight possibility of the land being utilized for the Sesqui. It will benefit *somebody*, won't it? And aren't the taxpayers footing the bill? (p. 2)

Along toward the end of the present season we'll be reading a score or more selections for the mythical All-American Football Team; and according to Paul MacDonald (the *nom de plume* of one of the best-known sports writers in the country) the *myth* is the greatest part of it. Most of the teams are chosen under the you-scratch-my-back-I'll scratch-yours system. And not one of the experts to make a selection has seen one-tenth of the college players in action. (p. 12)

There's another myth that enters prominently into American life—the myth of painless taxation. The aim of most politicians is to place the tax on the other fellow; and while this may be good politics, it is mighty bad national policy. Samuel Crowther, noted business writer, gives a clear and understandable insight into some of the more obtuse taxation problems. (p. 6)

New England Spindles Go to Dixie

The Textile Industry Has Made Enormous Strides in the South

By DIRK P. De YOUNG

IN 1880, the South produced 5,761,252 bales of cotton, of which only 221,337 were made up into cloth in Southern mills, while about 1,573,997 bales of that year's crop were consumed in Northern mills.

In 1925, the cotton-growing states used 4,167,596 bales of their staple in their own mills, whereas New England —the great center of the industry in the United States for many generations— consumed only 1,638,774. Furthermore, without wishing to convey the impression that Fall River and other cotton-spinning communities of New England are now like Goldsmith's deserted village, it should be noted that during the last ten years the South has increased its spindles four to one, as compared to the North.

A spindle, by way of explanation, is the unit of measurement in the industry—the elemental step in the manufacturing process.

These are remarkable figures, all taken from Government sources, and others will be given to show what is going on in one of the country's greatest industries. But they should all be taken with a grain of salt. Statistics and Government reports frequently need seasoning.

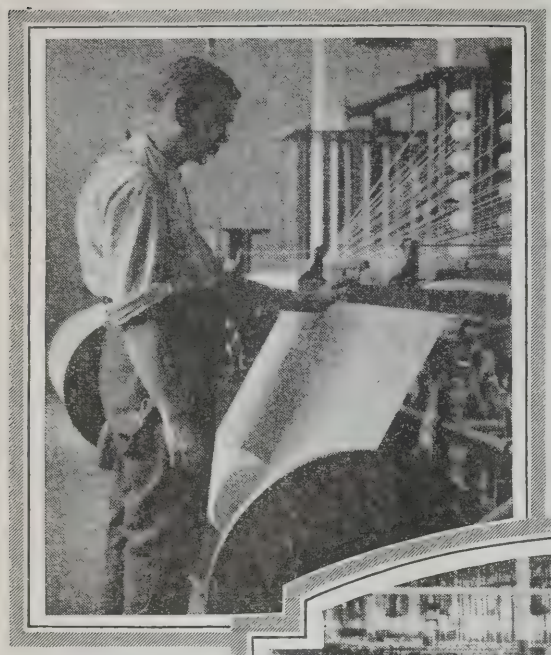
Without a doubt, the cotton-spinning industry has witnessed a change. New England, once supreme in this line, has yielded some of her prestige to the cotton-growing states. But it is still a great factor in the industry in more ways than one—first as a producer of cloth on its own soil, and second as a capitalist financing Southern mills. With all this southward trek of the cotton-spinning industry—from 1909 to 1919—the official figures indicate that more than half a billion dollars have been invested in Northern mills during that period, as against a little less than that in Southern mills, with money for the latter coming from coffers of thrifty Yankees.

—Ewing Galloway Photo.
Detail picture of cotton as it appears when ready for picking. Right—Bale of cotton, a standard of measurement and the form in which this commodity is shipped.

Thus, as Europe seems to have suffered little from the emigrants which make up our population of 115,000,000, New England still keeps up her cotton industry in spite of rapidly increased spindles in the cotton-growing states and reports of labor troubles, often magnified. Of the 111 mills in Fall River, Massachusetts, operating one-fifth of the spindles of the North, not one has moved South, and there has been no strike of any consequence there since 1904. The great expansion of the cotton-spinning industry in the South, it appears on closer examination of the official figures, has therefore not been a movement of mills, as is superficially thought, but the industrialization of the South itself, in which such expansion represents increased cotton-goods production in the United States as a whole, with the South taking the lead for various good and sufficient reasons.

It should be noted here that even though the South consumes 2,528,822 more bales of raw cotton than the North, the aggregate value of its finished products is about the same. Moreover, in the matter of yardage, the 1923 Government reports show that the Southern mills spun only 4,767,000,000 square yards from the 4,192,985 bales they consumed, whereas the New England States got 3,144,000,000 square yards of cloth from the 2,049,580 bales they used. All of which tends to show that the latter section is making the finer fabrics, concentrating more on quality, while the former, speaking generally, runs more to cheaper or so-called competitive cloths.

Until 1810, the South led New England in manufacturing, although



—Ewing Galloway Photos.

Above—Looms which have taken the operation of weaving out of human hands. Right—Operator at spinning machine in Southern mill.

cotton spinning, due to New England's climate, with other industrial advantages, was left pretty much to the Yankees. But the invention of the cotton gin, with negro labor, turned the whole attention of the South to agriculture—the large cotton plantations mostly—with manufacturing relegated to the background.

Then came the Civil War, with the South depressed for two decades following. Capital was lacking for the expansion of manufacturing industry and until 1880 or later most of the residents of the Piedmont section of the South, where this great cotton-spinning industry now flourishes, ate corn bread and blackstrap molasses three times a day.

Outside of occasional employment in the chewing-tobacco factories of that region, about a million and a half of pure-blooded Anglo-Saxon mountaineers were subsisting on a few scrawny acres planted to cotton, corn, and beans. This mountaineer stock, almost free of foreign blood, is the same type as those who made the textile mills of New England famous.

As the cotton-growing states gradually recovered from the effects of the war, the means of restarting the mills were forthcoming and with it business men who assumed leadership. Into these first mills, established less than fifty years ago, the savings of the community generally went, while from that nucleus as the initial investment, operating funds were built up from whatever source they could be acquired, until of late New England capital running into the hundreds of millions is now behind them.

For perhaps a quarter of a century, the operators in New England took no notice of this growing textile industry in the South. Now, however, they feel it so keenly that they have had to adjust themselves to the southward trend. This has been done, to a considerable extent, by constructing mills of their own in the South to take care of their increasing trade. Certain kinds of work can still be done in New England to better advantage than in the cotton-growing states, while many of the operatives of the North bring generations of background to their work. So, as said before, it is largely in the making of competitive cloths that the trek of the industry is southward. New England is still leading in the finer fabrics.

Tremendously rich in the natural resources for a textile industry—power, raw materials, and stable population—the mountain and plateau regions of the South have advanced with the stride of seven-league boots, in the past fifteen or twenty years. The capital invested in Southern mills in 1909 was only $351,000,000, while in 1919 it jumped to $812,000,000 and is probably more than a billion today, representing an investment equal to that in the New England mills, where the industry is as old as the nation.

New England, the birthplace of our textile industry, thrived under high protection and no serious competition with other sections of the country. Until the beginning of the present century the operatives there were of native or English stock, intelligent, skilled workmen, all speaking a common tongue. At the same time, with-

Science Describes the Interior *of the* Earth

By J. V. NASH

Dr. T. C. Chamberlin, Dean of American Scientists, relinquished the presidency of the University of Wisconsin, which he had held since 1887, to become, in 1892, the head of the Department of Geology at the newly established University of Chicago, where he could be free to devote his entire time to his scientific work. In addition, he has been director of the Wisconsin Geological Survey, commissioner of the Illinois Geological Survey, and consulting geologist of the United States Geological Survey. In 1894 he was geologist to the Peary Relief Expedition and made an important study of the glaciers of Greenland. He holds almost innumerable degrees, memberships in scientific societies, and awards. As long ago as 1878 he received a medal from the Paris Exposition of that year in recognition of his geological publications. For years he has been the most prominent geologist in the United States.

THE interior of the earth is no longer a realm of darkness and mere speculation. Three lines of specific evidence now penetrate it. While their full report is not yet at command, important light has already been shed on the tectonic or architectural state of the interior.

'The earth is a heterogeneous elastic solid, inclosed in a heated jacket which it has been for ages forming about itself from worn and weathered surface material reshaped and bound together by exudations from within. The "floating crust" is a misinterpretation. The continents stand on solid (elastico-static) foundations. The earth is better organized and stronger today than ever before, and the reorganizing processes show no signs of exhaustion.'

Such is the latest announcement of Dr. Chamberlin, who for half a century or more has been diagnosing old Mother Earth.

At the age of more than eighty-two years, the veteran geologist has just completed an important series of investigations on the structure of the earth, and the foregoing is a summary of his conclusions. Although past the age-score mark, and now a professor emeritus, Dr. Chamberlin is continuing his inquiries at the University of Chicago regarding the earth's structure.

Dr. Chamberlin is author with Professor F. R. Moulton, of the now famous planetesimal hypothesis of the origin of the earth and other planets. I asked Dr. Chamberlin to tell something of his part in this important discovery. He explained how for many years he had been testing the Laplacian and other hypotheses which sought to explain the birth of worlds, and had found them unsatisfactory.

'These men,' he said, 'had been working down from the heavens to the earth. I looked upon the features of the earth as hereditary traits and wanted to trace them back and find out whence they came and how they came. That is the geological method.' Professor Moulton, he continued, was at this time a young instructor, specializing in celestial mechanics and mathematics.

One day, while crossing the campus, Dr. Chamberlin met young Moulton, and in the course of a conversation threw out a suggestion on a certain phase of planetary movements. 'He dropped his head,' Dr. Chamberlin went on, reminiscently, 'thought a moment, and said: "Why, to be sure. Why didn't I think of it? I think I can test that in other lines." So he started the application of what is called the *moment of momentum* to some fundamental problems. He began to inquire into whether the Laplacian hypothesis would stand tests in that line, and he reached very decided results.

'That was the beginning of our coöperative work, and perhaps I may be pardoned for saying that it was a rather unusual combination in that field. Moulton, you see, was strong on celestial mechanics and on mathematics, whereas I was a naturalist, working from the earth up. Moulton understood the other side perfectly, and could test things by the principles of mechanics.

In reply to the inquiry as to how he had happened to become a geologist, he looked back with his mind's eye across the years and replied:

'I began simply as an educator, without any thought of scientific investigation. I was a high school principal at Delavan, Wisconsin, from 1866 to 1868. I taught the old classical course of the strictest sort. There was very little science in it, and I was personally strongly inclined to the philosophies. But after two years of experience as a public school-teacher and principal, I became convinced that the course of study was too narrow, limited, and dry, really to meet the needs of the ordinary pupil.

'So during those two years I gave little talks on various subjects—geology, astronomy, history, and things of that sort—to broaden out the course. I also started some little excursions out to see something of nature. I was untrained in these lines, but as a boy on the farm in the pioneer days when nature was still almost unmodified I had an unusual opportunity to see nature as it was, as a boy sees it.

'In doing this supplementary work for the pupils, I myself became interested in the sciences. I foresaw the coming wave of scientific development. So I stopped teaching for a year, and went to the University of Michigan to study the sciences. I covered the full range of the leading sciences. I had tickets of admission to the dissecting rooms, and similar advantages.

Putting *Sense* Into Taxation

A Plea for *Raising Revenue* Without *Destroying Prosperity*

By SAMUEL CROWTHER

THE noon whistle blew. The visitor, looking at his watch, asked the factory superintendent:

'Is that the right time?'

'Sure it is; it's observatory time. Do you see that big clock across the street in the jeweler's window? That's one of those telegraph clocks. It's always right, and we go by it.'

The next day the visitor happened to be in the jeweler's shop. He compared his watch with the jeweler's clock and asked, absently:

'Is your clock right?'

'To the dot,' replied the jeweler. 'It hasn't varied half a minute in a couple of years. That factory across the street gets the time direct from Washington, and when the noon whistle blows I look at my clock and it's always right, or at the most just a fraction of a minute off.'

That is the way with a good many authoritative statements when tracked to their lairs—particularly when we get into the high realms of government finance. We spend what we can raise by taxation and borrowing, but also we tax and borrow according to what we spend. It is just like the old game of fixing wages on the cost of living. Wages and the cost of living are results of the efficiency and directness of production and distribution. If we regulate our taxes by our expenditures and our expenditures by our taxes, then no matter how learned we may look, we are merely setting the factory whistle by the jewelry clock and the jewelry clock by the factory whistle. That is, we never know what time it really is in our public finance.

The first real tax question is: *What do we want and how much do we want to pay for it?* The second question is: *Who should do the paying?*

And right here we run up against a fact which is not commonly emphasized. We should not—continuing expenditures in their present volume—have much bother about tax rates if it were not for the exemptions.

We legally exempt between one-fifth and one-sixth of the entire wealth of the nation from taxation and that is only a fraction of the actual total exemption. Tax-exempt bonds are only a trifling part of this exemption.

It is in the states and their subdivisions that the exemptions, legal and otherwise, come into full flower. Some of the legal exemptions are obvious; it would be mere bookkeeping for a state to tax its own property. Also it is a general rule that charitable, educational, and religious institutions be not taxed—at least on other than their investment property.

There seems to be no good reason why an endowed orphan asylum should not be taxed on its real estate, while the workman up the street supporting his wife and children and at the same time buying his house is taxed. It would be a fine thing for the country if church property were taxed, because then from every pulpit in the country we should have sermons on taxation!

The ratio of legally exempt real estate to taxpaying real estate runs from 7 per cent in Missouri to 124 per cent in Wyoming, but in Wyoming this is accounted for by the large area of public lands. New York exempts over $4,000 million, or 24 per cent, Massachusetts exempts 18 per cent, and Pennsylvania the same percentage. Illinois exempts only 9 per cent, Ohio and Michigan 10 per cent, and New Jersey 12 per cent.

The fair and frank taxation of realty is getting almost no attention, in spite of the fact that it is the main support of local government. In the case of a rented property the burden of this tax is sometimes on the tenant and at other times on the landlord. When there is a shortage of houses, the full burden falls on the tenant. When there is a surplus, the payment is divided according to the surplus—that is, when there is a glut of houses and apartments, landlords will take almost any rentals they can get. They then operate at a loss and this loss finds its way back into the sales value of the property.

The price of a property bought for rental is based on the capitalization of the rental. The realty tax can make or break a community almost overnight and upset business and living conditions more effectively and more rapidly than any other tax. It is possible to take a big slice off the value of a property by increasing the rate of taxation.

So many factors enter into the incidence of taxation—that is, into who really gets hit—and so many of these factors depend on the emotions and conditions of the moment, that only the pigeonhole type of mind will dogmatize. We do know, however, that too heavy a tax will either be evaded or will exhaust its source.

The policeman may take an apple every day from the fruit stand, but if he decides to take a bushel every day, the Italian gentleman will either forcibly resist or will remove his stand. The policeman's protection is worth an apple a day but it is not worth a bushel a day.

We go on the tax theory that what we do not know does not hurt us. In other words, if the policeman sneaks an apple every time he passes and the Italian does not see him, it is of no matter even if he does pull out a bushel a day. But our taxes are now so large that they cannot be taken surreptitiously.

The only painless tax not yet tried is the sales tax. This magic tax about which we heard so (Continued on page 22)

WE TALK about tax reauction. There is only one way to effect tax reduction, and that is by reducing the amount that the state spends. We must either pay the piper or not hire him. How much government do you want and how much do you want to pay for it? Are you getting your money's worth? And are you paying for government with a minimum or with a maximum of inconvenience? Then why search for the painless tax at all, since the best we can get is a poor substitute? Since we cannot know exactly what taxation does to us, why not do the next best thing—know what we directly pay, and abolish all painless taxes? Why search for what cannot be?

Abraham Lincoln's Vein of Poesy

A Trait Which Furnishes Rare Insight Into His Character

By WILLIAM E. BARTON

Drawing by AUSTIN EUGENE BRIGGS

HUMAN nature is complex. We shall not fully understand any man by inquiring what were his major interests and stopping with these. Every man combines in his personality elements diverse and antithetic, blended either harmoniously or discordantly. Every man is the sum of all his qualities. We can never assume that we know any man until we have completed our induction of his proclivities, and made inventory of his traits and impulses both dominant and subordinate.

Abraham Lincoln was a lover of poetry, and at one time cherished aspirations to be a poet. This is not the most important fact to be known about him, but is a fact not negligible in the summing up of his character.

Poetry is the oldest form of literature. The oldest books of history, by no means excluding the historical books of the Old Testament, have embedded in them scraps of poetry and song still older. Children are poets by nature. Only by persevering cultivation of adult stupidity do we make ourselves as commonplace as we ultimately become. To say that Abraham Lincoln in his youth aspired to be a poet is to make a gratifying discovery of his essential normality. It will do us good to discover also how he learned poetry and what kinds of poetry he cared for.

What was the first poetry Lincoln knew? The few books of his boyhood contained no poetry, save only as he found it in the poetical portions of the Old Testament, and he did not know that the *Psalms* and *Proverbs* were poetry. *Pilgrim's Progress*, *Robinson Crusoe*, *Aesop's Fables*, the *Arabian Nights*, Parson Weems' *Life of Washington* and whatever history of the United States the boy Lincoln possessed were none of them in verse. He did not learn poetry, or what he thought was poetry, from books.

The first poetry he heard was in the form of old ballads, sung to him by his mother. This included *Barbara Allen*, in which the hero died of a broken heart by reason of the cruel rejection he suffered at the hands of the heroine; and *Fair Eleanor*, which she probably pronounced 'Ellender,' whose tragic tale was an early form of the triangle. The Brown Girl she had lands and gold, Fair Eleanor she had none, so the lover acted on the advice dictated by worldly wisdom, and married the Brown Girl. Fair Eleanor went to the wedding, which was a perilous adventure, and she made unpleasant remarks about the complexion of the Brown Girl:

'Is this your bride?' Fair Eleanor said,
'She seemeth me plagued brown;
And you might have had as fair a bride
As ever the sun shone on!'

Gentlemen prefer blondes, we are told, and this preference would appear to have been of long standing. The hero would have preferred Fair Eleanor, except for the undeniable advantage of the Brown Girl's land and gold. The Brown Girl did not enjoy Fair Eleanor's contemptuous remark, and so stabbed her fair rival. The hero promptly drew his sword, cut off the Brown Girl's head, 'and slung it agin the wall.' Then just before he thrust his sword into his own vitals, he turned to his mother, who had advised him to jilt Fair Eleanor and marry the Brown Girl, and he gave these final directions:

'Oh, Mother, dear Mother, come dig my grave,
And dig it wide and deep,
And bury Fair Eleanor in my arms,
And the Brown Girl at my feet.'

That was a satisfactory way to dispose of a triangle. When there was no *tertium quid* there still could be a dramatic ending. Though it was Barbara Allen and not her lover who was cruel, gallantry had its place in the ending of the ballad. The two lovers were buried beside the church. Out of her breast grew a red, red rose, and out of his grew a briar, and they grew beside the old church wall, and they climbed to the top of the spire, and there they twined in a true-lover's knot, for all true lovers to admire.

Never in all her life did Nancy Hanks Lincoln see a church-house with a spire, any more than she saw a lord and lady or a turbaned Turk who scorned the world, who strutted around with whiskers curled, content in the admiration of the ladies of his harem, but she sang about all these things, and Abraham Lincoln learned his first poetry in that fashion.

But also he quickly learned hymns. Once a month his parents took him to church, and sometimes they conveyed him to a big baptizing, and he heard poetry there in the hymns. The congregation rode to church up the creek or down, stopping at the houses of their neighbors as they went, and gathering what grew to be something of a procession.

They assembled under the beech trees, the men talking about 'craps' and politics, while the women were comparing babies and telling each other what was good for whooping cough and itch, until the preacher arrived. He hitched his horse to a swinging limb, took his saddlebags across his arm, and went inside the log temple followed by two straggling groups, the men on one side and the women on the other.

On the rude pulpit were the preacher's Bible and hymn book, and a bucket of water with a gourd dipper. Not only did the preacher drink freely, but any member of the congregation rose whenever he wished a drink, and got it and returned to his seat on a puncheon slab. The preacher had the only hymn book, if indeed he had one. (*Continued on page 20*)

Losing the Game Is as *Important* as *Winning* It

By
GILMOUR DOBIE

HEAD FOOTBALL COACH, CORNELL UNIVERSITY.

The newspaper editor would be short-lived if he omitted football or baseball from his sporting pages.

Gilmour Dobie, head football coach at Cornell University, has been called the 'Miracle Man of Football' because of his unique record for turning out championship elevens. He first came into the gridiron limelight at the University of Washington where year after year he turned out teams which had practically perfect seasons, repeatedly defeating such schools as California and Oregon. Dobie left Washington in 1915, and after a year with the University of Detroit became head football coach at the United States Naval Academy. From Annapolis he went to Cornell, and because of his success there has been given a ten-year contract, with eight seasons left to coach. His team each year is rated as one of the best in the country.

I AM frequently asked by lovers of football—and by broad-minded educators who recognize the place of clean competitive athletics in the development of young men—as to the danger resulting from the lofty position created for the gridiron hero of today. Also, in the tremendous importance given this sport on the average American campus.

Everything seems to be turned toward the production of a winning team. The alumni regard that as the most valuable aid they can render their alma mater. The heaviest investment athletically is in the stadium, and in the football establishment which of course includes the coaches.

The general public patronizes clashes between traditional foes literally by the tens of thousands, whereas games of equal importance in other lines of athletics do not awaken interest or draw similarly big gates. Columns of newspaper publicity are given the sport and its participants—greater and more consistently than for any other. The heroes of the game receive more widespread discussion than any public man of the day unless it be the nation's President.

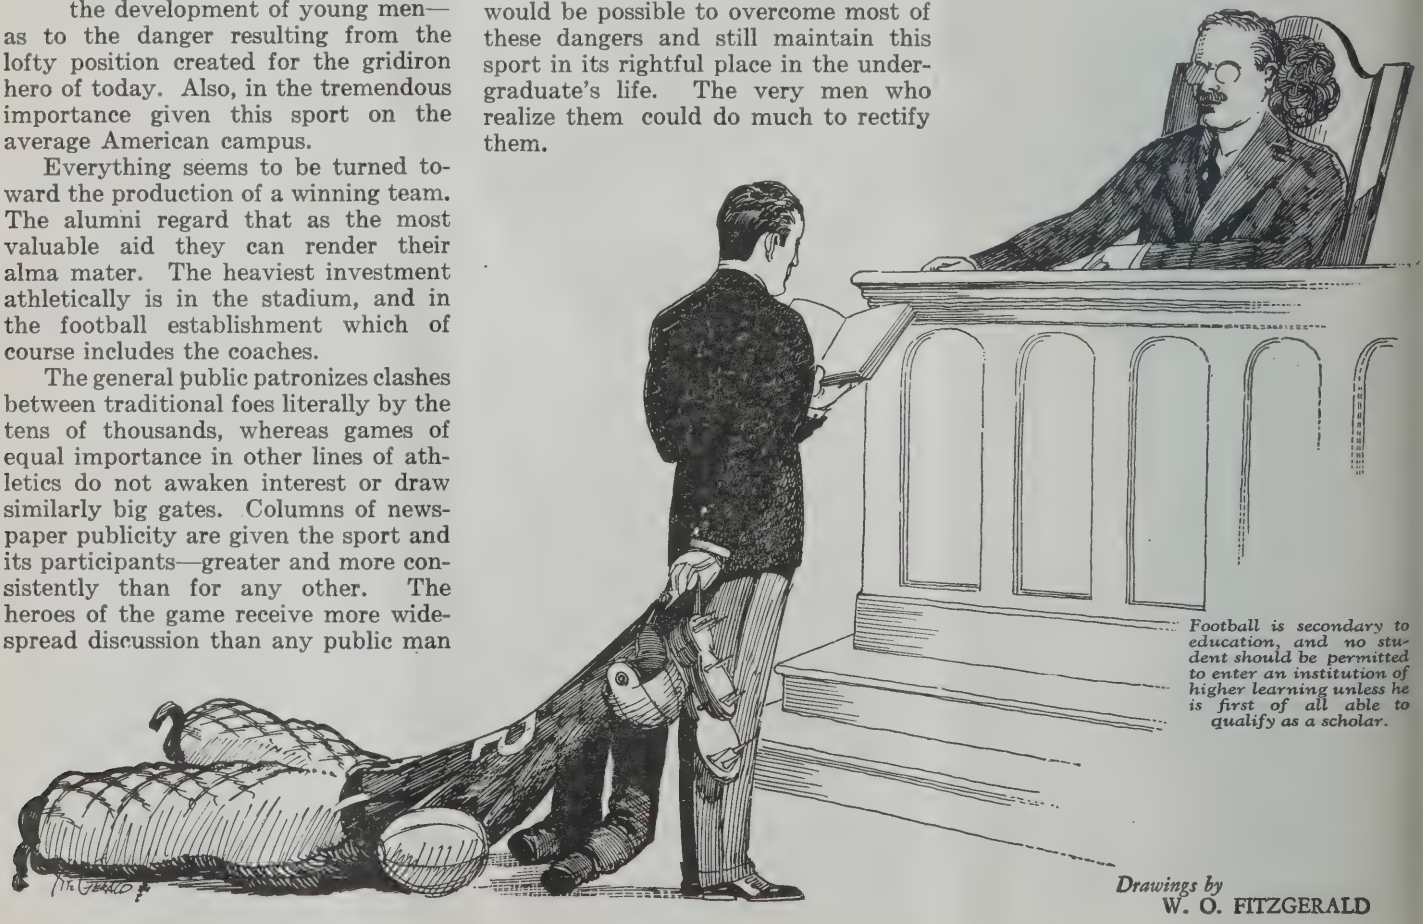
All of which has caused earnest-thinking men, looking ahead into the future, to debate seriously whether the time has not come to correct this condition by abolishing or curtailing intercollegiate football.

They point to the invasion of the field this year by professional teams as one danger sign. They use 'Red' Grange and George Wilson as illustrations of what they believe to be the logical sequence of American college football. They point to the great stadiums being erected over the United States, to the high salaries paid the coaches, and the scouting done by the alumni in securing stellar players for their own schools—at times paying for their education.

We all recognize that there is justice in these contentions. But we should not hold football as a sport responsible for them. In my opinion it would be possible to overcome most of these dangers and still maintain this sport in its rightful place in the undergraduate's life. The very men who realize them could do much to rectify them.

In the first place, too much attention is given to the importance of winning games. Naturally, I believe in winning. I believe every man in every team who goes on the football field should trot out with a determination to win if he can legitimately. But not every team *can* win. Nor can the same team *always* win. If a team goes out and gives its best, but loses to a superior eleven, it should receive the honor it deserves for having given all it had. No student or alumni body, no faculty or townsman, could expect more. Make the test of the team one of good, clean sportsmanship and fighting spirit—and let that same test apply to the school. In other words, be just as great in defeat as in victory.

The great danger I see in the undue importance given the game is in its overshadowing the true purpose of a college education. This can be overcome by making stricter eligibility standards, and then enforcing them. The school which lowers its bars to admit football men who are inferior students does a grave injury to the cause of football. Football is secondary to education and no student should be permitted to enter an institution of



Football is secondary to education, and no student should be permitted to enter an institution of higher learning unless he is first of all able to qualify as a scholar.

Drawings by
W. O. FITZGERALD

It is generally recognized that football carries the other lines of sport in colleges.

igher learning unless he is first of all ole to qualify as a scholar. In addi- on, he should not be permitted to lay more than three years of inter- ollegiate football, regardless of where r under what banner. That is suffi- ent for his development.

I do not agree with those who con- der 'Red' Grange, George Wilson, or ıe other former stars now professional, s typical of the many great players who ave carved their names in the Hall of ame. They represent but a small raction of the leaders developed by ıe game. There are plenty of examples ı the other side of the ledger. One George Pfann, Cornell's great all- merican back of only a few years go, is today a Rhodes scholar.

Personally I do not fear the invasion professional football. I do not believe can ever supersede the intercollegiate ame of today. The spectators attend ıe latter partly to feel the enthusiasm the undergraduates. They become oung again in the thrill of the kick-off. hey could not renew themselves in the ectacle of two professional teams be- ıuse the rivalries of the schools find an ho in their own hearts.

I do not fear that undergraduate ars will seek that field in the future ay more than do baseball stars seek ıe big leagues. A certain percentage ıay do so, but not among those who e in college primarily to obtain an ducation. The reams of publicity ven a football star should not be lamed on the sport.

Looking at it from the editor's view- oint, he would be short-lived if he mitted football or baseball news from is sporting pages. And so would his rculation.

I do not believe we should be armed at the large sums realized from otball nor from the investment made it by the students. Of course it is nerally recognized that football car- es the other lines of sport and without s revenues they would have to be ecidedly curtailed. But aside from at, why shouldn't the college wel- come the flow of money from its patrons to this sport? If necessary to construct even larger fields for their accommoda- tion, why not do so? So long as revenues justify, why not give the public the accommodations to which they are en- titled?

The great interest in football today is a product and part of modern civiliza- tion. The higher schools reach into many corners of the land and touch many homes. On every corner lot, young America is finding in football its most enjoyable fall sport. The game no longer requires weight and brawn alone. Quick judgment and a keen mind are just as important.

I believe that the faculty which in- sists on scholarship first of all from its students will not suffer from overem- phasized football. The danger lies in permitting the desire to win games to lead us to seek good football material first and good students second. The football manager, the coach, the student body or the alumni do not control the entrance requirements. Insist on scholarship, and athletics will take their proper place in college life.

They could not renew themselves to the spectacle of two professional teams.

The Propaganda Factory

By
GEORGE BARRETT DE MORE

IN EVERY modern brokerage office, besides the quotation tickers which print the fluctuations in stocks and bonds, there are news tickers—some- what after the fashion of electrically operated typewriters—which print news affecting the market 'too hot,' to use a newspaper phrase, to await the turning out of a news sheet and its distribution.

The news which broker and stock operator consider so important is gathered by financial reporters who are valued by their employers in ratio to their acquaintance with the street; upon this depends their ability to ferret out news. For unless the financial man has an axe to grind he is pretty sure to keep his lips tight together.

A young reporter who had pre- viously worked only on daily news- papers in New York and the West was taken on by one of these financial news agencies. He was accosted by an ac- quaintance in a café in the financial district as to what he was doing.

'Over at the propaganda factory,' was his reply, and the other understood.

Here is a paragraph written by a broker who spent over thirty years in Wall Street. It was the result of ob- servations made during a day long since past, but it shows clearly that it is practically impossible to have financial news in its entirety based on facts:

'One of the strangest of anomalies of speculation is the facility with which men are induced to take large risks on false information and manufactured "points" (tips). Considering the readi- ness with which a numerous class of "outside" operators buy or sell on sensa- tional rumors, it is not surprising that the professional operators should keep the market well supplied with such de- coys; and it is not easy to say which most deserves condemnation—the heed- less credulity of the dupes, or the de- liberate lies of the canard-makers.

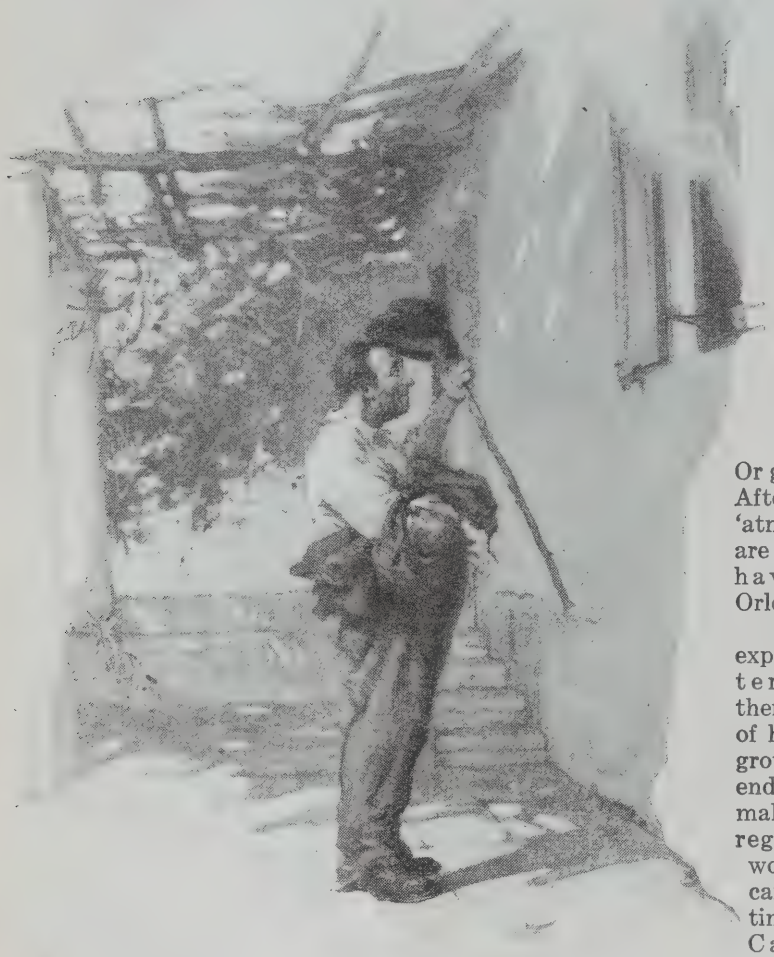
'The object of many of the Wall Street news agencies is a useful one; but the public has a right to expect that when they subscribe for information upon which immense transactions may be undertaken, the utmost caution, scru- tiny and fidelity should be exercised in the procurement and publication of the news. Anything that falls short of this is something worse than bad service and bad faith with subscribers; it is dishonest and mischievous. And yet it cannot be denied that too much of the so-called news that reaches the public through these instrumentalities must come under the condemnation of propaganda.'

The *Kitchen Side* of New Orleans,

The City That Remembers Cooking

By MARY WILLIS SHUEY

Illustration by GERALD VAN DER HEYDEN



Do tramps know more about us than our acquaintances? They come to our back doors, and these show what we really are.

IF YOU want to see the real differences in people you must see their homes, and know their standards of living. It doesn't ever do to 'place' casual acquaintances in impersonal surroundings. Ready-made clothes can make us all alike outwardly, but externals matter little. It is the internals that count—even to the food we eat!

Tourists come to New Orleans by the thousand. They see St. Charles Avenue, Canal Street, and then 'do' Frenchtown. They go to the Cabildo, St. Louis Cathedral, the Presbytere. They see Jackson Square and the Pontalba buildings, and listen to the tales of the professional guide. Then of course a few studios and the Haunted House. They buy an antique or two from Royal Street, visit St. Roch's, the Chalmette Monument, and the cemeteries. (Those cemeteries are filled with the most gruesome and the most amusing stories one can hear, so don't forget them!) They may even take the boat trip around the harbor, and eat at Antoine's or Galatoire's. Or go to the Patio. After reveling in 'atmosphere' they are through. They have seen New Orleans.

These surface expeditions are interesting, and there is a wealth of historical background, both legend and fact, that makes even these regulation visits worth while. You can't spend any time in the Vieux Carre without hearing of Jean LaFitte and the Barataria Pirates, without getting back to Patti, and Lafcadio Hearn. A queer trio to choose at random—but then, that is the way things are mixed in New Orleans!

But I've been wondering if tramps do not know more about us than our acquaintances do! They come to our back doors, and it is our back doors that show what we really are. Many homes that are the same from the living room are utterly unlike in the kitchen. Period furniture does not mean dinner on time! If the kitchen scales were the determinant, many a family would be weighed and found wanting!

Tramps do not bother with sightseeing. But they know their way to the back door, even when it leads through a little alleyway. They know that the bare-looking houses built right on the street have beautiful courtyards at the back. They can tell you of palm trees, bananas and oleanders, of hand-hewn doorways, high double-arched galleries and old fan-shaped windows. They see the flagged courts, with sweet olive, crepe myrtle, pomegranate, aspidistra, yuccas, lantana and shrimpflowers. Rosa Montana flames on the old walls and Spanish jars and pitchers would lure Maxfield Parrish. They know the old wall fountains and well heads, the wall lanterns, and mossy stone benches that tempt a tired tramp!

They can tell you that places that are old-fashioned, even shabby, from the outside, boast furniture worth a young fortune, with antiques still rising in price. Families that might be considered poor by Northern standards have servants as a matter of course, and maintain the kitchens of the past. A tramp knows!

The furniture in many of these old homes offers a decided contrast to the early American of the New England States, of Pennsylvania, or Virginia. Here there are many French pieces, and French influence in the designs of Louisiana cabinetmakers.

The tramps may not see the difference in the carving of the furniture—but they'll know that New Orleans knows how to carve meat. Even the humble daube and spaghetti is a feast.

And the enticing smells that greet you as you approach the back door! Coffee roasting, as coffee should be. A little chicory added to make it just right. Where else do people still roast their own coffee?

Someone said the other day that Americans do not like odors connected with food. We have a scent modesty which forbids garlic, onions, or anything smelly! If you have that complex New Orleans kitchens and foods will not intrigue you. While you are in New Orleans you will prefer eating on the uptown side of Canal Street. For besides onions and garlic, downtown New Orleans uses thyme, bayleaf, spices of all kinds, basil and filet. If you want your food really seasoned try some of the downtown New Orleans restaurants! You may not believe that East is East and West is West, but when it comes to uptown and downtown New Orleans you know that 'Never the twain shall meet!'

Filet is the powdered dry leaves of sassafras. The Indians used it, so it isn't a strictly French seasoning. It is used for thickening the gumbo that is one of the favorite dishes.

Okra, crabs, shrimps, oysters, tomatoes, these and often more go into that gumbo. From the time your New Orleans cook starts to brown her flour until the gumbo is (Concluded on page 21)

MR. FORD'S PAGE

THE time required to make a living is steadily decreasing. This in spite of the fact that the elements that compose what we call a living are steadily increasing in quantity and quality. Less than a century ago, a living for the working people did not amount to much, but it required fifteen or sixteen hours of labor every day to obtain it. So we see the rewards of labor steadily increasing while the hours of labor are steadily decreasing.

The decrease will continue. When the twelve-hour day was succeeded by the ten-hour day, it was prophesied that industry would suffer. Then by slow stages the scale sank to nine hours, until at the present time it is a widely accepted standard that eight hours should form a day's labor-time, and even this in many industries has coupled with it the Saturday half-holiday.

The influences which are responsible for the movement thus far have been haphazard and sporadic. At first it was sheer humanitarianism that entered the arena. People of sense and feeling protested in the name of humanity against the cruel affliction of excessive working hours for mere pittances of pay. They could offer no reason for their protest except that of humanity; they had no argument beyond the ordinary one that this was no way to treat dependent human beings. Thus, whatever improvement came was made in a blind sort of way. There was no sound basis in economics that could then be urged in its favor. Indeed, the whole attitude of industry was that *time off* was *time lost.* Business was ruled by the shortsighted opinion that the only relation which the employe had to the economics of society was as a worker. Keep him at work! Deny him leisure! Time off was counted time wasted, and there were even good people who opposed holidays on the ground that the working people did not make good use of them.

Probably they did not. The right use of leisure must be learned by experience. And there was no proper leisure in the old times. There was only idleness. There is all the difference in the world between idleness and leisure. One is the waste of energy; the other is the use of it in free time apart from the active necessary duties of earning a living.

Merely to make a bare living, that is, provide the things which may be consumed while they are being created, such as food and clothing, requires very little time. The mere living is earned very early in the working day. That part of the business is over and done before the morning has well begun. We go far wrong when we say that it requires all the work that we do to earn our living. In these days we require so many more things than a living, that a living has become the smallest part of what we earn. A very small proportion of the work most of us perform would suffice to maintain us. But there are a thousand other things that enter into the matter now—all the necessities, conveniences, advantages and opportunities of civilization. While our industries are turning these out in quantity for the use and development and enjoyment of the world, the individual worker is providing his own share of these things.

THE type of individual who can work with a will is the type that can also play with a will, and in his play he will be using the accumulated production of his labor. That is the foundation which sound economics has built beneath leisure. It is good business, just as good wages is good business. If good wages make good customers, leisure gives those same customers time and inclination to use what they have made. The way is then cleared for more. And the valuable by-product of it all, in terms of human benefit, is a more widely varied and a more enriched experience.

Now, it is just here that the new basis for leisure is discovered. Food for the day, if earned in the day, is consumed by the work of the day. But when can the people consume or use all the other things that now go to embellish their life? We have no leisure class in this country. All the business of the wealthy would not support a single industry. Our buying class is our working class, and our working class must also become our 'leisure class,' if our immense production is to be balanced by consumption. Besides, it is only just and human and progressive and educational that the people should use what they produce.

That, then, is the new basis for leisure. Instead of hurting business, it helps it. We seem to forget that business is one-half use. If we always produced and never used, there could be no continuous business. But when we apportion the time between production and use, we are acting in accordance with the economic law.

The burden of adjusting these functions so that they mutually support each other falls upon management. There is no charity involved. Leisure, like everything else, must be earned. No one has control of enough of anything in this world to give a constant supply of it to anyone; we must all produce it together. And this means a type of workman who knows the value of both leisure and labor. A man who knows how to employ his free hours well will also know how to employ his working hours to best advantage. The two cannot very well be mixed, but the type of individual who can work with a will is the type that can also play with a will, and in his play he will be using the accumulated production of his labor.

A New Trend in Education

A UNIVERSITY cannot be made a political football and continue to serve a useful purpose. The experiment in Washington where Governor Hartley has forced the removal of Dr. Henry Suzzallo as president of the state university is bound to prove costly—either to the university or to the governor. Whatever the original merits of the controversy, it has coalesced into a single fundamental question: Shall one man have the power summarily to dismiss the head of a great educational institution. If he has, the breakdown of the nation's public education system is only a matter of time.

Rightly or wrongly, Governor Hartley has arrogated to himself that power. He has set himself up as the sole dictator of the educational facilities of a large commonwealth. He has acted contrary to the advice of his legislature and the prominent men of his state. His action in removing Dr. Suzzallo was personal; it was done by his appointees at his behest. And its effect not only upon the University of Washington but upon the other institutions of higher learning in that state is sure to be far from salutary. Months ago it was known that Dr. Suzzallo had to go. He was slated, apparently, from the moment Hartley took office. Certain members of the university's Board of Trustees stood in the way. They were removed. The governor's power to do this, under existing laws, was upheld by court decree. From that moment it was a certainty that Dr. Suzzallo was marked for the axe.

The university president was removed at a star chamber session of the trustees without a hearing, without opportunity to defend himself, without even adequate public explanation of the reasons for the action. Had he been guilty of the gravest misdemeanors, he would have been entitled to at least a fair trial. But as the record stands the most serious charge against him appears to be the fact that he urged financial support for the university when the governor sought curtailment. And in this the legislature—representing the people of the state—upheld Dr. Suzzallo and not the governor.

During his twelve years of service Dr. Suzzallo had built the University of Washington into one of the outstanding universities of the country. His work received nation-wide recognition. Not long ago he was offered the presidency of the University of Pittsburgh at double the salary he was receiving, but he declined because he wanted to complete the work he had undertaken at Washington. Now that work has been terminated, not by the people of the state—his real employers—but by one man. As head of a great state institution Dr. Suzzallo was responsible to the citizens of the state, to the taxpayers who support the college. His work, apparently, was highly satisfactory to them. But it has suddenly been cut off by a lone state official. One-man government has no place in America, particularly in the nation's great educational system.

No Complaint

MAL DAUGHERTY essayed a dance for the first time in his life, a sort of jig-time Charleston. Harry M. Daugherty smiled a broad, bland smile. After deliberating for nearly sixty-six hours the jury had disagreed—seven to five, according to newspaper reports—for conviction.

For more than a month the jurors had listened to the interesting story of the transfer of $7,000,000 American Metal Company stock, seized during the war, to one Richard Merton, German metals magnate. They had heard Merton tell of a jolly New York dinner where the deal was consummated, a dinner attended by the late John T. King, Connecticut politician, by the late Jesse Smith, Daugherty intimate, by Thomas W. Miller, Alien Property Custodian. They heard Merton tell of turning over to King a block of bonds ($441,000) for his 'help and speed' in putting the transaction through. They heard Government witnesses trace many of these bonds, by number, to Messrs. Miller and Smith. They heard of a check sent by Mr. King to the bank presided over by Mal Daugherty. They heard Mal Daugherty testify that Brother Harry had burned the bank records covering this transaction 'in his shack.' They heard Judge Mack instruct them on conspiracy, on bribery. And then five of them stood out staunchly for sixty-six hours for Harry Daugherty's acquittal.

'I have no complaints to make,' declared Mr. Daugherty after the jury had been discharged. There was one other noteworthy utterance. 'I will not be able to tell for a month,' said United States District Attorney Buckner, *'whether I'll bring them to trial again or not.'*

A Campaign Without Green Apples

PROBABLY the most remarkable feature of the campaign which comes to an end Tuesday has been the utter lack of national party issues. In this it has been unlike any other campaign of recent years. Politicians have striven valiantly to stir up both issues and party enthusiasm, but they have met with scant success. The campaign, nationally, has been a model of tranquillity. It has been as calm as a midsummer idyll. Whatever disturbance has existed has been purely local.

The World Court—as an issue—was settled definitely at the primaries. So many pro-Court Senators were rejected *by their own parties* as to leave little doubt on the attitude of the American people toward adherence to the Court. And the attempt of the wets to make an issue out of prohibition has fizzled dismally. Even the dummy referendums, set up as targets for the drys to waste their ammunition on, have fluked. The wets' failure has been so complete that competent political observers believe this year will mark the end of such attempts on a wide scale. Grant the abortive efforts of the wets the dignity of an 'issue,' and they could not be accounted a party issue, for they cut sharply across party lines.

So the country has been treated to the unusual spectacle of a national campaign conducted without national party issues. Leaders of one party have let it be known that prosperity is the issue. But prosperity is not an issue; it is the inversion of all issues. Issues spring from depression, not from prosperity. An issue is a pain in the body politic. It is an indication of an unhealthy condition. Issues provide political medicine men the opportunity to spring forward with pet panaceas for curing all ills. But this year the ills are missing; the lack of issues gives evidence of a happy country. The Republican and the Democratic parties are as alike as Tweedledum and Tweedledee.

Unlucky the politician who cannot find an issue, but lucky the nation!

The Return of Roscoe Arbuckle

ROSCOE ARBUCKLE is back in the movies. His exile is ended; he is welcomed once again into the Hollywood fold. But his likeness will not be flashed upon the screen, his name will not appear in bright theater lights, nor will it be seen in heavy newspaper type. For he is back as director, not as actor, and under an assumed name. Only the initiated will know, when they see future films credited to 'William Goodrich,' that Mr. Goodrich and Mr. Arbuckle are the same person.

A few years ago Arbuckle pictures were barred in nearly every state in the Union. Then came the famous 'Christmas pardon,' by which Will H. Hays attempted to pave the way for Arbuckle's return to favor. But the reaction was so intensely condemnatory that the project was indefinitely postponed. Now Arbuckle is back; but he is back as 'William Goodrich,' not as Roscoe Arbuckle. His friends insist that he deserves a chance to make good, that he is truly repentant, that the public is willing to forgive and forget.

Possibly all this is so, but if it is, why should he not make good under his own colors? Why should this new 'return' be cloaked under anonymity? To many the name Arbuckle is anathema. In justice to them as well as to Arbuckle, his return to the screen should be made under his own name—so the public can have fair opportunity to decide whether they want to see pictures with which he has been connected.

Hist! 'Tis a Dangerous Night!

A MOONLIT orchard. Darkened shadows under the trees. Weird noises. Mysterious rappings on windows. The glowing, grimacing face of a jack-o'-lantern bobbing crazily as it vanishes in the woodland. A scurrying cloud—or is it a witch riding a broomstick?—flits across the moon, and a great barred owl hoots from the graveyard. It's Halloween!

Centuries ago the Druids performed mysterious rites on this night of nights. Bonfires were lighted to frighten away the ghosts and hobgoblins which were most apt, on this of all evenings, to frighten poor humans half out of their wits. In the green land of Erin, Saman, lord of death, called together the souls that had perished during the twelvemonth and had been condemned to inhabit the bodies of animals, and these rode abroad to spread terror in the hearts of the wicked. Down through the centuries has come the festival of Halloween, and down through the future centuries will it go. For Halloween is linked as strongly to the future as it is to the past. Is it not the night when troths are a-plighted and destinies are fixed? We have it on the word of no less a one than Robert Burns:

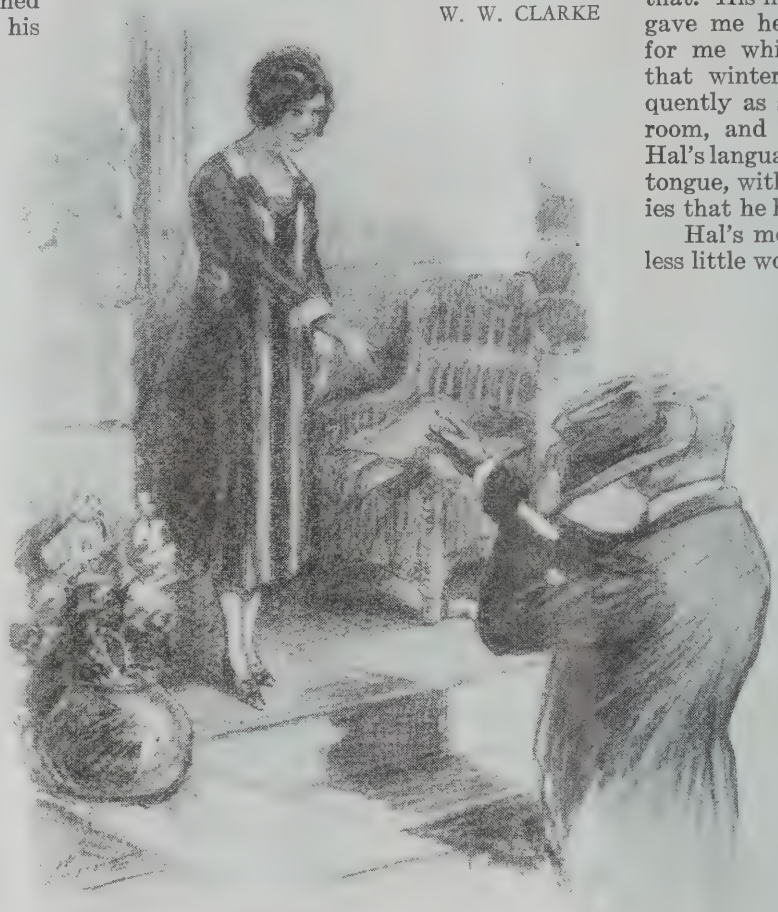
> And mony lads' and lasses' fates
> Are there that night decided.

Cynics may scoff at the march of the hobgoblins or the stirring of the sprites, but sensible persons will not. There are too many evil spirits astir. An' the gobble-uns'll git you, ef you don't watch out.

HAL—*A Story of Regeneration*

By JUDGE HENRY NEIL

Illustrated by W. W. CLARKE



Myra had grown older and the steady gaze of her eyes was tinged with a hint of wistfulness.

THE chances are you have seen Hal oftener than I have. You must have watched with admiration his courtly grace in the ballroom, his contagious smile, his frozen mask of determination when the big fight begins.

But you have never heard Hal talk. Unless speaking movies are perfected, he will never be able to take the lead in a photoplay based on his own dramatic life.

I saw Hal again only the other night. As I watched his deft portrayal of a millionaire's spoiled son, another picture thrust itself between the screen and my eyes. It was of Hal as I first encountered him, that afternoon several years ago when he cut my hair in a Hollywood barber shop.

His figure stood out in that garish room like a living statue amid a crowd of marionettes. His broad, low forehead, his Grecian nose, his dark blue eyes, that row of perfect teeth glinting in his irrepressible smile, his firm round chin, and the faint wave in his hair—I took them all in as I was led to his chair.

'Can you do it in fifteen minutes, shave, shampoo and all?' I asked.

Hal turned from the mirrored cabinet, snipping his scissors in his hand, and glanced at my bushy hair with a speculative smile. There is an odd charm in his every movement, as there is in the fleeting changes of his expression. But then he spoke.

'Y'aint askin' much, I'll say. Wotcha doin', ketchin' a train?' Such were the sounds that issued from that finely modeled mouth. 'Sure I'll do 't for yuh, this wunst, but don't holler though if I knick yuh. Jus' set still and let me operate.'

I felt as though a gleaming crystal ball had collapsed under my eyes into an ugly pile of clinkers. Hal's language sounded all the more slovenly because of the coarseness of his intonations. I decided to let the conversation die then and there. But Hal was only getting started.

'Who's the fella done yer hair last?' inquired my Greek god. 'Bum job, I'll say. Y'always wanna have yer hair cut by the same guy. Takes two 'r three cuttin's to get it to lay jus' right. Tell yuh what, phone the joint here a half hour before comin' over, 'n ask for Hal. That's me. I'll be ready for yuh.'

I apologized for the irregularity of my habits in tonsorial matters. I told Hal I couldn't very well have the same barber every week because I seldom stayed that long in the same town.

'Aincha got no home?' he queried.

And that led me to describe my widower's household, and how I sometimes got my own meals and did the dishes myself. 'I find it hard to get help,' I explained, 'because I keep the apartment here open only occasionally. I can't always find a woman who is free to come in when I need her.'

Hal was snipping away with tireless vigor.

'Y'oughta line up my old woman,' he said. 'She does washin' and gets meals. One good cook she is, too, I'll tell the world.'

I came to agree with Hal about that. His mother was a good cook. He gave me her address and she worked for me while I stayed in Hollywood that winter. I talked with her frequently as she fussed about the living room, and I discovered the origin of Hal's language. He spoke his mother's tongue, with copious grimy embroideries that he had picked up in the streets.

Hal's mother was a fluttery, toothless little woman, with wrinkled-leather features that had undoubtedly once been pretty. Her husband, she told me, had been a college man from the East—a chemist who met her in the lunchroom where she waited on table in her younger days. He had deserted her for another woman, a few years after their marriage, and Hal had had to go to work as soon as he was old enough. He started as a day laborer with the street car company, but later learned the barber's trade. He had always lived at home with his mother, and shared part of his income with her.

'Spends the rest of it jazzin' around with a gang o' roughnecks,' she explained. 'But he's doin' well, Judge, my boy is, what with his tips 'n' all. He's a bought a coop an' takes me to the movies in it sometimes nights. Funny thing, one thing that boy's crazy about; 'taint women, it's the movies.'

I was away traveling for nearly a year. When I returned home, Hal was in jail. His mother, still more fluttery than ever between her sobs, told me the story.

'He begun goin' to the dogs—musta been soon after you left. There's a girl in it somewheres. The police raided a gamblin' place. They was plain-clothes men. Hal was there and he shot one of them in the shoulder. He thought they was bandits, when they first jumped in on the crowd.'

I got Hal out on bail, and hired him as my chauffeur. He was sullen and silent. The old smile was gone. I tried to keep our relationship on the basis of friendship instead of acting the employer; Hal accepted it that way, but wouldn't talk with me. He dressed better than I did.

One night we dined together at a road house where I knew he had often danced. As I hoped, the associations of the place had brought out part of his story before the evening was over. But I reconstruct it here chiefly from what I learned afterward from his mother and from the girl.

From the outset it was one of those impossible romances that seem trivial or preposterous to relate, yet may bite deep. Bobbed hair was gaining vogue then; Fate should have sent the girl to some beauty parlor, but with her it was one of those reckless, street-corner decisions, and by the time she was in Hal's chair they were both lost. I can understand it because I know how Hal worked. He talked a blue streak with his male customers, but to the occasional women he rarely said a word. There was a strange refinement about him, a shy reticence with women, that stifled the turgid flow of his usual monolog. The girl could hardly have failed to be thrilled by his extraordinary good looks. But when, above his incorrigible smile, his eyes pleaded with her for a moment not to have those rich black tresses shorn, she must have felt the flattering warmth of a barely suggested personal intimacy.

She parried his thought with a gay little laugh.

'We're all doing it. Aren't you in the business? A boyish bob, please.'

The whole situation was the more dangerous because of its casual vagueness. But she saw reproach in his eyes.

A few months later he trimmed her hair again. That was her fault, not Fate's. But knowing the amazing charm of Hal's personality, when he was silent, I couldn't blame her. A tingling current of faintly daring intimacy sprang up between them—all with only a few matter-of-fact words spoken on her side and none on his.

BUT later he saw her dancing, at the road house where I was now getting my first hint of the tragedy. Hal had been completely fascinated by just two silent meetings. It was inevitable that, when their eyes met across the room, he should approach her table as the music started again, and that she should welcome that dance. Hal is an entrancing dancer. That was the first time they had ever talked together. It was the first time they learned each other's names.

The next night, hypnotized and utterly ignorant of the impression he had made, he presumed to call, uninvited. She taught school and lived with her father and a sister who kept house in a little bungalow. It was the sister who came to the door, and Hal waited on the porch while she went inside to announce him.

'Oh,' exclaimed the girl within, 'that awful boor. My dear, he's impossible! I met him last night. He's a dream of a dancer, but he talks like a dirty newsboy. I was mortified to death last night. Tell him I'm out, or ill, or something. I can't see him.'

The living room windows were open. Hal heard it all. He was gone before the bearer of the message returned. To understand it all you would have to know both Hal and the girl as I came to know them. Hers was a charm of which I think she was quite unconscious, and that made it the more intriguing. She had soft, glossy black hair, winsomely bobbed now, and a piquant oval face with olive skin through which a dusky blush showed faintly. Her slender figure seemed vibrant with magnetic energy.

She could not fail to rouse in any man an interest that the steady frankness of her large brown eyes promptly disarmed. Her vivacity expressed—I felt this when I had become acquainted with her—a potential passion that could be reckless, single and maternal.

She was the first woman Hal had ever met who represented something finer than the tawdry world of the manicure girls. I imagine his childlike soul felt for a moment as if it had been brushed by gossamer wings from some inaccessible fairyland.

Hal's reaction was inevitable. In violent disgust with the formless aspirations that had raised him to this Calvary, he tightened his armor around him. He went instantly and utterly to the bad. He deliberately sought the mud as a balm for his bruise. He took up a serious course of hard drinking. He gambled, lost his *(Concluded on page 27)*

I tried to keep our relationship on the basis of friendship, but he was sullen and silent.

Plants assist to make this sun room so inviting that it is often used as a family living room.

Plants *for the* Window Garden

Making Homes Beautiful *in the* Winter Time

By FLORENCE TAFT EATON

THERE is now no time to lose in looking after our house plants. If attended to immediately the potted plants will have a chance to recuperate and 'brace up' before they are brought into the house and arranged in their permanent winter quarters. There isn't the least need of the window garden appearing like a sanitarium for plant invalids—too often the case—if we begin operations early enough to give the plants time leisurely to take the successive steps leading from garden to window shelves or stands—a journey that must be a bit gradual and broken by occasional stops.

However, one needn't necessarily go entirely without plants merely because earlier work wasn't possible. Good 'dirt' is an essential. It therefore pays to be particular about it and to take time and thought in preparing it. A liberal amount of earth for all our plants should be provided by mixing one part of good loam from a fertile part of the garden with as much more fine dark humus from the bottom of a well-rotted compost heap. To this we add a little old manure if procurable, a small amount of wood ashes, and a bit of sand if it still seems too heavy; leaf mould from the woods or humus from the edges of the barnyard will serve if one has no compost heap—inconceivable, however, if one runs a garden!

All this we mix thoroughly and run through the ash sifter into a big box. We try to have a little left over to store in the cellar for our house-started seeds next spring. Next get the pots ready and collect all the broken ones for drainage; break them up and put an inch or so in the bottom of each pot.

It is a good idea to leave this broken crock in the bottom of its particular pot when we put them away for the summer after setting the plants in the garden; this saves much trouble.

It is an inference that every plant and flower lover has an abundance of 'slips' started in a shady part of the garden with window gardening in mind. Take up your desired number of these as carefully as possible without disturbing the roots; water, 'firm' well, and set in a shady place. If you fear frosts, set in the shed. Do not use too large pots for either slips or plants; they bloom much more freely and quickly if the roots are somewhat confined. If you are taking up older, larger plants, proceed a bit differently. Cut around them carefully, crumble off some of the superfluous earth (having reference to size of pot), put a little earth on top of the drainage, set the plant in, and holding it in your left hand, sift the prepared earth around with the right; slowly pour in water, add more earth, 'firm' carefully, and let a drip from the nozzle of the hose trickle on the surface until settled and solid; set in the shade.

Plants carefully taken up in this way will hardly wilt. It is well if they have been previously pruned with reference to their removal to the pots; if not, you can do sparse pruning now; but it is better, if not earlier pruned, to take up those of about the right size, as it takes some time for the plant to recover itself and get into ornamental shape after pruning.

After staying in the shade a day or two, with abundant watering, bring onto a shady corner of the piazza if the weather continues warm enough, and next into their winter quarters, shading a part of the day until well established.

If one has a regular plant or sun room one can, of course, acquire a greater number and variety of specimens. Large plants—arbutilons, orange and lemon trees, big azaleas, and the like—are successfully housed and grown. In regard to orange and lemon trees, I have a friend who grows them in her dining room—really not a very large

room—with great success. They blossom regularly and abundantly, and during their quite long blooming time their ravishing perfume is of 'Araby the blest.' She includes a camellia with these really tropical specimens. This also flowers freely every year and is so unique and beautiful a house plant as to attract great admiration.

The old-fashioned *Daphne odorata*, beloved of our grandmothers, is most attractive as a sun-room inhabitant. I used to spare room in my regular plant window for mine until it became so large that I gave it away with great regret! They grow slowly, however, and one can keep one some years before it becomes too large for convenience. This blossoms once a winter, every branch tipped with a cluster of entrancingly sweet pink and white waxy blossoms resembling the trailing arbutus; but the buds come to maturity so slowly and the blossoms last so long that the flowering time extends well over two months. It is sometimes rather hard to find these daphnes at nurseries; beg a 'slip' from some dear old country grandmother who still cherishes hers.

It is rather interesting, if one has a special plant or sun room, to experiment with novelties or less familiar specimens. I have in mind a fig tree occupying a corner in one sun room; this is of good size, drops its leaves every summer when set outdoors, but rushes to full, luxuriant foliage again with lightning rapidity when brought into winter quarters and given water and sunlight, and is very ornamental.

A sweet olive (*Olea fragrans*) is a delightful house plant. Its dark green glossy leaves growing in whorls, at the base of which spring delicate wreaths of tiny white flowers of most exquisite fruity fragrance, makes it an ornamental as well as beloved possession. One's whole room is perfumed by its delicate but delicious odor—permanent, because it is never without bloom. A lemon verbena must surely be included in any collection of plants where room can be spared. Its claim to our affection lies in the fragrance of its leaves—so delicious as to insure its inclusion if possible.

The same sun room includes a very interesting plant called the 'Crown of Thorns'—I could never learn or find another name! This showed lovely cherry-red, white-eyed, clustered blossoms once a year, and its foliage and habit of growth—including the 'thorns'—were unique and attractive. Any sun or plant room should include plenty of large ferns, which may occupy shady corners, and an abundance of different vines—always particularly attractive. Some sun rooms are planned to allow the growing of permanent vines directly in the earth, small sections of the tiling or floor being omitted for this purpose; this gives a very lovely effect. One called *Ficus Ripens* is the best and prettiest I know for such use.

English ivy, in hanging baskets or pots, is, I think, the most beautiful permanent pot vine. Sponge off the leaves occasionally—I remember how I disliked, when a child, having this job allotted me at housecleaning time—as should be done to all large thick-leaved plants. *Tradescantia* is a lovely one-season vine, also the delicate 'German Ivy,' which often, toward spring, develops showers of tiny bright golden blossoms.

What sort of plants shall we start in the regular window garden or plant stand for general winter house decoration if we haven't a regular plant room and can spare a sunny window or two only for our house plants? Geraniums, first and foremost. These are easily grown, are pest-free, and blossom for the 'just and the unjust.' There is great difference in the flowering habit of geraniums and free-blooming varieties should be carefully chosen. The double salmon ones are very beautiful and are also free bloomers. *Beaute Poitevine* and *Mme. Landry* are most desirable; semi-double, blooming in tremendous trusses, and of a lovely salmon-pink color. The *Dryden*—a brilliant cherry shading to a white eye—blossoms incredibly freely and gaily. I like to include a white geranium or two, or a double white petunia, which has more or less the same effect, with bright colored blossoms; *La Favorite*—double—is the best white geranium.

The *Pelargoniums* are the most showy and ornamental of all the geraniums, but have a shorter blooming time, and are a little harder to grow.

The various scented-leaved geraniums charm (Continued on page 25)

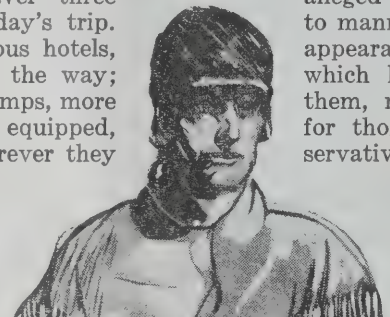
The Building *of an* Empire

When Scots *Pushed* Southward *and* Westward *into the* American Wildernes

By J. G. de ROULHAC HAMILTON

Illustrated by AUSTIN EUGENE BRIGGS

ALL the year round, but particularly in the early fall, the roads south are filled with all sorts of people driving all sorts of cars. Their main routes lie in, or not far from, Tidewater. Over concrete or asphalt roads they pass, crossing the Potomac, the James, the Roanoke, and the Pee Dee by superb modern bridges without even slackening speed. Sometimes they travel three hundred miles in a day's trip. Some sleep in luxurious hotels, now easily found on the way; others in municipal camps, more or less completely equipped, others, still, rest wherever they happen to find themselves. But all the journey is thoroughly modern and up-to-date.



In this mighty rolling host are to be found all sorts of people. There are would-be settlers, eager to secure land, to develop natural resources, to grow up with the country; there are land speculators, seekers for quick and easy fortunes; there are adventurers, restless spirits whose knowledge never includes any definite information as to their ultimate destination, but extends only to the certainty that they are on their way.

The whole country has marveled at the movement. Opinions as to its causes, its significance, and its probable results have differed widely, but there is at most unanimous agreement that nothing like it has ever happened before in America.

Yet it is not the first great 'trek' southward in American history. The other one, more romantic and, in its results, more spectacular than this one could possibly be, began two centuries earlier and continued for half a century without a break. In it participated every type of emigrant to be found in this one—and they all came without thought of returning.

The querulous complaints of certain Southern communities over the alleged undesirability, in respect to manners, morals, habits, and appearance of the motley horde which has poured down upon them, might well be mistaken for those uttered by the conservative Quakers of Pennsylvania as a greeting to those earlier travelers as they reached America. They are not entirely inadequate to express the opinions of the Indians upon whom it fell to play the part of hosts in the South at that time, and, anticipating certain later fire-eaters, to 'welcome them with bloody hands to hospitable graves.'

Of course there are differences. Not in swift-moving motor cars did these earlier nomads journey. Slow-moving wagons, drawn by horses or oxen, were *de luxe* accommodations of the road; horseback meant solid, prosperous comfort. Many walked the whole weary way. There were no inns, no accommodations for the traveler; only the nightly camp in the wilderness, exposed to the savage and the wild beast. Neither over magnificent roads and bridges, through smooth and level Tidewater Virginia did the earlier visitors come. They followed the rough trail of the Indian and the buffalo often cutting a way for the wagons—along a great highway made by nature, a great sluice between the mountains, through which poured the surplus population of the North on its march to free lands, a sluice which now became one of the great highways of history.

And not alone is it associated with them. The Indians had known it long and the buffaloes even longer. It was the pathway of the Tuscaroras as they fled North to join their brethren of the Five Nations. Stamped with the peace of the eternal hills which shelter it, it is indetachably associated in the mind of Americans with the tramp of marching men and the clash of arms. This highway is the Shenandoah Valley of Virginia.

The great Valley of Virginia, into which these questing spirits now penetrated, lies between the Blue Ridge and the Alleghenies. Its total length from the Potomac at Harper's Ferry to the Tennessee line is more than three hundred miles, and its average width between twenty and thirty miles. About midway, the valley is cut across by the James River, flowing eastward; farther southwest, by the New River, flowing west. Forty miles north of the James rises the Shenandoah which flows between the Alleghenies and the Blue Ridge almost one hundred miles into the Potomac.

The earlier migration played a fundamental part in the development of the Republic and upon it depended an important section of later American history. Scotch-Irish as the migration predominantly was, they did not begin it, but at first followed another determined, though less militantly aggressive, people, the Germans, who, though overshadowed by those who followed, remained an important factor in the movement until the end of its first stage. Both races came to America chiefly by way of Pennsylvania, both

settled in the same localities there, and both moved south for the same primary reason—the desire for cheaper and better land.

Both followed the same route and settled side by side in the virgin wilderness of Virginia and the Carolinas. Both were deeply religious, both glorified education, both eagerly loved liberty, civil and religious. But here the parallel ends. The Germans, peaceful, home-loving people, having found the promised land, in the main, settled down to enjoy it. The restless, eager, aggressive Scotch-Irish pressed on ever farther into the wilderness, and as explorers, trail-makers, settlers, conquerors, opened to the outside world the hitherto mysterious and dreaded West.

THE first Germans came to Pennsylvania in the latter part of the 17th Century, but the real migration came after 1710. Thereafter, in increasing numbers they crowded in, coming chiefly from the Rhine countries and Switzerland. Settling first about Philadelphia, they spread to Montgomery, Lancaster, and Berks counties, and then pushed westward, crossing the Susquehanna and settling York, Cumberland, and Adams counties. Thence they turned southward through Kittochtinney, a beautiful valley lying between the Susquehanna River and the Tuscarora Mountains, which served as a great natural thoroughfare toward Maryland.

They were an interesting group of people, and where they have retained their identity have remained so ever since. Their language—Pennsylvänisch-Deutsch—was a combination of dialects of the Palatinate, Würtemberg, and other Rhine countries, mixed with English words of common usage. Among them were to be found many religious groups, the ones of most importance being the Lutherans, the German Reformed Church, and the United Brethren, or, as they are commonly known, the Moravians.

The Scotch-Irish, so-called, were the descendants of the Lowland Scotch who had been settled since about 1610 in the Irish counties of Antrim, Down, Armagh, Londonderry, Tyrone, Monaghan, Donegal, Fermanagh, and Cavan, comprising the province of Ulster. Expatriation, so far from causing the loss of native characteristics, rather increased and strengthened them.

Prosperous, and enjoying political and religious freedom for almost a century, there came at last both religious and economic oppression, and with the beginning of the 18th Century they turned their eyes toward America. Once more they moved, and for eighty-five years they poured out in a never-ceasing flood to the New World. Once in Pennsylvania, they settled chiefly near Philadelphia, and in Bucks, Chester, Lancaster, York, and Cumberland counties, though they spread elsewhere, tending, however, in the same direction and to the same localities as the Germans.

Their coming caused no striking enthusiasm among the peace-loving Pennsylvania Quakers. They saw in the newcomers 'a pernicious and pugnacious people,' and as their numbers increased, their coming assumed the aspect and proportions of a calamity. James Logan, the secretary of the province, himself a Scottish Quaker, wrote, 'It looks as if Ireland is to send all its inhabitants hither, for last week not less than six ships arrived, and every day, two or three also. The common fear is that if they continue to come they will make themselves proprietors of the Province. It is strange that they thus crowd where they are not wanted . . . The Indians themselves are alarmed at the swarms of strangers, and we are afraid of a breach between them—for the Irish are very rough to them.' He added that the settlement of five families from Ireland caused more trouble than fifty of any other people. 'Before we were broke in upon, ancient Friends and first settlers lived happily, but now the case is quite altered.'

THE Scotch-Irish, already beginning to move toward their ultimate conclusion that the only good Indian was a dead one, in an 'audacious and disorderly manner' took up any vacant land that attracted them, alleging that 'it was against the laws of God and nature, that so much land should be idle while so many Christians wanted it to labor on and to raise their bread.' Hence in the eyes of the Quakers they were squatters and to the Indians hostile invaders. To the somewhat natural, if inhospitable, question, which nearly always greeted them, as to their excuse for being there, they replied that settlers had been invited and that they had accepted the invitation.

In the course of time the available refreshments of the Pennsylvania hosts, as well as their welcome, was exhausted by these 'hearty' Scotch-Irish, and no more free or cheap land of good quality was to be had. Like the Germans, the Scotch-Irish were too poor to buy the better land and so, breaking like a great wave on the mountains to the west, they, too, turned southward, following the great natural highway so long used by the Indians and wild animals that it had become more than a mere trail.

The dominant motive of migration, as with the Germans, was desire for better and cheaper land and a warmer climate where cattle would not require feeding in winter, but among the Scotch-Irish were the restless stirring of a conquering race; the love of freedom which found in the wild places of America a paradise hitherto undreamed of, where a man might, if he chose, live apart from his

fellows, offended by neither the sight of their smoke nor the sound of the barking of their dogs.

Germans and Scotch-Irish traveled alike except that the Germans were usually better provided with the goods of this world and hence enjoyed greater comfort. Both took all they owned. The more prosperous drove Pennsylvania wagons, drawn by two or four horses, in which were packed all their goods and chattel and in which rode the women and children. The men walked or rode on horseback, driving before them such cattle as they owned. Some had no wagons and traveled on horseback or walked with a pack horse carrying bedding, a few simple farming implements, cooking utensils, a bag of corn, and the Bible. Some, lacking even a pack horse, walked all the way, carrying their entire property.

The dress of the emigrants was that of the frontier. The men, almost universally, wore the linsey hunting shirt, a loose long-sleeved frock, reaching to the middle of the thighs, open in front and so wide as to fall over a foot or more when belted. This was often ornamented with colored cloth or thread. The blouse of the shirt when belted served as a sort of pouch in which were carried food, ammunition bags, flint and steel, and such other articles as the traveler wanted always with him. An ax or hatchet was suspended on his right side and a strong, sharp hunting knife on the left. An undershirt of cloth was usually worn. Deerskin breeches, leggings, moccasins, and a fur cap completed the costume. The women wore homespun, linsey dresses and sunbonnets, with heavy coats for cold weather.

The emigrants usually left Pennsylvania in the early fall, after the harvest was over, reaching Virginia or North Carolina before hard winter set in. Many, having been deceived as to the climate, like later winter visitors to the South, were aggrieved at cold weather and often, for lack of due precaution, suffered acutely. The Germans were particularly resentful because they failed to find a place where cattle could be left in pasture all winter.

Both races were industrious and thrifty, neither afraid nor ashamed of work. Almost all were farmers but they were artisans as well, making almost everything they needed. Both, but particularly the Germans, dabbled in the fur trade, sometimes very profitably. The Germans were the more industrious and economical; the Scotch-Irish more ambitious and grasping. The latter, more alert mentally, tended more to radicalism of thought and action; the Germans, phlegmatic in temper, were conservative. On the whole the two races got on admirably. With common tastes and interests they grew soon to appreciate each other in spite of differences of language, traditions, and habits.

In 1726 several German families from Pennsylvania settled on the Shenandoah River not far from Swift Run Gap. They attracted but little attention but the news of their pleasant location and their prosperity drifted back to Pennsylvania and others followed. Ten years after this settlement, Scotch-Irish came in to locate on Joist Hite's grant, and when it proved defective, under the leadership of John Lewis they pushed on into the wilderness where no grants had been made to annoy them and there were but few Indians to molest them.

The Shenandoah Valley, then as now, was of notable beauty. Much of it was prairie, with timber fringing the rivers and the numerous smaller watercourses. The settlers were thus spared that heartbreaking task of the pioneer—the clearing of the land of forest. The land, a veritable garden-spot, lay ready for the plow and the sower, and the two land-loving races who now entered it began to settle down. Game in abundance—deer, bear, turkey, squirrels, and rabbits—supplied them with food until the crops were grown and domestic animals had increased. They looked for a watercourse and a spring, and these once found, they built cabins and barns (one could almost detect a German farm at first sight by comparing the barn with the home) and with tireless industry set to work to make the land bloom and bear.

For thirty years the tide of settlement and migration poured into and through the valley, in wave after wave, conquering mountains, forests, and streams. Some settled down but others, and the greater number, pushed on into North Carolina, seeking always cheap and good land, a warmer climate, or fresh adventure. The valley, rapidly becoming a garden-spot, remained a great highway.

By 1735 the Scotch-Irish were seeping into North Carolina where presently they began to meet another stream of their own people, and also the Highland Scotch, who had come in by Cape Fear or by Charleston. For forty years, 1735-1775, the migration continued. Gabriel Johnston, Matthew Rowan, and Arthur Dobbs, governors of North Carolina from 1734 to 1765, and all three Scotch, gave to them every encouragement. They scattered all over the Piedmont region of the province, but the center of their early settlement was on the banks of the Catawba River.

There is every probability that a few Germans preceded the Pennsylvania Scotch-Irish to North Carolina. In any event they now came in together. The center of German settlement was on the lands lying east and west of the Yadkin River. By 1740 a steady stream of them was coming in and the number increased steadily for more than a decade. The two races substantially settled the present counties of Anson, Granville, Orange, Rowan, Guilford, Mecklenburg, Caswell, Burke, Lincoln, Catawba, Randolph, Iredell, Surry, Stokes, Davie, Cabarrus, Davidson, Gaston, Alamance, and Forsyth.

In one year, it was estimated, more than a thousand German and Scotch-Irish families entered the colony from Pennsylvania by way of Virginia. Between 1746 and 1756 Anson, Orange, and Rowan increased their population thirty-fold and within a period of sixteen years, six new counties were formed. Having little money and very few slaves, they took up small tracts of land which they could cultivate themselves and they thus set upon North Carolina the stamp of the farm rather than that of the plantation.

The route of travel and settlement, 'The Great Road from the Yadkin River through Virginia to Philadelphia,' ran from the Yadkin to the Dan, thence northward to the valley and down the valley to Winchester and then through York and Lancaster to Philadelphia, 435 miles in all. To Lancaster and York counties North Carolina owes more population than to any other single part of the world, and Virginia's debt is almost as great.

Down the 'Great Road' came the Moravians from Bethlehem in 1753, after Bishop Spangenberg had 'spied out the land,' of which he wrote, 'I regard it as a corner which the Lord has reserved for the Brethren.' They founded Bathabara, Bethanis, and later Salem, which is still the southern home of the Moravians.

By 1750 the Germans in small numbers, and the Scotch-Irish more numerously, had entered upper South Carolina, where York, Chester, and Lancaster counties still proclaim the origin of their early population, and had even penetrated to Georgia. Filling Western Virginia and Piedmont, North Carolina, they turned westward and conquering the once-dreaded mountains, they cut trails and then roads into the valleys of the Watauga, the Holston, the French Broad, and the Clinch whence they moved on in their restless, relentless march which was to end in the conquest and occupation of an empire.

'T. R.' was loved and hated by newspapermen. But he was a front-page newspaper subject. He understood news values.

Whether you were a friend or a foe of the fiery Colonel, you will enjoy reading

A Reporter's Memories of Roosevelt

in Next Week's Issue of
THE DEARBORN INDEPENDENT

The writer has packed this account full of fresh and intimate anecdotes. There's lively fun in the tale of 'Teddy' racing sixty miles across the Rockies on an impish pony; of the time he stopped his special train for an hour to have breakfast in true cowboy style along the way; and of how he sought solitary peace in Yosemite Valley for three whole days so that even the Washington government couldn't communicate with him.

Science Describes Interior of Earth

(*Concluded from page 3*)

'Then for four years I taught the natural sciences in the Whitewater Normal School, in Wisconsin. I taught all the leading sciences—human physiology, botany, zoölogy, chemistry, physics, geology, and astronomy. I took those up by turn as I could, because I could not do thorough work in all of them at any time.

'I then saw that the field was too large. It was necessary to concentrate, and I chose geology and was instrumental in commencing the Wisconsin Geological Survey of 79 and subsequent years. I became an assistant and later director of it.

'There was where I really started in science. My predilection was for paleontology, but my field—Eastern Wisconsin—was very heavily covered with glacial formations, and as a matter of necessity I had to give much attention, if not foremost attention, to that.

'This gave me a trend in that direction, and naturally there arose in my mind the question of the cause of so extraordinary a thing as the great ice invasions. I tried various theories that were then current, but they didn't work very well. At the close of the Wisconsin work, I became head of the Glacial Division of the United States Geological Survey, a natural sequel to my work in Wisconsin.'

DR. CHAMBERLIN here entered into a brief discussion of his epoch-making discoveries as to the causes of the great ice ages. It was these discoveries that led on to his investigations into the deeper problem of the origin and growth of the earth itself. The discovery of the planetesimal hypothesis, in turn, threw new light on the processes now going on in the earth, and on how the continents and oceans were formed. 'In other words,' he pointed out, 'the planetesimal theory leads to a very different concept of the way the continents rose and the way the earth has behaved ever since.

'I have worked this out more definitely and sharply in my last article, which has just appeared in the *Journal of Geology*, than ever before. In that article I reached very specifically the conclusion that the idea of a floating crust and a molten globe, and all that sort of thing, is a misinterpretation of the facts; that in reality the earth is solid, has always been solid, has grown up as a mass of little solid particles, and that these have worked upon one another, and that there is internal reorganization going on all the time. That is the explanation of earth movements and earthquakes, and this gives us a very different concept of the fundamentals of geology.'

When I inquired the nature of his future work, he sketched it in outline: 'You know the geographies have told us that if we draw a line around the earth, most of the land will be found on one side, and nearly all the water on the other. That is to say, the earth is one-sided in a very strange way, and the division is not parallel with the axis, for it crosses it diagonally. Now, if there is a strange thing placed before me, I don't start with a theory and come forward; I start with the thing and work back to the cause. That is what I am working on—the formation of the core of the earth, and the reason why one end of the core was big and light, the other dense and heavy.

'The great problem is the difference in the hemispheres, the shaping of the continents, and the fact that the North Pole is sunken while the South Pole protrudes. The working out of this problem is what lies before me in the future. I want to get it into scientific form, and finally into a little better shape for teaching. Then I shall be ready to quit.

'I never dreamed of getting to the point where I am now in my investigations,' he reflected. 'One thing has simply led to another. I want to find the bottom of things. The philosophical tendency is strong in me. I am not content to know that a thing is so; I want to know why.'

Is the universe a mere machine? Dr. Chamberlin doesn't think so. 'I think it is not simply a stiff, rigorous organism. I can't help thinking of myself as having a certain amount of liberty. I don't think like a machine; at any rate, I think I don't. Individuality, personality, responsibility, and all that, is something that is so strongly ingrained in me that I can't get rid of it.

'Just how life and volition and thought got into the geological system is the biggest problem to solve. I am a sort of Ishmaelite. I am not with the mechanists or determinists, nor, on the other hand, am I with the idealists—I am very far from that. In other words, I try to take the situation as it is.'

Dr. Chamberlin was asked whether his outlook for the world's future was optimistic. 'It is among my theological dogmas,' he smiled, 'that the optimist and the pessimist are both fools, but that the optimist is the more comfortable fool of the two, and on the whole, I am an optimist. Of course, I don't believe that the whole thing is going all right; but on the other hand, I don't think the whole thing is going all wrong.'

Dr. Chamberlin spoke with enthusiasm of the applications of science to farming and industry. 'Oh, yes, on the whole,' he concluded, 'I think we are just entering the blossoming stage of earth history, and we have lots of time—we have lots of time to work it out. It isn't any decree of the Lord that we are going to go to smash. We have the chance; if we take advantage of it, we shall profit, and if we don't we shall go to ruin as we ought to.'

What is ***behind*** *the McFadden Bill?*
What interests are sponsoring it, and what do they hope to get out of it?

American citizens want to know, for the banking system of the nation is at stake. They will want to learn the actual facts surrounding the bill. It without doubt will be the most important subject Congress will take up in the approaching session. Some of the provisions of the bill will startle conscientious Americans. Few persons realize the far-flung effect the measure will have if it is enacted into a law.

Abraham Lincoln's Vein of Poesy

(*Continued from page 5*)

He would announce his first hymn in this fashion:

'We will sing that good old hyme (He pronounced it in that way)—

' "The time is swiftly passing on,
And I must surely die;
My body to the dust return,
And thar forgotten lie."

'Solemn thought, brethren. Thank some brother to pitch and kerry the tune, and all the brethren jine in.'

No brother would volunteer to pitch and kerry the tune (the preacher pronounced it 'chune') if the preacher was known to be a singer. So the preacher would pitch the tune himself, and line it two lines at a time, the congregation following in alternation with him as he chanted it on the keynote. It was a useful kind of leading where there were no books.

These hymns in long, short and common meter were the most important source of Lincoln's knowledge of poetry in his youth. He extended it somewhat in the 'play-party' in motion songs, which were considered less sinful than dancing, the kissing that accompanied the sale of forfeits not being considered and in fact not being immoral.

NOT till Lincoln got to New Salem did he learn much if anything from the classic authors, though there were some poetical selections in his school reader. In New Salem he met Jack Kelso, and fished with him. Jack was a strolling elocutionist, and his recited poetry was of large value to Lincoln, for he learned poetry from hearing it rather than reading it.

Here Lincoln learned something of Burns and Byron. Those who remembered his quotation of Burns, could recall two poems, 'Tam O'Shanter' and 'Holy Willie's Prayer,' one a poem of rollicking mirth and the other a keen satire. These are what we might have expected him to like. We know that he learned to love Shakespeare, and often carried a copy of his poems with him on the circuit. In after years he owned a copy of Pope, and we might have expected him to have quoted some of his sententious couplets, but I do not recall his having done so.

We know from a letter of his to Andrew Johnston in 1846 that he had not then read Poe's *Raven* and we do not know that he ever read Poe. Early in 1860 James Grant Wilson presented to him a copy of the poems of Fitz Greene Halleck, and Lincoln, acknowledging the gift May 2, just two weeks before the convention that nominated him for the Presidency, expressed enthusiastic admiration for Halleck's 'beautiful lines.' He said: 'Many a month has passed since I met with anything more admirable.' He especially admired Alnwick Castle, Marco Bozaris and Red Jacket. These were, indeed, some of Halleck's best poems. But Lincoln was particularly moved by Halleck's lines in honor of Burns. Lincoln wrote to Wilson:

'It is wonderful that you should have seen and known a sister of Robert Burns. You must tell me something about her when we meet again.'

It does not surprise us to know that he loved Gray's 'Elegy,' a single line of which he said told his whole life story:

'The short and simple annals of the poor.'

At New Salem Lincoln came also into a knowledge of more kinds of music than those with which he had been familiar. He was not a singer, but he was an alert listener to music and enjoyed it.

Among traditions concerning Lincoln's attempt at song is one that he and the Rutledge family were accustomed to sing, the song called *Legacy* from the *Missouri Harmony*. The tradition is somewhat uncertain because this song was not in the first edition of the *Missouri Harmony*, and the copy which the Rutledge family has dates from after the time when Lincoln was in New Salem. The tune was that which college students use to the words:

If I were a Cassowary
On the plains of Timbuctoo
I would eat a missionary
Hat and coat and hymn book too.

The *Missouri Harmony* was a book of hymns with an appendix of secular songs. *Legacy* was one of the latter and appeared in the supplement to the book. This mournful drinking song ran thus:

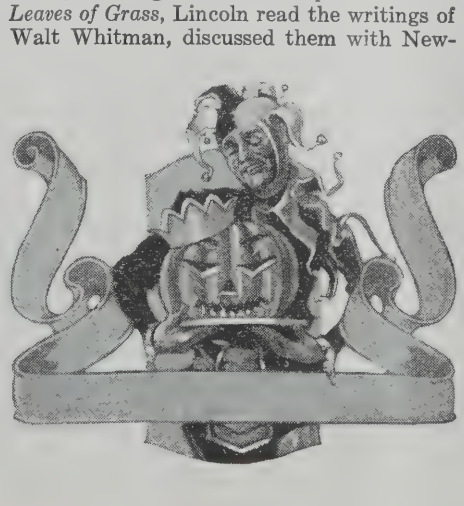
When in death I shall calm recline,
Oh, bear my heart to my mistress dear.
Tell her it lived on smiles and wine,
Of brightest hue while it lingered here.

Bid her not shed one tear of sorrow
To sully a heart so brilliant and light;
But balmy drops of the red grape borrow,
To bathe the relict from morn till night.

This preposterous drinking song, which proposed to comfort a heartbroken maiden by bathing her in wine, aroused Lincoln's sense of the ludicrous.

Except for such knowledge of and love for the blank verse of Shakespeare's plays as Lincoln is known to have possessed, all the poetry that he is known to have loved was lyric, much of it elegiac, and all of it had both rhyme and meter. We can hardly suppose that anything else appealed to him as poetry.

THE recent story that at some time in the fifties, not long after the first publication of *Leaves of Grass*, Lincoln read the writings of Walt Whitman, discussed them with Newton Bateman who is alleged to have



approved, while Lincoln defended th
reading the poems aloud in the law off
appears to come to us on good authori
but if it had been true we could hardly h
failed to learn of it earlier and from ot
sources. We need not discuss what Linc
would have thought of the morals of Wh
man's writings, but he would certainly
have thought of this literature as poet

ON THE last Sunday of Lincoln's life,
he was returning from City Point
Washington on the steamer, he read Shak
peare. Senator Charles Sumner, who w
present, recorded that he read aloud fr
Macbeth these lines:

Duncan is in his gra
After life's fitful fever he sleeps well;
Treason has done his worst; nor steel
poison,
Malice domestic, foreign levy, nothing
Can touch him further.

So significant did these lines appe
a few days later to those who remember
the incident, that they could not refrain fr
adding:

This Duncan
Hath bourne his faculties so meek, hath be
So clear in his great office, that his virtu
Will plead like angels trumpet-tongu
against
The deep damnation of his taking-off.

We do not know that Lincoln ev
committed to memory or cared for a sing
poem of love. We do not know that he car
for poems of natural beauty. The poems
preferred, like the hymns to which he w
accustomed, were melancholy. Nearly
the tunes to which those hymns were su
were in the minor mode. Nearly all
them moved to the theme that life was su
piciously carnal and death was a prop
theme for religion.

His favorite poem was 'Oh why shou
the spirit of mortal be proud?' Lincoln
early biographers called it 'Immortality' b
that was not its name, nor would that nam
have been in any way appropriate. Th
title is *Mortality*, and the poem has no oth
theme than the brevity and futility of lif
The poem was written by William Kno
a young Scotsman, who was born in 180
and died in Edinburgh in 1836. In a lett
to Andrew Johnston in 1846, Lincoln said h
did not know the author:

'I would give all I am worth, and go i
debt, to be able to write so fine a piece as
think that is. I met it in a straggling for
in a newspaper last summer, and I remembe
to have seen it once before, about fiftee
years ago, and this is all I know of it.'

This would indicate that he first saw i
about 1831, and that it took its deep hold o
him in 1845.

These dates are of special interest be
cause they do not appear to support th
commonly accepted story that Ann Rutledg
taught this poem to Lincoln, or that h
turned to it with an especial tenderne
growing out of her death. She died Augus
25, 1835.

William H. Herndon, Lincoln's law part

ner, says that it was Dr. Jason Duncan, of New Salem, who first showed the poem to Lincoln, about September, 1833. This may be true, but it gives us no suggestion of a connection with the Ann Rutledge incident.

This poem Lincoln committed to memory. His first public use of it appears to have been in his eulogy of President Zachary Taylor, delivered in Chicago, July 25, 1850. He made several copies of it from time to time and gave them to his friends, and he often recited it. Like some of his boyhood hymns, notably 'How tedious and tasteless the hours,' it was a despairing poem in three-four time. Thus did the melancholy of the pioneer fling crêpe in the face of the waltz.

Not because it was a great poem are this composition and its author remembered, but because Lincoln loved it, it is preserved and will continue to live. Sir Walter Scott, at the height of his fame, tried to secure recognition for William Knox and had very limited success; but Lincoln, who never knew the name of Knox, caused his name to be discovered and has made it live, with the melancholy verses entitled *Mortality*.

Oh! why should the spirit of mortal be proud?—
Like a swift-fleeing meteor, a fast-flying cloud,
A flash of the lightning, a break of the wave,
He passeth from life to his rest in the grave.

The leaves of the oak and the willow shall fade,
Be scattered around and together be laid;
And the young and the old, and the low and the high,
Shall moulder to dust and together shall lie.

The infant, a mother attended and loved:
The mother, that infant's affection who proved;
The husband, that mother and infant who blest,—
Each, all, are away to their dwellings of rest.

The maid on whose cheek, on whose brow, in whose eye,
Shone beauty and pleasure—her triumphs are by.
And the memory of all those who loved her and praised,
Are alike from the minds of the living erased.

The hand of the king, that the sceptre hath borne,
The brow of the priest, that the mitre hath worn,
The eye of the sage and the heart of the brave,
Are hidden and lost in the depths of the grave.

The peasant, whose lot was to sow and to reap,
The herdsman, who climbed with his goats up the steep,
The beggar who wandered in search of his bread,
Have faded away like the grass that we tread.

The saint, who enjoyed the communion of heaven,
The sinner, who dared to remain unforgiven,
The wise and the foolish, the guilty and just,
Have quietly mingled their bones in the dust.

So the multitude goes—like the flower of the weed,
That withers away to let others succeed;
So the multitude comes—even those we behold,
To repeat every tale that has often been told;

For we are the same our fathers have been;
We see the same sights our fathers have seen;
We drink the same stream, we view the same sun,
And run the same course our fathers have run.

The thoughts we are thinking, our fathers would think;
From the death we are shrinking, our fathers would shrink:
To the life we are clinging, they also would cling—
But it speeds from us all, like a bird on the wing.

They loved—but the story we cannot unfold;
They scorned but the heart of the haughty is cold;
They grieved—but no wail from their slumber will come;
They joyed—but the tongue of their gladness is dumb.

They died—ay, they died—we things that are now,
That walk on the turf that lies over their brow,
And make in their dwellings a transient abode,
Meet the things that they met on their pilgrimage road.

Yea! hope and despondency, pleasure and pain,
Are mingled together in sunshine and rain;
And the smile and the tear, the song and the dirge,
Still follow each other, like surge upon surge.

'Tis the wink of an eye—'tis the draught of a breath,
From the blossom of health to the paleness of death;
From the gilded saloon to the bier and the shroud:—
Oh! why should the spirit of mortal be proud?

The City That Remembers Cooking

(*Concluded from page 8*)

poured over the rice it keeps taking in new ingredients. Every grain of the rice stands separate and dry, for there is none of your gummy rice in New Orleans. Rice is real food here.

All sea foods are used in many forms. Strangers are often hesitant about trying crawfish, especially when they see that crawfish are usually served frappéed, and they look rather difficult to handle.

There are the large lake shrimps and the small river shrimps. New Orleans considers the river shrimp much more delicate in flavor, but they are a half-day's job to prepare.

Gumbo, court-bouillon, fried shrimps with tartar sauce, Pompano Papillotte (cooked in a paper bag) with potatoes soufflé—try all these. Those potatoes look like little balloons, and they are served in a bread basket. They fascinate me, for I haven't yet been able to understand how they make them hollow inside. They say it is a matter of the cooking temperature of the fat—they are started at slow heat, removed and dried, and put back at blue heat. But I don't know! It looks rather miraculous, and I've never summoned courage to try it.

Try jambalaya, and even the standard red beans and rice. You'll not find them the same anyplace else.

Oysters Rockefeller, baked and served in a pan of salt, with a marvelous green sauce. Bouillabaisse, which some consider the climax in cookery, with its ingenious mixture of red snapper, redfish and other sea foods.

And above all, the coffee.

Coffee before you are out of bed in the mornings, coffee as many times a day as you want it, coffee late at night down at the old French Market—and you'll sleep just the same.

After all, the grocery boy's basket has more inside information about people than any newspaper!

New Orleans? Mardi Gras? The City That Care Forgot? See all those. But learn too *The City That Remembers Cooking!*

See the courtyards, but see the kitchens too. Patios are beautiful, but there is charm in pots!

Putting Sense Into Taxation

(*Continued from page 4*)

much a few years ago may take any of three forms: (1) A general turnover tax at the rate of, say, one per cent, which would apply to every kind of sale; (2) the same tax limited to the sale of commodities; and (3) the tax limited to the final sale.

The general turnover tax has few friends because, although very simple to state, its effects would be revolutionary. We are continually working for a faster rate of turnover in business. This tax would penalize that progress and also it would place at a disadvantage the business which did not control its product from source to consumer. That business is already at a disadvantage and is due eventually to pass out, yet to compel instant consolidation by economic force would disrupt the country. And also to tax every kind of transfer at a uniform rate would be ruinously unfair. Taxing only commodities will have the same effect as a general turnover tax, excepting that its scope would be more limited.

THE final sale tax is open to the same objection as the commodity and turnover taxes, while if the commodities most frequently used were exempted the tax would not yield enough money to make it worth while. The sales tax would press hardest upon the people of small incomes and more especially the commodity form, because about two-thirds of the commodities of the country are bought by the people whose incomes are less than three thousand dollars.

Years ago a gentleman named Adam Smith grew famous not only by linking the popular Smith family with the Creation but also by writing a book on political economy which hardly anyone reads, but with which everyone setting up as intelligent either agrees or disagrees. He laid down four canons of taxation: (1) That taxes should be equal; (2) that they should be certain; (3) that they should be convenient; and (4) that they should be economical in their collection.

These canons are completely out of date. They always have been out of date. They have been out of date since the dawn of democracy—there is not a vote in a barrel of them. We are far too busy in these days to bother with abstractions or approximations. We want perfection. We know what we want and we want it quickly. We want the perfect tax, or, failing in that, we will take the almost perfect tax.

These are our canons:

(1) The perfect tax will provide ample funds for everybody and everything—and nobody will have to pay it.

(2) The almost perfect tax will likewise provide all funds for all hearts' desires—and the other fellow will do all the paying.

We have an irreducible minimum of expenditure—the debt service. We have to pay the interest on the money we have borrowed and also provide sinking funds for its retirement. All the other services will sometime have to be reviewed; first, to determine if they are necessary at all; and, second, to determine the minimum expenditure for adequate service.

These points would seem evident:

(1) Lay the taxes where they will do the least harm.

(2) Make them as simple and cheap in collection as possible, and in this consider the expense both to the Government and to the taxpayer.

(3) Make taxes not only highly visible but also universal so that everyone will pay a tax—and know he is paying it.

(4) Make taxes certain, that they may be provided against.

The two taxes that stand out as best fulfilling all these requirements are the real estate tax and the personal income tax.

The real estate tax we know. That is its great advantage, and when the assessments are fair, it is a fair tax. The personal income tax also has a great advantage, although we do not know it very well and have not as yet learned how to administer it. Its special advantage is that it can be graded according to ability to pay and, because it is imposed after the money is earned, it cannot well be added into the price of goods, and therefore within limits does not break up the normal progress of life.

There are a multitude of other taxes which we are beginning to accept as necessary just because we have had them for a long time in some form or other. It might be well to investigate their economy. The taxation of public service corporations and railroads has gradually increased until in 1922 the steam railroads paid 82 per cent of their net income and the street and electric railways 81 per cent.

This taxation, so far as the companies are concerned, is not concealed, but as far as the public is concerned the taxes show up in higher rates and poorer service. Corporations generally are supposed to be fair game for taxation.

The United States Steel Corporation in 1923 paid $55,000,000 in taxes and $54,000,000 in dividends. In 1924 it paid $45,000,000 in taxes and $60,000,000 in dividends. The various tax units therefore came in practically on an equality with the stockholders—who had paid their money and made the corporation possible. In both these years the taxes were in excess of ten per cent of the wages.

In 1923 the insurance companies, which are nearly all mutualized—that is, they are in effect coöperative societies—paid, over and above their real estate taxes, around $59,000,000 in odds and ends of taxes imposed by various authorities, and of this less than four per cent was devoted to service to policyholders through insurance departments or the like.

A corporation or any business must treat its taxes as a fixed charge and budget for them, and therefore they become a charge on production or distribution. They are bound to pyramid and this pyramiding may raise the price of the goods sold, or decrease wages, or decrease profits, or be divided, according to circumstances, among these three items. A higher efficiency may apparently absorb the tax but actually the absorption will be at the expense of one or all of the items. The tax hides, but it is there.

THE income tax is highly unpopular, and well it might be, because up to date it has been politically conceived and politically executed. The politicians have been afraid of the income tax. It is a tax of high visibility—anyone caught saying he likes to pay his income tax would be admitted to an insane asylum without further evidence.

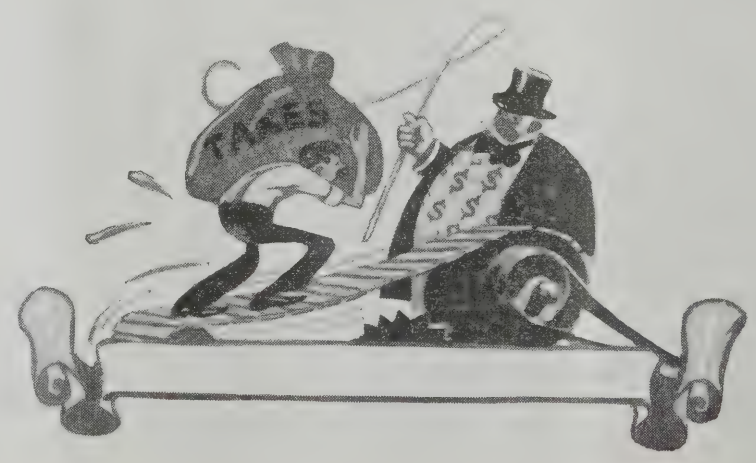
And so the thought has been not to make the tax fair but to raise the exemptions to a point where a clear majority of voters might be tax-free. The struggle has been to keep the exemptions ahead of the increasing wealth of the voters!

Do we want taxation conceived in terms of votes? Or do we want fair taxation? These would seem to be the elements of a fair income tax:

(1) The tax should go with citizenship. Very small returns are expensive to audit, but the payment of a head or poll tax with a return that was only an affidavit would cover this.

(2) The point of exemption for filing a return and paying a graduated tax should be determined not by the number of voters who can be released but by the expense of audit. This expense can be determined by cost accounting but not by oratory.

(3) The items deductible as expense should be made clear in the tax bill itself and not left to the more or less arbitrary determination of a Treasury ruling and should be made with regard to thrift and future income. For instance, traveling salesmen are penalized because they do not keep accounts which it is practically impossible for them to keep. Life insurance premiums are not regarded as an expense, although life insurance is the great American safeguard against poverty.



(4) The simplification of the form of returns and the adoption of some form of short return by which a taxpayer may simply report his gross income and, taking no exemptions or deductions, pay, say, 75 per cent of the rate provided by law.

(5) Distinguish clearly between what has been called 'earned' and 'unearned' income. *A professional man or a man who works for wages or salary uses up his capital—that is, his body and his brain—in the earning of his income.* What he has to report as earnings also include a part of his principal, whereas a man deriving his income from invested capital uses none of this principal. This distinction has not yet been written into any tax bill in other than the most perfunctory manner.

(6) The reduction of surtaxes to a point where they will not be confiscatory and will not drive money out of industry or curb individual enterprise. This is another point where we have to decide between taxation as a method of raising money and taxation as a method of nationalizing wealth.

(7) The administration of the tax with view to the expense to the taxpayer and not as a contest between the Government and the taxpayer.

If you think of taxes solely as a means of raising revenue, then it follows that they ought to be laid with a view to promoting prosperity, or at least not hindering it—which in turn means the greatest good for the greatest number—that is, frank, open, honest taxation. If you think taxes should be imposed as a penalty, then prosperity is of no consequence. If it is wrong to be rich, then wealth should quickly be taxed out of existence. The reason our taxation is so entirely unsatisfactory is that it is neither fish nor fowl—our laws have wobbled between these two principles.

A Traveler in India

WE WERE crossing a wide river, the Sonne, an important tributary of the Ganges. Groups of native people were weeping on the sand, while others, prostrating themselves on the shore, faced the sunrise and worshiped. The heathen, in his blindness, bows down to wood and stone; but he also in many instances is a worshiper of the sun.

The sleeping cars of trains in India accommodate sixteen passengers and two servants each. The servants have a narrow compartment fitted out with an upper and lower bench which may be, and are, used as a berth, and each servant cares for eight passengers.

The traveler in India is supposed to furnish his own bedding, but the American tourist may rent his outfit, or it is rented for him by the company under whose auspices he visits India. The outfit consists of a cold-all with a thin mattress and a quilt, a small, hard pillow, two sheets and three or four towels. In an American party, husbands and wives are separated, four men being assigned to one compartment and their wives to the adjoining one, as far as can be made to work out mathematically.

Each compartment has its own toilet, which is adequate if the water holds out, but the little bathtub is a sort of joke. It serves, however, as a place to set the box of ice which may be bought and carried along.

(To save space, authors and book titles are listed indiscriminately, but generally the best work of each author follows in brackets. Where authors' names alone are given, consult your local library for titles.——The old, classic or standard books are separated from the TODAY books by a dash(—). ——The following key letters attached to titles, in each case, will explain the general nature of the book: C: Comes in a cheap edition, such as Everyman's Library or Modern Library, or else in prices under $2.50. L: Long —either over 150,000 words in one vol. or in several vols. P: Pocket edition, or one so compact as to take but little space. S: Source book. By this is meant a book so fundamental that it is necessary to read it in order to understand the later literature on that subject and which, quite likely, it originated. These great source books, however, are not always strictly accurate in the modern sense, as the thought in them may have since been modified or re-created.——It goes without saying that the books listed here cover only a very small fraction of the whole; neither must it be thought that in all instances they are necessarily the best on that subject. But they are the ones I have personally read and studied and can vouch for.)

The First Advertisement *in* English

It Was Caxton Who Printed It, to Draw Attention to a Book

By LOUIS C. KARPINSKI

THE itinerant umbrella mender who rings a bell announcing his approach and the hucksters who still 'hawk' their wares about the city streets are survivals of the most ancient and most direct form of advertising. With the invention of writing the written word posted in the market place, or public place, took away the necessity of the sale by the town-crier method. With the invention of printing that medium became the popular one until at present printing and advertising are almost synonymous terms.

The first to appreciate the new power of the press for business purposes were the printers themselves. The first printers were also necessarily the publishers and booksellers, frequently even the authors of their books.

The first printed advertisements consist of notices of books published by the booksellers of Germany, of Italy, of France, and of England. Such a notice consisted of a single sheet, a broadside, designed to be tacked on the door of a church or the gateway of a city or in some similar public place. In the nature of the case such documents were not carefully preserved and the fact that a fairly large number have survived to the present day is largely due to accidental rather than deliberate preservation.

The first printer of England, William Caxton, printed in 1480 a book giving the rules for the government of priests in the diocese of Salisbury. The book would not appear to be a tale of adventure, stirring the enthusiasm of anyone who heard the title, and yet William Caxton deemed it of sufficient general interest to warrant an advertisement, for public display. This specimen of the great printer's art has been preserved in two copies. One is found today in the Bodleian Library at Oxford, and the other in the great John Ryland's Library of Manchester.

Caxton makes a point of the fact that the book is of the same type as the advertisement, 'enprynted after the forme of this present lettre'; that the book 'ben wel and truly correct'; and also where the book is to be had, at Westminster in the Almonry, by the Red Pole. All of this is good 'advertising stuff.'

In the second line a strange word appears, 'pyes.' For many years philologists disputed about the origin of this strange word, until quite recently a master-printer noted that the first line was about two letters shorter than the second line and that evidently two letters were accidentally dropped from that line. Any worker of cross-word puzzles will immediately recognize the two letters which would fill in these blanks to make a good English word ending 'pies,' and denoting 'specimens' or 'samples,' and appearing in a word like 'copyright.'

One reason for the activity of the printers in displaying their wares to a wider public was the fact that printers found quantity production as the only solution of the financial expenditure in setting up the type for a book. Written books were necessarily extremely expensive, and education by the written instrument was confined to a small group. The printed book put education in the reach of the masses, but the masses were not so quick to realize this fact as the printers. Note that Caxton calls particular attention to the fact that the book is 'good chepe' and practically all printers made a great point of the low price, as well as of correctness.

The first newspaper advertisement in English appeared in the *Perfect Occurrences of Every Daie, journall in Parliament, and other Moderate Intelligence,* for April, 1647. This advertisement reads as follows:

'A Book applauded by the Clergy of England, caled *The Divine Right of Church Government,* Collected by sundry eminent Ministers of the Citie of London; Corrected and Augmented in many places with a briefe Reply to certain *Queries* against the Ministery of England; Is printed and published for *Joseph Hunscot* and *George Calvert,* and are to be sold at the Stationer's Hall, and at the Golden Fleece in the Old Chaunge.'

The second newspaper advertisement in English appears in the *Mercurius Elencticus* of October 4, 1648, in which two other religious books are recommended·

'The Reader is desired to peruse a ſer-mon Entituled *A Looking Glass for Levell*s, Preached at St. Peter's, Paules Wh[arf], on Sunday, Sept. 24th, 1648, by [Ja] Knell, Mr. of Arts. Another Tract ca[lled] *A Reflex upon our Reformers with a pro[per] for the Parliament.*'

Advertisements were commonly made by posting up printed notices. A cent[ral] exchange appeared in London, 'the of[fice] of Publick Advice,' about 1660, print[ing] a page of advertisements, probably ev[ery] week. In 1689 this advertising medium co-sisted of some sixteen pages.

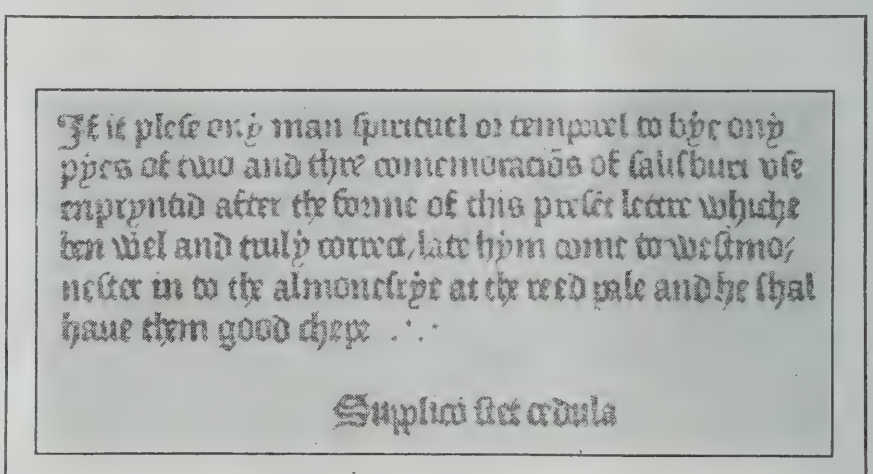
Books and patent medicines were [the] first subjects in England, followed by [one] which was advertised in September, 16[58] in the *Mercurius Politicus.*

'That excellent and by all Physitia[ns] approved China Drink, called by [the] Chineans Tcha, by other nations T[ea] alias Tee, is sold at the Sultaness He[ad], a cophee-house in Sweetings Rents, by [the] Royal Exchange, London.'

Such were the beginnings of advertising in the very early days of printing. In the early 18th Century some Engli[sh] newspapers began to devote large portio[ns] of the front page [to] advertisements. T[he] American newspap[ers] in their earliest [be]ginnings ran adv[er]tisements as part [of] their regular busine[ss]. With the advent [of] the daily paper [in] Philadelphia, lar[ge] sections of the pape[r] were devoted to a[d]vertising so that t[he] news seemed to o[c]cupy only a secon[d] place. That practi[ce] continues in Phil[a]delphia to the prese[nt] day, nor is it confine[d] to newspapers.

Complaints again[st] advertising are no ne[w] affair. Addison in th[e] *Tatler,* in 1710, cha[r]acterized the art [of] advertising as 'findi[ng] out a proper metho[d] to catch the reader's eye, without which [a] good thing may pass unobserved or be lo[st] among commissions of bankrupt.' Th[e] advertiser is to 'mention the "univers[al] esteem," or "general reputation" of thing[s] that were never heard of.' Even more caust[ic] remarks were made by the great D[r.] Johnson who was much disturbed th[at] through the advertisements the butch[er] and baker should appear in the same pap[er] and be perpetuated in history together wi[th] the royal rulers of the earth.

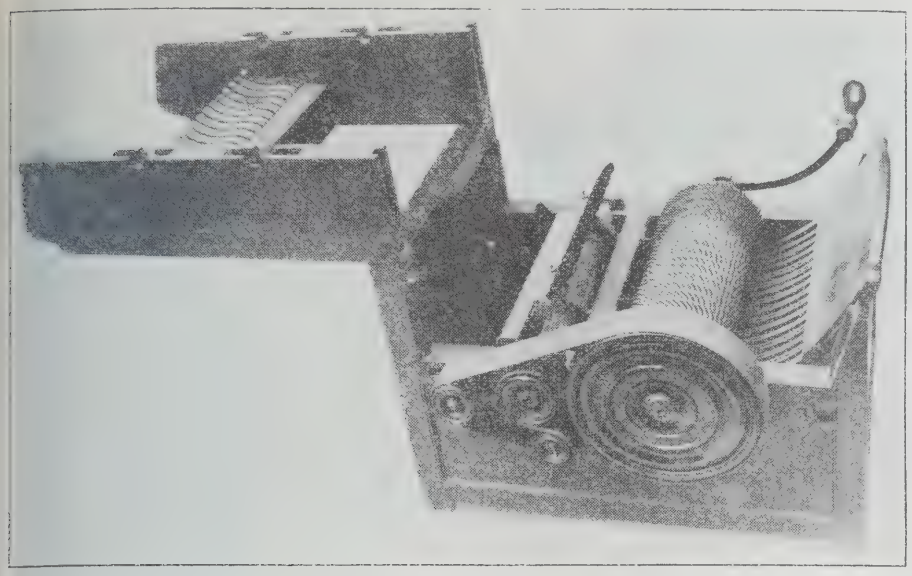
Today advertising has reached such a point that in a number of journals the mo[st] highly paid articles are contained in th[e] advertisements. Psychologists and scie[n]tists are employed to make the advertis[e]ment most compelling.



William Caxton's advertisement of a book giving the rules for the government of priests in the diocese of Salisbury, which appeared in the year 1480. The last line in Latin reads, 'Please leave this notice up.'

New England Spindles Go to Dixie

(*Concluded from page 2*)



The cotton gin helped make cotton growing more important than manufacturing in the South.

ut serious sectional competition, wages ere generally more easily adjusted by imply adding increased payrolls to the onsumer's bill. The textile manufacturer hen assumed the public attitude of 'Take ur goods or leave them, but you must ave them anyway.'

As this was going on in the North, the ompetition of upcoming mills in the South ade its appearance. Meanwhile New ngland's population was rapidly changing. oday, more than sixty per cent of her eople are of foreign-born stock, with as igh as sixty-six per cent in Massachusetts, eadquarters of the Northern textile in-ustry.

In Boston, New Haven, Providence, lartford, New Bedford, Fall River, Lowell, nd other cities of New England, only bout one-third of the inhabitants are of ative American ancestry, while in the extile centers of the South not more than wo per cent of the population is foreign-orn. And throughout the South, as a hole, where the most marvelous industrial rogress is on today, the foreign-born white opulation is but 2.7 per cent of the people, hereas it is 18.1 per cent for the rest of the ountry.

With this foreign population in New ngland have come labor unions, a higher ercentage of agitators, and a sort of a abylonian mixture of tongues, which have ot added any to the concord or expedition f operation. The finest textile hands, by he way, have generally originated in Eng-and, whence few of the present New Eng-and immigrants come. Of course, many of he old hands, with several generations of extile skill, are still at work in these mills, hich no doubt has much to do with the roduction of the finer fabrics there.

Cheaper power and nearness of the raw aterials for the Southern mills have put ew England out of competition with the otton-growing states in the coarser cloths. ith cheaper labor, cheaper raw materials, nd cheaper power, and still other ad-antages in the South, the Northern oper-tor has to overcome his handicap by giving ore attention to designs and adaptability. Instead of manufacturing cloth just as potatoes are grown and selling it in the same way potatoes are sold, they are now featuring certain fabrics and specializing more on goods that do not meet with the Southern competition.

Southern labor, willing, homogeneous, with its background of Anglo-Saxon skill, inured to hardship and satisfied with smaller wages than the New England operative, is the greatest contributing factor in the rapid rise of the textile industry in the South—that and the hydroelectrical power development of the hill sections, such as states within the great mountain range.

Western North Carolina, with the most of these mountaineers as a reservoir of labor supply, and with more natural power development than any of the others, leads the cotton-growing states in the textile industry, although it does not rank first by any means in the production of the raw staple itself. According to the 1925 figures, it consumed 1,334,794 bales of raw cotton, as compared to South Carolina, its nearest competitor, 1,029,797, while it operates about 700,000 more spindles than the latter.

Half of the textile industry of the South is confined to these two states, with the center of the Southern industry located at Charlotte, North Carolina, on the Piedmont Plateau, where the three prime factors in this remarkable industrial expansion—labor, power, and raw materials—are most abundant.

In the South, skill increased rapidly, with other favoring advantages, including a better climate in which to live at less cost, thus constantly favoring the mill operator in the cotton-growing states, while the row of his New England competitor became harder and harder to hoe. With so many natural advantages in favor of the former, the adverse human element has been a great problem for the latter to overcome. And the result has been a shift of much of the New England textile industry to the South—a shift in which New England capital and New England management brains have joined hands with the mountaineer workman in the Piedmont area. There still remains much of an industry in the North, however, which for various technical reasons, such as climate, nearness to consumer market, and other manufacturing facilities only acquired through long operation in one center, is thoroughly entrenched.

One drawback of Southern labor, authorities claim, is the tendency to change from mill to mill with practically no provocation. To offset this roving disposition, the mills established in the South have been obliged to erect and maintain entire communities, to house and supply their workers. This was because they were brought down from the mountains where the mills could not be located.

Plants for the Window Garden

(*Continued from page 15*)

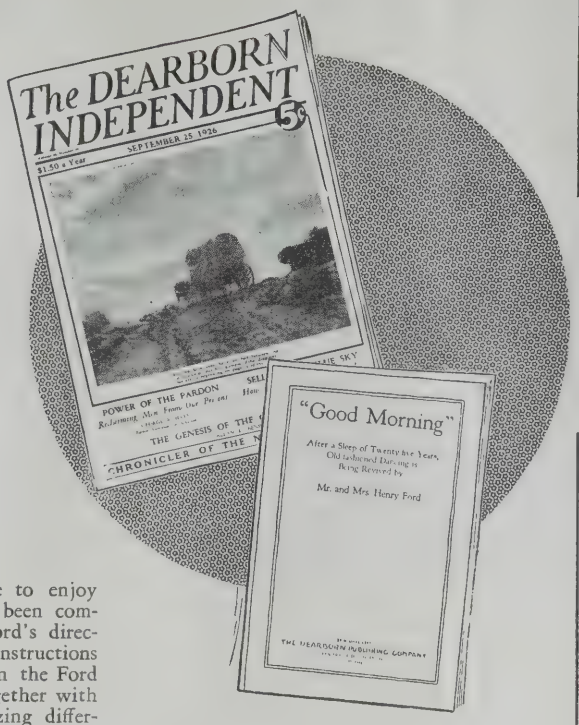
me—the 'skeleton,' the loved 'rose,' the 'peppermint'—really smelling exactly like that pungent mint. Last year we had a gift of two tiny-leaved scented geraniums—name unknown—of a vine-like habit of growth, which in the spring developed a shower of small, exquisite single pink blossoms along the branches. Single leaves or sprigs of these scented varieties are lovely to use in finger glasses—as are also small sprigs of the pink-flowered semperflorens begonias, which we value highly for window gardens and always include. A pot of this in full flower, set in a basket or some other artistic container, makes a lovely dining-room table center. It is a good idea to grow extra ones for this purpose, shifting into full sunlight occasionally, as the blossoms pale in the shade. It is well to plant a package of mixed seed in the spring and select for winter salvage those which prove most lovely and free-blooming. Or, in the pleasant freemasonry of flower lovers, beg 'slips'—easily rooted—of some of proved worth from a friend. The Lorraine type, and the various large, ornamental-leaved, seasonal-flowering begonias make lovely house plants, if one has room for their inclusion.

Petunias make charming house plants. They are very easily rooted by keeping chubby slips in a tumbler of water for a few days, when roots will sprout freely; pot at once, and pinch out centers to induce branching. Or take up seedlings of desired size from the garden, pinch back, and they will begin to thicken up, grow, and blossom almost immediately. The *Rosy Morn, Royal Purple*, and the *Lady of the Lake* (double white) are the best.

But of all easily slipped plants for winter growth, nasturtiums take the palm! We value these highly for house plants, either to wreathe the windows or to twine on a frame. Formerly we raised them from seed—a good enough method—but we have discovered that the best way is to break off slips, selecting stocky, shrubby offshoots of favorite varieties, and stick them directly into a pot of prepared earth; a good-sized pot will grow four or five successfully. These never even wilt, and grow and blossom without even a day's vacation. I suppose that roots appear at the proper time, but the slips do not seem to need them to carry on their ordinary activities!

Long sprays of flowering nasturtiums

LEARN *to* DANCE *and Keep Young*



The DEARBORN INDEPENDENT

SEPTEMBER 15 1926
POWER OF THE PARDON
THE GENESIS OF THE
CHRONICLER OF THE
"Good Morning"
After a Sleep of Twenty-five Years, Old-fashioned Dancing is Being Revived by
Mr. and Mrs. Henry Ford
THE DEARBORN PUBLISHING COMPANY

The Old American dances as revived by Mr. and Mrs. Henry Ford have created widespread interest.

To render it possible for everyone to enjoy these beautiful dances there has been compiled and published, under Mr. Ford's direction, complete information and instructions on each of the dances as taught in the Ford School of Dancing at Dearborn, together with calls, music and pictures visualizing different steps.

"Good Morning"

is the title of this interesting book. It contains 169 pages, carefully printed in clear type, and durably bound in attractive paper covers.

It also explains the origin and etiquette of the dances; style and deportment, and how to arrange and conduct a successful dance.

Readers of THE DEARBORN INDEPENDENT are now given an opportunity to obtain a copy of this popular book free. It regularly sells for 75c a copy, but for a limited time we are offering a copy of *"Good Morning"* in return for obtaining a new subscriber for THE DEARBORN INDEPENDENT.

Thousands of men and women are just waiting to be asked to subscribe to this great publication. Many of them are your own friends and neighbors. All you have to do is to secure one new subscription and forward it on the coupon below. We will immediately send you a copy of *"Good Morning"* with our compliments.

may be picked just before frost, placed in a large vase, twined around a picture or two if you wish, and will bud, blossom, leaf, and grow incredibly, without a break. The only 'out' about growing nasturtiums in this way is that the old leaves turn yellow very rapidly, and must be carefully removed daily to keep the arrangement from looking shabby.

A real plant-lover will always succeed in taking heliotropes from the ground for winter blooming. Cut around the plant in sections—if you begin early enough—a few days apart; lift very carefully into the proper-sized pot arranged with drainage and a little earth, add water and earth alternately, 'firm,' spray very gently until the earth is solid, set in the shed for a few days, and even if the plant drops its leaves a bit, new ones will immediately appear. I have seen splendid heliotropes in full winter bloom, salvaged from the garden in this way.

We like to take up a few annuals to bloom through the early sparse season, before the old stand-bys come into full blossom. French marigolds are among the best annuals for this purpose. Select a symmetrical, good-sized plant in full bud and bloom, take it up carefully as directed for heliotropes, and it will never wilt, and will blossom gaily for a month or more. African marigolds, if you can find a well-shaped specimen of proper size, will blossom gorgeously in the same way. Balsams are lovely, especially the double pink variety, which resembles the smaller azaleas; and a selection of German asters in full bud and bloom, taken up in single pots and grouped, make as gorgeous a beauty spot in your living room as you can imagine. These, however, are rather ephemeral.

Pots of seedlings of phlox Drummondi, mignonette, sweet alyssum, candytuft, and such plants, are lovely in the window garden, if they get plenty of sun. Sometimes you can find and salvage self-sown seedlings. These are all beautiful during their blooming season, but must, of course, be discarded when their beauty begins to wane. A friend of mine always tucks in a few morning-glory seeds in various pots, which later on show dainty colored bells.

But the very loveliest annual for the window garden is the *schizanthus*—'Poor man's orchid.' This grows well, develops its fern-like leaves in abundance and sends out showers of the daintiest, most enchanting orchid-like blossoms imaginable. The bright lavendar is the prettiest. *Streptosolon*—pure sky-blue—is a most charming house plant. This grows in a vine-like fashion and produces countless single blossoms, resembling violets in shape and color. There is an orange-colored variety producing its flowers in luxuriant clusters that is very ornamental. Both are attractive to the green aphis, and must be carefully watched.

Azaleas make lovely house plants and may be saved from year to year. Sink pots in the shade, and give plenty of water through the summer, as well as during their blooming season.

Plants should be given sunny windows if possible. We enjoy having them in the dining room. Their cheerful greeting starts the day well, and the whole family takes an interest in their constantly developing buds and blossoms. Shelves are better than stands. Try to resist the temptation to take up too many plants. A few well-developed specimens are infinitely more attractive than many crowded, ill-shaped ones.

Hal—A Story of Regeneration

(*Concluded from page 13*)

jo, took to hanging about the race tracks, spent a squalid week in Tia Juana, and finally found his level in a ring of petty bootleggers. He was drunk the night he led with such reckless but misguided zeal to protect the gambling tables in Mike's pool room from the supposed holdup which proved to be a plain-clothes police raid.

WHEN his case came up for trial, I was a character witness for him, and he was let off with six months. He came out harder and more sullen than ever. It was almost as though he had discovered within his own soul the craving for a finer life that was denied him by all his past experience—that had been ruthlessly closed to him in his one impulsive step toward it. Feeling instinctively superior to his environment, yet hopeless of escaping it, he began with ingenious perversity to adapt himself outwardly to it, and to hack to pieces the impulse within.

The revulsion was manifested by quite trivial as well as serious things. His language became coarser than ever; he neglected his hitherto irreproachable personal appearance. He drove a taxi, daytimes, went out with his petty bootlegging, and drove my car when I wanted him in the evenings, but wearing now a nondescript chauffeur's uniform. He wore a large, stiff cap with shiny leather peak, pulled down over his eyes. He acted the chauffeur with the subservience of an English menial. It was, incidentally, that talent for the dramatic coming out in him.

One day I went to the principal of the school nearby, and told her that I was studying the effects of malnutrition on the physical and mental powers of the children. She introduced me to several of her teachers. And so I met Myra Lane, who was so startly interested, on the practical side, in the subject of my quite unauthorized investigation that she gave me much of her time, and a friendly acquaintanceship sprang up between us. I watched her at work in her classroom, talked with her frequently in her home, used her as a pipe line for the information I needed about typical cases of juvenile deficiency, malnutrition and backward pupils.

She had promised me reports on a certain group of children, and one evening I asked Hal to drive me to her home. He suddenly began fumbling with the gear shift when I gave him the address, but said nothing. I had about given him up at this time, he had grown so sullen, and had so submerged himself in his chauffeur's uniform.

I TOOK Myra and her sister Emily for a drive that evening; Hal, sitting unobtrusively in the dark at the driver's wheel, must have overheard all of the girls' clear, sprightly talk. Both Emily and Myra were an inspiration to me with their college background and intellectual vivacity. To Hal their talk must have illumined the gulf between him and the world he could not enter. That night he left me with his handsome face set in still harder lines of sullenness.

A week later I picked the girls up for another evening drive. Myra talked confidently, confidentially, on the public school failings that were preoccupying us both. And suddenly, in a mood of indiscretion, she began to illustrate it with the story of an experience that had been rankling in her soul for months.

Then for the first time I realized the situation and knew what was coming. And Hal's face, faintly illuminated by the glow from the instrument board light and reflected back to me in the mirror above the windshield, gave me a sudden glimpse of bleak despair. I broke in on Myra's story with a rude change of topic, but of course it was too late.

Hal had never told me the girl's name; his mother had never known it. On each of these two evening drives, Myra, always absorbed in the interest or experience of the moment, had paid no more attention to the nondescript chauffeur in the darkness of the front seat than she had to the seat itself. He was only a part of the car to her. But I can imagine how Hal had felt, hearing the throbbing flow of her sweet voice, her easy play with ideas, her hints of what was to him a wealth of culture in her environment.

THAT night as we returned to her home he did a preposterous thing. He was both rubbing salt into his wound and giving free rein to his incorrigible sense of the dramatic. In fact, I take it that his play-acting urge had reinforced from the start his mood of wallowing in the mire. As soon as he had stopped the car, he leaped out, opened the rear door, and stood stiffly like a hotel doorman beside it as Myra stepped out.

'Thank you, madam,' he murmured, in his best imitation of the servant who knows his place.

Their eyes met in the light from the street arc, and as I took her arm at that moment I felt Myra's uncontrollable trembling. The story she had started in the car must have flashed through her mind. She was speechless for a moment, then started to say something, but Hal slammed the door and stepped forward to raise the hood and examine the engine. Myra bade me goodnight on the porch with a stricken voice.

It was unpardonable on Hal's part; and I could see that it had dramatized for Myra an emotion that had long been simmering uncontrollably within that unaccountable woman's soul of hers.

I was leaving shortly on an extended lecture tour. I gave Hal a letter of introduction to a friend of mine, a director in one of the studios; and I wrote the same man a long private letter.

It was two years before I settled down again and resumed some of the associations of that odd affair. Myra had me to dinner at her bungalow shortly after my return. She had grown older and more subdued. The vagrant sprightliness was gone. There was a premature sedateness in the carriage of her head—the old alluring toss of her bobbed black tresses had disappeared, and in the steady gaze of those warm brown eyes the disarming frankness was tinged with a hint of wistfulness.

Later I asked her to dinner at a hotel, and we put in the rest of the evening at the movies. It was just another society melodrama that bored us both—until she saw his figure on the screen. Her repressed exclamation coincided with my own recognition of Hal, playing a minor part, but playing it with inimitable grace and sincerity.

By tacit agreement we sat silent through the second showing, and I am sure that every faintest change of his expression, every movement of his figure was indelibly fixed in her mind as we left.

SHE was in love now—in love with a shadow on the screen, with a memory, with an impossible dream. No doubt there was a peculiar egotism about it—the same sort of egotism that makes some women of Myra's type cling to love for a husband who abuses and deserts them. And no doubt in both these manifestations, the basis is an extension of unconquerable maternal love. I am sure this was true in Myra's case.

The climax came unexpectedly soon and with an unforeseeable twist.

I had been announced to speak one night at a community forum in the school auditorium. Myra was in the hall; and while the chairman was still introducing me I saw Hal smiling at me from one of the back rows. All the while that I talked I was afraid of what might happen, and concerned as to how I might keep them apart; for I could see nothing but tragedy in renewed proximity. A man may find at last his destined rôle in life, but that does not mean his mannerisms or character will change. Yet I could not keep my eyes off his glowing features, in which the old Hal of before the degraded days seemed to live again. I saw that the personal letter to my friend had done wonders; I had no belief that it could have wrought miracles.

After the talk I was surrounded of course by the usual crowd of friends, known and unknown, from the audience. Myra and her sister were among them. The group gradually dispersed, and I went over to the girls with the intention of escorting them home.

A quiet voice at my elbow and slightly behind Myra spoke—a known yet unfamiliar voice.

'Judge, your message struck home; the people around me I know were impressed. May I congratulate you?' And then, 'Miss Lane, *your* message once struck home too. Much of the past is quite dead for me. I hope it can be for you, too. May I apologize, and forget?'

I CAN'T reproduce the tension of that moment; I should rather not call to mind Myra's face, pale for once, nor the startled, bewildered look in her eyes. Hal had said just the right thing, and just enough.

I call at another bungalow when I am in Hollywood now. And when I occasionally see Hal upon the screen, in well-directed films, I think of the director's genius not in terms of photoplay production, but of another sort of leadership altogether. I know of a great educator, a great leader of boys, who missed his profession.

Chats *with* Office Callers

'This is the 20th Century,' declared ***the Inventor*** as he strode into the office. 'Why not live in it?

'Our forefathers sat out on the wide prairie away from civilization, narrowed in mind and enjoyment by the horizon their eyes beheld, wizened in spirit and soul by the hardships enforced by the ignorance of environment, knowing little of what the world was doing.

'We today may live on the same farm, view the same prairie, may even have the same viewpoints if we are willing. But this is the 20th Century. Why not live in it? My grandfather, age twenty-one, with his wife, age eighteen, left New York in an ox-cart and in three months reached the frontier in Illinois where he settled and stayed. That was travel for those days, and adventure. Few knew then how the rest of the world lived and cared less. This ignorance led to misunderstandings and hatreds. It led to distrust of strangers. Travel is bringing understanding and a world brotherhood, a happiness of the knowledge of the great things of life. This is the 20th Century. Why not live in it?'

❦ ❦ ❦

The Man Who Tramps for His Health is a bit of a philosopher. 'The most tragic thing I know,' said he, 'is the retired farmer. In former days, say twenty years ago, when a farmer was ready to retire he turned his place over to his children, while he went to the nearest town, usually the county seat, to live out his life. He settled in the outskirts, bought an acre or so, kept a cow and chickens and exercised enough to retain his health. The children on the farm made good, and when he tired of town he could visit them. In this way he rounded out his life as did his hard-working wife.

'Nowadays when the farmer gets along in years he finds his children have for the most part left the farm and have settled in the larger cities. They succeed usually and make many times what they would have, had they remained next to the soil. The farmer grows old, sells his farm and severs his connection with the soil. He does not move to the small town but goes to the city and rents an apartment. He brings his farm appetite with him and satisfies it by stuffing. He gets no exercise and soon assumes the attitude of a house dog. Unheard-of ailments attack him and soon he passes away. His widow, to occupy her mind, starts a boarding house and thus occupied carries on a bit longer, but you will find few long-lived farmers in the city.'

❦ ❦ ❦

'Down in Texas, Captain Tom Hickman, of the Texas Rangers, has been busy again,' said ***the Man From the Ozarks.*** 'His latest deed is the shooting of a couple of bandits at Clarkeville, as they left a robbed bank, carrying $33,000 loot. It is the same Tom Hickman the light-hearted who laid the Yancey Storey outfit by the heels, though the doing so took the coolest of cool courage under fire, and the act was one of a kind to have called forth headlines and "Extrys," had it been done on the front in war time. A dozen or more valiant deeds stand to Hickman's credit.

'But, by some queer quirk, publicity men eagerly instruct a confiding public in the ways and personality of the criminal, but almost never have a word to say of the officer of the law, except in a secondary and remote way. Which is, at bottom, a catering to the primitive idea that there is an inherent affinity between criminality and heroism. It is a catering to sensational excitement, or morbid curiosity. For the criminal has always been the hero of the ignorant. And he knows it too. Hence all that posing in silver and Genoese velvet of a Jack Sheppard; and the foppery of a Vaux; and the diamond hat of a Haram Pasha. Mark this too. The tale of the doings of a criminal stirs up half-dormant instincts in ill-balanced natures, and in those of emotional instability. It must have been forced upon the attention of every thinking man that on the commission of a crime, imitators spring up.

'So why not try things the other way round? Why not say a word about the officer of the law doing what he has to do in efficient workaday way? Take this same Tom Hickman, certainly one gallant and courageous. You have in him no posing hero, but an unassuming man of singular modesty; one planning with swiftness of brain, acting with instant correspond of eye and hand, going about alone with nonchalance, among the friends relatives of those he has captured. Me him socially you would take him for a g good-humored scholar perhaps; at rate for a complacent and contented very courteous, very tolerant, very pathetic. Had a criminal gone, as Hick did, to England to ride in the rodeo whe gained the praise of Cunninghame Gra for his horsemanship, the newspapers o country would have blazoned his nam scarlet letters.

'Why not a word for the man of ho now and then?'

❦ ❦ ❦

Letters, letters and letters; also men varied types and many moods—earnest distressed men, men who talk with an a half-mystical confidence, men who plans with which to settle and unsettle nation, men who prophesy, men plaus and men incoherent, men with charm others wildly overbearing; men who w carry logic to tremendous extremes pro that because taxation is increasing, the must come when every citizen is the s of the state. So, one way and anot amid a mass of strange stuff, one ge side light on current human interests.

Thus, one ***Man From Chicago*** that the strike of musicians, though s and sharp, showed that a motion pict without music is as flat and uninteresting a potato without salt. 'I watched an a ence in a movie show, no humdrum scr story either but one full of emotional aff of modern life, and there was hardly interest manifested.'

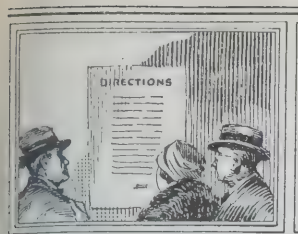
Another spoke of oil. He was fr Amarillo. 'I see that the Coolidge bo estimates that the world has an oil sup sufficient for six years, so urges a search new fields, also some measure of oil conser tion. The first is taking care of itself. for the second, I foresee limited use, or least an avoidance of waste, brought ab by taxation of natural resources. I own acres of oil-bearing land, but it never seem right that I should have and hold sort of inverted pyramid, a chunk of world stretching to the earth's center. so things go. No one man should be allow to rob this treasure chest, the world. Own ship of a piece of land should be limited occupancy, somehow. What is in the ea should be used for the benefit of all. how to do it is the question.'

❦ ❦ ❦

For the best part of an afternoon we talk about best-sellers, and ***the Man W Writes for the Literary Secti*** of the New York *Herald Tribune* cited f gotten things:

Mr. Barnes of New York.
Mystery of a Hansom Cab.
Looking Backward.
The Woman Who Did.
Dream Life.
Prisoner of Zenda.
The Christian.
Aylwin.

He reeled off other names, now in dece retirement but once hailed as privileged live in the clouds. 'There is one book, good seller of twenty-odd years ago, wh still sells well. It is L. Emmett Hol *Care and Feeding of Children.*'



Can You Tell Me?

QUESTION: Which state in this country has the least illiteracy?

ANSWER: Iowa holds first place in low percentage of illiteracy. Only 1.08 per cent of Iowans over the age of ten years are illiterate.

QUESTION: How far can a Congressman go in 'extending' his remarks in the *Congressional Record?*

ANSWER: In an annotation under section 904 of Rule XXXV of the 'Rules of the House of Representatives' it is stated: 'The practice of inserting in the *Congressional Record* speeches not actually delivered on the floor has grown up by consent of the House as the membership has increased and it has become difficult at times for every Member to express at length on the floor his reasons for his attitude on public questions. The House quite generally stipulates, granting leave to print, that it shall be exercised without unreasonable freedom. General leave to print may be granted only by the House, although in Committee of the Whole a Member, by unanimous consent, is sometimes given leave to extend his remarks. When a Member under leave to print places in the *Record* that which would not have been in order if uttered on the floor, the House may exclude the speech in whole or in part.' Thus, where a Member, under leave to print, made charges against another Member, the House ordered the speech stricken out. The principle that a Member shall not be called to order for words spoken in debate if business has intervened does not apply to a case where leave to print has been violated. Where a Member gets leave to insert one matter he may not print another. Where a Member abused a leave to print on the last day of a session, the House at the next session condemned the abuse and declared the matter not a legitimate part of the official debates. An abuse of the leave to print gives rise to a question of privilege, and a resolution to expunge from the *Record* in such a case is considered as of privilege. An inquiry by the House as to an alleged abuse of the leave to print does not necessarily entitle the Member implicated to the floor on a question of personal privilege.

QUESTION: When was the Bureau of the Budget created and under what department does it come?

ANSWER: It was created by the act approved June 10, 1921. It is in the Treasury Department but not under the jurisdiction or direction of that department. The Bureau is under the immediate direction of the President. Under rules and regulations prescribed by the President, the bureau prepares for him the annual budget and such supplemental or deficiency estimates as the President may recommend from time to time to Congress.

QUESTION: When and where was the National Anti-Slavery Society formed?

ANSWER: Philadelphia, in 1833.

QUESTION: What did the payments for maintenance and operation of the general departments of the state governments of the forty-eight states for the fiscal period closing January 31, 1926, amount to?

ANSWER: The total amount was $1,036,478,035 or $9.20 per capita.

QUESTION: What is the purchasing power of the agricultural industry?

ANSWER: The purchasing power of the agricultural industry is annually nearly ten billion dollars for goods and services produced by others. It purchases about six billion dollars' worth of manufactured products annually, or about a tenth of the value of the manufactured goods produced.

In this department we shall do our best to answer questions concerning Government and kindred matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

QUESTION: By whom and where is the rate of 'International Exchange' fixed?

ANSWER: Generally speaking, the larger New York banks determine the rate of exchange. In countries whose financial systems are what international bankers term 'stabilized,' the rate is usually arrived at on the basis of demand determined by the condition of trade, the rate fluctuating as the balance of trade is for or against. In 'unstabilized' countries, the bankers deal on a speculative basis, trying to guess or determine what the particular medium of exchange is going to do. They sometimes guess and they sometimes determine.

QUESTION: What is the Federal Council of Churches?

ANSWER: The Federal Council of the Churches of Christ in America was established in 1908 by the official action of twenty-nine Protestant denominations in the United States to represent them and to act for them in matters of common interest. The work of the Federal Council is carried on through several commissions, interdenominational in membership.

QUESTION: Has the Congressional Library any system or method by which the average citizen throughout the country can make use of it?

ANSWER: No; unless such citizen go to Washington and there use the library. The library would probably answer any reasonable question that did not involve too much research. There is, however, a coöperating system with other libraries by which students and scholars, through the local coöperating library, can obtain the use of rare books and manuscripts. But no attempt is made in this service to furnish books commonly available to the coöperating libraries.

QUESTION: What are the purposes and functions of the Federal Bureau of Standards?

ANSWER: According to the Department of Commerce:

'Custody, development and construction of standards of measurement, quality, performance or practice, comparison of standards used by scientific or other institutions.

'Determination of physical constants and properties of materials.

'The testing of materials and establishment of standards and processes in coöperation with commercial firms or organizations.

'Researches covering industrial materials and processes.

'The collection and dissemination of information concerning building codes and planning and construction of houses.

'Establishment of simplified commercial practices through coöperative business organizations.

'The bureau publishes eight series of scientific and technical publications, reporting the results of its researches and giving technical data fundamental to science and industry.

'The director has supervision of the preparation of technical specifications through the Federal Specifications Board.'

QUESTION: What is the smallest island owned by the United States?

ANSWER: Samoa. It has an area of 57.9 square miles.

QUESTION: On what date did the U. S. Navy seaplane NC-4 hop off for its flight across the Atlantic Ocean?

ANSWER: May 16, 1919.

QUESTION: What is the value of the real estate in the United States?

ANSWER: Estimated at approximately $230,000,000,000.

I Read in the Papers

A headline shouting. And by it we are told that in India a treasure is guarded by a Holy Cobra. Of course no one takes that kind of thing seriously, nowadays—nor did the man who wrote it think that anyone would. But it relieves tedium for commuters, and men waiting for supper, and that's something. The pity is that an idea for a rattling good tale of adventure should be thrown away by the man who wrote it. He had a good thing and did not know the value of it. O. Henry, or Jack London, would have built it into a three-thousand-word story instead of letting it die in an hysterical yell. But there's the difference between genius and ineptitude. Some people would not know A Good Thing if it went down Main street riding a blue rhinoceros, with a steam calliope in the rear and seventy heralds announcing the parade.

A Good Story Wasted

ǂ ǂ ǂ

A golf ball is that small indented object which remains on the tee while a perspiring citizen fans it vigorously with a large club.—Detroit *News*.

ǂ ǂ ǂ

Example of the melodramatic: Columns of print about a woman who shot a jaguar in Brazil. But a boy might do the same with a .22 Remington. The jaguar is no such fierce beast as romanticists would have us believe. It is a great cat with all the shyness of the feline, and its fearfulness lies in its roar. If you doubt, read W. H. Hudson, and R. B. C. Graham, and Waterton, and Humboldt, and others who know the wild life of South America. The beast's reputation for evil, like the reputation of men, is greatly in excess of its merit.

Melodrama From Brazil

ǂ ǂ ǂ

Senator Glass is writing a book about Colonel House; a sort of Glass-House affair.—Philadelphia *Record*.

ǂ ǂ ǂ

There are these odds and ends, wise men talking foolishly and common men saying things with flashes of wisdom; some posing, some just saying things to be noticed; some playing Bombastes Furioso, and so forth. To wit: A Doctor Ernest Gardner recommends the flesh of the octopus for human consumption, saying that it is 'rich and delicate,' and a Professor Charles Shaw tells us that the men of the future will never laugh, because their immense store of knowledge will prevent them from being surprised.

Odds and Ends of Wisdom

Another learned man, looking into the future, Professor Gregory it is, tells us that by the year A. D. 3,000, there will not be standing room for the earth's population outside the polar regions. But another, very wise indeed, assures us that at the rate that the world's population is decreasing, within a measurable distance of time this earth will be left to wild animals.

And a letter from a correspondent published in a local newspaper has this: 'If men were as keen for order as they are for their own selfish pleasure, we could pull down all the prisons and turn the law courts into schools.'

Then there is a queer piece of unsophistication quoted in a book review of Teignmouth's *The Smugglers*. It is a kind of Spoon River tombstone inscription, at Hunstanton, where a smuggler lies buried. It runs:

I am not dead but sleepeth here,
And when the Trumpet sound I will appear.
Four balls through me Pearced there way.
Hard it was. I'd no time to pray.
This Stone that here you do see
My comerades erected for the sake of me.

ǂ ǂ ǂ

Athletes at Sing Sing are not so much interested in dramatics as they are in the suggested cross-country run.—New York *Evening Post*.

ǂ ǂ ǂ

A wiseacre builds a column of print on this for a theme: *The successful executive is the man who puts his feet up on the desk and thinks.* And, saying what he has to say, he beats about the bush, repeats himself, iterates and reiterates, revealing his unfamiliarity with the ways of executives by his prolixity. That kind of thing sounds witty, but there's nothing to it. The successful executive, ninety-nine times out of a hundred, does his thinking on his feet. You'll find him, not in a chapel of ease, but where things are wrong, or might go wrong, or might be bettered in the going.

How Wiseacres Would Run Business

The International Jew in 4 volumes: *The International Jew*, Vol. I, 235 pages; *Jewish Activities in the United States*, Vol. II, 256 pages; *Jewish Influence on American Life*, Vol. III, 256 pages; *Aspects of Jewish Power in the United States*, Vol. IV, 246 pages. Price: 25 cents each; set $1. THE DEARBORN PUBLISHING COMPANY, DEARBORN, MICHIGAN.

And that wild and glorious vision of a gre plant running without anything goi wrong is the pipe dream of a theori There is always something wrong, or abo to go wrong, in the best of businesses. you don't believe it, ask any executiv But you'll not be able to ask him, for he be too busy to talk. Besides, men imita With a desk-roosting executive, you have loafing foremen, somnolent machinis and heads of departments with fema stenographers doing the dictating.

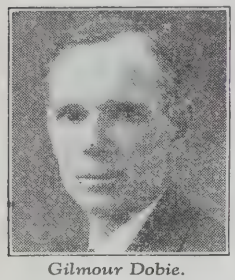
SUPERTAXES OF TEN per cent on theater tickets, fifteen per cent on families occupying more than ten rooms and fifty lire ($1.85) on automobile owners are being levied in Rome to aid in the fight against tuberculosis.

NOTES · COMMENTS CRITICISMS

MR. FORD'S Page this week discusses the fundamental economic fact that leisure is essential if the fruits of production are to be consumed.

Here is a football coach who says that too much importance is attached to the winning of games, and not enough to the losing of them. (p. 6)

Gilmour Dobie is recognized as one of the greatest coaches in the country. For years his teams had a record of unbroken victories. He has met with extraordinary success at the University of Washington, at the United States Naval Academy, at Cornell. What he says about football is important: The great danger in the game is in its overshadowing the true purpose of a college education . . . Insist on scholarship and athletics will take their place in college life . . . There is no reason why the large sums realized from football as long as these revenues are spent for better accommodations for the public . . . (p. 6)



Gilmour Dobie.

There are only two basic questions in taxation: *What do we want and how much do we want to pay for it?* And: *Who should do the paying?* (p. 4)

The politician's tendency is toward reckless expenditure and feckless taxation. He operates on the theory that what the public doesn't know won't hurt it. If he can place the tax on the other fellow he is satisfied. But that is a plan that cannot last long. Revenue must be raised without destroying prosperity. Samuel Crowther speaks plainly in the concluding article of his series on taxation. But he brings forward constructive ideas. Read this article; *and then watch Congress and your state legislature when they convene in a few months to pass further tax laws.* (p. 4)

Dixie used to devote all her time to raising cotton; now she spins it. Development of the textile industry in the South has been one of the notable achievements of the past generation. And the growth has been accomplished without serious harm to the industry in New England. The one section supplements the work of the other. Dirk P. De Young, well-known newspaperman, has made a comprehensive study of the situation. (p. 1)

A correction: Through an inadvertence, THE DEARBORN INDEPENDENT recently published a short article stating that the body of President Zachary Taylor was lying in a neglected tomb in the old family burying ground near Louisville, Kentucky. With appropriate ceremonies, the body was removed from the small mausoleum (in which it had lain for seventy-six years) on May 6, of this year, and now rests in a large marble tomb erected by the Government. The body of President Taylor's wife was also placed in the new tomb.

From Mrs. G. F. Pearson, Springfield, Massachusetts: Your advertisement of a permanent file interests me. I have difficulty keeping our DEARBORN INDEPENDENT until our family have read it. Our friends are always asking for it.

From M. L. Moore, Corsicana, Texas: I am a constant reader of THE DEARBORN INDEPENDENT and think that it is the best periodical published in the world today . . . It should be in the home of everyone in the United States.

C. C. Watson, editor, Monette, Arkansas: The style of your paper is taking and it has a wonderful field, because it is not like the others.

From C. H. Bird, Bethlehem, Connecticut: Why not call off your World Court man? His mind must be diseased.

This is the time of year to bring the ou doors indoors. Potted plants in the house give an air of freshness, of cheerfulness thro out the winter. But the window garden should not have the appearance of a sanitarium for plant invalids. It should be glowing and vivid and alive. Florence Taft Eaton has a delightful article telling how the transfer from the outdoor to the indoor garden can be made without injury to the plants. Mrs. Eaton is noted her stories on gardening, cookery and dome science. Her home is in Concord, Mas chusetts. (p. 14)

Florence Taft Eaton

Another important indoor feature i cooking. New Orleans is a city that l made cooking one of the fine arts. There kitchen is the shrine of the home, a shr whence float delicious odors to herald approach of delicious foods. Mary Wi Shuey lives in New Orleans and she kno New Orleans kitchens. In this article does the seemingly impossible; she tra poses the delights of the kitchens to pap (p. 8)

A frontier youth once cherish ambitions to be a poet. He faile and became instead the natio greatest President. Lincoln's lo of poetry was a tremendous fac in his life; it helps to explain oth wise puzzling traits in his charact Dr. William E. Barton (the o standing Lincoln authority of o generation) weaves a whimsi story. (p. 5)

The earth is stronger than ev This is the cheering reassurance Dr. T. C. Chamberlin, dean American scientists and one of t world's outstanding geologists. (p.

Empires are not born; they a made. The tale of the empire buil ing in the South and the West America is of epic proportions. G. de Roulhac Hamilton writes the time when Scots pushed the way inland from the seaboar thrusting the frontier before the as they went. (p. 16)

Louis C. Karpinski (professor the University of Michigan an noted writer on historical topic has an interesting article on th first advertisement printed in Eng lish (p. 24) . . . Judge Henr Neil writes a true story which is a absorbing as fiction. (p. 12)

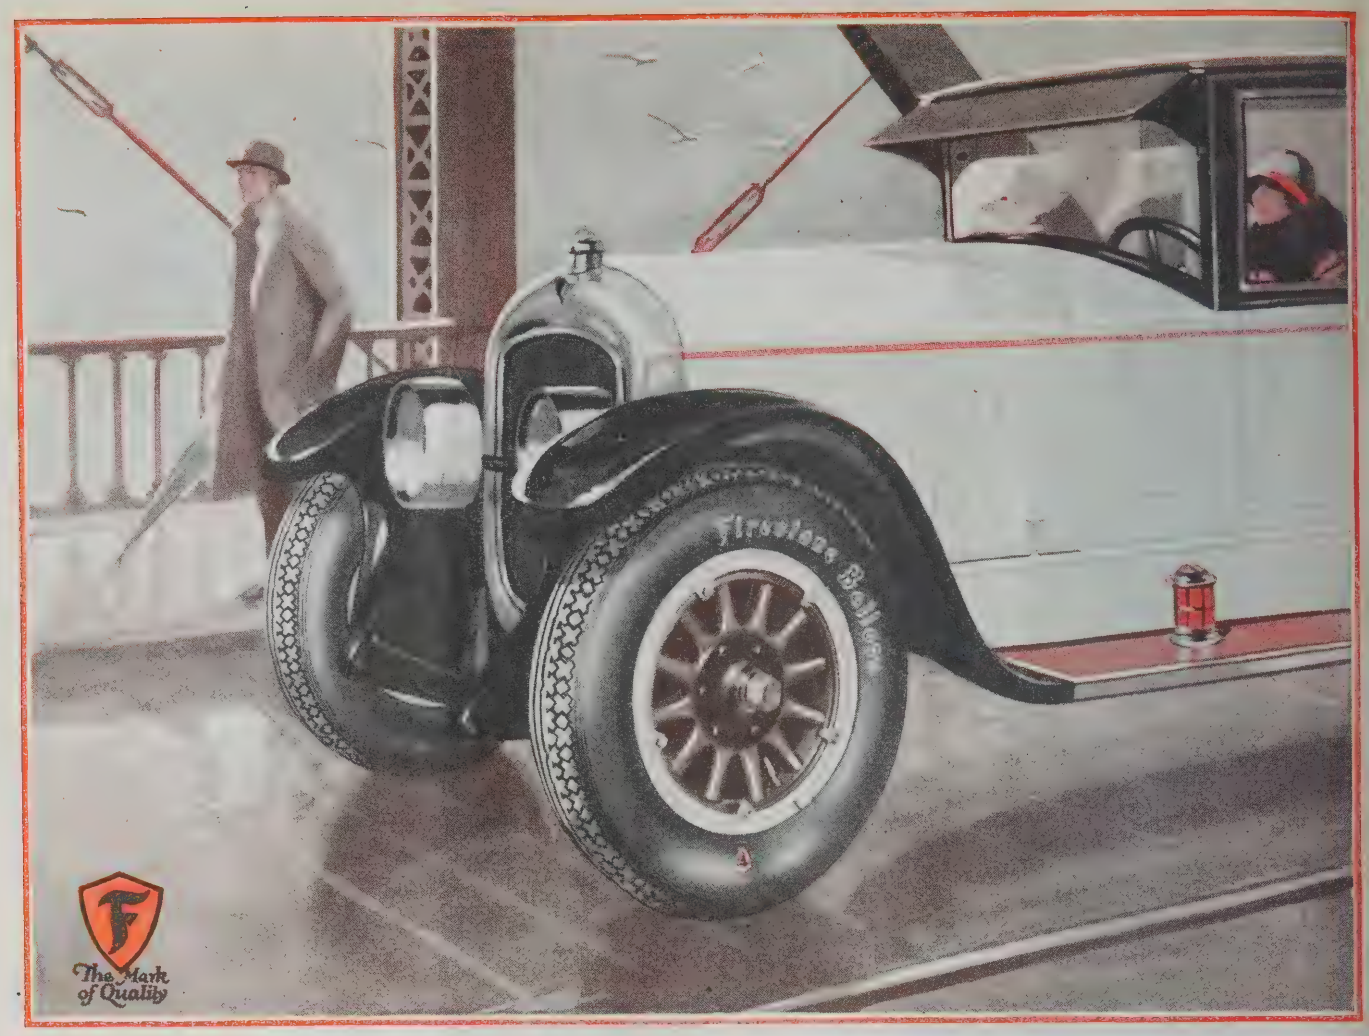
CHRONICLER OF THE NEGLECTED TRUTH



To Be on the Safe Side— She Insists on Firestone Tires

Woman has always keenly felt her share of responsibility for the safety of those she holds dear. Woman, today, is true to that heritage —and with use of the motor car her cares extend beyond the home, demanding every precaution for safety in motoring.

Experience shows that tire equipment is a decided safeguard—and that Firestone Full-Size Gum-Dipped Balloons are specially built for safety and sure response.

Gum-Dipping, the extra Firestone process, gives the extra strength for extra flexing strain. The wide, resilient tread with its scientifically designed "safety angles" holds the car from swerving or skidding; so broad and yielding that it makes a "bridge" over ruts and uneven places.

The woman driver finds that confidence in Firestone Tire performance sets her mind at rest. She trusts the tires to respond quickly in an emergency, to hold true and to deliver long, economical mileage. The Firestone dealer will be glad to advise.

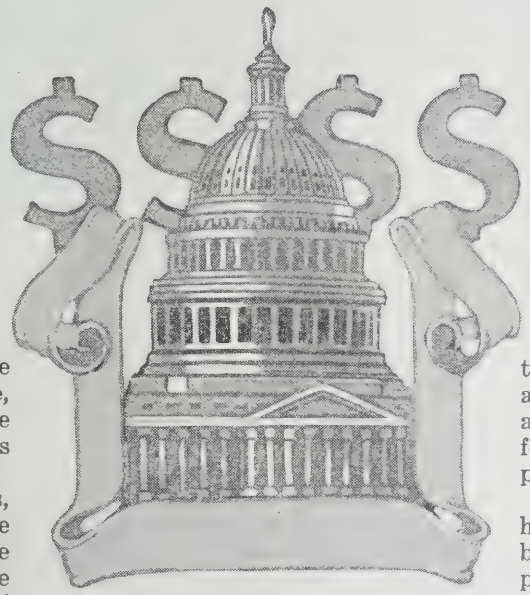
Peering Behind the McFadden Bill

A Measure Which Would Perpetuate the Federal Reserve System

By WESTERN STARR

THERE is a widespread belief among men who have knowledge of world movements in the broader fields of industry and international politics that there is something like an actual conspiracy among the world's financial magnates to create a financial super-government, to control the social and economic future of mankind. Conspiracy or not, there is little doubt that there now is power in the hands of financiers that, if it be not soon controlled, will enable them, at their own time and choice, effectively to control the world. There is no doubt that, even now, finance has more than half enslaved the world.

The method of this enslavement is, in part, through the usurpation of the sovereign power of the state to issue money; in part, by the perversion of the purpose of money from a medium of exchange to the creation of interest-bearing debt. But the real evil is that, in the present money system, we have an expansible and contractible 'concertina' instead of a currency. Considering the question of a conspiracy, we have vague reports of recent days that the chief financial powers of the world were 'in conference' on the Riviera, the playground of Europe, in August. 'Among those present' were Hjalmar Schlacht, the head of the Reich's Bank of Berlin, Montague Norman, head of the Bank of England, Benjamin Strong, Governor of the Federal Reserve Bank of New York, Andrew Mellon, Secretary of the Treasury of the United States and ex officio head of the Federal Reserve Bank Board. We are also informed that the representatives of the world's leading banks are accustomed to hold periodical conferences. Considering these indications, there is reasonable ground for a study of legislation pending in Congress relating to our financial program, and its possible bearing on the part American finance may be expected to play in the future, as a factor in world finance. To present all the evidential facts afforded by the record and tending



to support the belief in the conspiracy suggested, would require volumes. Yet a brief statement of certain facts, with a rational interpretation, should indicate the necessity for a thorough exposition of the whole subject of our financial system, before further commitment to a policy fraught with incalculable peril to our individual and national welfare.

The existing system of American banking is the outgrowth of a long and painful experience—an experience reaching back to the Revolutionary War—when, in 1781 and 1782, the Bank of North America was established as an agency to finance the thirteen colonies in their war for independence. Since that time, no single public question has absorbed so great a share of attention as the 'money question,' and even now there hangs over it a sort of semi-religious mystery—a superstition that only a few are fitted to speak with authority on the subject. Yet there is in it no mystery whatever, except such as ignorance and misinformation create in any field of thought or science.

In Jackson's time, the whole range of public finance was covered by minds as able, inspired by as pure a patriotism, as our country has ever known. During the war between the states, when the greenback was made to do the work the bankers of the nation had refused to do; when the national banks were created; during the greenback campaigns of the 'seventies,' later, in the silver agitation, followed by the discussions of the 'nineties,' down to the acute struggles over the Vreeland-Aldrich Bill of 1904-5, the so-called 'Assett currency' bill: During this whole 145 years, the money question has been a live source of debate and controversy. On no subject is there a larger body of literature, a richer mine for the student of our history or the philosophy of our institutions.

At every contact throughout our history, the issue on this question has been as to where the power to issue the people's money shall be lodged. The Constitution imposes the duty of issuing money and regulating the value thereof upon Congress as a legislative act and function. The bankers of the land have contended for this power from the beginning. Under the Federal Reserve Bank system, Congress has delegated to the banks this legislative power to issue the people's money and to regulate its value and has made the Government a guarantor of the Federal-Reserve-Bank-system paper notes.

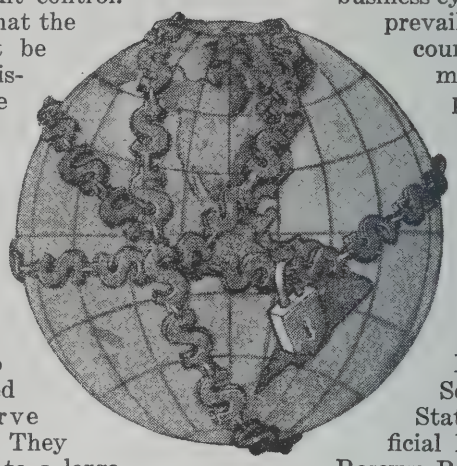
It is proper, here, to consider the heart of the whole problem, and the source of that frantic zeal with which the friends of the Federal Reserve Bank system contend for still further powers and a guaranty of unlimited peaceful possession of their extended powers.

Possessing the power to exercise the sovereign function of the Government to issue money, these banks issue, or withdraw, money (their notes) and credit, by lowering or raising discounts in such volume and at such times as suits their discretion and private purposes. These banks are all private concerns, as declared by Mr. Strong, Governor of the Federal Reserve Bank of New York City, in a statement before the Agricultural Commission.

But the power to issue their notes as money is valuable to these banks, much more by reason of the further power it gives to issue and control the volume of bank credit—or money of account—which is the sole stock in trade of the banks. Possessing this power the banks, considered as a system, a unit, are able to control the amount of money and the volume of credit that is in use at any time; and thereby to affect the market prices of all things, either service or commodity, that are offered for exchange. It is quite clear that the more abundant money is, the cheaper it is in the market; it takes more money to buy things than when money is scarce. And the same principle applies to credit as to money or shoes, potatoes, stocks, bonds, securities, or anything else that is bought or sold on the market.

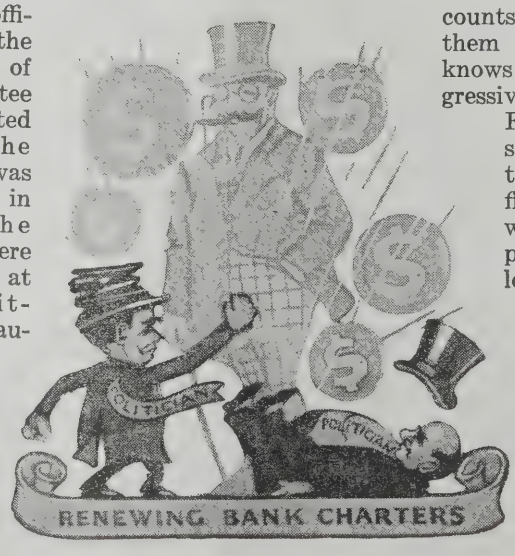
It can be seen that unless and until the bank system came into possession of this power to control the issue of the people's money—that is, if the Government had retained its power to carry out the mandate of the Constitution to issue money—the bank system would have no monopoly; would have no power to control the movement of prices in the open market, by opening or closing the floodgates of money and credit 'at their discretion.' This is the main prize at stake in the money controversy. There are other trifles as well, but these will be considered later.

With the foregoing as a clearance, consider the present condition of the field. Congress adjourned on July 3, leaving hundreds of bills without action. Among these the so-called McFadden Bill was the most important, if we consider its purposes and the probable consequences of its enactment into law. This bill is a proposed amendment of the Federal Reserve Bank Act of 1913, that created the Federal Reserve Bank system, that began operations in November, 1914. This Federal Reserve Bank Act was the outcome of a persistent drive by certain bank interests to secure legal sanctions for practices that had been denounced by the official report of the Pujo Committee of 1912. This committee had been appointed to investigate the charge that there was a money trust in operation in the United States. There were 'hearings,' at which many witnesses, experts, authorities, bankers, merchants, manufacturers, transportation men and others, testified at length. A voluminous report was submitted, in which the committee said in substance that, in all the essential elements of a trust, there was a money trust that dominated the business activities of the United States. This, in 1912. The subject became a feature of the volcanic political campaign of that year. The result of that campaign demonstrated the hostility of the people to the 'trust' principle, in banking and credit control.



It was obvious that the trust practice must be abandoned, or so disguised as to elude public resentment. The Pujo report pointed out by name the men and banks it deemed responsible for the money trust. Trust practice in credit control was not new to the men who framed the Federal Reserve Bank Act of 1913. They were the same men to a large extent who had framed the Aldrich-Vreeland Act of ten years before. They had practised credit control so effectively and so disastrously to every interest except their own, that the hounds of public opinion were following close upon their tracks and forced them to seek sanctuary under a statute of legitimacy—the Federal Reserve Bank Act.

In May, 1920, on the eighteenth day of that month, at a secret meeting of the Federal Reserve Board and its council, in the City of Washington, it was decided, in their 'discretion,' and over the protest of certain members, to 'raise discounts.' This had the effect of destroying the credit structure of the nation that had been built up during six years of the most intense industrial and economic pressure to increase production. The world knows the result. In 1924, their discretion suggested the necessity of lowering discounts; they lowered them and the world knows that the Progressive Movement, La-Follette and all he stood for, was, for the time being, flooded out by a wave of artificial prosperity that followed. Was this the result intended by this exercise of 'discretion'?



Another of the results intended is indicated by certain suggestions from the official head of the Federal Reser system, Mr. Mellon, who is reported saying, in the May *Nation's Busine* (house organ of the United Stat Chamber of Commerce): 'A politic attack' against the Federal Reser system must be expected, 'when t time comes for renewal of its charter and 'its effectiveness will largely d pend upon the particular phase of t business cycle which happens prevail at the time. If t country is then in t midst of a wave prosperity, the o position will b slight.' There a other significan suggestions in M Mellon's state ment as reporte in the *Nation' Business*, to be co sidered later. Bu Mr. Mellon is, a Secretary of the Unite States Treasury, the o ficial head of the Federa Reserve Board, and, therefor of the Federal Reserve Bank system It is something of a question whethe Mr. Mellon runs the system, or th system, through Mr. Mellon, runs th Treasury; but either way, Mr. Mello knows from past experience that, be tween himself and his board, the should be able to develop a wave o 'prosperity' just when and to the exten necessary to put over the so much de sired renewals.

There are two highly important features of this McFadden Bill: one o these is the charter renewals of the Federal Reserve Bank. As is known, the present charters expire in 1934. It is one purpose of this bill—which is an amendment to the Federal Reserve Bank Act—to extend these charters.

Aside from the apparently unnecessary haste in anticipating the expiration of the charters by eight years, it is important to consider the modest demand for what is in effect a perpetual charter—a so-called 'indeterminate' charter. Senator Pepper, in charge of the bill on the floor of the Senate (*Congressional Record*, April 28, 1926, page 8265), said, in answer to a direct question: 'Does it (the Federal Reserve Board) approve the provision giving the indeterminate charter?'

Senator Pepper: 'That has been proposed a number of times by the Federal Reserve Board and is favored by the board in the form in which it is embodied in this bill.'

Another feature of the bill which calls for remark, as illuminating the intentions and ultimate purposes of the Federal Reserve Board and Bank system, is the provision authorizing banks in the system to deal in 'investment securities.' This will be discussed in a subsequent issue.

Richard Matthews Hallett aboard a vessel with ice-covered decks in wintry weather.

A Rolling Stone

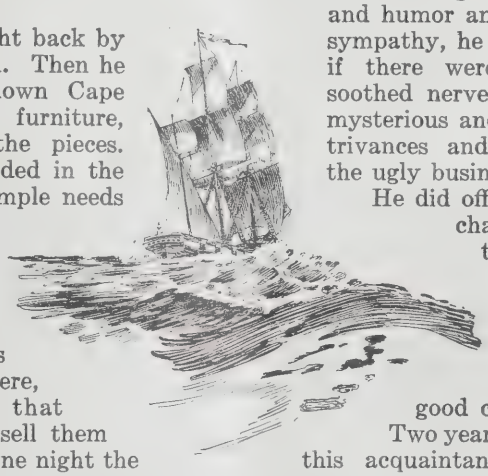
Who Became an Author

By JANET MABIE

TO HAVE heard first about Richard Matthews Hallett from his father admirable preparation meeting a man who urted his career by aming the seven seas and two hemiheres. This voyaging would make n write fiction if it were in him. Even ough they meet infrequently now chard Matthews Hallett's father is a lp and an inspiration to him. He lls him, with a deep note of affection his voice, 'Old Andrews Hallett—e great old fellow.' And it is only cessary, on the other hand, to know drews Hallett a very short time to scover what a help his huge son is to n.

Some years ago Andrews Hallett nt to a hospital on Cape Cod for eatment which he now calls repair rk. When he was well he discovered did not want to leave the hospital. stead, he said to the resident physian with high good humor, he would d something to do there. 'I'll earn y board and keep, as a matter of ct, for I guess maybe there are some little things I can do to help here.'

There were two half-finished rooms under the eaves of the hospital barn. He took up what he called his roost there. 'Out of everybody's way but my own,' he explained as he crammed the rooms with books and fragments brought back by his globe-trotting son. Then he acquired, up and down Cape Cod, some antique furniture, 'scraps' he called the pieces. He put what he needed in the two rooms for his simple needs and, because buying antiques for songs amused him, he hired an old barn down in the village for a few cents and stored the rest there, always maintaining that some day he would sell them for pots of money. One night the barn burned, before he could get into his clothes and run the half-mile to where a telephone call had advised him that all his things were being burned up. He arrived breathless, expecting to laugh at being 'burned out of his antiques,' and had to laugh instead because they were all saved.



Promptly at half-past six each morning the patients whose windows faced the barn could soothe their ruffled feelings at being waked so early by the sight of Andrews Hallett emerging from the door, spruce and jaunty, whistling, ready for the day. He made himself indispensable to the physician, a fine, rather silent man who had need of such a companion and helper in his hospital but who had doubtless never suspected as much before. Between the two there sprang up a wordless rapport. Andrews Hallett developed a way of helping out with X-ray patients. Between a boundless gift of quaint wit and humor and a deep, warm sympathy, he calmed fears or, if there were no fears, he soothed nerves. He adjusted mysterious and terrifying contrivances and helped to get the ugly business soon over.

He did offices, too, as purchasing agent for the hospital. And he became to successive patients an ambassador of mercy and good cheer.

Two years and more after this acquaintance began with Andrews Hallett at the hospital on Cape Cod, I met Richard Matthews Hallett, after a reading by Robert Frost in the Memorial Hall at Bowdoin College. A powerful figure he made, with an interesting face, a negligible allowance of sandy hair neatly plastered down, and a voice that in its full volume must have been heard across China's inland sea.

Now the person who introduced me knew nothing of the interval I had spent at the Cape Cod hospital and was in a great hurry besides. So he merely said, 'You ought to know . . . Hallett . . . writes for the *Post* . . .' thrust us at each other and was gone. But there was something in the voice as it said, 'How do you do . . .' *(Concluded on page 27)*

Lincoln and the Sleeping Sentinel

The *True* Story of William Scott, Who Was Sentenced to Die

By WILLIAM E. BARTON

THE story of William Scott, who was arrested for sleeping on post, sentenced to be shot and pardoned, has become an accepted part of the life story of Abraham Lincoln. It varies in the telling, but this is a popular form of it, quoted from a well-known book entitled *Abe Lincoln's Yarns and Stories:*

There had been a long march, and the night succeeding it he had stood on picket. The next day there had been another long march, and that night William Scott had volunteered to stand guard in the place of a sick comrade who had been drawn for the duty. It was too much for William Scott. He was too tired. He was found sleeping on his beat. The army was at the Chain Bridge. It was a dangerous neighborhood. Discipline must be kept.

William Scott was apprehended, tried by court-martial, sentenced to be shot. News of the case was carried up to Lincoln. William Scott was a prisoner in his tent, expecting to be shot next day. But the flaps of the tent were parted, and Lincoln stood before him. Scott said:

'The President was the kindest man I had ever seen. I knew him at once by a Lincoln medal I had long worn. I was scared at first, for I had never before talked with a great man; but Mr. Lincoln was so easy with me, so gentle, that I soon forgot my fright. He asked me about the people at home, the neighbors, the farm and where I went to school, and who my schoolmates were. Then he asked me about my mother and how she looked; and I was glad I could take her photograph from my bosom and show to him.

'He said how thankful I ought to be that my mother still lived, and how, if he were in my place, he would try to make her a proud mother, and never cause her a sorrow or a tear. I cannot remember every word he said, but every word was kind.

'He said nothing yet about the dreadful next morning; I thought it must be that he was so kind-hearted that he didn't like to speak of it. But why did he say so much about my mother, and my not causing her a sorrow or a tear, when I knew that I must die the next morning? But I supposed that was something that would have to go unexplained; and so I was determined to brace up and tell him that I did not feel a bit guilty, and ask him if he wouldn't fix it so that the firing party would not be from our regiment. That was going to be the hardest of all—to die by the hands of my comrades.

'Just as I was going to ask him the favor, he stood up, and he says to me:

' "My boy, stand up here and look me in the face."

'I did as he bade me.

' "My boy," he said, "you are not going to be shot tomorrow. I believe you when you tell me that you could not keep awake. I am going to send you back to your regiment. But I have been put to a good deal of trouble on your account. I have had to come here from Washington where I have a gr deal to do; and what I want to know how are you going to pay my bill?"

'There was a big lump in my thro I could scarcely speak. I had expected die, you see, and had kind of got used thinking that way. To have it all changed a minute! But I got it crowded down, a I managed to say:

' "I am grateful, Mr. Lincoln! I ho you will believe I am as grateful as ever man can be for saving my life. But comes on me sudden and unexpected lik I didn't lay out for it all; but there is sor way, and I will find it after a little. The is the bounty in the savings bank; I gue we could borrow some money on the mor gage on the farm."

'Then besides, my pay was somethin and if he would wait until pay-day I a sure the boys would help; so I thought w could make it up if it wasn't more tha five or six hundred dollars.

' "But it is a great deal more than that, he said.

'Then I said I didn't see just how, bu I was sure I could find some way—if I live

'Then Mr. Lincoln put his hands on m shoulders, and looked into my face as if h was sorry, and said:

' "My boy, my bill is a very large on Your friends cannot pay it, nor your bounty nor the farm, nor all your comrades! Ther is only one man who can pay it, and hi name is William Scott!

' "If from this day William Scott doe his duty, so that, if I were there when h comes to die, he could look me in the face a he does now and say, 'I have kept m

Between three and four o'clock on Friday morning the captain of the guard found all three of the sentries asleep.

promise, and I have done my duty as a soldier,' then my debt will be paid. Will you make that promise and try to keep it?"'

The promise was given. Thenceforth there was never such a soldier as William Scott.

This is the record of the end. It was after one of the awful battles of the Peninsula. He was shot all to pieces. He said:

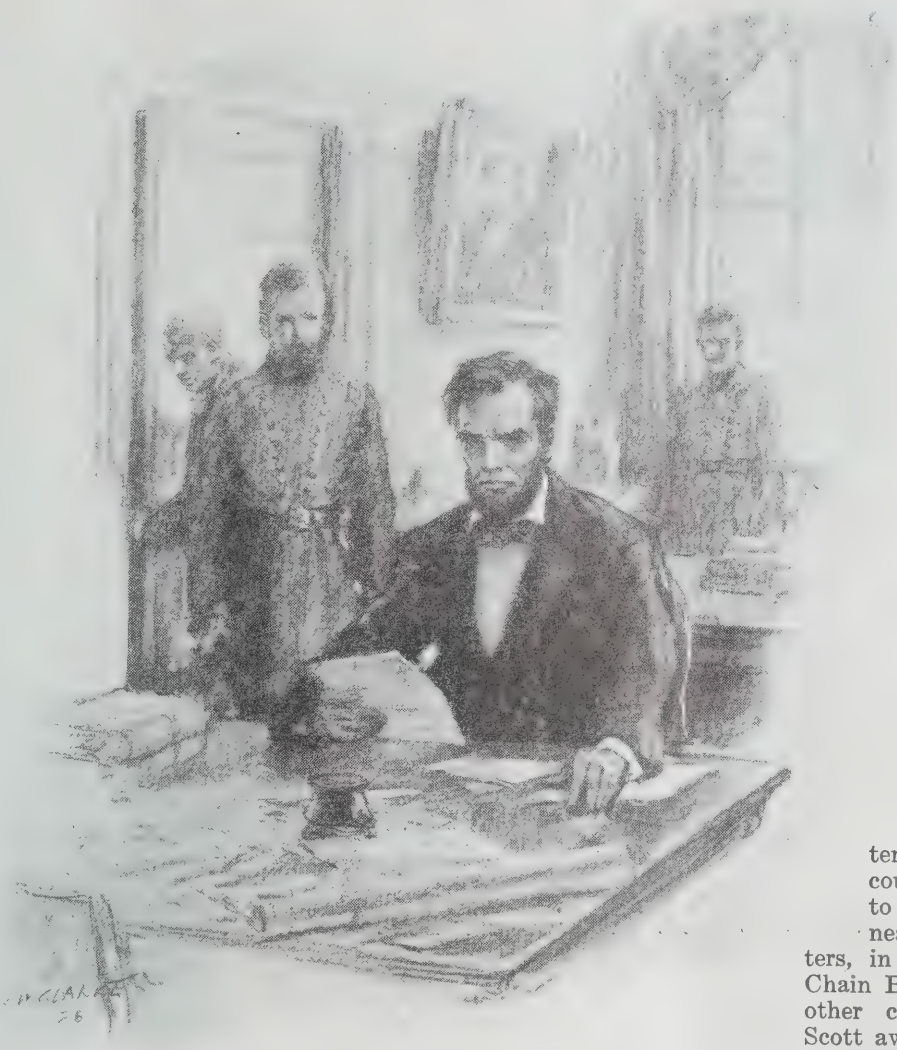
'Boys, I shall never see another battle. I supposed this would be my last. I haven't much to say. You all know what you can tell them at home about me.

'I have tried to do the right thing! If any of you should ever have the chance I wish you would tell President Lincoln that I have never forgotten the kind words he said to me at the Chain Bridge; that I have tried to be a good soldier and true to the flag; that I should have paid my whole debt to him if I had lived; and that now, when I know that I am dying, I think of his kind face, and thank him again, because he gave me the chance to fall like a soldier in battle, and not like a coward, by the hands of my comrades.'

This version deserves to be given in full, because it is one that professes to tell the story in Scott's own language. Other versions, based on the discovery that Scott's mother appears not to have been a widow, relate a very affecting interview between President Lincoln and Thomas Scott, father of the lad.

I first began to investigate this matter between six and seven years ago, and have had three different periods of searching the files of the War Department to learn about William Scott.

William Scott, a native of Groton, Vermont, and a private in Company K, Third Vermont Infantry, was one of three sentinels posted in a hut guarding the Chain Bridge, on the night of Friday, August 30, 1861. The three men were posted because the position was an extremely important one. Only one man was required to stay awake, but all were to be ready for the giving of an alarm if an attack were made or if there was any attempt to run the bridge. The three men divided the night into watches of four hours each. Scott was the third man, and had already had eight hours of sleep, or of freedom to sleep, before he was called on duty. Between three and four o'clock on Friday morning the captain of the guard, making his rounds, found all three of the sentries asleep. He wakened all three, inquired which of the three was assigned to duty at that hour, and finding all agreed that Scott was the man who should have been awake, placed him under arrest. This was about four o'clock, Saturday morning, August 31. For three days Scott remained under arrest awaiting trial. A court-martial was summoned Monday, September 2, to convene Tuesday, September 3, at ten in the morning. Scott was found guilty, and no extenuating circumstances were shown in evidence. He was sentenced to be shot, and the time of his execution was fixed for Monday, September 9. He was pardoned on Sunday, September 8. His record thereafter is supposed to have been good. He was shot at Lee's Mills, near Yorktown, Virginia, April 16, 1862. The wound was in the chest. He died on the following day.



The pardon was not issued by Lincoln; he was in no necessity of hunting up trouble.

The laws relating to courts-martial provide that death may be inflicted as a penalty for this offense, in extreme cases and in time of war. It is not known, however, that the death penalty was ever inflicted for this offense during the Civil War, and it is definitely known that it was not so inflicted in the American Army during the World War. Usually heavy guard duty, with a fine of one to three months' pay, was deemed an adequate penalty. We may be sure that if William Scott had been on duty one night through generously standing guard for a sick comrade, the fact would have been stated in the evidence. Scott had full opportunity to introduce such evidence. The laws relating to courts-martial specify that while fatigue resulting from excessive duty is not a defense, it may be regarded in mitigation. No mitigation was proved or attempted to be proved in the case of William Scott. We may safely believe that all such details are the work of the imagination.

On Monday, September 2, a general court-martial was called to meet at Camp Lyon, near Smith's Headquarters, in the vicinity of the Chain Bridge. At least one other case besides that of Scott awaited trial. Colonel B. N. Hyde, Scott's own colonel, was the presiding officer, and Captain E. McK. Hudson, of the 14th Infantry of the Regular Army, was judge advocate. Twelve officers, besides the judge advocate, constituted the detail. All were present. Four of them were of Scott's regiment.

Captain Thomas F. Houre, of the Third Vermont, testified:

'On the thirty-first of August last I was officer of the Grand Guard which went up the Potomac and on the morning of the thirty-first I started about three o'clock, to make my rounds; and when I came to the post where Scott and his two comrades were stationed, I found them all asleep. The prisoner was a member of my guard and regularly posted.'

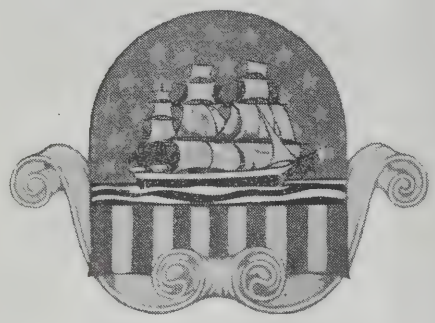
The prisoner then asked his one question:

'What did I say to you after you had waked me up?'

(Concluded on page 22)

This to YOU

An EDITORIAL from
the August 14, 1926, number of
THE DEARBORN INDEPENDENT



THE press states that House of Commons criticism of the United States will cease, on the orders of international bankers. Outbreaks against Americans in Paris will be discontinued by the same orders as soon as the diversion created thereby has served the political purpose. That, plainly, is where we have arrived through the handling of our public affairs—we are under the protection, if not in the custody, of the international bankers.

No, patient reader, we are not going to discuss the international debt. We prefer today to discuss YOU. YOU are a somewhat greater mystery than the debt. If we could only understand YOU! If, after reading this, you would write to us and tell us just what YOU are thinking about it.

And here is part of the mystery of you. For ever so many years now you have been told by President, Cabinet and Press that the policy of the United States was not to cancel war debts, but to determine the amounts due us, and make the best arrangements for payment that we could. That is what YOU have been told; that is what YOU believed. When you heard that the 'U. S.' was being interpreted as 'Uncle Shylock' throughout Europe, you understood the reason to be that our Government insisted on collecting the debt. It is true that YOU had no greed for that money; you might even have been willing to forgive the debts if you had been convinced that the benefit of such action would have flowed past the bankers down to the pitiful people of Europe. Undoubtedly you would have said: 'Just the principal; not those mountains of interest too.' And if you had chanced to think of the difference between the purchasing power of the dollar which Europe borrowed from us, and that of the dollar we are demanding, doubtless you would say, 'No more value than we lent, not a penny.'

HOWEVER, you were not consulted, and Mr. Andrew Mellon does not do business that way—at least, so you were told. The Republican Party told you the debts would be collected. President Coolidge told you that cancellation was contrary to his policy. As long as you understood this, you understood why Europe howled.

BUT—just the other day Mr. Mellon told you in letter and statement that this Government was not collecting any war debts at all, except from Great Britain. The war debts of France, Italy and the others have been cancelled. We are collecting only the loans made since the Armistice.

Just as coolly as that, Mr. Mellon informed you that everything which you had been told about the loans was not true. And there is not a ripple from the country.

The bludgeoning of the good name of the American people goes on overseas. It is the international bankers, the Press says, who are intervening on our behalf.

YET not a ripple of astonishment, not a word of protest, not a sound of inquiry from YOU—from the American people. Misled, hoaxed, misrepresented—then publicly told about it—and yet dumb. This is not to say whether Mr. Mellon did right or wrong; it is to say that all the while YOU were being told that one thing was being done, it was really the opposite thing that was being done. And you swallow the fact without even faint protest.

There is a reason for your being so placid—what is it?

But is it any wonder that our public officials think that they can play with you as they do?

Or maybe you are wiser than they, having the deep instinct of the common people that what officialdom may do today means nothing to tomorrow. It may be that Mr. Mellon and Mr. Churchill do not matter after all.

But feelings of nation for nation do matter. There are FACTS which all the nations ought to have. These FACTS as they regard the United States have patently been distorted. And there is not an authoritative voice in the country to declare or even to inquire the extent to which the policy of the United States has been pawned into financial control.

Why is it that you, John Citizen, have been silent about it? There is a reason. What is it?

And This FROM YOU

A Cross Section *of* American Thought

THE American people are silent on the debt question for one reason only—*they have no forum from which to present their views!* This fact is made plain by the flood of letters received by THE DEARBORN INDEPENDENT in response to the editorial, 'This to YOU,' printed in the August 14 issue.

The people are not fooled by the mass of statements and counter-statements about the so-called debt settlements. They are not silent because they have nothing to say. They are silent only because they have had no opportunity for expressing their opinions.

They have been thinking—*and thinking deeply*—on the debt question. They have been weighing the assertions made by American politicians and the assertions made by European politicians. And they have noted the transparent discrepancies in the settlements.

The amazing response evoked by the editorial shows how tense sentiment actually is throughout the country. Scores of letters have been received (and still are being received) from every corner of the nation, from Florida, from Oregon, from Maine, Colorado, California—in short, from nearly every state in the Union.

The letters form a cross section of thought of the American people!

They come from lawyers and from plumbers, from bankers and from butchers, from salesmen, stenographers, laborers, manufacturers, clerks, editors. They come from the groceryman on *your* corner, from the physician in the next block, from the farmer who raises your food. Some of the letters are couched in impeccable English; some are written by illiterates. They arrive at their destination by devious ways, but through them runs a dominant theme that cannot be ignored.

The American people feel that cancellation would benefit international bankers rather than the people of Europe. They feel that the proper time for cancellation would be that moment when these international bankers cancel their private loans.

They feel sharp resentment at the unfair propaganda being carried on both in this country and abroad, impugning as it does both the American character and America's motives.

They resent the fact that there is no way by which they can directly register their attitude toward the debt settlements.

They feel that cancellation would not be in the interests of peace. 'So long as the European taxpayer finds his burdens increased by payment of the expenses of the last war,' writes one correspondent, 'just so long will the rulers be cautious about entering into a new one.'

This writer, Will Atkinson, of

Capon Springs, Virginia, states his views concisely:

'The real question is: Shall the taxpayers of Europe pay the debts due us for money loaned their governments, or shall our taxpayers pay these debts in addition to their present heavy burdens? The cancellation of the debts due us from France, England and other countries of Europe would not be in the interests of Peace, but would tend to bring another war nearer. There is no law to prevent Newton D. Baker or Mr. Baker's clients from contributing whatever they wish, small or great, to the income of the countries who owe these debts to us. In that way they can show their good will to these countries and their sincere desire to relieve them of these burdens. Judging from the noise made in the eastern press there must be many advocates of the cancellation of debts who would be willing to contribute something from their own means to this end. But it is not fair for them to try to force the taxpayers of the United States generally to pay debts which should be paid by the taxpayers of the countries who contracted these debts.

'The United States cannot remit these debts; it cannot cancel any part of these debts without adding to the burdens of our own taxpayers. Make this clear to the taxpayers of the United States and then let them decide whether or not these debts should be cancelled, in whole or in part. My own impression is that any Congressman is inviting his own political death in voting for either the partial or complete cancellation of these debts.'

HOMER STIMSON, attorney of Goyse City, Texas, echoes the opinion of many persons when he declares:

'As stated in your editorial, we have been told by President, Cabinet and Press that the policy of the United States was not to cancel our war debts. But did we believe these statements? On the contrary, we had been warned by Senator Borah, Senator Reed and other able statesmen that the proposed debt-settlement plan, if ratified, would result in cancellation of all our war debts, except those owed by Great Britain. THE DEARBORN INDEPENDENT and other papers proved with facts and figures that we were being committed to a policy of cancellation. Now Mr. Mellon's admission now only confirms what we already knew.

'And before the ink was hardly dry upon these debt-settlement agreements our international bankers flooded the country with advertisements offering to the American public immense issues of 7 per cent European bonds—the direct obligations of the same "pauper" nations that have failed and refused to repay to the United States one dollar of principal or interest due upon their war obligations. But from the proceeds of the sale of these 7 per cent European bonds to the American people our international bankers will collect their own private pre-war European loans in full. Our war loans are cancelled; billions of our money is lost; but the international bankers have collected their loans.

'Yes, the citizens have been silent. But they know they have been wronged. And they will follow you and all others who are for "America First" in safeguarding posterity from a like fate.'

The matter of silence on the part of John Citizen is ably discussed by G. D. Fairbanks, office of Medical Officer, Brownsville, Texas:

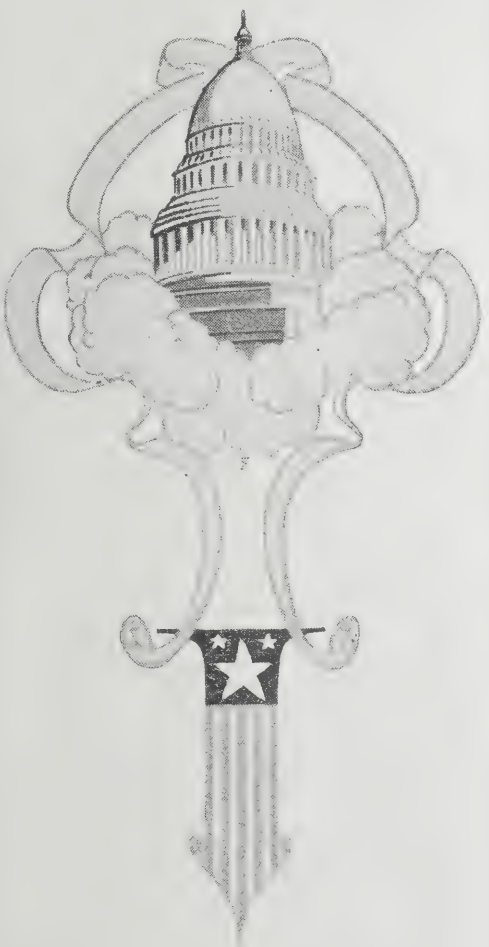
'You gave the answer yourself a little further along in the article,' he declares, 'when you wrote, "However, you were not consulted." The people are not consulted, nowadays, on those questions and we have no vote in the matter, consequently we take no interest. If the people had a vote on important questions, there would be an end to that placid attitude. How different matters would be if we had a vote on important questions.'

F. I. BOGGS, of Dallas, is another Texan who casts a suspicious eye on the settlements:

'Do you think for one moment that we, the common citizenry of this country, take no individual exception to such instances as those set forth in your article regarding our attitude regarding the foreign debt?' he asks.

'When Mr. Mellon and President Coolidge suddenly inform us of actions exactly opposite to things they have been telling us these months are you surprised that we remain dumb? If your father should tell you something diametrically opposite to a truth he had taught you for months, would you not be hurt beyond any sudden outburst?

'I think it a disgrace to our national economic ability that we pay 3½ per cent to 4½ per cent on our own government securities, make foreign loans for a less rate and then charge ourselves enough income tax to help those foreign countries pay interest on our own securities. Certainly this and many other equally vexing facts will be rigidly denied by our international bankers and perhaps Mr. Mellon but bear



in mind their actions mentioned in your article, and I wonder if we would be justified in placing our utmost confidence in them again.

'We who take no active part in governmental affairs, aside from voting, try to believe in all departments of our Government, but being from Texas and witnessing our gubernatorial capers the past two years and those facts and actions relative to our foreign loans make one have a "what's-the-use?" feeling.

'I hope the time is not far distant when we may as a nation return to strict adherence of principle for the nation's good and from the Lincolnistic viewpoint, "The Good of the Common People." Then partisan opinion, as affects international bankers, will be secondary.'

Roy B. McKittrick, an attorney of Salisbury, Missouri, explains the apparent apathy on the part of John Citizen:

'It occurs to me that the reason that John Citizen has been silent about the misrepresentations made by government officials is because he has not been thinking about international bankers, international debts, and has not read Mr. Mellon's statements concerning the international debt. He has merely accepted the statements made in news articles prepared by international bankers, which have been advising that Mr. Mellon's policy is an excellent thing for humanity. He has not discovered that the humanity that the cancellation advocates are helping consists of the international banker.

'To my mind your editorial demonstrates that the gravest injury done the government by the officials making misrepresentations is not merely the loss of the money but the loss of honesty and integrity in the conducting of the government's business. If John Citizen continues to take no notice of officials making misrepresentations, the time will come when either he or his son will be awakened to the fact that people no longer constitute the government.'

A SOMEWHAT different explanation is offered by Clarke L. Foster, of Shawnee, Ohio:

'You ask why John Citizen has not protested,' he says. 'There are several good and sufficient reasons. John Citizen is bewildered by the very immensity of the figures involved. Up to 1914 he was accustomed to think in terms of millions and then only after more than a century of the bandying of the term "millions." Now he is asked to think in terms of billions! The step is too big for John Citizen to make all at once. John Citizen, with his average education, his average income of $1,000, is intellectually unable to assimilate the abstract concept of billions. So in despair he relies upon his "experts" at Washington who presumably know their business.

'John Citizen sees his taxes piling up, but direct taxes are so few and indirect taxes so numerous that he really does not know where to begin his protest. He cannot see how cancellation affects his tax rates.'

A pessimistic strain runs through many of the letters—a 'what-can-we-do?' attitude. Louis H. Dusenbury, of Detroit, exemplifies this in his statement:

'Frankly I do not *know* what is going on. I read your periodical to learn the truth, but very seldom the newspapers because I feel that most periodicals publish biased facts according to the financial control of the paper. I feel that although we are supposed to govern our country through methods of voting, we are not able to select the men we want nor get very thorough information as to their fitness in order to intelligently vote.

'As matters stand now, I see no way of avoiding the present political control, so just stand by hoping that the men selected by a few political leaders will lead the country in the soundest possible manner.'

Lady Cynthia Asquith *Describes*

Lion Hunting in Society

AMONG the types to be met in London society, none has been so consistently held up to ridicule as the 'Lion Huntress.' What is more natural than the wish to be personally acquainted with the most interesting of contemporary human beings? No one derides the collector of famous pictures. Why this sneer at the collector of eminent fellow creatures?

It is urged that Fame is a fluke, and that the celebrated men of the day are by no means necessarily those most worth meeting. True; but a woman can scarcely be attacked for, to a large extent, accepting the world's verdict in these matters. Surely it would be presumption on her part to ignore the general estimate, and think she should always make her own discoveries?

There is much confusion of thought in these matters, and it seems that the truth is that our feelings toward the individual huntress must depend very largely on the *motive* which inspires the chase.

Is it appreciativeness or vanity? If it be a genuine love of the lion which makes her enjoy his company as an end in itself—why throw stones? No vanity is indicated by this attitude; rather a certain amiable humility, and very likely she will be able to give as well as take pleasure.

On the other hand, if his presence at her table is not its own reward, but is only coveted as a means to an end—perhaps as a feather in her hostess's cap with which to inspire envy—then we can neither expect nor greatly wish her parties to be a success.

* * *

Probably it is the methods of lion huntresses which are objected to rather than their aims. These, it must be admitted, are often lamentably crude.

We are told pride is a sin, but some women show a too Christian lack of it. They will take no refusal; they cannot be insulted; they have a thousand cheeks to turn to the leonine paw.

Then—what may be called the bluff-bait method is employed to excess. The hostess sends out invitations for the same meal to a lion and a lioness—on the strength of which each is asked to meet the other! Perhaps one of them goes, only to find the bait which tempted him *not* on the hook! Can it be wondered at that he growls?

If a woman be deeply interested in an author because she loves his books, nothing is more natural than the wish to meet him and give him her best of food and drink. It is a different matter when the house is strewn with his uncut books, only ordered because she expects him to luncheon! He should be there because of his books, not *vice versa*, as is too often the case. The following story is told of an unfortunate hostess belonging to the second type.

She: 'Do you admire Dante?'

He: 'But he's *dead!*' (Implying, 'Come, come, now, don't *you* pretend to take an interest in anyone you can never hope to entertain!')

A clever lion huntress will never quite 'brown the covey.' She must have some discrimination of her own. If notoriety is to be her only criterion, her dining room will indeed become a strange menagerie.

Stage Degradation

DOES the risqué drama pay? Ther is nothing refreshingly novel abou the problem. Periodically, New Yor experiences spasms of virtue.

Criticism of the artistic merits of th undraped and 'sexy' drama creates th suspicion that the New York manager rather hope the agitation will reviv interest in this particular form o entertainment, when it begins to pal upon the popular taste.

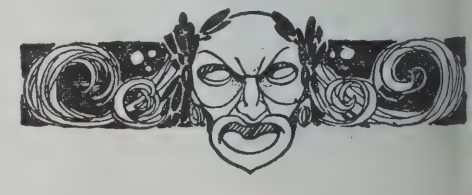
'If the long-threatened theater cen sorship is ever forced upon this town, wrote one reviewer recently, '—an that catastrophe may be closer at han than most people suspect—we shal know whom to thank for it. Our stag can go no further in self-degradation This state of affairs cannot continue The license of the New York stage i fast becoming a national scandal Plays forbidden in London, Boston Los Angeles, continue here.

'The so-called play jury was a farce, declared one theatrical publication commenting on an attempt to close a show a few months ago. They appear to be produced with but one intent—to make money, and in this, morbid public curiosity being what it is, they succeed beyond the dreams of avarice.'

The attempt came when, despite the lukewarmness of the newspapers, complaints from citizens who had witnessed the objectionable shows began to pour into the office of the District Attorney.

The complaints and the verdicts of the play juries were cleverly met by farce-comedy 'stunts' on the part of managers and their astute counsel. The producers converted the notoriety from the fights into valuable publicity.

How do the producers of these objectionable exhibitions 'get away with them'? A very popular American novelist recently took upon herself to answer this query by a suggestion that such shows depended for their support on the patronage of an element in the population which she denominated 'the dark whites,' as distinguished from those included in the generic term 'average adult normal persons.' It may be that he who travels through Longacre Square and its environs during theater hours may coincide with her contention.



MR. FORD'S PAGE

THE tribal instinct makes men antagonistic to one another and creates a desire for domination. It has disturbed the world since the day that Ishmael and Hagar were driven into the wilderness. At the present day this feeling is undoubtedly the principal cause of the many misunderstandings which undermine coöperation and obstruct progress.

If all the tribes and nations of the world were to unite in one great movement for the common good, all animated by a desire for true advancement, the world would begin to move in the course for which it was designed. But of course there are such things as misdirected energy and misdirected unity. Just as people unite for a good cause, so may they also unite for one that is the opposite.

Ages ago the people of the earth were of the same mind and the same speech. They held a great convention on the plain of Shinar and in the fullness of their unanimity and strength resolved to build a tower so high that its summit would reach the heavens. But confusion in their speech, and consequently in their aims and objects, came upon them and caused them to scatter into different countries. This was the punishment meted out to them for their presumption.

It is plain that in this period of the world's history unanimity of purpose was not the most desirable thing. It was centralization carried to an extreme, and if it had been permitted would have ended in stagnation. The elimination of local and individual effort would have been as disastrous then as it is now. This was the beginning of properly distributed effort.

In these new conditions jealousies and dissensions arose, and at first there was little unity of purpose except where coöperation meant self-preservation; but there grew up a spirit of healthy rivalry which was much better, although this rivalry was not always pursued along legitimate lines.

As time went on one nation sought to assert its superiority by its scientific knowledge, another by its skill in the fine arts, another by its supremacy in the raising of crops and cattle. But there were others who tried to take a short cut to all these things by force of arms, by seeking to conquer other nations and to absorb their scientists, artists, and industrialists. Rome was an example of this.

THE lack of cohesion in national effort and in international ideals is our heritage from prehistoric times. Racial feeling is not in itself an evil, any more than is individual opinion or effort. It becomes an evil only when it assumes a negative or destructive form. Each nationality has its strong points as well as its weak, and if this strength is properly directed the weakness will in time disappear. The dream of a 'United States of Europe' will be attained only at such time as swords and spears are discarded for plowshares and pruning hooks.

After the fall of this mighty empire dissension arose among the various tribes and nations which had been brought under its subjection, and where nations were confined within narrow limits this feeling became the most intense. Insular nations especially have been prone to internal dissension owing to being cut off from direct contact with other countries. This factional spirit has been the curse of some countries since the beginning of time, and has been the greatest obstacle to their advancement.

Europe today is largely made up of the fragments that flew far and wide when the Roman empire went to pieces, and although there are dreams of a 'United States of Europe,' these dreams can never come true until there is a welding process from a much more powerful arm than any that has yet been brought into action. That arm will have to to be one that specializes in plowshares and pruning hooks and not in swords and spears.

The beginning of a second getting together of the nations of the earth took place at the moment Columbus stepped ashore at San Salvador. Practically every civilized nation in the world is now represented on the American continent, and for the most part these nations speak the same language. In North America where they do speak the same language and are animated by common interests and ideals, a prosperity and sense of national security has been built up which is unparalleled in the world's history.

The peoples that are continually wrangling and squabbling with one another in the Old World are dwelling harmoniously side by side in the new, where the tribal instinct has been largely eliminated. But it still exists in quarters where it should not, and will continue to exist until all become true Americans.

If there is present within any nation a unit which does not assimilate the common ideals of that nation, it is bound to be a disturbing factor. It is not necessary that a person lose his national characteristics to make a good citizen in the land of his adoption, because it is from a judicious combination and utilization of these characteristics that this country has been built; but it is essential that he eliminate tribal prejudices from his code before he can fall in line with the great scheme of things.

Red Russia Turns Pink

NOTHING so significant has come out of Russia in recent years as the news that Liebe Braunstein, alias Trotsky, has again been beaten. Once more he is on the outside looking in, as far as the inner councils of the Communist Party are concerned; his capitulation is complete and abject. More important, however, than his personal defeat is the defeat of the things for which he stood. Soviet Russia has come, apparently, to the turning of the road.

Under Stalin it is leaving behind the doctrines of world revolution and pure Marxism. It is inclining slowly toward sanity and rationalism.

It will be another generation, probably, before the details of the mighty struggle which has been going on within the ranks of Bolshevism will be fully known to the outside world. It has been a struggle which held within it the destiny of the Red Revolution, a struggle not only of personalities but of principles. Stalin, powerful secretary of the Communist Party, has been attempting to lead the country from the economic chaos into which it was plunged by Marxism. He has thrust aside at least temporarily the Jewish ideal of world revolution. He has concentrated on building up Russia.

Thus he has advocated the adoption of a modified capitalistic system under the term 'state capitalism,' in the effort to restore the country's ravished industries; he has endeavored to placate the peasants, heavy sufferers under the old régime; he has tried to develop Russia's great natural resources.

At every step he has been violently opposed by the Jewish clique, headed by Trotsky. The doctrine of world revolution, originally theirs, has been their main theme. They have refused to surrender it. Instead of appeasing the peasants, they would confiscate their grain to further the cause. They have warned against 'the danger involved in the growth of a class of rich peasant landlords.' They have formed a fraction, or organized minority, within the ranks of the Communist Party to fight against the will of the majority—a thing which is held black treason in the tenets of Bolshevism.

Through all the struggle there has been no question of real democracy for the Russians. It has been entirely an internal struggle, one confined to the Bolshevist Party. The Russians, numbering millions, are still governed solely by the members of this one party. They have no voice in their own affairs. And so it was by Bolshevists themselves that Trotsky was carried down into defeat. The defeat augurs well for Russia.

The Busy Biographers

AN ASTONISHING discovery has been made by two men of genius who write books for a living. George Washington did not chop down the cherry tree! He did not say, 'Father, I cannot tell a lie. I did it with my little hatchet.' He did, upon occasion, drink. And there is evidence that he engaged, under due provocation, in the lusty art of cussing. So, having made their cataclysmic discovery, the two gentlemen have proceeded to write 'myth-breaking' biographies, published simultaneously.

The theory has been advanced that the books were written for children. Surely, says one commentator, no adult who can be trusted with a wife, a job and a latchkey entertains the 'myths' thus ruthlessly destroyed. But there is evidence that the authors themselves regard their work seriously. One of them, a fictionist called Woodward, has even essayed to the sensational. Not content with tilting at the commoner 'myths,' he must set his lance against others. Before he is through he has stripped Washington of virtually every vestige of his reputation as a husband, as a soldier, as a statesman, as a patriot, and as a gentleman. His words have moved Nathaniel Wright Stephenson, one of America's outstanding historians, to rebuke. Writing in the New York *World,* Mr. Stephenson says:

> The reader of any penetration, before he is half through, will feel that what he is reading is a book about Mr. Woodward and his views of American history, not a book about George Washington and the rousing story of his triumphant duel with circumstance.

The stir of indignation which has greeted the work is unfortunate. It gives the book publicity it does not deserve, and a position of importance it does not warrant. As a biographer of Washington, Mr. Woodward's book is supremely unimportant. As a book about Mr. Woodward, it is no doubt satisfactory.

Main Street Comes Back

THE American village is regaining its importance in American life. More than twelve million persons—or about one in eight—live in villages or small towns at the present time. For a time the trend was away from the village toward the city; now it is reversed. Main Street is coming into its own. Not only is village life better industrially than it was twenty years ago; it is better socially. With improved methods of transportation and communication, the village has acquired the benefits of a miniature city without its defects.

The village is rapidly becoming an important production center. Certain types of industry can be carried on there far more economically than in the city. A happy combination is struck when agricultural products can be sold locally, and the output of local factories consumed in supplying the farmers' needs. Thus transportation and handling wastes are largely eliminated. Certain industries, of course, may always remain in the larger cities. But many can be carried on successfully in the villages. The present tendency toward decentralization of industry is an important one to the life of the nation.

Parties of the Future

HISTORY is written in the retirement of Herbert Asquith from public life and the leadership of his party. For nearly half a century he has been intimately linked with the destiny not only of his party, but with that of England and the world. Coming first into prominence under that grand old man of Liberalism, Gladstone, he has lived to take prime part in some of the most momentous events of all time. The span of his career coincides with a period of revolutionary world history. And Asquith, now Earl of Oxford, has helped to make much of that history; he has helped to build and to overthrow dynasties. His retirement is a matter of international concern. But it is overshadowed by a question it brings forcefully to the surface.

What is to become of the once great Liberal Party? Powerful in England's history, it is pitifully weak in present circumstance. The reforms it forced through are now accepted as everyday matters, but the party itself seems forgotten. In the present Parliament it is an almost negligible factor. Whether it will regain its former strength is problematical.

The fate of the Liberal Party has significance for American politicians. The tendency of Anglo-Saxon countries is toward two great parties. The fall of the Liberals has been attributed to many things: to Lloyd George, to the war, to the Coalition. It is too soon yet to account for it definitely, but the probable truth is that the Liberal Party has slipped because it is no longer liberal. It has been running in lines almost parallel to the Conservative Party. It was inevitable that an opposition should arise, and that the weakest of the two old parties should give way before it.

There is a noteworthy similarity in America. No longer is there any distinct line of demarcation between the Republican and the Democratic parties. Neither can be classed as progressive, or conservative. Yet each party has its progressive wing, its conservative wing, its middle-ground wing. It is a condition that cannot last. Groups within each party are pulling at different directions. Each party's platform must be elastic enough to appeal to voters of widely diverging views. Concerted party action is difficult, because definite party aim is almost impossible.

Interesting possibilities loom. A new party may arise, as it has in England, differing radically from the older ones and drawing its strength from them. The old parties may split into their component parts, progressives flying to progressives and conservatives to conservatives. Or the old parties may abandon their middle-ground policy, one becoming definitely progressive, the other definitely conservative. Whatever the outcome, intriguing developments lie ahead. It looks like a hectic decade, politically.

Hail to the Boiled Dinner!

CERTAIN facetious writers and hack lecturers refer slightingly to that great American institution, the boiled dinner. It is significant that the slurs are not cast by those who have been initiated into the inner circle. And those who disdainfully lift their noses when such plebeian fare is mentioned, declaiming it as coarse food fit only for swine, know not whereof they speak. Certainly it is coarse, and that very fact recommends it to those who are on the search for vitamins and other nourishing things. Homely fare, to be sure, but the food experts and dietitians are swaying back to it because it contains the very essence of life. To a hungry and wearied human there is no more delightful perfume than the odor of boiling carrots, cabbage, potatoes, beets, turnips and all the other things that go into the making of this king of dishes. The news that the cabbage yield of the United States will be thousands of tons greater this year than last will quicken the pulse of every lover of the boiled dinner!

A Reporter's Memories of ROOSEVELT

Intimate Tales of T. R. by One Who Traveled the West With Him

By WILLIAM C. RICHARDS

THE late Theodore Roosevelt had the happy and valuable faculty of landing on the first page of the newspapers and staying there.

Many newspapermen, like many men who disagreed with his policies or his tactics, hated him. Many others loved him. Men of both camps, however, admitted that no one ever understood news values as T. R. did. He simply exuded copy that was bound to be read.

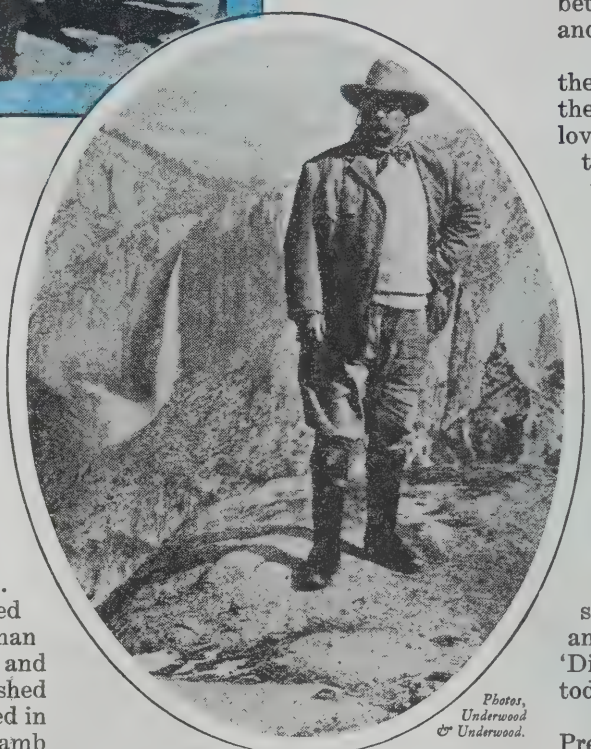
He galvanized state documents. He coined words. If Roosevelt called names at times, he also dripped human interest. His words popped and thundered, and it is a well-established fact that the world is more interested in a lion on a rampage than a ewe lamb lapping water from a quiet brook. When he fought, T. R. never stuck out his tongue; he fought with his fists. Above all he was human.

One night he walked into the press-room at the White House. The hour was late. He sat down and began gossiping. In an hour or so the rain was whipping down in torrents. Lightning lighted the room. Suddenly the President got up and started to withdraw. A correspondent moved to the window and grumbled disgustedly.

'Look at it; me without a coat and got to walk to the hotel!'

'Wait a minute, Joe, and I'll get you an umbrella and a cravenette,' said the President. He went into his personal quarters and returned with the promised articles.

'Do you know,' the correspondent said later, 'that he would have walked down to the hotel with me if I had said the word.'



Photos, Underwood & Underwood.

Oval—*One of President Roosevelt's favorite recreations—enjoying Yosemite's grandeur.*
Upper left—*From railroad train to 'puncher's steed—ready to enter Yellowstone Park.*

It was Roosevelt's policy to dodge the cities on Sundays when he was campaigning in 1903. He liked stillness on the Sabbath, and he would run his private car into some siding in a small hamlet and go to some obscure but tranquil church. One Sunday morning he reached Sharon Springs, Nebraska. Accompanied by the Senator from Kansas and three other men, he walked across a forty-acre farm of new-plowed ground to a little house of worship. Two pews had been reserved for the presidential party, and every other seat was taken. The service had proceeded only a minute or so when there was the pad of bare feet in the aisle.

When the President started to take his seat again after finishing a hymn, he discovered two little girls standing at the end of his pew. There were n seats for them, and they were pictu esque, stockingless figures, about eigh and ten, resplendent in dresses an poke bonnets of checked gingham. Th President rose, made room for the between himself and the Kansas Senato and sat down.

The children's eyes roved all ove the church. They paid no attention t the man beside them, although n lover could have been more attentiv to his sweetheart than T. R. was t the two chicks. He found the hymn for them and held one side of th book for them, although he wa obliged to stoop to do so. Whe there was a prayer, he woul turn to the proper place in th prayer book and present it t the children.

They thanked him, but thei curious eyes ranged the lengt and breadth of the pine-beame nave. At the conclusion of th service he asked the older one i she came to church every Sunday 'Pop's on the ranch,' she said, wit eyes still swiveling in search o somebody. 'We're fifteen miles away and sometimes he brings us.'

'Did you come for anything specia today?' asked Roosevelt.

'Yes, sir. Someone told us th President of the United States would be here today.'

'And can't you find him?'

'No, sir,' replied the child, disappointedly, 'and we've looked everywhere.'

'I am the President,' he assured her.

I wonder how many times that young woman, now in her thirties, has told that story.

If you look at a map of North Dakota where the Northern Pacific crosses the Little Missouri River, you will see a little black dot. That is Medora. There the Rough Rider of Sagamore rode the range and played the cowboy part in his beardless days. When he was campaigning for the Vice-Presidency in 1900 he came back to it. The colonel, then governor of New York, borrowed a puncher's pony and galloped away to the buttes. He rode to the edge of a cliff and there he pointed out the spot where a 'bad

man' once shot the county sheriff and made his escape in a stolen canoe. He did not tell that he, T. R., owned the canoe and that he followed the murderer down the river and three days later brought back his boat, with the killer 'hog-tied' in the bottom. One of the old pioneers told *that* story.

Back in town they called him Teddy. He put his arms around aged people and asked many questions. 'What has become of Willie?' he inquired of one couple. 'Willie' was standing beside them, six feet one, and a hard cowpuncher. T. R. had forgotten that folks have a singular habit of growing up.

Three years later he came back to Medora as President of the United States. He came at midnight. On the station platform was a solitary figure—an eighty-year-old gentleman carrying a barn lantern.

'Hullo, Teddy,' was his greeting. 'The boys be waiting for you in the dance hall.'

That building was a quarter-mile down the road. There was no yip-yipping, no gun play. It was a period of reminiscence. For two hours Roosevelt and his old Western friends talked of the halcyon days. And when they put him on the train, they said: 'Goodby, Teddy. Come again when you can. You know you're always welcome.'

But he never saw that little village again.

The President took a hair-raising ride May 30, 1903, which would have caused a lot of stocks to fall clear off the board if Wall Street had been eyewitness to it. He boarded an impish pony at Laramie, Wyoming, and headed for Cheyenne, sixty miles away, over the very backbone of the Rockies. He had a relay of mounts. Six or seven horses were used during the trip and they were the pick of the section. A cowpuncher escort rode with him, but not the immediate members of his party. They returned to the train and continued on Pullman saddles to a ranch house thirty miles away, there to join the President. He reached the house before his party did, meeting them as they were riding in a hayrack from the station. A tiny cloud of dust was seen on a hill to the west as the correspondents were pulling out from the station for the ranch.

'Here comes one of the cowboys,' said some one.

'Cowboy!' said a puncher. 'That's not cowboy dust. That's Teddy Roosevelt.'

The dust got dustier and in a short space the President was in plain view. Behind him, strung out for half a mile, was the escort, using whip and spur in a vain effort to maintain the pace. A newly laid railroad, minus ballast, lay in his path, but the President's horse cleared it with a clean leap. The chase took on the appearance of a pursuit of a horse-thief. No favors were being shown; no quarter was asked. The punchers were trying to overtake this Easterner, whether he was President or not. The prairie, moreover, was pock-marked with dog-holes, which meant a serious fall if a horse stepped into one of them. Nothing happened, fortunately.

Roosevelt felt car weariness in his muscles the next morning, and he headed a troop of hooting, pistol-banging cowpunchers which rode away to a ranch thirty-five miles distant. At ten o'clock in the evening he returned. One could hear the 'boys' yelling and shooting long before the hotel was reached. The colonel was first to arrive, nevertheless. He threw the bridle over the horse's head, entered the hotel, and bounded up the steps three at a time. The cowboy escort was close up, and as they dismounted one man was heard to say:

'If that fellow stays here another twenty-four hours he'll have a lot of us killed. He's too rough for us when it comes to riding.'

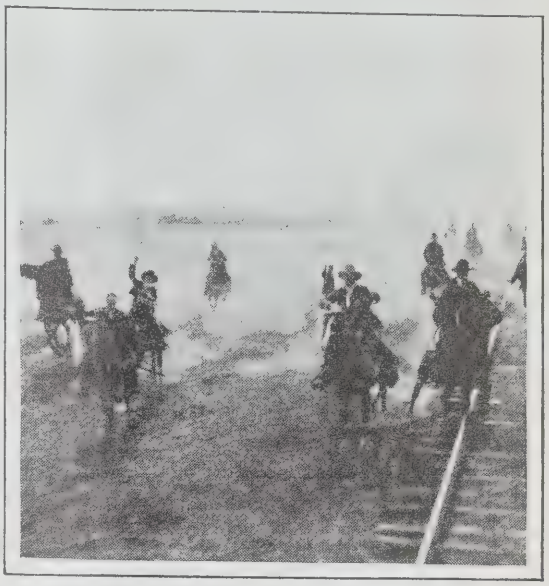
Two cowboys from Hugo, Colorado, rode the 100 miles to Sharon Springs in a futile effort to wheedle the President into stopping his train at Hugo on his way to Denver, for a noon meeting.

'Boys, I can't do it,' he said. 'I've got an important speaking engagement in Denver. Well, I will do this. I'll stop the train for a minute.'

When T. R. stepped to the rear platform in Hugo the next morning he was surprised to see only the two punchers he had met the day before.

'We don't want to hear you talk. Look around the corner of the car,' drawled one.

One look sufficed. The platform gate (*Concluded on page 25*)



Cowboys trailing Roosevelt's special train out of Hugo, Colorado.

The 'punchers at this little point along Roosevelt's route through Colorado knew that the President would enjoy a meal in regular 'cowboy style.' The photograph bears an autograph of 1903.

Negro America, Fifty Years Hence

Will Be Transformed if the Colored Man Maintains His Progress

By NAHUM DANIEL BRASCHER

DEA' Lo'd, hep de white fo'ks and de cullud fo'ks to git 'long 'getth in peace and ha'mony. We has liv'd side by each; we has 'fit, bled an' died 'getth, an' from now on, show us de way, de ri't way to live in peace, in de name of de Son Jesus, Amen.'

Years ago, in a little church in a little town of the South, the foregoing was part of a prayer I heard an old white-haired man making, while all about him were low moans, and fervent 'Amens.'

Those crude words expressed my innermost hope, and I think the hope of the majority of the negroes of America, as well as a large proportion of white people. America is above all lands the country where the chief desire of the people is to live together in peace and harmony.

On the other hand, there are those, of both the white and black race in America, who are constantly seeking to obstruct the cause of better understanding and progress. Nevertheless, we have come from where we have come, the millions of us in darker hue. Whither are we bound? We may well feel able to gauge the future by the past. It is all, in my opinion, working out along the lines of a great plan, like the running of a great clock, with the pendulum swinging back and forth. When there is a backward swing, we see within the shadows, when there is a forward swing, we get a clear-cut picture by the radiance of the sunlight. If we keep within the valley, things are gloomy. If we climb to the mountain top, there is a vision that adds glory to the soul. But we need the shadows to enjoy the sunlight.

Looking back fifty years will help us to look forward fifty years in observing negro life in America. There seem to be too few of us who are willing either to look back or to look forward with vision. We must act in the present, but we must be guided by the past. If the negro has a place in America, let us find it with sympathy and good will.

Our accomplishments are interwoven with all that has happened in our national life. We cannot be separated from it either in theory or fact. A complete separation of all negroes and all whites in all things in America is impossible.

There can be adjustment of all our difficulties, from time to time, with satisfaction to all concerned, in keeping with progress and enlightenment, on both sides of the color barriers.

We can make headway only by using common sense, with due respect for the views of others. There come times when we, of the minority group, are forced to talk low. We may not like it, nor do we like real hot, or real cold weather; but sensible people adjust themselves to the changes from day to day, and in like manner must we adjust ourselves to race relations in America.

To find our permanent place, we must make ourselves acquainted with the facts that lie in the way. Our place fifty years hence will no more be the place of today than today is the place of fifty years ago.

One of the schools in the South for colored children.

Our first movement into the 'world's work' of America was through a great avenue of sentiment. White people with Christian hearts opened them up, together with their purse strings, and we were *given*—not the word *given*—churches, schools and some work. We established our own fraternities and group organizations modeled on those of the whites. Having no other pattern but the whites of America, we adopted their ways. We did carry with us, and many of us yet have, certain valuable instincts derived from our native Africa. These gifts of nature must continue to serve us as we travel toward the great goal.

We are spiritual, sentimental and emotional, in qualities that command both praise and blame. We must continue to use these gifts to our general advantage.

The patriotic record of the negro is testimony to the value of the qualities named. We have used them for the independence, preservation and glory of America. We have done this with a will that has given heart to others.

'That stuff in our make-up has been our sorry curse,' I have heard some of my people say. I can see their point of view, but do not accept it.

The World War marked the beginning of a new epoch in negro adjustment, and the American complex of negro life. Up to 1914, from a period dating back almost fifty years, on matters black there was sentimental toleration or cordial indifference, North; and there was studied calculation, and nursed animosity, South.

Where there were few negroes, there was little or no trouble. Trouble began and parked where numbers dwelt. Hence, with the numbers, the beautiful South developed its own notions, and by superior numbers and main force put them to work and kept them going.

'The white man of the North is no different from the white man of the South, when he has the same problems to deal

with,' contends the white man from the South. But he is wrong. The white man of the North plys most of his problems of hate under cover; while the white man of the South goes straight to bat, and boasts about it with the grandstands full of people. He advertises it openly.

A study is afforded in the migration in ten years of more than 500,000 negroes from the South to the North. Industrial needs were pressing. Some bright mind jumped at the idea of going South and 'bringing negroes North.' 'We will give you better wages, you will have freedom, you can go where you please, educate your children, live where you please, and vote—be real citizens,' they were told.

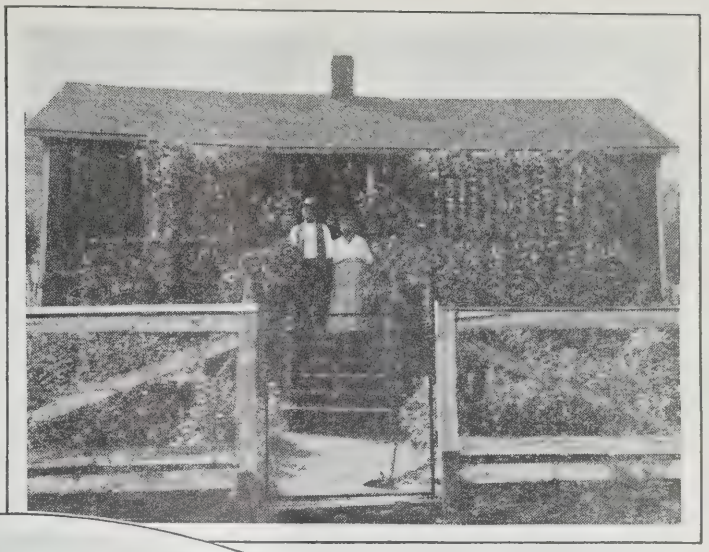
They came, they saw, but did not quite conquer either the white field or themselves. They have proved to be useful but have likewise caused some sorry messes, here and there.

One big employer said to me, when he was changing his workers from white to black: 'We have studied this question carefully. We have tried many nationalities. We are now going to try the negro. It is an economic, not a sentimental matter. The negro has the advantage of speaking our language, and he is a congenial spirit.'

The same man reported a short time later: 'We have several hundred here. The majority of them are giving good service. Some of them will work a few days and quit. Some shirk. But those who work, my, how they can work, and sing with it! Say, that's new to me. Negroes are the only workers I know who take their songs along with their tasks. We are going to keep them permanently, and help them to grow. We intend to give them jobs in the skilled trades, as fast as they measure up. I tell you, I'm really glad of the opportunity.'

Herein entered the labor unions. The majority of them, North, had designed to keep out the negro worker. In the South, they made little headway getting the negro lined up, because a suggestion from the 'big boss,' or the fear of a trick, were deterring influences. Labor unions today, in the North, here and there, are letting down the bars, but industrially the millions of negro workers cannot be regarded as organized.

The attitude of an American President on dealing with the negroes is specially interesting, not only to the negroes themselves but to the whites. I begin with President Cleveland, because he was the first President I remember. President Cleveland exhibited a minimum of racial prejudice in his dealings with the negroes, and had the courage to name a negro as minister to Bolivia,



Oval—Part of a Southern village with a colored population. Upper—Winners of the first prize in a contest for the beautification of the homes of colored employes of a Tennessee concern.

although the nomination was not confirmed. He made several negro appointments, however, that were confirmed by the Senate. During the administration of President Cleveland, in the larger cities of the North, discrimination against negroes, as a class, was at a minimum.

President Harrison was from my native Indiana. Nothing in his administration marked him for or against the negro. He was quietly tolerant, and racial problems were not acute in the sense that they are today.

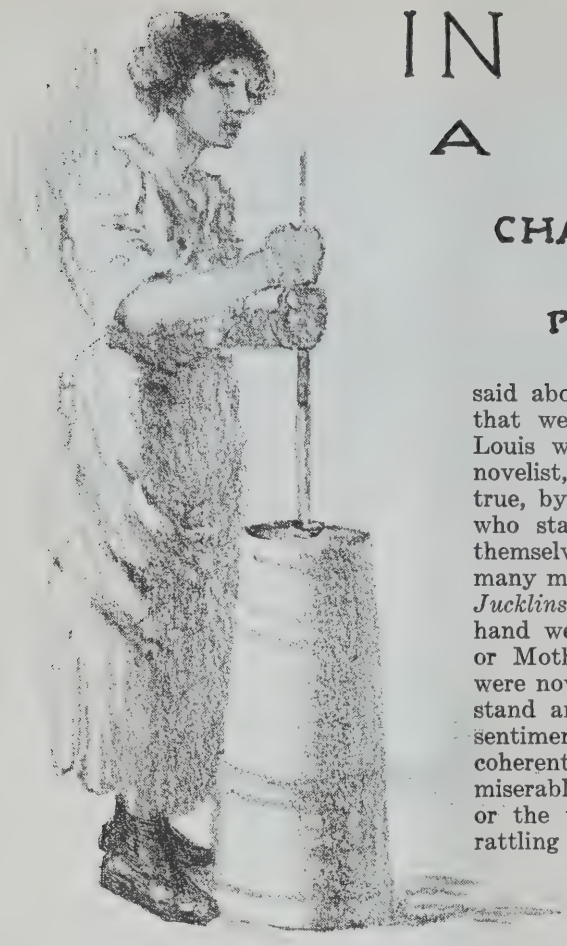
President McKinley had as his sponsor Marcus A. Hanna, a business man of Cleveland. As governor of Ohio, Mr. McKinley had direct dealing with negroes, and as a big business man, Mr. Hanna had several personal acquaintances. Mr. Hanna 'played' the negro in politics, and Mr. McKinley, when elected, made several interesting appointments.

Along about this time, the 'New South' was getting in its heavy work. By grandfather clauses in its laws it was successful in practically eliminating the negro as a factor in Southern politics. There had been up to this time always one or more members of Congress, and two United States Senators. The negro lost prestige and power.

It was during this period that there was a big change going on in the national mind about negroes. President McKinley did not attempt to stem the tide of changing opinion. Personally he was tolerant, but publicly he was discreet, as he imagined it.

Theodore Roosevelt gave public utterance to opinions concerning the negro, and, though he made some in the South very angry, he stiffened the opinion of thousands of whites, in their favorable attitude toward negroes. Roosevelt insisted upon a 'square deal' for the negro, and while he was President there were many things accomplished for negro America.

President Taft was from Ohio. The attitude of the average Ohioan toward negroes is one of toleration with limitations. These limitations are often determined by segregation measures. This, as might be expected, could easily have been the thought of President Taft, from Cincinnati, hard by Mason and Dixon's line, which, like Banquo's ghost, will not down. Therefore, in President Taft's administration, the color line became *(Concluded on page 18)*



He would, I told him, see things in common use which, in some parts of the world, were in museums.

IN THE OZARKS

A FREE FANTASIA

BY

CHARLES J. FINGER

DRAWINGS BY

PAUL HONORÉ

GENTLEMEN, hear something of the Ozark country, more especially that part of it in northwest Arkansas, where Paul Honoré and I have been tramping. But that which you are to hear is not of its commercial side.

I say that, because there are people given to fall into a kind of mystical rapture of what is really self-exaltation about places, a reflex egoism, measuring all things by dimes and dollars to the exclusion of everything else. And, as you may have noticed, if you look too closely at a dime, you will blot out the whole horizon; earth, sky, all mankind. Now my contention is that no census ever yet taken served to show the number of men and women who care nothing at all about how many factories or mines or skyscrapers a place has, just as on being introduced to a man they care nothing at all about his bank account, or the size of his hat, or the price he paid for his shoes. But they do care a great deal about his character and the manner of man he is; whether he is a buoyant gentleman or a burglar, a friendly companion or a pirate, a man with an eye to your pleasure or an eye to your pocketbook. In the same way, many men and more women are more interested in the character than the commerce of places.

Indeed, it was because of something said about the character of Arkansas that we took our trip. For in St. Louis we met Opie Read, who is a novelist, somewhat pooh-poohed, it is true, by supercilious young gentlemen who stand in ecstatic admiration of themselves as the illuminati. Yet many may recall a time when *Old Lim Jucklins* and other books by the same hand were as popular as old ballads, or Mother Goose stories. And they were novels which a man could understand and enjoy; not full of sex and sentimentality, not wandering and incoherent and of a sort to leave you miserable and wondering whether you or the writer were weak-minded; but rattling good stories with the subtle qualities of unity and vigor of narration, the characters in them full of naturalness. Reading them, you had the feeling that you had lived among the characters described, and, indeed, some of them were very much like the folk in this same Ozark country.

Naturally, as we talked, something of that was said, at which Opie Read's eyes brightened, and he said: 'Now somehow the people in those parts of the land had a notion that I wrote *A Slow Train Through Arkansas*, poking fun at them, so grew touchily sensitive to the point of having the book taken from the bookstands in the train. But I didn't write it. And of all spots in the land, I like the countryside in Newton County. The people are God's own . . . By the way, is Uncle John still in the land of the living?'

So we talked on and on, Honoré listening, until, because of what he heard, the artist in him began to burn to see a life he had thought no longer existed. He wanted to see the place, he declared. Whereupon I took him by the hand, poetically speaking, and told him that he should indeed see the Boston mountains, leaving his paints and easels, to embark upon a crusade of joy. I promised to show him people of simple and healthy natures leading a life of their own, and not immured among conventions and received opinions. He would, I assure him, learn something of the temper and texture of a world untouched by modern methods. He would be among people who knew how to spin, how to make bread, and how to manufacture their own candles; folk who spent winter evenings, not in sitting each one with nose buried in book, but talking and singing ballads as they made quilts or burred wool, or sewed harness, or churned. He would, I told him, see things in common use which, in some parts of the world, were in museums. That quite early in his pilgrimage, he found to be true, for he saw and traded for these, which he carried with him not without pain: a very heavy iron kettle, an earthenware pot, a bow and arrow, some flints, a large stalactite from a cave, and an old book of Holy Roller songs. He contemplated a spinningwheel. But that is getting a little ahead of the tale.

For as Opie Read and I told things to Honoré, we saw in him a growing and wrong impression; and that was a supposition that we described the state of Arkansas, instead of only a picturesque part of it. So we set him right

He had a memory stretching far back, and as he talked, he sat with chin thrust out, his wrists and knees crossed and foot a little inturned.

by telling that Arkansas followed state fashions and possessed cities, and policemen, and chair factories, and Rotary and Lions clubs, and banks with surpluses, and hot springs, and national cemeteries, and diamond mines, and stone quarries, and literary societies, and churches, and Mrs. Bernie Babcock, who wrote novels about Lincoln, and filling stations, and mortgages, and a university, and newspapers, and a poet who lived in London whose name was John Gould Fletcher, besides many other things going to make up the tapestry of civilization. But the unique part, we told him, was this interesting thing of which we had been talking, as interesting as the pyramids in Egypt, or the Kalahari Desert in Central Africa. For in that corner of the land the wilderness was not yet tamed, though the tamers were there and at work, and for them I had most hearty respect. Then when Honoré spoke of an automobile, he was greatly moved at hearing me say that our itinerary was one permitting no such vehicle by reason of the wilderness, and that he must either walk, or ride on horse or mule back.

At the first sun ray the whole world changed. From secret places came the noises of birds in sudden chorus.

He tried both methods, but what might be called Sorrow Endured made him choose walking for the long trip. For, on the first day, he mounted Prince, an animal large and bony and heavy of foot, whose trotting has a sort of pile-driving decision about it. The ride he took was to the Labyrinth, where are mighty rocks large as two-storied houses, which once were mountain tops, but are now tumbled to the plain as though cast there by warring Titans. So that evening the artist was somewhat abstracted, almost in the manner of one with unrevealed things on his mind. I imagined that the memory of the rifted crags thrilled and haunted him, until he spoke, with pathos in his voice, of the hardness of saddle leather to one accustomed to an automobile cushion. Yet, in the morning, when he awoke he sang, and his was again the old mood of delight.

And we traveled far that second day. We climbed sun-flooded hills to see haze-hung mountains. We went through gorges between dark slopes, where, on the one hand were high hills bare and craggy; on the other, steeps clad with tall pines which bent their heads to whisper about us. We stood on precipitous places from which we looked down into valleys all brilliant green, to see silvery winding streams embroidered with willows. And everywhere there were wild grapevines, some grown to the thickness of a man's thigh and wild roses in great abundance, and tall thistles, and barred and striped grasses of striking beauty, and ferns and fungi of many hues, and lichen-covered rocks, and wild convolvulus, and sensitive plants. Flowers too there were, a vast abundance of them, whole acres of upland turned to gold; velvet-green carpets sprinkled blue and crimson and lemon yellow and lilac, copper-colored tiger lilies, other things flaming and glowing.

Then at evening we found Uncle John. We were resting after a hard climb, and from sheer habit looked through a newspaper we chanced to have, not, be it said, for interest's sake, but because of an idle trick of reading about things which it is worth no human being's while to know. We heard a voice calling cattle, not so far away, so went a few yards to a turn of the road, and there saw a log-built house, with rough stone chimney and light-blue smoke plume slowly drifting in still air. For though the place is far south, it is high above sea level, so nights are chill.

A paling fence, whitewashed, was around the house yard, and an old man stood at the gate, with guardian hollyhocks on both sides of him. His face, lined and wrinkled and the color of ocher, was full of character. There was that matchless dignity about him so often seen in those of sunset years. But he drew himself up in greeting and made a welcoming gesture, at which, suddenly, we seemed to see not an old man, but rather one in his prime, strong and more than six feet high; an Anak of a man. And he was pleased to see visitors—there was no doubting that. For when we spoke of a night's lodging, he said: 'Why, a man's house is made for a resting place,' and led the way in.

Now of that evening's talk very little can be set down. Such things are to be experienced, not to be imagined. There, in the room, were children and grandchildren, a neighbor or two as well. They had sat together thus a hundred times and more. But there was no sign of boredom. Rather was the atmosphere one of lively interest and eager sympathy. And while each had his or her say, the old man was the center of things. He had a memory stretching far back, and, as he talked, he sat half leaning forward, his chin thrust out, his wrists crossed and his feet a little inturned. He told us of a Civil War battle which he remembered, with people hurrying along a narrow road, and darting into the 'sticks' at the sound of guns; of soldiers presently flying in retreat, their horses slipping and sliding on the clay road; of his own boyish wonder at all the stir, not knowing the why nor the wherefore nor the result. 'They could have cut all our throats, had they been minded to. But they were not bad men,' he said.

One of the children said something and the conversation became more general, about how the world advances, about the wonder of the radio, of water witching by means of a willow twig, of man's duty to man, of experience and the everyday stuff of life. And the talk was double-shotted with queer sayings, as: 'You've got to keep your character sound, 'tis like the kettle this stranger carries; once mended always to be patched.' Again, when we spoke of a nation buying things on credit, there was this: 'A pig bought to pay for

later makes a good winter but a sad spring.' And after we had talked about taxes and people without money, with more taxes in the offing: ''Tis hard to shave an egg, and no man limps when another is hurt,' for someone had spoken about the possibility of the Government looking into farm matters. The old man seemed to struggle with good-humored laughter at the thought of 'Washington men' understanding the affairs of men in the mountains.

We were on our way in the early morning in a chill mist, with dew dropping from leaves, and spider webs wonderful with fairy pearls, and white ghost mists in hillside hollows. But, at the first sun ray, the whole world changed with the vanishing mists. Fairyland fled and nature struck a bolder note. Golden light pierced leafy roofs to make strange arabesques on the grass. From secret places came the noises of birds in sudden chorus. Far foliaged mountains were painted purple and rose. All the tall thistles had gone white in the night. And there were laughing streams, and miniature rapids and waterfalls, and metallic-hued lizards that ran out and back in a state of mystery. Once, a lad, tall and sunburned, looked after us gravely. We had not gone far when he took a mouth organ from his pocket and played it, still watching us thoughtfully.

The place we were in was between the town of Jasper, a county seat without a railroad, or electric lights, or telegraph; and the town of Pettigrew. A country, this, in which automobiles have never been, nor can go because of the roughness of the way. Indeed, in places the road is a mere footpath, twisting and turning on the mountain side, running zigzag along steep hills, bending upon itself in most astonishing manner. Sometimes the silence there is so all-possessing that when one stands still there comes a consciousness of the sound of heart beats. Or the quiet is pierced by the musical sound of some distant cock, trumpeting his warrior challenge. Or you sit to rest, to find yourself dropping to sleep, soothed by the murmur of the water-splash.

And the people? Well, for one thing they behave gently to their beasts. For another, they are given to hospitality. For another, there is a careful civility to the stranger. I had been reading David Livingstone's *Journals* just before starting, and as I remembered his affectionate testimonials to the natives, their wholesome and invigorating life, their freedom from silly vanity, their toughness and fine working qualities, their naturalness of intercourse—as I remembered what I had read, and how he deplored the change wrought by civilization and the contact with those who were all ulterior motives, I wondered and my companion wondered whether, after all, man gains much with all the intricacies and complications of the busier life.

Suppose you say that the statistics are such and so; that in the backwoods there are illiterates. The truth of that must be admitted, but not with any feeling of scorn for those talked about. For why set mere book-learning on any impossible plane? Why hold the mere reading of a book in the light of a virtue? Why be proud of a mere acquisition of dull facts? For what counts, after all, is not knowledge but character. And a man may have swallowed all of that which school and university offer, yet still be a sorry fellow and poor citizen.

These people, these mountaineers and tamers of the wilderness, these frontiersmen are simple. And kindly. And hospitable. You will not find them indulging in commonplaces, nor in catchwords about flags and frontiers, nor in worn phrases. But know them and you will find them entirely and clearly capable of independence of thought. A lifetime of patient work, of observation, of facing nature in her many moods, of contact with things at first hand, of strict and methodical action—and the result is a sturdy independence and a soundness. Their determination is as was the determination of a Boone, or a Robertson, or a Sevier, or a Bowie. Their unflinching integrity lifts them to zenith high places. Envy they do not know; neither selfishness nor malice.

They are the salt of the earth.

A country, this, in which automobiles have never been, nor can go because of the roughness of the way.

Negro America

(*Concluded from page 15*)

emphasized in government departments at Washington, and official segregation of the negro has grown, until today segregation is practised in one form or another in almost every city of America.

It was easy for President Woodrow Wilson to follow in the footsteps of President Taft. He did so most successfully, so that when President Harding took office, racial prejudice and segregation in Government departments was at its peak. Except for the influence of World War conditions, there would doubtless have been some bitter clashes.

President Harding was known to many of us. He knew us by our first names, and knew of our work. He was more or less a student of negro life in America. He had the Ohio idea of negro opportunity, and lived up to it.

President Coolidge has a different slant on negro America from that of any other President. President Coolidge has a strong belief in common sense and patience, and it is by these methods that he is dealing with adjustments today. He has always been vigorous, but never threatening. He looks at the viewpoint of the white man of the South, and asks us in groups and individually not to expect too much in a short length of time. He regards it all as a process of evolution.

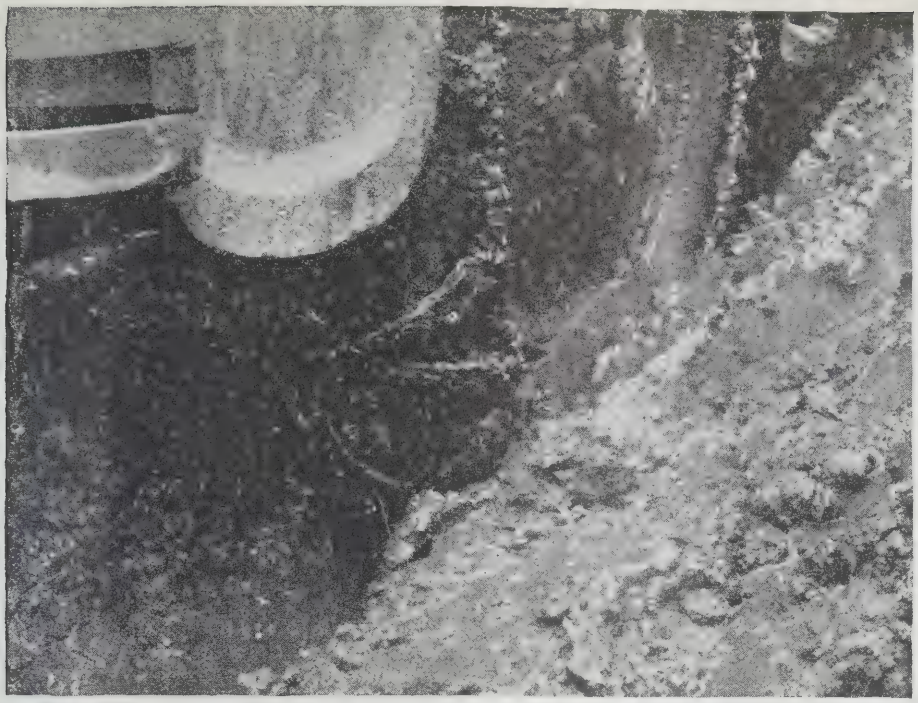
There are four types of effective negro leadership at this time, outside of the schools and churches. They are the educator, the intelligentsia, the business group and the fraternal group.

Negro America Fifty Years Hence! In that day, counting the future by the past, we will be at least 25,000,000 in number.

A negro farmer or mechanic or laborer is better anywhere if he has education. The same is true of whites.

Fifty years hence, the negro may be more segregated in some locations, even North, but he will have a larger voice in things, and will be in a position to plead his own cause in places that will get a hearing. I do not look for the elimination of prejudice. I do look for an increase of the ideal understanding of American citizenship.

Within the next fifty years, negroes of America will have contributed to art, literature and music to such an extent that there will be a softening of the tone on the inferiority complex. We of the Negro race are working to that end.



Think what rubber means in a tire chain

This is the new Goodyear Rubber Tire Chain. It will cause you to revise all your ideas about tire chains.

Because the cross links are of *rubber*, Goodyear Tire Chains are noiseless and, instead of damaging the tread, actually conserve the life of the tire.

Because this specially compounded tread rubber resists the grinding action of road wear better than steel, one set of Goodyear chains, under average conditions, will outlast several sets of ordinary chains.

Because the silent rubber cross links naturally lie flat, Goodyear Rubber Chains are much easier to put on. They are also more agreeable to use. Wet street, dry street, snow, mud or slush—all in a day's drive—just leave 'em on.

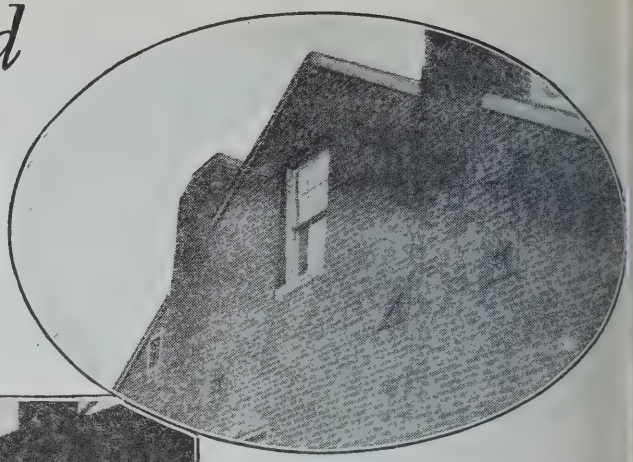
Because of the unique design of the rubber cross links, an adaptation of the Goodyear All-Weather Tread, Goodyear Rubber Chains provide resistance to skidding in any direction.

Especially suited to balloons. Made by the makers of Goodyear Tires.

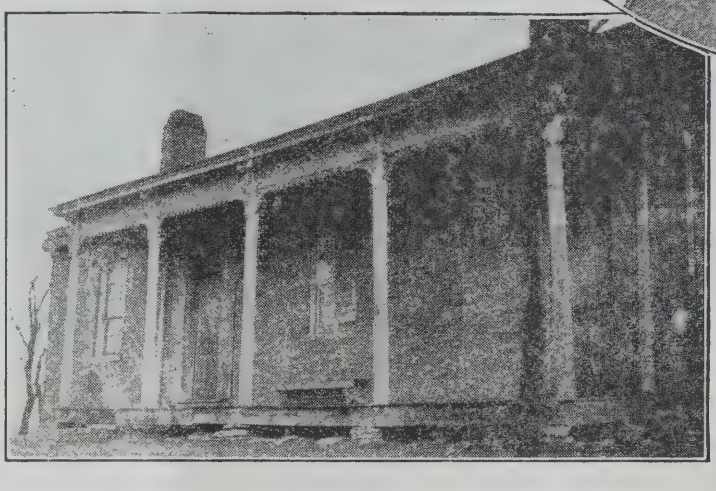
GOODYEAR
TIRE CHAINS

Where Eliza *Crossed the* Icy River

What Ripley, Ohio, Knows About Heroine of *Uncle Tom's Cabin*



Oval—*Window where signal lights were displayed. Left—Eliza House, Ripley, Ohio.*



By CHESLA C. SHERLOCK

'THAT'S the old house up there,' said the conductor of the Chesapeake and Ohio local, pointing in the general direction of a high bluff across the Ohio River. There could be no mistaking his intention, for the stark, bald bluff was topped by only one house. It loomed somber and forbidding, that early spring morning when I first saw it, just as it had for more than one hundred years.

I took a wheezy old ferry over to Ripley, for the railroad runs down the Kentucky side of the river. I think the boat must have been one hundred years old, too. It wheezed and churned and tugged at the light chocolate brown of the storied Ohio, making a mighty business of its humdrum task.

As we wavered across the current, I stood and took in the scene before me. The village of Ripley nestles under this tall and abrupt bluff, almost at the water's edge. I thought of all that it had witnessed in its life of one hundred twenty-five years.

I saw it in those feverish days just after the menace of the British and Indians had been removed—when this muddy stream was the teeming gateway to the promised land for thousands of settlers. I saw the planters of Old Virginia pouring down this highway, many of them settling here on these hills with their possessions.

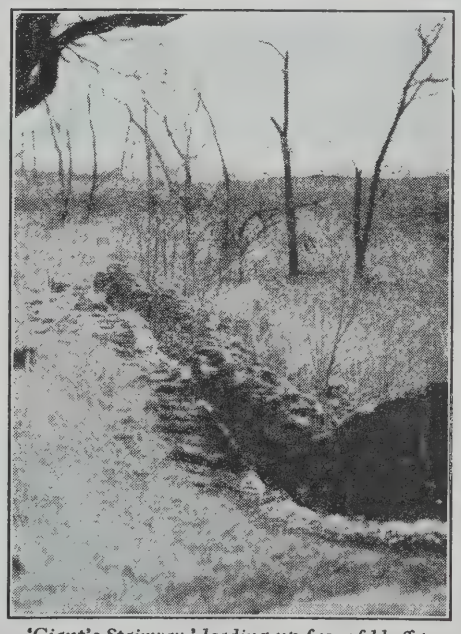
Then the long lull of comparative quiet until that day in 1821, when a thin and sinewy circuit-rider preacher from Tennessee came across the same river and took up his station on the hilltop and lifted his voice against the human traffic that was still countenanced on the other side.

He was the Reverend Mr. John T. Rankin and he had made his way slowly across his native Tennessee and Kentucky, preaching anti-slavery doctrines as he journeyed and sowing the seed, even in hostile territory. In Ripley he found a more sympathetic ear. It was here that he decided to spend his days, and there, on the hilltop, he built the small, severe brick house which endures even to this strange time as a monument to his work.

Ripley has had its day. It gives one the uncomfortable feeling that it is settling down to the long sleep, alone with its memories and its past. One feels, consciously, the intrusion that a stranger must be. I did not see evidences of recent progress; the houses are all of another day, and the carpenter's hammer has long been silent.

But the houses, ancient and odd as they are, are all inhabited. It just seems to be a village that got caught on the edge of the stream, and there it has hung all these years, as the rest of the world flowed swiftly by on the quick current of progress.

And the people in Ripley are proud of their past, and they will talk to you about it, eagerly and generously. That is, most of them will. One man I met soon after my arrival, a long, thin man with an enormous mouth and a terrible capacity for 'long green' which he 'chawed' in every shade of meaning of that term, denied vigorously, and rather bombastically, that Ripley had any claim at all to fame.



'Giant's Stairway,' leading up face of bluff to Eliza House.

'Yeh,' he mumbled, working his jaws to double purpose, 'they calls that the Eliza House all right, but 'taint so, 'taint so! There's no truth to that yarn any more'n I can fly!'

When I asked to know his reasons for such a bald statement, he answered: ' 'Cause my father lived here all the time, and he never heard a word 'bout it!'

But others in Ripley, among them a banker, assured me that the Eliza legend is not without its foundation in fact. Yes, he thought it was true, and he quoted names, dates and threw in a few anecdotes to prove his point.

Another man, whose family has always lived in Ripley, so he assured me, was positive on the point. 'That is the Eliza House, all right,' he said, and he took me across the street and pointed it out for fear I would miss it. 'That's it, all right. Eliza crossed on the ice right down there in front of the old Collins house, and climbed that bluff to the house where the Reverend John hid her for several days. Then he smuggled her north to a Quaker settlement about nineteen miles away.' There was more to his story, as I later discovered.

So I set out for the house determined to look for myself. On the way, I chanced to pass the school yard where my attention was attracted to a concrete block in which was inserted a bronze tablet. I read:

This Tablet Is Erected to
REV. JOHN T. RANKIN

A Tennesseean by birth who preached anti-slavery doctrines across the State of Kentucky, finally locating in Ripley in 1821. The Rankin house on the hill became a fortress by day and a beacon light by night to the fleeing fugitive.

Many western men call him the 'Father of Abolitionism.' This title is verified by William Lloyd Garrison who, in a presentation copy of his works to Reverend Rankin, inscribed: 'With profound regards and loving veneration of his anti-slavery disciple and humble co-worker in the cause of emancipation.'

There is just one way to get a proper perspective of a hill and that is to climb it!

One-third of the way up this Ripley bluff I was out of breath and perspiring, in spite of the sting and bite of the March gale that all but swept me off my feet. I was then three hundred feet above the town.

I had been informed, when I reached this point, that I would find a stone stairway composed of just one hundred steps, which would take me right to the front door of the Rankin house. But those steps! Surely only a giant might have climbed them a single step at a time; they were in reality a series of ledges made by dragging heavy field stones and placing them one above the other. Some were four or five feet wide and must have weighed a ton or more. This giant's stairway meandered over the face of the bluff, much as the Ohio below me meandered in and around the bluffs. It was fairly easy going until I reached the last two hundred feet, and then it seemed that the stiff upper lip of this hill was going to push me back into the village. I hung like a fly on a wall, the wind snapping my coat tails! I grasped a wire fence by the side of the steps and pulled myself hand over hand, panting and exhausted, to the summit. A broad, flat plain stretched off to the north, and I saw that this old dilapidated house was the remains of a farmstead.

A TREE or two straggled near it, and a clump of tiger lilies were beginning to awake from their long sleep, but for the most part, the plain was swept clean by the wind which moaned and groaned, with all the heaviness of the past, around the old and broken house.

A young wife—very young, and grasping at the tow head of a curious youngster—stared at me with vacant eyes as I asked about the romance of the old house. She did not seem to understand, and she looked helplessly at the heaving floors.

Her husband was away; perhaps, he knew. Perhaps, when he returned he could tell me. Did I used to live here? What was it? Eliza? Eliza? She did not remember anybody by that name ever living here. Besides, I must understand, she had only lived there a short time herself.

But I saw it all. I saw the room up under the roof where the frightened Eliza was hidden for a week or more—the same room in which the lights were placed to signal to the waiting slaves lurking in the Kentucky hills under cover of darkness for the chance to scurry to freedom.

The story goes that Eliza, after she departed from the Rankin house, left her baby in safe hands and made her way to Canada. Then she came back once more to danger. She appeared at the Rankin house one evening and asked the Reverend John to put her across the river. It seems that her mother heart would not be denied, and she would rather risk her own freedom once more, in an effort to recover a child left behind, than rest content in liberty.

It is said that the fighting parson rowed her across the river and that in due time he reappeared with a negro boy, whom she guided to Canada, through the various stations of the 'Underground Railroad.' There she was subsequently joined by her husband, who had also successfully eluded the bloodhounds and the law.

It is not definitely known just how Harriet Beecher Stowe met Eliza, but the popular legend is that Mrs. Stowe came to Ripley and saw the slave girl and heard her story from her own lips.

It is certain that Mrs. Stowe, then Harriet Beecher, was living and teaching in Cincinnati at the time, and that practically all of her novel, *Uncle Tom's Cabin*, was based on authentic records—stories and facts that she gathered during that period. Uncle Tom, himself, was an actual character that Miss Beecher met at this time—a slave living in Kentucky south of Cincinnati. Before Mrs. Stowe died, she wrote a book in which she produced the data upon which her great novel was based.

It does not seem unreasonable that she should have met Eliza and heard her story. Miss Beecher had been scribbling for a few years and had made some headway as a contributor of stories to the magazines. She was busy gathering data for a novel on slavery. The remarkable romantic lure of a young slave girl daring to brave the treacherous ice in a swift current like the Ohio, in an effort for freedom, would draw any writer many miles. And we do not doubt that the story was whispered all over Southern Ohio soon after it occurred.

We do know that the incident became the thrilling climax of *Uncle Tom's Cabin* and that it did more than anything else in that great novel to arouse the North to the inhumanity of slavery.

Lincoln and the Sleeping Sentinel

(*Concluded from page 5*)

The Captain answered, 'When I found them all asleep, I tried to find out whose duty it was to have been awake at the time. They all said it was Scott's, and Scott also admitted it was his duty.'

A member of the court then asked, 'Did you positively wake him, and know that it was his guard?'

An affirmative answer was given, and the prosecution closed.

Scott was asked if he had any witnesses or wished to testify, and replied in the negative.

After mature deliberation on the evidence the court found the accused as follows—

> 'On the Specification, Guilty; on the charge, Guilty.
> 'And the court does sentence him, pvt. William Scott, Co. K., 3rd Regiment Vermont Volunteers, *To Be Shot to Death.*'

Major General McClellan approved the finding and sentence and set the date of execution at Monday, September 9, 'at such hour and place as the Brigade Commander may determine.'

As the date approached for the execution of William Scott, his regiment grew more and more excited. A petition was passed around and freely signed not only by privates but by most of the officers of Scott's regiment. This petition was addressed to Brigadier General William Farrar Smith.

On Sunday, September 8, Major Ridenour from Smith's headquarters went to Washington to McClellan's headquarters and also to the White House. When he left Washington that evening he told the newspapers that Scott was not to be shot.

Next morning Scott's regiment was drawn up, and a pardon was read, issued by order of Major General McClellan, in which it was stated that the President had asked for the reprieve of this young man, since this was the first time the death sentence had been imposed in the Army of the Potomac for this offense, but that it was not expected that the President would intervene in a like case again.

BEFORE long the President's relation to this case assumed a more important aspect. It was freely stated that he issued the pardon, and that not content with issuing it, rode out to the Chain Bridge, and arrived in a cloud of dust as the firing squad was standing ready to fire, and stopped the deadly work just in time.

Now the President was not followed then as now by camera men and reporters noting down every word and act, but certainly the President could not have left Washington on such an errand and the papers not have been full of it. For instance, on the very next day, the President did ride out from Washington to Tennallytown, D. C., and was present when a stand of colors was presented to the Pennsylvania regiments stationed there. Did he get out of Washington and back on that formal and inconspicuous errand in which he was merely an observer and escape the notice of the reporters? He certainly did not. Could he have driven at breakneck speed to the Chain Bridge on the preceding day, and halted an execution, and not have had it mentioned in every Washington paper, and also in the New York *Times*, the New York *Tribune*, the Boston *Advertiser*, the Boston *Journal*, the Boston *Transcript* and other papers in other cities? All these newspapers had special Washington correspondents. The Boston *Journal* had Charles Carleton Coffin, then with the Army of the Potomac. Could it have escaped him?

AS A matter of fact, the newspapers of Washington, on file in the Library of Congress, contain no item concerning the movements of President Lincoln on Sunday or Monday, except as to his receiving the call from Major Ridenour and permitting it to be said that he requested that Scott should not be shot.

The newspapers tell what McClellan did on the day Scott was to be shot. He rode across Long Bridge to Forts Jackson, Runyan and Albany toward Bailey's Cross Roads, and rode back to Washington that night. The Records of the Rebellion tell in detail of the advance of Brigadier William F. Smith with two thousand men from the Chain Bridge toward Lewinsville on the eleventh, with the Third Vermont on the march. We know pretty well what was happening that people were interested in; did so interesting a thing occur as the ride of the President from Washington to the Chain Bridge to pardon William Scott?

That did not happen, we may be sure. The petition was not addressed to President Lincoln; the pardon was not issued by him; he was worrying about his break with General Fremont, and was in no necessity of hunting up any trouble. He knew that the pardon of Scott was attended to, and he let the matter alone. It had not come before him in official form; there was no occasion for him to do any of the spectacular things which are credited to him.

When we consider the whole situation we see how discourteous, foolish and perilous it would have been on President Lincoln's part to have ridden to the Chain Bridge to stop this shooting. The case had never come officially before the President. It was handled by humane and competent officers whose very desire to save Scott had caused them to ask the President's informal assistance. It was settled, as it ought to have been, by General Smith of the brigade and General McClellan commanding the army, and McClellan went off about his other business knowing that the matter was properly settled. Now, suppose that President Lincoln, knowing all this, and knowing that the army officers had already told the Washington papers that Scott was not to die, had put on a movie-stunt on Monday, riding to the camp when he knew or could have learned McClellan was not there, and advertising that he, and not Brigadier Smith or General McClellan, was the friend of soldiers. When McClellan got back to Washington that night he would have been furious, and with good reason.

Lincoln had frequent occasion to overrule military authorities when they refused mercy. He certainly did not insult them when they had shown mercy.

Peruvian jar representing human figure.

Museum of the American Indian

THE Museum of the American Indian, in New York, had its inception more than twenty-two years ago, when its present director, George G. Heye, began the systematic accumulation of objects pertaining to the American Indian. A representative gathering of earthenware vessels from prehistoric Pueblo ruins in New Mexico was the first important collection. From this the collections have so greatly and so rapidly increased that they have already outgrown the new building. Owing to the limitations of space it has been necessary to present to the public view only small synoptic series of objects illustrating in an admittedly meager way the culture of the Indians they represent.

The director and founder of the museum, George G. Heye, is not the type of man one usually associates with the painstaking collection of Indian relics. He does not wear thick, horn-rimmed spectacles. He is neither hollow-chested nor stoop-shouldered. He is over six feet tall and weighs more than two hundred pounds. Round-faced, and smooth shaven, he resembles rather the successful go-getter type of business executive portrayed in advertisements, than a collector of antiquities.

Mr. Heye is a native of New York City. Upon graduation from the School of Mines at Columbia University in 1896, young Heye went West. While engaged in an engineering project in Arizona, he became interested in Indian relics. His interest soon developed beyond the craze for collecting things common among most visitors to that section of the country. From the first, he was fortunate in having the active interest and aid of his mother, the late Marie Antoinette Heye, who subsequently financed some very valuable expeditions in South America. The profitable researches of Dr. Marshall H. Saville, of Columbia University, in the archeology of the Andean and coast regions of South America, from Southern Ecuador northward to Darien, were made possible by her coöperation.

As the years passed, Mr. Heye's inter-

est in piecing together the fragments of the Indian's history became keener. His collection grew until there is no other that even approximates it in its scope or worth. At first the collection was housed in a loft but it soon outgrew its quarters. A large part of the collection was loaned to the University of Pennsylvania Museum, where it was exhibited until the new building was completed.

Besides the specimens collected by Mr. Heye and his staff, the museum has received more than 24,000 objects from those connected with it only through sympathy with its endeavors.

Among the notable objects procured by the museum are two wampum belts presented to William Penn by the Indians. Those important relics had been taken to England by the Penn family but they were bought and brought back to America. A wampum belt was also retrieved which had been presented to an Indian chief by Penn.

The popular conception of a museum devoted to relics of ancient civilizations is a dusty, dark, and dismal place packed helter-skelter with odds and ends, labeled chiefly with flyspecks. The Museum of the American Indian is different. It is the last word in museum construction and equipment. It is well lighted and well ventilated. The objects are neatly and meticulously arranged in shining glass cases. Although there are more than 2,000,000 objects stored in the building and only one-third of them are on view, they are so carefully indexed and cataloged that museum investigators can place their fingers on them at a moment's notice.

A pipe lover would be amazed to see the variety of pipes used by the Indians; and they were by no means inferior to the ones in use today. Some of the pipes in the collection were smoked one thousand years before Columbus discovered America. There are all shapes and sizes. An Eskimo pipe of carved ivory; an elaborately carved pipe, brilliantly colored, from British Columbia; pipes of clay, stone and wood. The art of making beautiful pipes died out upon the appearance of the white man and his cheap clay pipe of civilization. The Indians adopted the clay pipe in preference to those of their own manufacture. Through lack of practice the pipe-makers lost their knack for carving.

Example of how the Jivaro Indians of Ecuador cause human bodies to shrink.

A primitive device for 'radio broadcasting' used by the Tucano Indians of Brazil is one of the interesting exhibits. These natives devised a sending outfit which may look crude but worked very well. The sending set consists of a drum, hollowed out of a section of a tree trunk. The task was arduous, for the scraping had to be done through four holes barely large enough to permit the entrance of the hand. The 'drum' was hung by vines from the limb of a tall tree usually by the bank of a river. The 'operator' tapped out his simple code with a heavy drumstick. The sound could be heard for several miles and messages picked up satisfactorily. The 'radio-outfit' was very valuable in time of war. Warnings could be flashed from tribe to tribe of the approach of a common enemy. The late Herbert Ward, artist and adventurer, who spent five years in the heart of the Congo district, brought back reports that a similar device was in use there.

Probably the most unusual specimens in the entire collection are the shrunken heads from Ecuador. The museum possesses an entire shrunken body. Heads are plentiful but the entire body is very rare.

The scientists associated with the Museum of the American Indian are in a very real sense working against time. In the first place, few college men are going into the field of ethnology and archeology these days. Whether or not their aversion for the work is due to the lack of financial rewards, the fact remains that almost all the men engaged in research among the remains of ancient civilizations are well past middle age and many of them are white-haired.

for Accurate MILEAGE

$10

STEWART-WARNER SPEEDOMETER

You can depend on Stewart-Warner mileage figures. Being a product of an organization that has been building speedometers for over 20 years assures a degree of perfection as accurate as a fine watch. The Stewart-Warner Speedometer has less wearing parts. The "trip" dial has been eliminated. You get your trip mileage from the total mileage. Means longer perfect service with only two dials to watch—Speed and total mileage.

Is Your Battery Prepared for Cold Weather?

A SUDDEN change in weather affects all batteries. Winter starting conditions place an extra drain on the battery because the engine is cold, the oil stiff and starting more difficult.

A discharged battery will freeze in cold weather. A partially discharged battery is apt to freeze. Don't be caught as thousands of car owners were last fall. They could not start their cars the morning of the first cold spell because they had let their batteries get "too low."

The USL battery man in your town will tell you "Don't buy a new battery until you have given us a chance to save your old one." Give him this chance before cold weather sets in. It will save you money and inconvenience.

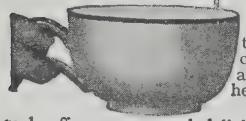
FOR COFFEE LOVERS
Who Fear Caffeine



There is a coffee with the caffeine taken out. A coffee all may drink at any hour and to their hearts' content.

Not mock coffee, but real coffee—a rare and delightful blend. We simply open the pores and remove the caffeine. That is the source of all coffee's harm.

Caffeine is tasteless and odorless. Its removal does not affect the flavor or aroma in the least.

This coffee is called Kaffee Hag. The finest hotels now serve it. In countless homes it is the favorite brand.

Learn what it means to you and yours. A coffee you need never fear or stint. A coffee you can drink at night and sleep. Children can enjoy it.

This coupon with a dime will bring a 10-cup package to you. Get it for some coffee lover who cannot drink caffeine. Clip coupon now.

KAFFEE HAG
1439 Davenport Ave., Cleveland

Send me postpaid, enough Kaffee Hag to make ten cups of real coffee; I enclose 10 cents (coin or stamps).

And This From You

(*Continued from page 7*)

The same pessimism is reflected by C. W. Barron, merchant of Holloway, Louisiana:

'My reason for not saying a great deal about a number of things is that I have no way of saying it and no one to say it to,' he writes. 'I haven't been able so far, to help or hinder, just in Louisiana. Today we have a senatorial campaign on and I don't want to vote for either of the men running. There is a reason why a different type of man failed to enter the race, and I think it is the same thing that affects politics everywhere most. If we had more papers like THE DEARBORN INDEPENDENT, I believe things would get right.'

C. E. WATHERS, of West, Mississippi, presents his views in the form of an affidavit:

'Cometh John Citizen who deposeth and saith that he is as he is because he has no organization in which he can place any confidence, through which to express his disapproval of the things that he knows are wrong. That he feels outraged at the conditions outlined in your editorial and expresses himself freely in private conversation but is without any organization to voice his views. That whenever an organization *is* formed to promote the general good, it soon seems to deteriorate into a bread-and-meat affair for those who assume leadership.

'That party interests are held to be permanent to the public good—therefore he votes as a rule for what he believes to be the least of two evils, and expects little results to accrue to the public good, no matter who is elected to represent him.

'He resents the usurpation of authority taken by Secretary Mellon, and the passive attitude of the people's representatives, and believes that nothing but fear of Mr. Mellon's power in the world of finance actuates them. That there are so few outstanding, honest, fearless men in public life, that when one does show signs of independence, that he, John Citizen, is ready to hail him as a possible savior.

'John Citizen further deposeth and saith that he is ready to express himself on all moral and political issues whenever a clear-cut issuance is made, and unselfish leadership is available. We need in the United States a thousand Jeremiahs—men who have no personal axe to grind, who can envision conditions as they ought to be—and who do not ask for a reward for their services.'

An interesting expression comes from L. J. Butzow, Chicago factory worker:

'You ask what we are thinking about. I ask what can we think when the earmarks of truth, the chance to check, are lost in the haze of misinformation. It seems that our histories and our papers both mislead us. "The bludgeoning of the good name of the American people goes on overseas." The bludgeoning of the good names of the European peoples, descended from our ancestors, goes on over here. The quotations from the European papers given in the papers I've read indicate a good deal of ingratitude for our sacrifice there. But the press is a moulder of opinion rather than a reflector of opinion. I believe that the natives in Europe want their debts paid. But constant agitation would make them desire repudiation. When the news of the debt cancellation came out some of us at the factory berated the cancellation and then went to work. What we thought of it seemed to matter but little. We live in hopes.'

The view given by John C. Stafford, councilor of the Michigan Federation of Farm Loan Associations, no doubt reflects that of many farmers:

'As one of "*You*" I wish to say that most of us know that the International Banker rules the world by owning the currency and most of the credits. We know that the pyramiding of debts and the multiplication of interest obligation must lead to a smash. But our Government and most of the others having admitted their incapacity to "coin money and regulate its value," and having farmed the job out to the International Bankers, we can do nothing but look on, electing their puppets to positions of political power and amusing ourselves by discussion of far-off and inconsequential things.

'We have formed habits of voting by prejudice and thinking by proxy in matters political, and these lifetime habits for the great majority of us are hard to break. In fact they are not broken except in time of great distress. Mr. Mellon has been the visible part of the power behind our government for some time now. When he disappears the International Bankers have many other capable men to take his place.'

G. Warren Davis, of Norwich, Connecticut, is succinct:

'This John Citizen has been silent for two or three causes,' he says. 'One cause is —I have been very busy hoeing clover seed into the ground among tomato plants and digging potatoes. Another cause is—I, with divers other John Citizens, have been drugged and saponified so long that I have lost some power to think.'

Pat Keelan, of Wauaseta, Texas, expresses himself clearly:

'When I first came to this country some fifty years ago, the leading papers were mostly the property of men with positive opinions on all public questions which they expressed in no uncertain language.

'The papers of today are mostly syndicate affairs that often represent very sinister interests and divert the reader's mind with paregoric propaganda, designed to dull his curiosity and promote the "child mind" so prevalent today in our adults—go into any gathering of young workingmen or farmers today, and if they discuss the day's paper at all it is more apt to be the "funnies" than anything else.'

A SEATTLE physician who wishes to remain anonymous typifies the views of a number of professional men. He writes:

'My ancestors lived in New England, fought in King Philip's War, French and Indian Wars, the Revolutionary War and so forth. I went through the public schools of Michigan, graduating in the literary and medical departments. Was in the Spanish American War. Was rejected from service in the World War because of my age. Personally, I felt that the future of our country would have been menaced if Germany had been victor and that we should have armed ourselves in the beginning and been prepared to go in, long before we did. This opinion was largely based on a fairly good knowledge of history, the reading of which serves as a recreation for me after my day's grind. With a good background of this nature I felt that the beautiful phraseology constantly emanating from Washington about making the world safe for Democracy, League of Nations, and self determination, was, to use our expressive word, bunk. I had long believed that only the Anglo-Saxon race through the centuries of de-

velopment understood the meaning of self-government and was sufficiently trained to make self-government or democracy a success.

'During all this period my wife was the only one to whom I could express my disgust at the course of events because of the sedition laws, which were undemocratic and as severe as those of the most absolute despotism of Europe. We spent money like drunken sailors and John Citizen had about as much to say concerning it as he has about the solar system. Not until 1920 did John Citizen have a word to say about it, when at the polls, by a seven million majority, he let the government know how he felt. He retained President Coolidge in 1924 by the same majority because he felt that Coolidge would do everything in his power to judge conditions more in accordance with the ideals of our old Americanism. He has also been patiently paying income tax ever since, with but little protest.

'I am writing to inquire what you can suggest that John Citizen can do to improve conditions other than using his vote at election time. I am sure that any suggestion of practical nature that you could make would be highly appreciated by many millions of the Citizen family. Meanwhile I am plugging along taking a reasonable part in civic activities and doing my best to bring up three boys as Simon-pure Americans with American ideals. I am not writing this for publication and specifically request that my name not be used. But you have asked for opinions and I am responding to that request.'

[*Further letters will be published in an early issue.*]

A Reporter's Memories of Roosevelt

(*Concluded from page 13*)

was locked, so the President jumped over the rails. Half a dozen boys were preparing breakfast in true cowboy style, chuck wagon and all. 'Denver will have to wait,' Roosevelt told the newspapermen. 'Here's where I eat breakfast.'

There stood the cattleman's chuck wagon and a fire blazing beneath the two kettles. The guest of honor had not forgotten his etiquette. Not waiting on one's self in such a situation corresponds to eating with one's knife. T. R. helped himself to steak and potatoes, and he knew the exact location of the salt and pepper shakers in the wagon. The one short minute he had promised lengthened into an hour, and when the train finally moved the punchers accompanied it on their ponies for a mile or more, following between the rails and over the prairie, shooting their fire-irons and whooping as no one but a cowboy can.

It was on the same trip that T. R. decided he wanted a complete respite from civilization. Thirty miles from the Yosemite is a giant grizzly tree. It is 300 feet tall and thirty-five feet through, and under it one day the Secret Service men and the President's personal advisers counciled with an old woodsman. They asked him first of all if he would promise to bring the President back safely if T. R. were intrusted to his care for three whole days.

'No, sirree; I won't,' he said.

'No?'

'No,' he said, slowly, 'but I'll promise to bring back dead the man who kills him.'

Two horses carried Roosevelt and his guide toward the valley the next day. Two pack mules shouldered the grub. During these three days the nation had no head, or might as well have had none, for if Washington had desired to communicate with Roosevelt, no one would have known his whereabouts. He was simply somewhere in the spacious Yosemite, satisfying the craving to be alone.

When he came back he headed first for the press car to tell the newspapermen of the strange but bully time he had had.

'Say, I thought they had handed me a lemon in this old backwoodsman,' he laughed. 'The whole first evening he never spoke a word, and I thought I was going to have a jolly time against that blank wall. We struck camp at six, and he got the food ready, and we got together the pine boughs for the beds. All he'd say was "yes" or "no," and he never took his eyes off me.'

'PROBABLY just wonder-struck at lugging a President around,' remarked a veteran correspondent.

'Well, sir, the next morning,' the Colonel went on, 'he began to talk and as far as I know he is talking yet. I've never had three finer days. He knew just the things I wanted to know. I guess he slept off his nervousness that first night, and we were friends from then on.'

Both Mark Hanna and Roosevelt are dead now, so the following story may be told with propriety. It supports the opinion held by many correspondents that Roosevelt feared nothing and no person.

In the spring of 1903 the Ohio State Convention was being held in Columbus. Hanna, at the time chairman of the national Republican committee, was present. Roosevelt was in California. A majority of the Ohio delegates were anxious to endorse Roosevelt for a second term, even at that early date.

Hanna didn't take kindly to that attitude. Before he retired that night, Roosevelt was notified of the proceedings in Ohio. Not a word had come from Roosevelt up to that time as to whether he would be a candidate for reëlection. About one o'clock in the morning Pearl Williams, a telegraph operator with the party, was awakened and informed that the President wanted him to handle a message as soon as he could dress. The conductor was told to stop the train at the first telegraph office, which happened to be quite close, and in one of those famous snowsheds in the Sierra Nevada mountains. The operator got a direct wire to Columbus. It was a 200-word telegram he sent. It started off as gentle as a spring shower, and ended like a hurricane.

'I HAVE not yet expressed an opinion whether I will be a candidate for reëlection or not. I have kept away from it, but inasmuch as you, Mark Hanna, have dragged the matter into the Columbus State Convention, I will say to you that I am now ready for the question. Do you, Mark Hanna, know of a man either dead or alive, Mark Hanna, whom I ever asked to vote for me? Did I ever ask you to vote for me?'

And then, with the true Rooseveltian flourish, was this fillip:

'The greatest honor that you, Mark Hanna, chairman of the Republican National Committee, can bestow upon me will be never to vote for me.'

Before noon the same day the Ohio State Convention, in Columbus assembled, endorsed Roosevelt for a second term.

Recent Tendencies *in* Education

By A. LAWRENCE LOWELL
PRESIDENT OF HARVARD UNIVERSITY

CHANGES in customs, in aims and purposes, come not so much from a reversal of principles, as from a difference in emphasis. We do not refute past convictions; we rather look at the matters to which they relate from a new point of view.

This is no less true of education than of other matters. Little that was deemed important half a century ago is not thought so today. Little considered essential now was wholly neglected then. No doubt there has come a change of methods and of the means for reaching results, but above all there has been a shift of emphasis.

Progressive thought of that time dwelt on the need of providing enlarged opportunity, on the scale of equipment, on the extent of choice offered to the student, and hence on the number of courses, of instructors and of subjects covered. We heard much of enriching the curriculum, which in fact meant a greater diversity of curricula.

Now the newer thought, at least in colleges, is concerned more with the use made of opportunities, the character, energy and ambition of the student. We are regarding education less as a matter of information, more as a stimulating, and incidentally as a selective, process. We are thinking, not of the course, but the student, as the unit to be considered.

We are moving away from the counting of educational credits, toward a final measurement of the student himself as the product of the system; and we are learning that above the rudimentary technical skill acquired by reading, writing, and arithmetic, all real education is essentially self-education—a principle that becomes more and more true the higher the stage reached.

Strange contradictions appear where one looks for any single principle which may be regarded as the pervasive tenet in the whole life of a community.

In American industry there is a marked tendency to increase the speed of production, to make high wages possible by means of methods; but in education the same principle is not applied, and our youth go less rapidly than those in the more advanced European countries. This is a serious defect which extends well-nigh throughout our educational system.

At every point we do things too late. We send children to the kindergarten at an age when they should be in the primary school; and in some cities close at hand we do not allow them to go to the public schools at all until the appropriate time for kindergarten has passed. The children are therefore doing in the primary, grammar and high schools much that they ought to have done earlier, and they are doing it at too slow a pace—certainly too slowly for those among them who are capable of going far and should be helped to go fast. When an improvement is made in the method of teaching it seems to be used to enable the child to spend less time in school, rather than to enable him to advance on the long path of his education more quickly.

The retardation culminates in the colleges, where, at the age when a foreign student enters his university, an American takes, in most places, two years of secondary school character before he is fitted for work of university grade. In college again his pace has in the past been slow, and sometimes it has been for most students so leisurely as to make the public almost forget that colleges were founded primarily with a view to academic education.

In the well-known phrase of Woodrow Wilson, when president of Princeton, the side shows have tended to supplant the main tent. Not that any sensible person would want to suppress the side shows, for they are an important part of the training; and to suppress them would not add to the attraction of the main tent . . .

Formal education has been, and perhaps is now more than ever, a fetish in America. Mankind is expected to be saved by a process called school, and hence we are inclined to ask, not what a child or youth has become as a result of the treatment, not what he has retained or how much he has developed, but how much of the process he has been through. We ask how many years he has attended schools of what grade, what credits he has obtained; and in many parts of the country, school credits have been given for satisfactory attendance and work from day to day without any measurement of the result, on the assumption that punctual performance of routine duties necessarily indicates intellectual growth.

In colleges, moreover, examinations in courses have often required only a memory of detailed facts for which a skilful crammer could prepare a student in a few hours. From all this we have of late been getting free. That is what I meant by saying that we are considering, not the course, but the student as the unit in education. The process is only a means to an end, and that end is the development to the highest extent possible of the student himself. The advance in his maturity of thought, in his capacity to deal with facts and problems, in his ability to use his powers, to apply the knowledge he should have acquired, all this is the object of his education. The process is of value only so far as it contributes to that result, and its effectiveness is to be measured by the result . . .

This brings us to another of the points on which more emphasis is being laid than heretofore. You cannot educate a child, still less a young man or woman. You can by drill force them to learn mechanical movements physical or mental, you can even to some extent stuff their memories with facts. But the power of a person's mind can be developed only by effort on his part. Like every other portion of the organism the brain gains strength by exercise, and loses it by inaction. It cannot reach any considerable power by massage from outside; and therefore the teacher can do little except assist and guide the process of self-education, and above all supply a stimulus for effort.

In American industry there is a marked tendency to increase the speed of production . . . but in education the same principle is not applied, and our youth go less rapidly than those in the more advanced European countries.

* * *

Formal education has been, and perhaps is now more than ever, a fetish in America.

* * *

In the well-known phrase of Woodrow Wilson, when president of Princeton, the side shows have tended to supplant the main tent.

* * *

We may ask whether we are not carrying the enthusiasm for schooling too far.

* * *

We must consider seriously not only how we can make education more effective, but also how we can render it less costly.

Rolling Stone Becomes an Author

(*Concluded from page 3*)

Something that came back magically, of tales of hoboing in Australia, told by a hospital bed in a morning when the sun's gold seemed tarnished, and there was a suspicion that next year's books, good or bad, wouldn't make any difference.

'Why you must be Richard Matthews Hallett . . . Oh . . . Why, I know your father. For heaven's sake . . . Fancy finding you here . . . '

'Sure I am . . . So you know Old Andrews, the great old fellow . . . C'm on over here and tell me . . . When did you see him last . . . Isn't he the old rascal . . . How'd he look . . . I had a letter from him yesterday . . . '

That brings us to Richard Matthews Hallett. He lives over in Boothbay Harbor. Each evening, during the Institute of Modern Literature, he ferried across to the mainland and hurried to Brunswick to hear Willa Cather and Margaret Deland, Hatcher Hughes, Carl Sandburg, James Stephens and the others who discussed literature and its making.

At a dinner one evening, he spoke. 'I want to write, doggone it,' seems to have been the cornerstone of this tumultuous man's career. 'Every writer that ever was worth his salt,' he continued, 'chased off around the world. No Hallett ever had any money to dash round it in luxury. Old Andrews Hallett will tell you that. Wherever I went I had to work my way. My mother had died. I had to write. That was partly my father's fault, the old rascal. He gave me stuff to read when I was a kid that stirred up what was already in my head. Stevenson and Henty, Kipling and Fenimore Cooper, Tomlinson, Trowbridge, Stanley Weyman, William Stearns Davis and, of course, *Westward Ho.*

'I plowed through the law because a man's got to have some profession. Law helps a fellow to write, too, now that I think of it, but writing doesn't help a fellow to want to practise law, let me tell you. When I got to Australia I didn't have much money. I worked like a Trojan for every mile that old square rigger carried me.

'I tramped it around Australia a while. Then I got a job as swagman going into the bush. That was a life! Lugging some other man's baggage over my back day after day! But carrying a long roll over your back never interfered with storing up everything you saw, now did it, and many's the night I dropped dog-tired and had just time to think, "By gad! I'm getting what I came for," before I was dead asleep.

'After a while I got kind of sick of being a tramp and taking little bits of money for slavish work so I hiked back to Melbourne, where I got a job on a newspaper. Every man who expects to write fiction ought to be a reporter for a while. It does something to your perceptions.

'And one fine day I knew the time had come to move on, so I skipped my job as reporter—I dare say the boss had no vain regrets—and hopped a mail packet bound for England where they let me shovel all the coal I wanted to as fast as I wanted to all the way across. Sometimes I look back and I think you don't know what life is until you've shoveled coal on a sea-going vessel for a while. Well I got to London and glad I was! I settled down in queer, dark little lodgings. It was near the time the *Titanic* went down. I wrote "The Black Squad" and it has been the only authentic account to date of life in the fireroom of a great liner, begging Mr. O'Neill's pardon and not forgetting *The Hairy Ape.*

'Well about this time along came someone who dangled before me the chance of going into the west of England with an archeological expedition. I went, but it and I didn't hit it off any too well so I came back to New York and to my own surprise began, actually, to practise admiralty law! But pshaw! I'd been to sea as a sailing man, digging coal dust so the boat would go on, dreaming and writing on scraps of paper between times; and sitting at a shiny desk telling prosperous men little intricate laws of the sea that would make them more prosperous didn't seem very lively to me. So I hiked off west to the Great Lakes where I found a copper freighter plying up and down and a chance to fire on her. Then I went back to digging coal dust. I even found time to sandwich in some writing between shifts, I don't know how. But that didn't last long. I wanted to keep going. I heard there was gold in Arizona so I just hustled out to Arizona thinking I would dig up enough gold in a funny little pan to let me go back, perhaps to Bath, Maine, where I was born, and sit in a cottage and just write.

'Funny thing, though, there wasn't any gold, or if there was it didn't chink into my pay. I got a job in the Old Dominion Copper Mine at Globe, down at the two-thousand-foot level, the twentieth level, to be precise, and they gave me four dollars a day. Well, it was something. And it certainly was a part of the world I hadn't seen and since I wanted to see the world I thought I might as well see it all.

'But along about the time a Chicago newspaper bought an article of mine I felt as if "Rescue" was written bold and bright across the face of the check they sent me. So I went right away from Globe, Arizona, thinking that working at the twentieth level should rightfully be left to those who had a taste for it, which didn't mean me.

'Something told me to go up to Canada and take a crack at timber cruising, so I did, but then the war came along and I had a chance to go back to "that old davil sea" as watch officer on a transport. By this time I never had a minute when I didn't have to be doing something else, that I didn't spend writing. I knew the law was behind me and that I was "in" writing, if you can say it that way. All of me, win or lose.'

You see there had been no need to prod Richard Matthews Hallett by asking questions. All that he had in the way of theories, about ways to become a fiction writer, went into his relating of his own experiences in becoming one.

The last word, even as the first, was about Andrews Hallett. 'Remember, if I don't see you again, and if you see Old Andrews, give him my love. A great old fellow, Andrews is . . . '

Chats *with* Office Callers

'Critically speaking,' said ***the Author of Children's Books,*** 'there is matter for much thought in the fact that in spite of all modernistic theories, the young generation of readers sticks to its favorites, accepting only that which is new when it retains the old values and the old naturalness—

"Haystacks steady as stone
Gates to lean upon,
Lambs and rabbits everywhere."

'Boys want heroes doing things with ruthless efficiency, want them in the midst of exciting and risky achievements, but with the "love element" barred. Younger readers insist upon books without preaching. They rebel at propaganda. If they have fairies, then they must be of a sort to stand cold water and clear air, creatures alive and very much so, credible to human beings, thinking their own thoughts and not the thoughts of their creators, or else speaking

"a language whisperingly,
Too fine for us to hear."

'So old favorites hold their place: *Alice in Wonderland, Ivanhoe, Robin Hood,* who could take his beating without whining like a man, Louisa May Alcott's children full of intense sympathy as children should be, amazing creatures from Grimm and Andersen. And it is a happy sign that the recent winners of the Newberry Medal, the late Mr. Hawes with his Mutineers, Mr. Lofting with his triumphantly funny Doctor Doolittle, Mr. Finger with his South American heroes, and Mr. Van Loon with his historical characters, should have followed the old and tried and proved ways.

'Literature is safe in the hands of the children.'

* * *

'Look on any library shelf,' said ***the Economist,*** 'and see volumes on the subject of money, not amusing or light-hearted books, but books of dignity which few of the general public read. For man is strangely unadventurous in the matter of exploration in the direction of money as a medium, as unadventurous as men were on the subject of their own blood circulation before Harvey's day. But money means much, not only to trade and industry, but to international affairs. The majority of men have the most rudimentary notions about the circulating medium, about interest, about the power of government over values. No one, except a few specialized students, is interested in the history of monetary mechanisms.

'Is there a money law? Is the value of money in inverse ratio to its quantity? What amount of the wealth of the civilized world is held by bankers? What are the causes of an established rate of interest? What is the relation of money to prices? Does value flow from labor? Is there a science of money? What determines the value of a service or commodity?

'Do the questions seem dull and profitless? How many candidates for public office could answer them intelligently? Yet they are all-important, as important to men with the public welfare in mind as would be questions about blood pressure and blood condition and blood composition to a physician with a patient. For all that, we give the management of political affairs to those of active ignorance, which is as if we chose our physician at random and expected miracles. Politically we set dwarfs on pedestals and expect them to reach the stature of giants.'

* * *

'The popular plaything in the way of argument just now,' said ***the Father*** of four interesting children, 'is The Problem of the Younger Generation, but it is only a kind of wordiness after all, like the silly amusement of the schoolmen of the Middle Ages who liked to discuss how many angels could stand on the point of a needle. Hendrick Van Loon tackles the subject of the Young Person in October *Scribner's,* and tells us that it seems to know where it is going, but he does not indicate the goal. He also says that "it seems to be born with a clearly developed sense of the realities of life, and with a fine nose for all current varieties of fraud and hypocrisy." All of which is very eloquent and very high-sounding, but there remains this to ask: What does Mr. Van Loon mean by fraud and hypocrisy, or are the words mere shibboleths of the day, as were the words Liberty, Equality and Fraternity shibboleths of a former day?

'But a pest on wordiness. Coming down to bed rock, here is the main thing to be desired—that both young and old should be learners and strivers; that they should find delight in work; that they should judge with fairness and should reason with accuracy. You cannot get away from the fact that these are goals for young and old alike. In them lies a polaris for sixteen as well as for sixty, if the ideal is to be unstunted existence. For there are no dividing lines between generations, as every thinking man knows. Formation of character is the one thing for young and old alike, and no one ever completes the job.

'And here's another thing not to be overlooked. He who finds some mysterious new and admirable thing in the younger generation is as much in error as he who finds nothing but bad in it. To do either is to typify, which is shallowness; it is as silly as the typification of the sailor, or of the countryman, or of the Irishman, or of the cowboy. And you know, as well as I know, that in literature nothing is more wearisome than the habitual typifier.'

* * *

Here are letters; letters critical, letters complimentary, letters from cranks, letters from men with plans to settle the universe, letters sarcastic, letters censorious, letters interesting, letters silly and letters wise. But especially letters from people who seem to wish to write unaffectedly about that which interests them.

For instance, one, bearing an address in the Virgin Islands and from a man who has been reading Prince Kropotkin's book, *Mutual Aid a Factor in Evolution,* has to do with education in the past, in Florence, Italy. Quoting his author, he states that in Florence, in 1336, which then had a population of 90,000, there were about 10,000 children in primary schools, 1,200 in its seven middle schools, and 600 in its four universities. The inference is that we take things too much for granted talking about a little-known period of time which we loosely call the Dark Ages.

* * *

Then one of those fearful gentlemen given to dark predictions who foretell the world's end writes from Edmonton, Canada, saying that we may expect an earthquake which will rend apart the ocean bed, upon which the oceans will pour into the chasm, the Pacific will become a whirlpool, other oceans will rush with terrifying speed into the Pacific, each strait and channel becoming a fearful rapid the like of which man never saw; then, the waters mingling with the hidden fires in the bowels of the earth will turn to steam and this planet must needs disappear in a cosmic explosion. He illustrates with a diagram. He assures us that he has given the subject close and philosophic scrutiny. He asks that an issue of the INDEPENDENT be devoted to an exposition of his belief and warning. He has a postscript in vein constructive, suggesting a safety valve in the form of a shaft sunk to the central fires through which internal energies might be conducted and used for the benefit of mankind . . . So there's material for an attractive and exciting prospectus setting forth the Aims and Objects and Purposes of The Anti-Universal Disintegration Corporation.

'With many a man, what he calls his opinion is only an echo of the latest thing read!'—In a letter from Ohio.

Can You Tell Me?

QUESTION: How is our national wealth divided according to industries?

ANSWER: 18 per cent agricultural; 14 per cent used in manufacturing; 13 per cent held by railroads and other public utilities; 12 per cent held by federal, state and local governments; a large but unascertainable amount employed in wholesale and retail trade, and probably the largest single share is that composed of town and city dwellings, furniture, and personal effects—wealth possessed and used for personal necessities and enjoyment—which probably is not less than one-fourth of the grand total.

ɣ ɣ ɣ

QUESTION: What was the cost of the state soldiers' and sailors' memorial bridge at Harrisburg, Pennsylvania?

ANSWER: Something over $2,000,000.

ɣ ɣ ɣ

QUESTION: Why were the Treasury Savings Certificates withdrawn by the United States Treasury from circulation two years ago? Have these certificates been entirely and permanently withdrawn?

ANSWER: Official reasons for the withdrawal from sale of Treasury Savings Certificates on July 15, 1924, are that interest rates had fallen so low as to put the certificates out of line with the markets, and the cost of maintaining an issue of such certificates far exceeded, relatively, the cost of maintaining any other public debt securities issued. Conditions, remaining the same, are such that no renewal of their sale is contemplated.

ɣ ɣ ɣ

QUESTION: What is the Court of Customs Claims?

ANSWER: A statutory judicial remedy is given by the Tariff Act of 1922 for the return of money illegally exacted by the administrative customs officials before a special statutory Court of Customs Claims called the Board of United States General Appraisers. If the valuation by the local appraiser of imported merchandise upon which an *ad valorem* duty is assessed is disputed by the importer he may appeal for a revaluatoin (or reappraisement, as it is called) within ten days after the personal delivery or mailing of the written notice of appraisement by the local appraiser. If the importer is dissatisfied with the classification by the Collector of Customs at the port of entry, he may file a protest in writing within sixty days with such collector, who thereupon must forward the papers to the board, and the case is regularly docketed.

ɣ ɣ ɣ

QUESTION: What is meant by the acknowledgment of deeds?

ANSWER: An acknowledgment is the act of declaring the execution of an instrument before an officer authorized to certify to such declaration. The officer certifies to the fact of such declaration and to his knowledge of the person so declaring. Conveyances or deeds of land to be entitled to be recorded must first be acknowledged before a proper officer. Most of the states have forms of acknowledgments, which should be followed.

ɣ ɣ ɣ

QUESTION: How many square miles of territory was Germany required to cede according to the terms of the Versailles Treaty and what nations got this territory?

ANSWER: Germany was required to cede to France Alsace-Lorraine, about 5,600 square miles of territory; to Belgium, two small districts between Luxemburg and Holland, totaling 282 square miles; to Poland, most of Posen and West Prussia; and in addition, Upper Silesia and the southern part of East Prussia should determine by plebiscites whether to join Poland or to remain German, in all more than 2,800 square miles; a district of 1,467 square miles placed under the jurisdiction of the League of Nations; 910 square miles to Lithuania; part of Schleswig, totaling 2,787 square miles, was to have its status determined by popular vote of the inhabitants. Germany was further deprived of all of her over-sea possessions.

ɣ ɣ ɣ

QUESTION: If House Bill No. 4576 should become a law, what would be its effect?

ANSWER: The bill referred to is one of those measures providing for the issue of legal tender Treasury notes as loans to political subdivisions on non-interest-bearing bonds to be repaid in equal annual installments. The answer must be an opinion merely, but THE DEARBORN INDEPENDENT believes that with such restrictions as to volume bonds outstanding as now exist it must be of great benefit. Not only would public improvements be secured at cost, but they would be paid for by the generation benefited. In case of business depression and unemployment, idle labor could be profitably used. It would eliminate interest, which usually absorbs from 1½ to two times the actual cost of the work. The same principle would save the United States a billion dollars a year in interest on its own financing as at present conducted.

ɣ ɣ ɣ

QUESTION: Are the Plains of Abraham located in Palestine?

ANSWER: No; they overlook the St. Lawrence River, near Quebec. This is where, in 1759, the French and British fought the battle of Quebec.

ɣ ɣ ɣ

QUESTION: What is the present Indian population of the United States?

ANSWER: In 1924 there were 346,000 Indians in this country. It is estimated that there were 846,000 in 1492.

QUESTION: What caused the trouble between the United States and Colombia, and what was the settlement?

ANSWER: Colombia put forth the claim that the United States contributed to the partition of Panama. Though never admitting any guilt, for the reason that an offense against international law had been committed, President Wilson, for cause of Pan-Americanism, offered Colombia $25,000,000 as a peace offering to be paid in $5,000,000 installments. The agreement was ratified by the Senate in 1921. The last installment has been paid.

ɣ ɣ ɣ

QUESTION: Could you tell how child labor is regulated by the states?

ANSWER: The laws are enforced through a work-permit system administered in most states by local school authorities, and through inspection of the place of employment by some state agency, usually the Department of Labor. Moreover, in every state the compulsory school attendance law, if enforced, indirectly regulates the employment of children during school hours. The failure of the state child labor laws to prevent the widespread employment of children shown by the census reports is not altogether due to low percentage in the total number of children ten to fifteen years of age, but there was a decrease of 46.7 per cent in the number of children ten to fifteen years of age, engaged in gainful occupations. This was largely due to the fact that the 1920 census was taken at the beginning of a period of industrial depression and at a season of the year when employment in many occupations, especially in agriculture, was at its lowest ebb. Few state laws apply specifically to farm work or domestic service.

ɣ ɣ ɣ

QUESTION: Does the American Red Cross operate under any official authority?

ANSWER: Yes. It operates under its charter by Act of Congress of January 5, 1905, 'to furnish volunteer aid to the sick and wounded of armies in time of war in accordance with the convention of Geneva; to act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the American people and their army and navy; to continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the suffering caused by national calamities, and to devise and carry on measures for preventing the same.'

ɣ ɣ ɣ

QUESTION: Is there a law against threatening the President?

ANSWER: Yes. A law, inspired by the assassination of President McKinley, makes it specifically a crime to threaten to kill or harm the Chief Executive of the United States.

I Read in the Papers

On the night of October fourth, the New York Police Department underwent an unusual and surprising experience. In Manhattan and Bronx boroughs, where the crime wave has flourished intensively for so many years, there was neither burglary nor holdup throughout what is called the midnight shift, the period most prolific in wrongdoing, which begins at midnight, Saturday, and ends at nine a. m. on Sunday. The captain appointed to duty at that hour was forewarned to 'get ready for the busiest trick of the week'; but he and his lieutenants sat in headquarters for nine hours, and for the first time in the memory of seasoned veterans of the force, a report of 'no crime' was turned in.

No Crime for Nine Hours

There has been a perceptible decrease in criminality in New York City since the inauguration of the Baumes crime laws, under which the habitual criminal loses practically all the privileges which his lawyers previously exerted on his behalf for many years. Proof of a criminal record often causes the forfeiting of bail and the parole privilege is withdrawn. One section of the new law also requires that an appeal be argued within three months from the date of a notice of appeal or be dismissed. The stern sentences of from twenty to forty-five years and also life imprisonment, lately imposed by judges on young holdup men who had apparently elected a life of crime in warring upon society, has cast consternation into the ranks of the underworld.

ɤ ɤ ɤ

Chief Deputy Coroner Adolph Herrman announced yesterday that nine hours had elapsed in which no deaths from unnatural causes were reported. This is one of the longest periods on local record.—Chicago *Herald-Examiner*.

ɤ ɤ ɤ

A specialist philosophizes, saying that a murderer is a pathological type, and to punish one is as cruel as it would be to sentence a man to solitary confinement because he has typhoid fever.

Cruelty to Our Murderers

But typhoid patients are sent into solitary, not from vindictiveness, but for the good of the whole. And we do put willful murderers out of the way, not from vindictiveness, but for the good of the whole. For as murderers they are as dangerous as are mad dogs, or cobras in the kitchen. It is part of the tragedy of life that a sense of justice must overwhelm a sense of pity.

ɤ ɤ ɤ

'. . . nor shall we rest, until we have brought every man to a pitch of perfection; until he stands a superman free from imperfection of life and character; until he stands unblamed in the light of conscience.'

(Finale of a speech as reported in a New Thought magazine.)

But why not leave something for God to do?

ɤ ɤ ɤ

There is said to be an acute shortage of plumbers in Wales. One theory is that most of them are still en route to various jobs.—London *Opinion*.

ɤ ɤ ɤ

Today about 92 per cent of the total of the arable land of Finland is held in farms of less than 250 acres; and this result has been achieved with practically no use of compulsory powers, but by cheap credit for the small farmer and appeals to the national patriotism of holders of large estates to consent to divide their holdings.

Small Farms Are Rule in Finland

Having got the farmer on the land as a proprietor, Finland takes care to give him a good chance. The farming and dairy interests of Finland owe their prosperity largely to the coöperative movement, which is chiefly a rural movement 'to promote the economic prosperity of the people by means of coöperation and to be a connecting link between the different coöperative enterprises.' District experts are employed to disseminate the idea of coöperation and to give practical guidance, and there are frequent special agricultural coöperative conferences. The coöperative movement has drawn up a special system of bookkeeping for all coöperative societies and supplies the necessary books. A coöperative and agricultural journal called *Pellervo* is published. The Government gives practical help by granting loans at low interest, up to half the amount of the initial expenses, for starting coöperative dairies. The coöperative dairies in 1916 produced 94.6 per cent of all the dairy butter made in the country, and they dominate both the home and the export markets for milk and milk products. They have eleven dairy unions, which work for the improvement of dairy technique and management and engage in enterprises connected with dairying, such as fuel and power supply and transport. The chief of the dairy coöperative societies controls the export of butter from Finland and the price of butter within the country. It includes cheese, milk and cream, condensed milk, and lactose in its scope, and has large modern cold storage warehouses for cheese at Helsingfors and Viborg. Foreign trade is conducted through an office in Hull, and it has agents in Stockholm, Oslo, Berlin, Antwerp, and Amsterdam. It has been of great value to the dairy industry by the control of sales, but its most important work is to improve the quality of dairy produce.—Frank Fox, in *The Nineteenth Century and After*.

Price: 25 cents each; set $1. THE DEARBORN PUBLISHING COMPANY, DEARBORN, MICHIGAN.

ɤ ɤ ɤ

Chile knows how to 'get the vote out,' if we may judge from the fact that in a recent election down there 709 voters cast 2,100 ballots.—Fort Wayne *News-Sentinel*.

ɤ ɤ ɤ

Herr von Hermann Oberth is the gentleman who corresponded with Professor Goddard, of Worcester, Massachusetts, whereupon there was talk of a rocket being sent to the moon, as you may remember if you are of the sort to seek a new sensation. Now comes a group of Russian scientists who talk of a rocket, or something of the kind, to start within a few days for the moon, carrying eleven men. An initial velocity of seven miles a second, it is said, would overcome the earth's gravitation and in space, 200 miles above the earth's surface, the velocity which would be decreased by gravitational pull would be offset by explosions of nitrocellulose. Gentlemen with firmness of conviction only are expected to apply for passage.

All Aboard for the Moon

ɤ ɤ ɤ

Perhaps the funniest thing our funny old Government does is to put embargoes on the shipment of arms to Mexico and Nicaragua and carry 'em by United States Mail to 100 per cent Americans who are thinking of using 'em on somebody.—*Ohio State Journal*.

ɤ ɤ ɤ

And, in the light of cultivated intelligence, a vivid gentleman of the sensational press tells the world that Obregon is not dead. For the ninth time that warrior of many trials and hardships is restored to us, and, be it said, he has been a boon to those who instruct a confiding public. For

The Lives of Senor Obregon

They have filled him full of bullets, till he must look like a sieve,
They've beheaded him a dozen times or more;
They have blown him up with powder—but he manages to live,
For of lives the martial Señor has a score.

They have thrashed him and they've mashed him; they have pounded him and banged
They have buried him for ever o'er and o'er;
He's been guillotined, garroted; they have even had him hanged,
But of lives the lucky Señor has a score.

Briefly Told

NOTES · COMMENTS CRITICISMS

MR. FORD'S Page this week discusses tribal instinct and its bearing on international affairs.

Finance—the least understood and the most misused word in Webster's—will again occupy the center of the stage if the 'McFadden Bill' should become a law, claims Western Starr. (p. 1)

There may be two sides to the money question, but only one side is usually presented. This fact would indicate that some of the harsh things Mr. Starr says about the financial control of life are true. He puts before us the ever-recurring question as to whether this Government was organized 'for all the people' or for just a few financiers. Should the Federal Reserve Bank system be granted a perpetual charter? That is a highly important feature of the McFadden Bill. The present charter expires in 1934. Why—eight years before its expiration—are they trying to jam through this perpetual charter? How will you instruct your representative to vote on that question? A correspondent who has been watching the bill closely writes: 'It appears that the members of the Federal Reserve Board are going to exert themselves to force the bill through at the coming lame-duck session of Congress.'

Western Starr.

'T. R.' was loved and hated by newspapermen. But he was a front-page newspaper subject. He understood news values. Whether you were a friend or a foe of the fiery Colonel, you will enjoy reading *A Reporter's Memories of Roosevelt.* (p. 12)

Tales, Legends, Myths!—some woven out of whole cloth, some with a faint semblance of fact, some much twisted and turned as they pass from mouth to mouth. Thus are the life and works of Abraham Lincoln romanticized. There are a few Lincoln biographers, however, who have put honest research into an investigation of these legendary tales. Dr. William E. Barton has exploded many of the Lincoln myths. He has looked into the classic story of Lincoln and William Scott, the sleeping sentinel, and found it sadly wanting. To get the true story, Doctor Barton recently attended the reunion of Scott's old regiment. Perhaps you would like the truth of it. (p. 4)

Congressman John C. Box, Texas:

It is my purpose to continue to read THE DEARBORN INDEPENDENT, so long as it continues to bear evidence that its publishers and editors are keeping in mind the four vital and fundamental propositions given in your 'statement of the origin and purpose'; to wit:

Truth is neglected 'because it makes demand upon the mental power of readers.'

'Truth is neglected when it is unpleasant.'

'Truth is neglected when it runs counter to powerful selfishness intrenched in business, politics or social tendencies.'

'Truth is neglected when it is new.'

A flood tide of falsehood moves over America today, threatening to submerge its life. I think the principal origin of this is 'selfishness intrenched in business' and 'politics.' The next most powerful factor in the baleful work of hiding the truth is stated in your second proposition—because 'it is unpleasant.' Of course the other factors named, and perhaps still others, enter the situation.

But if discernment, patriotism, love of humanity, love of the truth, courage, the opposite of selfishness, and ample financial resources, such as are behind THE DEARBORN INDEPENDENT, all coöperate, the work as outlined by you is great enough to engage the powers and command the support of the best and brainiest in the country and everywhere.

The American Merchant Marine

Must Be Built by Business Enterprise and *Not* by Government Subsidy

By W. C. COWLING

LATE one summer afternoon a venerable old man entered a tall office building in Shanghai, China. The elevators had stopped running, but this fact meant nothing to this aged traveler. Eagerly, despite his eighty years, he climbed fourteen flights of stairs and finally reached the office of a merchant of importance.

He had been in this particular office many times before, always in pursuit of business, but always receiving the same answer: there was no business to be had. But this time the scene changed, and the Far East merchant, challenged by the display of indomitable spirit, succumbed to American enterprise and gave an American shipping line the first shipment of consequence it had ever received from this quarter. And thus Robert Dollar finally formed a business contact which he had sought for many years.

For a quarter of a century he had been striving to build up a miniature American Merchant Marine without any grants or concessions from the Government. He had been schooled in the idea that, after all, real business is but a service to mankind, and that in extending his shipping facilities he was offering the best that human ingenuity could devise, and that the world as well as himself would be benefited. He may have felt at times that he needed financial help in the nature of a ship subsidy, but the lack of this did not prevent him from beginning operations without them. And so his business grew without Government aid, and incidentally any preferential rates which existed were not for his benefit alone but for his foreign competitors as well.

WE NEED more business for American ships, and paradoxical as it may seem, we need more American ships, but of the right type. What we patriotically call our American Merchant Marine is but a shadow of what it should be. We handle most of the cargoes we secure, but what we secure in proportion to the total available is at best very small. Something is undoubtedly wrong with our methods. It is difficult to discuss our present lack of business for American ships without at the same time covering the subject of our Merchant Marine, for in reality one is embodied in the other. With a practical plan for a Merchant Marine the problem of keeping our ships busy would almost if not entirely disappear.

Competition did not kill this business any more than it does any healthy business which has for its purpose a distinct service. Robert Dollar's experience in securing business was fundamentally no different from that of any other American business man seeking to develop a business against odds. It was typical of that same fixed purpose and Yankee pertinacity which has played such an important part in the revolutionizing of American industry during the past few years. With this in view, laymen can approach the subject of our Merchant Marine with fewer misgivings.

The subject is always of importance because it necessarily involves our world relations; and furthermore, because it is so broad and demands the most comprehensive thought, its discussion has been limited in most cases to those most directly interested—manufacturers and producers. True, it has been made the football of politics, but this in a measure has served to bring its weaknesses to the attention of the many who otherwise would have paid little or no attention to it.

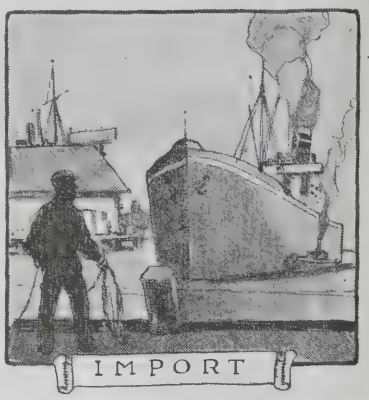
To say that America needs an effective Merchant Marine is to state an elemental truth; but to devise a concrete, practical plan upon which to found such an institution is a vastly different proposition. For some reason the mind of the average business man looks upon a Merchant Marine as something set apart from ordinary business; that from its nature it must receive grants or concessions in order to put it upon a firm basis.

Not so long ago we considered that our railroads could not be run along ordinary business lines; but of late we have found them to be subject to the ordinary rules of business, and managed by regular human beings. When we made this discovery we began to coöperate with them and they then began the most tremendous development in their history.

And why should we not approach American shipping in the same attitude? There is nothing mysterious about it any more than there is to any American business. True, it takes

capital, but so does any business. It must meet competition, but so must any regular American business. It will take time to develop it, but so it does any healthy business.

But somehow we have combined with our thoughts of an American Merchant Marine the idea of a Government subsidy—either direct or indirect financial aid to our shipping interests. Our coastwise trade is already limited to American ships, so to this extent we have recognized preferential treatment.



It is obvious that the easiest and simplest method of securing an American Merchant Marine would be a definite system of Government aid either to owning or operating companies. The line of least resistance is always attractive, especially to the class which looks to quick rather than to permanent results.

We point for proof of subsidy to the fact that our early American railroads were given huge grants of land as well as certain money concessions, but we miss the vital difference that with our railroads it was a blazing of paths into territory where civilization was almost unknown, where neither population nor possible tonnage was imminent. Civilization naturally followed, but only as fast as the rail carriers developed their resources. With our Merchant Marine, we have not only established trade routes, together with an immediate advanced civilization, a tonnage to encourage it, but commercial treaties to give effect to our business relationships.

It is no longer a problem of developing civilization, but of taking care of its demands. Why then should American capital hesitate to back our commercial needs? Simply a matter of psychology. We have not been trained to blaze new ocean routes, because it has been so easy to satisfy our wants by using routes already established by foreign ships. Some of these trade routes had been subsidized in some form or other either by rail differential, as in France and Germany, or by various forms of refunds. It is not strange, therefore, that American capital is always skeptical about investing in channels where competition is unusually keen, and especially where operating costs are in favor of the competitor.

Regardless of where the responsibility belongs (and he would be wise indeed who could fix the entire responsibility with any degree of certainty) the real reason for our lack of an American Merchant Marine has been the total absence of any well-defined national policy which could command any general support.

Discussion throughout the country has developed individual ideas, but regardless of their merit they have not been crystallized into one forceful, practical and comprehensive program which could appeal to the public imagination sufficiently to be carried to a completion. The merchant and the manufacturer, busy with their domestic problems, have not felt it their business, while the farmer has had trouble enough at home without dabbling into questions of foreign commerce. But nevertheless these are the gentlemen who must ultimately become interested if a Merchant Marine shall be developed. They are either directly or indirectly interested and entitled to the same protection as the shipowner, the shipbuilder, and those who furnish capital for investment in the shipping business.

Without this policy it has been easy to belittle the efforts of the Shipping Board and the Emergency Fleet corporation and these criticisms have so appealed to the public prejudice that they have developed widespread lack of confidence as well as suspicion toward these national agencies.

Nothing at times so encourages suspicion as the lack of a definite policy.

And all this time, while we have been fumbling around for a solution of our Merchant Marine problem, our foreign shipping interests have become more firmly entrenched in American commerce. By frequency of sailings, lowest rates and reliability of service which has grown with the years, they have ingratiated themselves into American business until the American dollar has quite naturally gravitated toward them in preference to our American boats with their infrequent sailings, their higher rates and inconsistency of operation.

It is easy to blame the Shipping Board for lack of activity or lack of a policy. No one seems to question the integrity of its members, but if for no other reason than that it has lacked the ability to place our Merchant Marine upon a firmer basis, it has not appealed to public imagination. But in reality it has done much for American shipping, although unable to place us upon a commercial parity with foreign countries.

There are some who still hark back to the old days of the sailing schooners when we thought ourselves a real seafaring people, and they ask to be restored to what they term our 'former position of sea supremacy.' The fact is, we are far ahead of what we have ever been, although far behind what our national idealists would have us. Much good has come out of the Shipping Board and trade routes hitherto unheard of are now open to American commerce, while restrictions imposed at intervals by foreign ships upon American shipping have been noticeably relaxed in an effort to secure our business.

But we have not the presumption to declare that we have an effective Merchant Marine. Ships alone do not constitute an effective commercial weapon. The Shipping Board has been blamed for so many of our old war-time fleet lying at anchor with no immediate outlook for use. But even if the Board should turn every one of these old hulls loose today, it would still require more skill, persistence and intelligent salesmanship to secure business than has so far been exhibited.

We have only recently awakened to the fact that an adequate Merchant Marine does not grow overnight; that it must be the result of a national policy in which all interests, social, political and economical must be considered.

When Congress in 1920 passed the Jones Act, it undoubtedly assumed that with this as a basis, American commerce would grow without any additional assistance. But it didn't, and with that law more than six years old, we are still struggling for an answer to our shipping problems.

It is claimed, and not without some suggestion of truth, that one difficulty in the American shipping industry is the difference in operating cost as against foreign ships. Food and wages are higher, living conditions better and therefore more expensive, while gross revenues remain the same. The so-called Seaman's Act, which regulates the number of crews as well as the hours of labor, together with other restrictions, has aroused the serious antagonism of shipping interests and, whether justified or not, has had the effect of frightening American (Continued on page 18).

An Intimate Article on

Famous Frenchmen I Have Met

By A. M. SOMMERVILLE STORY

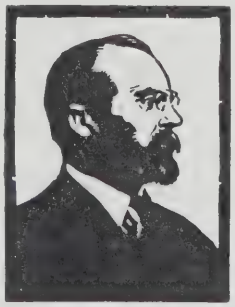
A WRITER who has spent some twenty years in Paris engaged in recording events, has necessarily at various periods met most of the prominent persons in all branches of thought and activity, from presidents to seeresses; and though meeting does not always entail knowing, in a few cases one does get to know them—or thinks one does.

French politicians—or perhaps I should use the more august word, statesmen—of whom I have met many, have mostly such a remarkable power of conversation, that they leave one dazzled and convinced. But afterward one realizes that he may have imbibed a good deal of the man's opinions, but has to piece together his personality as best he may.

Raymond Poincare.

M. Raymond Poincaré, the present Premier of France and President of the Republic during the war, I have met a number of times. He is less of a charmer as regards eloquence than some other French statesmen in view, but that is an indication all the greater of the power of his mind and personality. His voice is a little harsh—it has been compared by an unkind critic to the sound of a gramophone—but his use of words is tense and realistic, and he has a very abundant flow of them.

M. Poincaré is a man who looks straight ahead; he has the reputation in France of being very direct and somewhat hard. He rather lacks the suavity of some of his colleagues. He does not use phrases and metaphors for their mere effect, and he puts little store on party. As a patriot there is none greater, though there may be a few a bit more pliable. You feel when talking with this little man that you are battling with a great mind. He rarely smiles, but when he does so there is a sudden charm about it, like a burst of sunshine on a cloudy day.



Jean Barthou.

I found in a conversation with him some years ago that his knowledge and appreciation of England and America were profound, though he himself would perhaps be surprised to know it. Poincaré's present return to power is as great a triumph as a statesman of a great country can reach.

What a different man is Aristide Briand. Briand is the adept Parliamentarian—a man gifted indeed, but also full of social amenities and charm. His big, rather hulking figure, with the eternal cigaret between his lips, is a signal for clever management of political questions. He is a diplomat of the first water, with a gift of eloquence surpassed by few in French public life, though he has to be roused to it, and in conversation he strikes one as rather indolent. With a marvelous grasp of public affairs, and a rare insight and capacity for judging men and matters, he is one of the strongest political powers France possesses, as is shown by the numerous times he has been premier.

I have met M. Briand a number of times, officially and otherwise, but the meeting I remember best is an occasion when I went to see him and he refused to talk politics, but smilingly turned the subject to that of fishing, for he has a small estate in the country where, when politics permit, he loves to go and angle.

Aristide Briand.

It is practically essential to statesmanship in France to be a fine orator, just as nearly every cultured Frenchman is a fine conversationalist. M. Barthou, now also again a minister, is a fine orator and very approachable; Jaures' oratory, of the vehement type, has become historical; and it was an unforgettable lesson in public speaking to listen to the late great patriot, Paul Déroulède, during his harangues to the youth of the nation. (And Déroulède was one of the foremost of those who nurtured the great patriotic spirit in the nation's youth during the years that preceded the war.)

I never heard Rochefort speak, but one could still realize the fiery spirit of the tall upright old man until near the end—although the last time I ever saw him, shortly before his death, he was in a public restaurant eating oysters and drinking milk!

Among the finest orators of the past few years were Paul Deschanel, who was president of the Republic for so short a time, and René Viviani, the premier at the time of the outbreak of the war. The ends of both these men were tragic. Deschanel's whole life had been devoted to the attainment of his great ambition, the presidency of the Republic, and when one met him one realized that his chief aids had been urbanity and an extraordinary charm of manner. It will be well remembered how wretchedly he succumbed less than a year after he had reached the Élysée.

Paul Deschanel.

Viviani was called the 'silver-tongued,' and I never heard a speaker who could more effectually 'carry one off one's feet.' I heard him speak directly after his famous visit to America, and it was a revelation. Beside him sat General, now Marshal Joffre, who smiled and said nothing (was he not known in America as the 'silent Joffre'?). But the generals of France are not so adept in public speaking as the politicians; Foch, like the others, is not brilliant on the platform.

To leave statesmen for men-of-letters, it will not surprise the reader to learn that one of the most interesting men I ever met was the late Anatole France. He, too, was a brilliant speaker in public on occasions, and in intimacy a charming talker. Unlike some men of letters who achieve distinction, he exerted himself to be amiable and was interested in English and American people.

I once heard him utter a few words in English, which I suppose few did (it was when I presented him to a late distinguished American diplomat who knew but little French). Anatole France, with his fine head and rather horse-like face, was a very distinguished figure.

M. René Bazin I met first soon after a number of his novels had been translated into English, and one of them especially, *La Terre qui Meurt* (I forget the translated title), had such a reputation in the States that he told me there

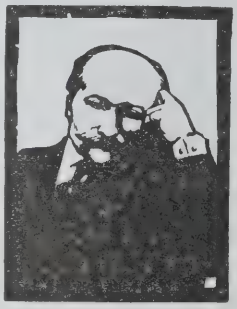
had been a 'Bazin boom'! But, he said, translations bring little to the French author, and though he was proud of the reputation he had got in the vast continent, he remarked drily that he was none the richer for it. Bazin is a very different man from what France was; he rather reminds one of a country priest.

Rene Viviani.

A much less amiable or interesting man than either in his private life was the late Pierre Loti, who, in spite of the beauty of his writings, was, when approached, arrogant, monosyllabic and 'stand-offish.'

Maurice Donnay, the famous dramatist, whose recent book on his early beginnings at the Montmartre cabaret, *Le Chat Noir*, has attracted much attention, I met frequently at one time, being associated with him in a modest capacity in a 'war work' in 1914. An extremely gifted man, with a great reputation, he was and is nevertheless still quite Bohemian, perhaps because he has consorted so much with theatrical people.

I had occasion once to admire his great talent when he produced a short dramatic sketch taken from the people with whom we both associated, and one could see the living characters translated into wonderful *simulacra* on the stage. I was amused once when I heard Donnay say that he thought the English were a very 'uninteresting' people, but more so only a month or so later when he met a batch of the first British 'Tommies' who came to Paris and, though they could not communicate except through interpreters—and laughter—he found them most amusing and very like the French 'poilus,' which was perfectly true. Donnay was, however, very interested in America when he visited it a couple or so years ago as a sort of literary ambassador.



Edmond Rostand.

The late Edmond Rostand, the poet, was a very amiable man to meet, and unlike so many Frenchmen, was prompt and polite in answering letters. When one conversed with him, he seemed rather distant and sad, and I saw him a number of times when he was in Paris sitting at a big tea house on the Champs Élysées all alone as if dreaming over new plays that were never destined to be written. The production of his last play, *Chantecler*, was the most sensational theatrical event for many years, but it was the least of his successes.

I once spent a very pleasant evening in the company of the late Camille Flammarion, as I sat next to him at a public dinner. He was very gay and humorous and did not breathe a word about astronomy or spiritualism! He was a diminutive great man with a mass of white hair and beard.

Maurice Maeterlinck is one of those who are interesting to meet but difficult to 'draw.' A short, stocky man, this Belgian poet who prefers to live in France, and who would have been in the French Academy had he been a Frenchman, is somewhat monosyllabic. I knew Madame Georgette Leblanc much better, and had numerous conversations with her both at St. Wandrille, the poet's famous home in Normandy, and in Paris, when she explained to me her theatrical and dramatic theories.

Sarah Bernhardt.

It was on the occasion of one of the productions by this brilliant woman of a play of Maeterlinck's at a Paris theater, that in answer to a question of mine she said, 'Oh, no, Maurice is not in the house: he hates these occasions and has gone to bed!' So it was with the famous productions of plays at St. Wandrille, when Georgette Leblanc was trying to inaugurate a new era in theatrical production; these performances annoyed the poet, who only came down when all was over to receive the congratulations.

One of the most delightful of Frenchmen for strangers to meet, if he is interested in you, a man with all the courtesy and charm of the old school, is the veteran painter, Albert Besnard, former head of the Villa Medicis at Rome, now chief of the École des Beaux Arts, and one of the most recently elected of the Academicians. The revelation of color which he brought back with him years ago from a famous visit he made to India is still well remembered by artists, and he told me of the enchantment it had been to him. One of the glories of French art, Besnard is simplicity itself, and with his huge frame, white beard and genial smile (he is well over seventy now) he reminds one a little of a charming English country squire.

I wonder if other people have noticed, as I have, that artists are usually cordial and often jolly people, whereas musicians are rather glum, often boorish (with exceptions, be it understood).

Of Massenet, Saint-Saëns, Debussy, Gabriel Faure, and other well-known composers whom I met in the years past, there is little that can be said, as they themselves had little to say, and I remember sitting beside the last-named fine old fellow all through a luncheon (at a private and not a public affair) when he kept his attention almost exclusively on his plate, and when he did speak would only address the whole table or his host (but, it is true, he was already a very old man, and perhaps he did not like writers).

As to the famous women actresses, what shall one say? My memories of Sarah Bernhardt date back very many years, but it was not until she was an old woman that I had the advantage of meeting her off the stage, and then, although the 'golden voice' was the same, though somewhat tired and languid, her gestures struck one as being more artificial than on the stage. She would keep a scented handkerchief to her face, I remember, as if afraid one might see too much of the wreck.

But Bernhardt was a mistress of make-up, as Melba in her reminiscences relates. Melba was in her dressing room when she was visited by the great actress: '"Bah! You make up your face like a schoolgirl," said Bernhardt. "You have no idea how to do these things. You are too innocent. Take a lesson from me, the wicked one!" And she took my face in her hands and proceeded to apply deft touches with rouge and blue pencil, with powder and lipstick, forbidding me as she did so to look in the glass until it was all over. When it was over, she leapt down again, threw out her hands, and said: "Voila! Now you may look, my pretty!" I looked in the glass, and I was astonished by the transformation which Sarah had effected.'

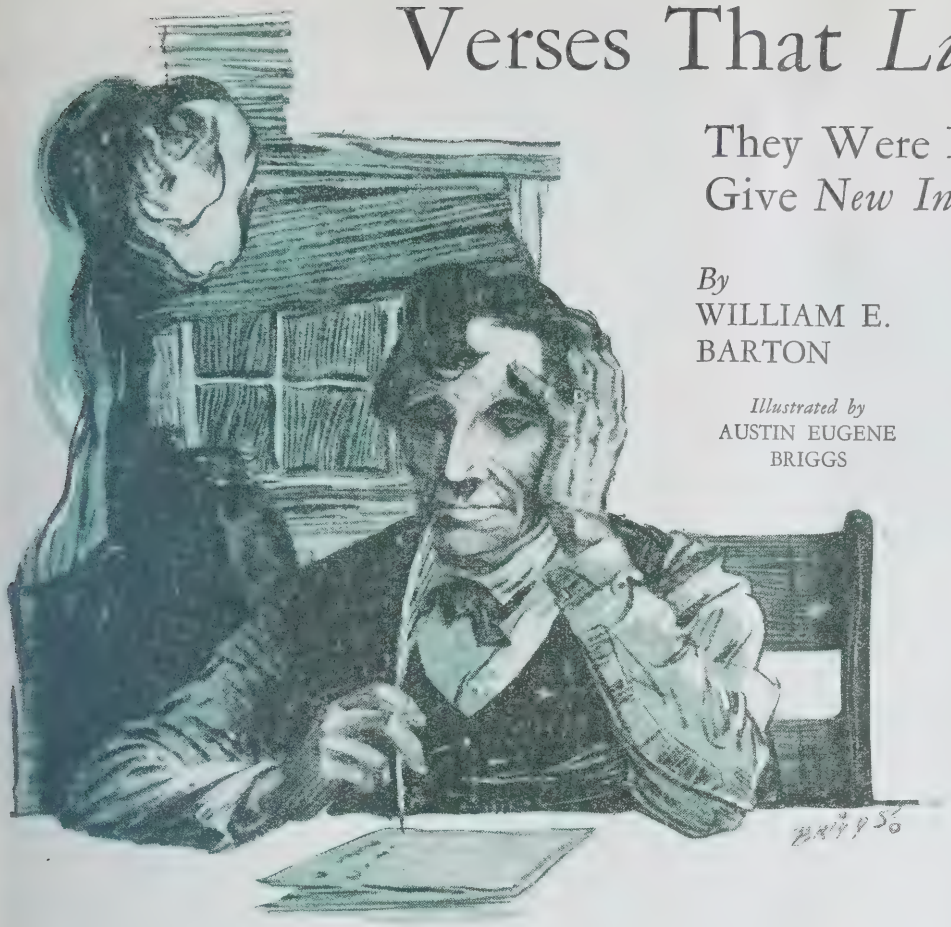
Many in America will love to think of her as the Lady of the Camellias. She depended greatly in her declining years on the technic she developed very early in her career, and, although many critics disparage the value of her stage technic, Bernhardt enjoyed more than sixty years' reign.

Réjane, that wonderful comédienne, also was much more interesting on the stage than off it. Then she modulated her voice better; in private it seemed rough and a little coarse; but what was always amusing and refreshing in Réjane was her cheery 'hail-fellow-well-met' Bohemianism, and she loved to remind people that she was of Montmartre by birth and nature.

There are people who when they meet and talk with persons engaged in periodical journalism who have a certain facility with their pens are rather difficult to 'draw out'; there are others who correspondingly expand. I should say the politicians are among those who are most difficult really to know—much more so than actors, musicians and literary people

Verses That *Lincoln* Wrote

They Were Not Great *But* They Give *New Index* to His Character



By
WILLIAM E. BARTON

Illustrated by
AUSTIN EUGENE BRIGGS

ABRAHAM LINCOLN did not always know that he would one day be President of the United States. He considered the possibility of his choosing any one of various careers, from that of being a blacksmith to that of entering college and preparing for some professional career. One thing he did not do which we might have expected him to do. He did not teach school. Stephen A. Douglas did that and so did very many aspiring young men of that period. Lincoln's education was fully equal to that of many of these teachers, and teachers earned more money than sometimes came to him, but he was never a pedagogue. He did, however, try his hand at lecturing, and, not succeeding very well, he gave it up. His one lecture on 'Discoveries and Inventions' has been recovered and printed in recent years. And as he tried lecturing, so he tried poetry.

It is probable we have some fragments of Lincoln's boyhood attempt at versification, though how far he took over the crude rhymes of others in his recitations of doggerel verse we may not be sure. One subject on which Lincoln is alleged to have tried his hand was the familiar story of 'How St. Patrick Came to Be Born on the Seventeenth of March.' The truth is said to have been that that old hero was born somewhere near midnight between the eighth and ninth. Two clans in Ireland used to have an annual fight over the question as to which was the date of his birth. A clever priest suggested that 'one man could not have two birthdays unless he was twins,' and proposed to add the eight and the nine together.

Some stanzas on this subject were recited by Lincoln and these are the ones that introduce the theme:

On the eighth day of March, as some people say,
St. Patrick at midnight he first saw the day;
While others assert 'twas the ninth he was born—
'Twas all a mistake—between midnight and morn.

Some blamed the baby, some blamed the clock;
Some blamed the doctor, some the crowing cock,
With all these close questions sure no one could know
Whether the babe was too fast or the clock was too slow.

The story did not originate with Lincoln, and we are not sure that the verse is his. His fame will not suffer if we leave the authorship uncertain.

Somewhat in the same category, but with rather better title to be thought of as possibly Lincoln's, are the verses that tell again the ancient story of why woman was created from man's rib. William H. Herndon attributed these stanzas to Lincoln, and Nicolay and Hay accord them an obscure place in his supposedly genuine writings. There is originality at least:

ADAM AND EVE'S WEDDING SONG
Alleged to have been Lincoln's first poem

When Adam was created
He dwelt in Eden's shade,
As Moses has recorded,
And soon a bride was made.

The thousand times ten thousand
Of creatures swarmed around
Before a bride was formed
And yet no mate was found.

The Lord was not then willing
That man should be alone,
But caused a sleep upon him
And took from him a bone.

And closed the flesh instead thereof,
And then He took the same,
And of it made a woman
And brought her to the man.

Then Adam he rejoiced
To see his loving bride,
A part of his own body,
The product of his side.

The woman was not taken
From Adam's feet, we see,
So he must not abuse her,
The meaning seems to be.

The woman was not taken
From Adam's head we know
To show she must not rule him.
'Tis evidently so.

The woman she was taken
From under Adam's arm,
So she must be protected
From injuries and harm.*

What qualities had Abraham Lincoln that qualified him to compose poetry?

He had little love of nature. When his sister-in-law, Mrs. Ninian W. Edwards, visited the Lincoln family in Washington, and dragged his reluctant feet to the White House conservatories, he could not share her enthusiasm over the rare flowers which she showed him there. He had not visited the place in a year, he told her; something seemed to have been left out of him that would have enabled him to appreciate beauty.

He had no facility of expression in matters of love. His love letters to Mary Owens are a sad example of a courtship wholly ineffective because utterly done in prose. He did not write poetry about religion or patriotism or any other high theme. He could not have done so. It was not in him.

He could not sing well, though he often tried, and (*Continued on page 24*)

*Quoted by Nicolay and Hay from Herndon—N. & H. Vol. 1, pp. 289–90.

Broken Promises in PALESTINE

By GWLAD MATTHEWS

Left—Arabs love to pose, and this son of the household goes his elders one better. Below—Three of our dragomen in Palestine. The one on the right was known as Alexander the Great.

WHEN the British finally decide they have made a good job of it and wave goodby to Palestine from the decks of a liner, the Jews will also be making their adieus. The British will go to Egypt or London or parts unknown; the Jews, if the Arabs have anything to say about it, will leave by a more direct and efficient route for the Zionist paradise.

Ask anyone—your donkey boy, your driver, the porter that brings you lukewarm water in your hot water bottle. At the very mention of the Zionists they cease smiling in a flash, and a hard glitter narrows their eyes. If you are unlucky, they lapse into explosive Arabic; if you are lucky, they say slowly, 'Ah, some day they will pay, by the grace of Allah!'

In October, 1915, when as yet the British had made little headway in the Near East campaign, the government at London made a formal promise to Shereef Hussein that it would recognize Arab independence, once the Arabs had thrown off the Turkish yoke. Naturally, the Arabs of Palestine believed this promise included them, for, as all men know, the population of that country is 85 per cent Arab and only 15 per cent Jewish. At that time, when Britain needed the help of the Palestinian Arabs, nothing was said about excluding Palestine from the promise. So 11,000 Arabs, with the desire for freedom making their blood hot and their trigger fingers itch, swept north across Palestine, enabling Allenby to concentrate his regular troops, capture Damascus, and collapse the Ottoman Empire at one blow. Britain and France declared that their aim in stepping into the Near East was the 'definite emancipation of the peoples oppressed by the Turks,' and their one political desire was to support the 'government and administration freely chosen by the people.'

Even at that, the British mandate would have been successful and popular if the Balfour cabinet hadn't suddenly contracted a severe case of Zionitis and neglected to get itself quarantined. Then the portly British Santa Claus mislaid his spectacles and gave the pretty Palestinian toy to little Abie Isaacs, when it was plainly marked 'For Mohammed ben Mohammed, with gratitude.' And there has been trouble ever since.

In David Street, Jerusalem, one can find anything. It is a narrow street of gradual steps, flanked by crazy rows of bazaars and coffeehouses and shops, each with its knot of gesticulating customers in front. Here you see bearded priests in tall hats and flowing robes, Arabs in brilliant *abayehs* with short daggers at their belts, Jews with long corkscrew curls on their shoulders, fierce Bedouins with sharp noses and sharper eyes, trim British uniforms, and a goodly sprinkling of red fezzes. Mix these all up in a melodious babel, throw a few scavenger dogs in underfoot, and you have David Street. It was here one morning that I found Fuad.

Fuad was a young Arab with a never-ending flow of perfect English. He had the face of a dashing devil and the smile of an angel, and a tiny mustache that crinkled whenever he was pleased, which was often. Fuad's pride and joy was a car of questionable parentage which he asserted came from America, and which he drove with breath-taking abandon on the narrow winding roads. He had been in a responsible government position until a short while before, when the civil authorities had placed a recently arrived Russian Jew over him, reduced his pay, and at the same time told him that he must do the same work as before. It had been too much for him, so he had capitalized his car and his knowledge of English to make his living as a guide. We hired him to take us on a day's trip north.

We reached the rolling Plain of Esdralon about noon, when the sun was hot on the long furrows of the field. In the midst of the patchwork quilt of black earth and green grain were little clumps of red-roofed houses, and a few straggling trees, the only ones in sight. Fuad told us that this was one of the oldest Zionist settlements; it had been founded about forty years ago.

The pattern houses were still as unindividual and devoid of personality as they had been the day an enterprising Zionist Committee put them up wholesale. Rusty

American farm machinery rested securely in the stubble and refuse of the yards. Only one man, in ragged overalls and straw hat, was plowing in the field, behind a sleepy yoke of oxen. The grain that was already up was uneven and as sparse as that the Arabs coax from the same ground with their crooked stick plow. We asked Fuad why more men were not working.

'Oh, they work enough,' he said with a shrug. 'Why should they come out in the hot sun when there is no need? They do not need to have a big crop of grain, because always more money comes in from England and America for them.'

At first it seemed impossible to believe that a forty-year-old community was still dependent on the Zionist Loan Fund, but later the head of the American Colony at Jerusalem confirmed Fuad's statement. According to the colonization plan, the land is bought for the immigrants, a town is put up, they are supplied with all needs, and loaned a certain amount each year per family, to be paid back when they are self-supporting. So far, in most cases, nothing has ever been paid back, but more is always forthcoming.

This condition is probably due in great measure to the class of colonists. Try as it may, the Zionist Committee has not been able to get the better class of Jews to migrate to Palestine, and has been forced more and more to import a lower shiftless class of Jews from Russia, Austria, Bulgaria, and the barren Caucasus regions. The few of the better class that do come refuse to work on the land, and insist on being set up in a little shop of some kind in a village or town.

Tel Aviv, the one Zionist city, will soon be a place of shopkeepers and no customers. The shiftless class that settle on the land care little for returning money to a lenient and indulgent committee.

This committee, in the main, receives its funds from the American Zionist groups. The particular colony that we visited owned the land of the plain for miles around, but it was lying idle. As a reward for large checks from rich American Jews, much of this land was parceled off into streets, untenanted, unvisited, named in honor of the donors.

I wonder how many more checks would be forthcoming from Mr. Cohen of Cohen Street, and Mr. Abrahams of Abrahams Street, if they could see their honorable names on a stone in the middle of a fallow field, a resting place for lonesome crows! And the Arab farmer, bought out of the only occupation he knows, what his father and his father's father have done before him, must stand by, powerless, and see his strips of farm go to stubble and rock.

This preponderance of Russian and Austrian population, besides being in the main shiftless and irresponsible, has brought in the doctrine of Bolshevism. The Maflaga Poalim Socialim (Workmen's Socialist Society) is powerful and far-reaching among the Jewish population. Bolshevist agents work openly under the noses of the British to establish Palestine as a communistic state.

The Hagoneh, the secret Jewish army, refused to disarm and cease smuggling in ammunition and guns, so the British legalized them by making them special constables! The Soviet, according to papers found in the local headquarters in Jerusalem, considers the Hagoneh to be the nucleus of a Red Army which will crush the Arabs, drive out the British, and make the Communistic Jewish State supreme!

No wonder the flowery formal declarations of the Jews only increase the fear and hatred in the Arab population, and the weighty sentences, balancing 'love' and 'brotherhood' at each end, with 'peace' in between, make the Arab long for a dark night, a back alley, and a sharp dagger!

The famous Balfour Declaration says that 'nothing shall be done which may prejudice the civil and religious rights of the non-Jewish population in Palestine.' Yet the findings of the American King-Crane Commission in 1919, to the effect that the Arabs were squirming under the order of things, were disregarded by the British Government. Later, in 1920, the military administration, antagonistic to the Zionists, was removed, and the civil administration was set up under Sir Herbert Samuels, a member of the Zionist Committee.

It was not until 1922 that the British remembered their promise about free representative government and set up an elective machinery. Then the ratio accepted by the British and Zionists was so unfair to the Arabs, leaving 40 per cent unrepresented, that the latter refused to accept it and boycotted the elections. Of course, the whole thing had to be declared null and void, and since then everything political, economic, and general has been decided by the Jews and British behind closed doors.

Behind these closed doors, they decided to try floating a Palestinian loan. If it had (Concluded on page 22)

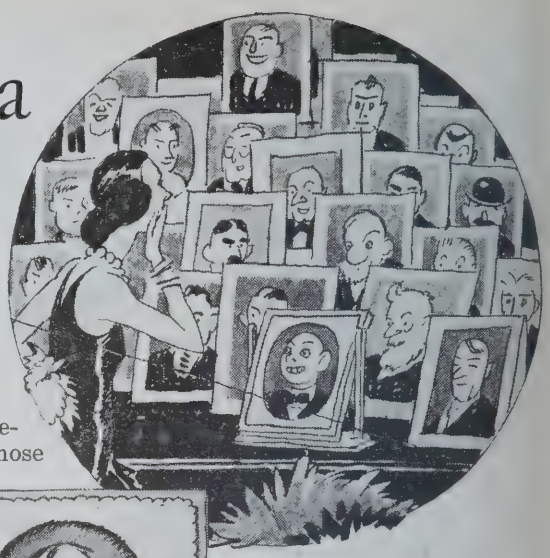
Nightmares *of the* Camera

By
LADY CYNTHIA ASQUITH

Illustrated by
RICHARD BROECKER



EVEN the most 'grown-up' women still feel a pleasurable excitement at the receipt of a parcel.

But when, on opening it, we find its contents to be merely a photograph framed in gleaming silver, or worse, in that kind of leather in which minor poets are bound at Christmas-time, we are still young enough to feel a pang of disappointment.

Frankly, I do not know what to do with this well-meant gift.

I have so many photographs.

I am very fond of my friends and some of them have very nice faces; but, however beautiful and beloved, I do not want them perpetually to glare at me from either my writing or my dressing table.

When I approach the fire to warm myself, I do not want to catch the eye —be it melancholy, playful, or surprised—of a familiar friend.

Sometimes I am quite pleased with the first sight of a photograph, but how soon it becomes a nightmare, with its one crystallized expression! A friend's face is a lovable kaleidoscope. In a 'studio portrait, cabinet size,' he or she perpetually registers one exaggerated emotion.

Which is worse to live with, the fixed smile or the strained sweetness of resigned melancholy?

I do not blame my friends for the atrociousness of their photographs.

I know to what a state of imbecile docility, fatigue and boredom one can be reduced in a studio. I become as passive as dough in the hands of a cook. I suffer my shoulders to be draped in chiffon, acquiesce in the suggestion that I should suck the stem of a rose, and meekly murmur, 'Good morning, good morning, good morning,' so that my lips may, as they say, 'settle nicely.'

Now, I like being presented with unframed and unmounted photographs of my friends and enemies. Wet days can be very agreeably spent in pasting them into albums, and these albums are quite useful for the entertainment of over-punctual guests.

Besides, one loves looking through them oneself.

No; I cannot be given too many of the kind of photographs that you can relegate to drawers and take out to look at every now and then. What I deplore is being snowed under by those which have to be kept perpetually exposed or else, by their absence, cause offense to their donors.

Where are they all to be placed? It is not only that I dislike the sight of them, but space is very limited and I cannot endure the kind of room in which photographs stand in close formation like tombstones in a churchyard. I should have no objection to having them out two by two in rotation, but how well I know the inquiring glance thrown round a room by the giver of a photograph. It is as hungry as that of a smoker in search of a cigaret.

Of course, if one only knew when each friend was coming it would be quite easy to pull his or her photograph out of its dusty seclusion and place it in a prominent position; but in London friends are apt to be as unexpected as ambushes.

But how absurd it is that people should consider it the right thing for one to keep photographs in perpetual evidence. Suppose it were the custom —and sentiment may very soon dictate this—to possess a gramophone record of the voices of your nearest and dearest.

Well, no one would keep one going on all the time, would she? You would only have recourse to it occasionally—very occasionally, I should think: perhaps just on their birthdays.

Well, shouldn't our photographs of loved ones far away be treated in somewhat the same way—just taken out occasionally to be gazed at and then reverently returned to their dignified retreat?

Soon, I suppose, the affectionate will have kinematograph films of their intimates. Perhaps this may prove a blessing in disguise and banish the static portraits.

Once or twice a year we will engage an operator and, peacefully reclining in the dark, watch dear old Uncle Algy winning the croquet tournament forty years ago. That will be much pleasanter than having him forever frowning from the mantelpiece.

Yet, let us count our blessings. Embarrassed as we may be by photographs, at least let us give thanks that it has never become the custom for human beings to bestow their life-sized waxwork portraits on one another. They would, I suppose, be costly, but families could club together at Christmas and people could leave money in their wills for their waxification.

Waxworks of unknown celebrities are horrible enough. Could we use them as hat and umbrella stands? Scarcely. No, not until at least the third or fourth generation. I'm glad I thought of them. Never again shall I complain of being given a mere photograph!

MR. FORD'S PAGE

THE commonest excuse most people give for not going to church is lack of time. Like most excuses it has in it a grain of truth. Life, as some men view it, is divided into two parts: one, the coördinated expending of human faculties, called work; the other, the rebuilding of those faculties, called recreation. Recreation does not necessarily mean play. Its basic meaning is *to impart new vigor, to refresh after labor.* But in the recreative processes these men have given an undue importance to play. They have stressed the physical to the neglect of the spiritual. In the squirrel-cage round of work and recreation which they have devised, they have left no place for the church.

In a generation when so large a proportion of the people spend their time in factory and office, a need of physical recreation is felt. In recent years, however, the physical aspect has been gaining predominance over the moral in the popular idea of Sunday. The rest day had its original sanction in moral and religious considerations, but these have gradually been giving way to other motives. In former days the church did not have the problems it faces today; it did not have the competition of outside forces.

Life today is not the simple matter it was a century ago, or even a generation ago, nor is it burdened with monotonies of past centuries. It is more intricate, more complicated. But it is also fuller and more worth the living. It has more of happiness for the average person. If it has new problems, it also has greater rewards. If it presents new obstacles, it presents new incentives to overcome them. Progress of necessity brings with it unfamiliar difficulties; but it also brings their solution. Progress brought about the congested city—the concentration of men within a small, limited area where they could coöperate in their work and thus produce more efficiently and abundantly. That evil conditions resulted from this congestion was evident. But progress now furnishes the remedy through improved methods of transportation.

Men can live farther from their work than ever before in history. There is not the remotest necessity for the continuance of city slums, where physical, mental and moral qualities are at lowest ebb. The workingman knows he can live in the country, can have his own home, his own trees, his own garden and flowers, and still retain the advantages of the city. His physical well-being is safeguarded. He has new interests, new duties. He feels a new responsibility toward society through ownership. His home work fills an important and redeeming phase of his life.

Men need this contact with nature. They need the vigor that is imparted by treading fresh-turned earth. They need to watch the common, everyday miracles of nature as they unfold in the open country. But they need more than these. They need contact with the spiritual. They need the guiding influence of the church. *Both physical and spiritual recreation are essential to the perpetuation of the race.*

> *THE five-day week has been considered heretofore largely in the cold light of business. It is good business; but it is just as sound from the spiritual standpoint. The church will be one of its chiefest beneficiaries. But the church has definite duties to perform as well as definite benefits to reap. There is a sharp line between idleness and leisure. Leisure to be effective must be properly directed. The church will receive rewards from this new leisure commensurate with the force it exerts in directing the intelligent use of it.*

Unfortunately when men are forced to make a choice between the two, many are prone to choose the former. It is a regrettable trait, but one which must be faced.

The solution lies in greater leisure. People's minds expand and their sense of a fuller life grows stronger during their leisure hours. Culture is a product of leisure. It furnishes the medium for greater mental development. The five-day week provides the opportunity for physical recreation on the sixth day and leaves the seventh free for moral and religious observance. It helps restore the Sabbath to its former high place. It means larger attendance at church.

A great philosopher has said that religion is the conservation of values. It is more than that. It is the bulwark of the people. No one should be more jealous in his insistence upon the preservation of Sunday than the workingman. It has been in the past his one opportunity for moral and physical recreation.

In recent years camouflaged interests, at work under the name of 'liberalism,' have been stealthily taking the day from him. For thousands, Sunday, the day of rest, has been changed into Sunday, a day of labor. The more the people take their pleasure on Sunday, the more other people are compelled to work. Some of this Sunday labor is necessary; most of it is not. The five-day week, by giving people the sixth day for physical recreation and the seventh for religious observance, will go far toward bringing Christianity nearer to the people.

It will open the door to great opportunities for service, and the church will benefit to the extent it takes advantage of these opportunities.

EDITORIALS

Legalized Gambling

THIS editorial was written partly by a New York 'investment' house. It was not meant originally for an editorial; on the contrary, it was intended solely for use as a circular letter. But the statements made in the letter are of such sterling editorial quality that they are here reproduced—without permission:

> It is a well-known fact that no man ever made a fortune or accumulated wealth by the sweat of his brow. While money may be accumulated by systematic saving, it can be multiplied only by investment and successful speculation. Most of the world's wealth has been created by speculation and the millionaires of today were the people of moderate means of yesterday, who had the courage to take a chance.

The letter is interesting not alone because of the highly original economic theory it advances—the theory that 'most of the world's wealth has been *created* by speculation'—but because it is typical of thousands that are flooding the United States mails. Shady 'come-on literature' has become so common that scarcely a family in the country but can boast of being on some sucker list or other.

It is of course unnecessary to point out that not a penny of the world's wealth has ever been 'created' by speculation. Nor is it necessary to call attention to the first sentence of the letter, a sentence palpably misleading. These things are apparent to any reader of average intelligence who takes a moment to analyze them. But it is pertinent to ask what the justification is for dissemination of this kind of guff.

It is by false and misleading statements such as these that thousands of persons of moderate means are lured into legalized gambling, with unhappy results that are too well known to need recalling. A growing conviction is being felt throughout the nation that the stock exchange is not a necessary adjunct to business. Apologists have attempted to minimize its gambling proclivities, but they are meeting with less and less success. Reforms come when abuses become so pronounced that the people rise up to abolish them. Prohibition was brought on not by the drys but by the saloons. Their excesses proved their own undoing. The same is true of legalized gambling. Speculative abuses are approaching a peak. It is only a matter of time until the American people will abolish them.

Youth, Terrible Youth

IT IS heartening to find leaders of the Methodist church moving to the fore in defense of youth. Too many good people are prone to lay all the ills of a changing world to youth. The younger generation is neither depraved nor vicious; it is merely following the effervescent instincts of the times, and if upon occasion it becomes a little boisterous or a bit too loud for good taste, it has redeeming features that more than give recompense. Yet we find it blamed by worthy folk for everything from the crime wave to the decline and fall of the hairpin industry. The gloom of the older generation beholding the younger is so depressing that it is highly cheering to read of the Reverend Dr. Horace M. Dubose and the Reverend Dr. J. M. Rowland, Methodist bishop and editor respectively, rallying to the cause of the boys and girls of the nation. 'The chief trouble,' remarks Dr. Rowland, 'is that we are trying to dehumanize youth. The greatest thing God ever made was a human being, and we need to preach humanity instead of pessimism.' And to this Bishop Dubose adds: 'Bobbed hair and the costumes of the day are unjustly condemned. Both are sensible and wholesome to the physical woman. Her dress is an evangel of moral sensibility.' Wise views, both of them, wise and fraught with understanding. They should be read by mote detectors the world over.

The New Slavery

A NEW slavery has arisen in this country—the slavery of machines. Each American has the equivalent of half a hundred or more slaves to do his bidding, machine slaves that save the human body and release the human mind to other tasks. This new slavery is lifting humanity from the drudgery of ages, it is loading man's burdens onto the backs of inanimate metal.

It is perhaps characteristic of the human race that here and there objectors should be found. There are always those who mourn the passing of the old and deplore the coming of the new, no matter how deficient the old may have been, or what richness of promise the new seems to hold. And there are those without vision who cannot realize that progress can come only with change. The world is passing through the most marvelous period of develop-

ment in all history. We have commonplaces today that would have been hailed as miracles a few generations ago—the electric light, the automobile, radio, the airplane. Imagine the awe, had any one of these been suddenly projected into the placid life of the Middle Ages.

These commonplaces are ours today because of this new slavery. They have come into being because machinery was here. Not one of them would be in existence, had their development depended solely upon the dexterity of human hands. Slavery in the past—human slavery—was degrading. But the new slavery—the slavery of the machine—is freeing the human race from bondage. Power is the Emancipation Proclamation of the 20th Century.

The Debt and the Bond

IRVING FISHER, considered as one of the country's leading economists, is of the opinion that the European war debts to the United States, if not canceled altogether, should be reduced because of the difference in the value of the dollar today as compared with its value at the time of borrowing. That is, if seventy-five cents will buy as much today as it would have taken a dollar to buy at the time the debts were incurred, that it would be only fair to remit twenty-five per cent of the original debt.

Mr. Fisher's proposal is that the debtors should benefit at least to the extent of the difference, whatever it may be. There is nothing said about giving the taxpayers likewise the benefit of the increased value of their dollars. The real creditors of Europe are the financiers who own the bonds of the United States floated to establish European credit. These bonds must be paid by the American taxpayers, dollar for dollar, no matter how great the increase in buying power. So far as European repayment is able to recoup this country, the taxpayers should be repaid in full—the same basis should apply to both debt and bond.

The Cat and the Canary

NOT capacity, but fixed ratios agreed upon at conference, will be the basis of future steel production by the leading producers of Germany, France, Belgium, Luxembourg and the Saar Valley. A more or less rigid assignment rather than a competitive awarding of orders will govern the output of the various European plants. Just how the ratios will be determined is not made clear.

Plans of European manufacturers do not intrude themselves largely upon us except as our own manufacturing interests are concerned. For that reason we might not worry over steel production across the Atlantic, were it not for the fact that it now appears *we* may knock at the door of this consortium.

Judge Elbert H. Gary, chairman of the board of directors of the United States Steel Corporation, is authority for the statement that 'should it become necessary, it is believed' an international conference would be held between all these interests (including ourselves) and a full open discussion indulged in, 'after which *a fair understanding* could be reached.'

While it is true that there is today a more liberal attitude toward big business combinations, the advisability of world-combinations even in so ordinary a commodity as steel is open to question. Particularly, the advisability of our seeking a rapprochement with the group comprising this special family. Lessons taught recently in the fields of finance and diplomacy do not lend much encouragement as to future conferences. They seem to present occasions for large giving and small returns.

As to manufacturing, America has always held an enviable position in the world's marts. Chief among our basic commodities has been steel. Let us not feel undue alarm because we hear across the Atlantic the murmurings of combinations which 'presumably were set up for more effective competition with England and the United States.'

That is their privilege. But we should not be so naïve or ingenuous as to desire any 'understanding' with them, however 'openly' arrived at. We have already had one experience or two with that sort of understandings. We should be able to hold our own as far as the steel market in this country is concerned, with our modern machinery and methods of efficiency. Outside, let us seek it on a basis of merit rather than apportionment.

This Franco-Belgian-German consortium will be a fine thing for us—if we stay out of it. Otherwise—

'I weep for you,' the Walrus said,
'I deeply sympathize.'
With sobs and tears he sorted out
Those of the largest size,
Holding his pocket handkerchief
Before his streaming eyes.

'Oh, Oysters,' said the Carpenter,
'You've had a pleasant run,
Shall we be trotting home again?
But answer came there none,
And this was scarcely odd because
They'd eaten every one.

The OTHER SIDE *of* FIFTY YEARS *Ago*

Being Some Tales *and* Reminiscences *of an* Era *That Has* Gone

By J. BRECKENRIDGE ELLIS

'IF WE never meet again in this world,' said my Uncle Charlie—and added something about meeting us in heaven. In the doorway he stood looking back. We had just exchanged farewells.

As if it were yesterday I see my Uncle Charlie standing in the door. The colors do not fade. And just as vividly I recall the sudden breath that chilled my spirit at the thought of losing one's grip on this full-of-sunshine world to awaken in a place mentioned only in whispered prayers.

I was intensely disturbed. For I knew he was talking about death; and it's talking about death that brings it out of its hiding-place to the consciousness of men and little boys. I felt that something should be done about it, something to strengthen the temporary nature of our earthly accommodations. But nothing was done, and my Uncle Charlie died soon after his visit.

It was not a visit, really. He was on his way home from his brother's funeral. Since he was my aunt's husband, didn't that make his brother my Uncle Richard?

Uncle Richard the United States had picked out to bring the Modocs to terms. They were terrible creatures, those Indians. I had but to close my eyes to see them skulking behind corners with such designs upon my scalp as literally to lift my hair. Driven from their homes on Lake Klamath, they had run for their lives to the Lava Beds—a part of Oregon formed before my time by molten rock bursting through the earth's skin. No one but Modocs could live in that place or even find the way about. So the man at the head of everything, President Grant, sent my Uncle Richard to talk to the Modocs' chieftains.

'Don't take a gun, or pistol, or any kind of weapon along,' said President Grant to my Uncle Richard.

So Uncle Richard took nothing but a flag of truce. And he told my Aunt Lou just before he started to the 'Peace Conference' that he was going to his death. He knew a lot about Indians. He had been their friend. At the close of the Florida War he helped remove the Cherokees and Creeks and Choctaws to Indian Territory. But he knew that if you talked to Modocs unarmed, they had the last word. Among the first phrases I can remember are, 'flag of truce,' and 'the massacre,' and 'brains scattered on the stones.'

Outside the family circle Uncle Richard was known as General E. R. S. Canby. There was a book I lived with before I could read which tells about his capture of Mobile—for he was on the 'wrong side.' It had seemed to him that he just had to fight against us Southerners. But it was my impression that he fought as gently as he could. Anyway, in 1873 the war was over, I mean the actual killing, and a general, even though on the wrong side, was something to be proud of.

Illustrated by GEORGE HARPER

There were others to give our home life a national flavor. My mother's cousin was Vice-President under Buchanan; and among all those running against Lincoln in 1860, hadn't John C. Breckenridge come the nearest to winning the Presidency? He, indeed, was on the right side—'The handsomest man,' my mother declared, 'I ever saw.' Certainly the history of the United States couldn't have been written without us! All men, or at any rate all Americans, are born equal. I had it on good authority. But evidently there were ways whereby some of them got lifted above the dead level.

As a girl, my mother had seen Lincoln when he was 'out against Douglas' in Illinois. But, ah, Douglas! There was an orator of masterful presence, of words that flamed! She had found Lincoln ungainly, far from handsome. 'But he was not so ugly as his pictures,' she protested. 'I never saw one that did him justice. For there was something in his face—a glow . . . ' She used to recount how, on his assassination—another of my earliest words—when my father brought the news to a group of Southerners, his voice sunk to a whisper: 'The South has lost the best friend it ever had.' Strange words from an ardent lover of the Lost Cause!

Historic names were our property. My mother once came down from Louisville on the same boat with U. S. Grant, then on a tour of inspection relating to prisoners. He was disposed to friendliness, but my mother remembered what he had done and how thoroughly he had done it, and gave him the deck.

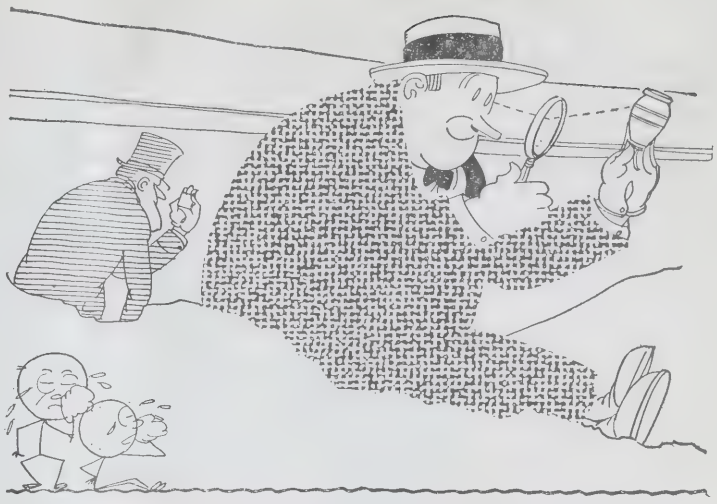
Coin Collecting—
A Neglected Hobby

By
PAUL M. LANGE

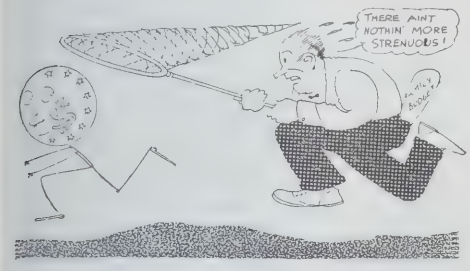
Drawings by
W. O. FITZGERALD



There has been an overwhelming interest in collecting antiquities in the last few years.

OVERWHELMING interest in collecting antiquities, awakened in the United States in the last few years, has apparently eclipsed one of the most interesting as well as instructive fields known to collectors, the collecting of coins and medals.

Possibly the designation, coin collecting, may act as a deterrent to persons who look for a hobby, since it appears to refer to something very valuable or expensive. Might it be better to refer to it by its scientific name, Numismatics? In stamp collecting as well, no earnest collector wishes to be known as a postage stamp collector, but as a 'Philatelist.'



Coin collecting furnishes plenty of excitement and even exercise.

In mentioning stamp collecting it is only fair to say that coin collecting is really a less expensive and more educational hobby. Stamps have been in existence only a bare hundred years, but coins have been struck during the last twenty-five hundred years.

The old charge that governments deliberately have issued and even now issue series of stamps to make money out of sales to collectors cannot be raised against coin collecting. Yet, strange to relate, the high prices of the earlier issues of stamps have never been reached by coins, no matter how interesting or important historically they have proved to be.

Silver coins 2,000 years old, in good condition, can be bought for from two to five dollars, and some even cheaper. It is possible to procure a coin for, say, every fifty years of striking, beginning at 500 B. C. to date, for a total of $100 and have every coin tell an important historical story. A collection that will prove interesting, entertaining and instructive may thus be formed.

To become a serious collector it is better, outside of a few coins of general interest, to confine one's activities to one of the many series of coins most attractive to oneself. Possibly the most historically important are the Roman imperial coins, and here, if he desires, one can even confine the collection to one emperor and his family.

Another choice might be the ancient coins of Syracuse, Greece, Parthia, Egypt, Roman colonies, British Sceatta, or of medieval times: Bracteates, Crowns, Thalers, the enormous copper coins of Sweden, Chinese money in all its curious shapes, including the knife, spade, key, bridge, bell and temple forms.

The hard-time tokens of the 17th and 18th Centuries of England and of the 19th Century of our own country, as well as the Civil War pennies, or, more correctly, tokens, of which there are about 6,000 varieties, will hold one's attention for a long time.

Our own colonial and state coins and the large cents and half-cents are largely collected, not only according to dates, but also to die varieties, there being of the 1794 cent alone about sixty different dies.

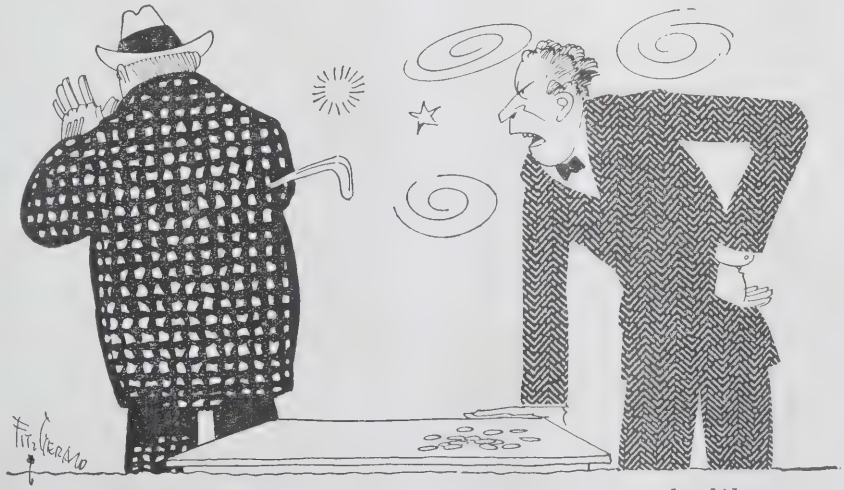
How many of our people have seen or even heard of the so-called Franklin cent, bearing a sundial on its obverse and the motto: 'Mind your Business'? Or the New York 'Clinton cent' with the portrait of Governor Clinton? Who knows the Castorland token or the Higley threepence with the deer and the axe and the motto: 'I cut my way through,' or the second one with the inscription: 'I am good copper, value me as you please'?

The Massachusetts silver coinage of pine-tree, oak-tree and willow-tree shillings, sixpence and threepence, the Gobrecht dollars, the flying-eagle cents and the commemorative half-dollars and gold dollars are all obtainable. I believe not one of a hundred citizens has seen or knows of the only coin of the United States that bears the portrait of a foreign ruler: Queen Isabella on the Columbian quarter. How many know the Lafayette dollar, bearing the portraits of Washington and Lafayette on the obverse, and the equestrian statue of Lafayette on the reverse?

The Bouquet-sous of Montreal exist in many varieties; Mexican and South American coins are becoming rare in many instances, opposing parties melting the old and coining their own money from them.

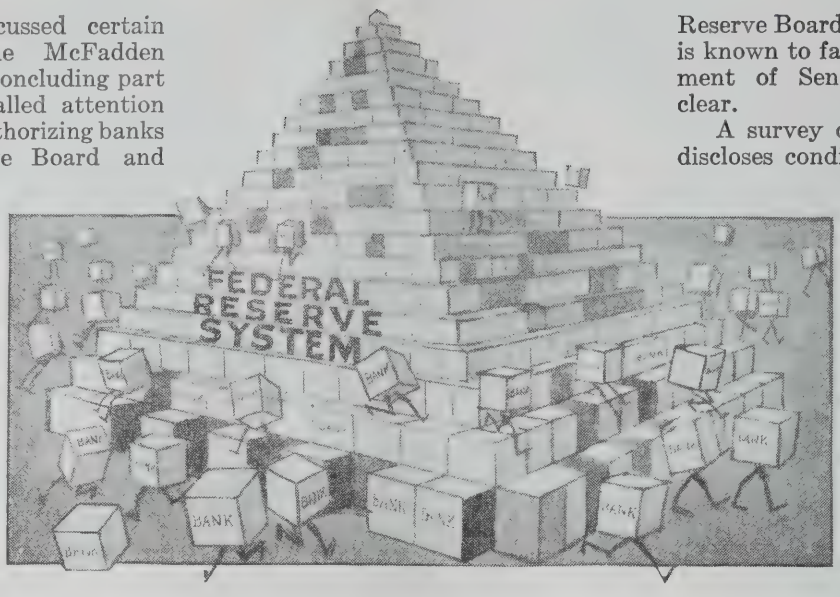
Coin collecting may not be a strenuous pastime, but it furnishes plenty of excitement and even exercise. Often one hears of a collection in a remote place in the country and with high hopes the pilgrimage begins.

(Concluded on page 26)



I told them their treasures were worthless and refused even to make a bid.

A Further Glance at the McFadden Bill



By WESTERN STARR

LAST week we discussed certain provisions of the McFadden Bill, and in the concluding part of the article called attention to the portion authorizing banks in the Federal Reserve Board and Bank system to deal in investment securities.

To get the full import of this provision requires a knowledge of the purposes of the Aldrich-Vreeland—'Assett Currency'—bill of 1905. Under the provisions of that bill it was intended to authorize banks to use the securities, stocks and bonds of American corporations, as the basis of issues of bank notes, and as 'reserves.' The McFadden Bill goes even further, in that 'investment securities' of this period—and for probably an indefinite future time—include not only securities based on American public utilities and industrial corporations, but also stocks and bonds of foreign corporations and governments.

With Federal Reserve Banks issuing the money of the American people on the basis of foreign debts, instead of a basis of actual American wealth, and having it guaranteed by the American Government, one can readily see the possibilities.

The proposals of the Aldrich-Vreeland Bill, intended to make the Government a guarantor of the values of watered and ballooned securities, representing chiefly capitalized privilege; with the further purpose to forestall the possibility of any change in public policy as to the regulation or control of industries or services by political industries, failed to become a law. It was a program to monetize specific forms of property. But, having opposed and defeated the monetization of silver, they found it impossible to monetize incorporated paper; so the bill became a regretful memory. Yet the spirit that inspired it was not laid; the men and the interests behind it were very much alive.

While individual men make mistakes and even die, the class never makes a mistake and never dies. The same men and the same interests that planned the bill of 1905 also planned the Federal Reserve Bank bill of 1913—and also the McFadden Bill of 1924. To 'get by' with the Federal Reserve Bank bill, they were forced to drop the 'Assett-Currency' feature of the old bill—also, to arrange for twelve 'Regional Banks,' instead of one central bank, as intended in the old bill. Paul Warburg was consulted and, as he says, 'gave the best advice I could.' He was consulted by the chairman, Aldrich, of the 'monetary commission,' and that resulted in the Aldrich-Vreeland Bill.

When the Federal Reserve Bank Act was enacted, Mr. Warburg testified that certain defects in the bill could be 'corrected by administrative processes.' And Mr. Warburg was made the first president of the Federal Reserve Bank Board. Yet, Mr. Warburg was, as he testified, 'a prominent member of one of the banking firms' denounced in 1912 as a member of the 'money trust.'

AS FAR back as 1841, John C. Calhoun, discussing a Monetary Measure, said on the floor of the Senate: 'If this body, instead of being a Senate of the United States, was a deputation from Wall Street, sent here to arrange the details of the measure, we would not be at any loss to understand why they are arranged as they are. No wonder, then, that Wall Street should shout and clap its hands for joy on its passage through the other House.' The statement has particular significance for us today.

This bill has been before Congress for more than two years; it has twice passed the House. It has passed the Senate (May 13, 1926), and since then has been before a conference committee of both Houses. It is an administration measure. Mr. Mellon is Secretary of the Treasury and, therefore, ex officio head of the Federal Reserve Board and Bank system, which is known to favor the bill, as the statement of Senator Pepper has made clear.

A survey of banking as a business discloses conditions and considerations that make legislation on the lines of the McFadden Bill vital and imperative, if the Federal Reserve system is to continue. There are just about 30,000 banks in the United States. The number varies slightly from day to day. There are just about 9,000 of these banks within the Federal Reserve system. More than two-thirds of all banks are outside the system, and the outside banks have larger resources than those within the system. There was bitter opposition to the Federal Reserve Bank Bill when it was pending in Congress, and there has been constant opposition to the law since it was enacted.

To keep the record straight, it should be further stated that the Federal Reserve Bank Bill could never have become a law without the personal appeals of W. J. Bryan, then Secretary of State. Also, that Mr. Bryan afterward published his repudiation of the law.

Senator Robert L. Owen, Chairman of the Senate Committee on Finance, and whose name was given to the bill, as the Glass-Owen Bill, also denounced the administration of the law by the Federal Reserve Board, as being contrary to both the ostensible purposes and the specific promises of its proponents. John Skelton Williams, controller of the currency and ex officio a member of the Board, also denounced the administration of the system. The working of the Federal Reserve Bank law has not been approved by the nation's bankers. A great many banks, that were members, have surrendered their charters and become state banks. In the last two years, 166 banks, some of them of large resources and wide influence (according to Mr. McFadden) have deserted the system.

The failure of banks to join the system and the withdrawal of other banks from the system became so important as to have a joint Congressional Committee appointed to investigate the matter. Mr. McFadden was the chairman of this committee. It held inquiry, heard evidence in many cities, visited banks and ques-

tioned bankers and business men generally. For some reason this committee has never made or published any report.

At a recent hearing in the Banking and Currency Committee of the House, Mr. McFadden, chairman, Adolph Miller, who has been a member of the Federal Reserve Board from its inception, testified that the board had raised and lowered discounts entirely 'at its discretion'; that is, it had played the 'concertina,' at will. It is not to be wondered that the great majority of American bankers refuse to place themselves and their patrons under an authority as arbitrary, as irresponsible, as Mr. Miller states the Federal Reserve Board to be.

It is conceded by Mr. McFadden that, unless the outsiders do come into the system, and those inside quit going out of it, the system will soon be in a very bad way. He says, 'If they (the banks in the system) are not equipped for survival (in competition with other banks and banking agencies), the system will die at the roots and perish.' The board and banks within the system look upon banks outside the system as 'bootleggers' of credit. It is the purpose of the McFadden Bill to coax outsiders to come in, quit 'bootlegging,' and, since they cannot be driven in, to offer them such inducements to come in, in the way of larger powers—prolonged security of chartered life—also, by imposing certain restrictions on the practice of outside banks as will effectively intervene in the operation of natural economic laws, to build up a monopoly in the control of credit.

It will be asked, how a program fraught with such possibilities of power could have been brought to the very threshold of success with no protest? The answer is because the meaning of the bill has been concealed. There has been no important debate upon it; it was misnamed as the 'branch-banking' bill from the start; the vicious 'assett currency' feature was 'camouflaged' and the charter extension feature was not in the bill until introduced in the Senate, where the bill has not had an hour of attention on the floor of the Senate.

The 'branch-banking' feature of the bill has absorbed the bulk of the time spent on the measure, and has been the 'herring on the trail' to distract attention from the more vital features.

In some states banks are authorized by state laws to have branches in other cities than the home city of the parent bank. In other states branch banks are unlawful.

In Congress, the controversy between the House and the Senate, and which is now pending before the Conference Committee of both Houses, turns on the disposition of this question. Both Houses are agreed that where a state permits branch banks, the banks in the Federal Reserve system shall have authority to establish branches.

The Senate insists that when and if a state, that does not now permit branch banks, modifies its policy to admit of branch banks, then, by automatic consequence, banks in the Federal Reserve system shall, without further action by Congress, be empowered to establish branch banks conformably with the law of the state. The House insists that banks within the Federal Reserve system shall be further authorized by Act of Congress before they shall have power to establish branch banks in states that hereafter shall authorize branch banks.

ALL that seems a matter of small importance compared with the principle of branch banking in itself. The natural tendency expressed in branch banking is not expansion but concentration; it is the abolition of competition and the development of monopoly, and is hostile to the interest and welfare of all who depend upon an unrestricted flow of credit. As above intimated, it is not a monopoly of money that constitutes the evil. It is the monopoly of credit that is the evil. Money and credit are related exactly as the stock and the lash of the whip, and he that wields the stock throws the lash.

Branch banks simply manifold the lash; carried out to its practical possibilities, it restores the single central-bank idea of the old and denounced Aldrich-Vreeland Bill. The combination to coax outside banks to come in—the proposed, or contemplated, restrictions on state and other banking outside the system—with an indeterminate charter, or, in effect, a perpetual charter and universal branch banking authorized by law, the system will be equipped not merely to survive but to destroy all competition.

This is the object of the long campaign. A campaign that has developed

something of the best and much more of the worst that is possible under a democracy.

It has been a superstition of American democracy that the larger knowledge implies the larger life. But facts in the way of periodic unemployment—factories idle, or working only part-time; land going out of cultivation; social despair reflected in waves of crime; respect for law vanishing in the face of laws unworthy of respect; the confusions of a society developing on the quicksands of political policy that violates every natural principle of economic law: these spell a very different lesson. A political theory that contradicts economic law is also a contradiction of the moral law, since truth is a unit and does not—cannot—belie itself.

There cannot be a sound philosophy for finance and another, a different philosophy, for farmers, or mechanics, or any other. Unless your philosophy explains and unifies the experiences of all men, of all classes and avocations—unless, that is, it deals in universals—it is a false philosophy and the truth is not in it.

To give the illusion of florid health to a leg or an arm of the human body, one can bind tightly about it a band that will arrest the circulation of the blood: it is not health but disease that results—disease that, if allowed to continue, will bring death not only to the limb, but to the whole body. The apparent prosperity, that is the evidence of a diseased body of the state, the surplus of blood that plumpens and purples the arm of high finance, is drawn from all other parts of the body: the pumping heart strives in vain to carry it back to the place whence it was drawn. The band about the limb is monopoly—even a monopoly of monopolies—the stranglehold of high finance.

The coming conflict lies not between the poor and the rich; not between capital and labor. It lies between science, understanding of Nature's laws, on the one hand, and 'finance,' with its horror of social progress, on the other. Scientific progress is one thing; social progress is another phase of the same thing, which is human progress. Any one knows what is meant by scientific progress; few will agree as to what is meant by social progress. Yet social progress is the social realization of scientific progress.

While monopoly stands between men, to intervene in and deform the operations of Nature's laws, there can be no social progress. Therefore it is that the vaunted scientific progress of our time continually tends to dehumanize the race. Yet not for always, not for long. Nature has mysterious ways of righting wrongs and caring for those of her children who are worthy of her care.

Are DRAMATIC CRITICS *Human?*

At the first-night performance, in front of me sat the 'Angel' who put up the money for the show.

By THOMAS L. MASSON

Illustrated by RUSSELL LEGGE

A FIRST night, or opening night, in a New York theater is a very remarkable study in contrasts. More varieties of cosmopolitan human beings are on display than in any other place I could name. After the first tryout, which generally takes place in Atlantic City, Philadelphia, Hartford, Utica, or some smaller towns elected for the purpose, everything is produced in New York that is worth producing, and also everything that is not worth producing.

At a typical first-night performance of a popular musical comedy, directly in front of me sat the 'Angel.' By 'Angel' I mean, of course, the man who puts up the money for the show. This gentleman was calm, placid, immovable. He sat through this opening performance, where the dialog was funny and the dancing was funnier, and never cracked a smile. Of course he had seen it before. Why should he smile? Why should any of the elect smile?

At this show, at my right, sat the wife of the man who was the author. A popular and highly successful writer herself, I wondered how much she had helped her husband. He had collaborated with another man and I could fancy her listening to him as he read the funny stuff, recited the lyrics and so on, and having her tell him true words about it. Women do that nowadays. The wives of literary men no longer go into hysterics of praise over their husbands' writing. The business is too commercial for that. It is a hard, cold-blooded game. 'Cut that out, John,' says the wife. 'It won't go with the lowbrows.'

If a fellow wants to take a girl to dinner and the theater in New York, he will have to charge up nearly twenty-five dollars for the evening's amusement.

Three rows ahead of me sat John Anderson, dramatic critic of the New York *Evening Post*, and next to him, a trifle late and deliberate, came Percy Hammond, dramatic critic of the *Herald Tribune*, imported from Chicago some years ago. John Anderson is young, tall, thin, unaffected, temperamental. Percy Hammond is heavy, weatherbeaten, slightly pachydermatous, personally delightful. No one would suspect, indeed, that a man who looks like a near-United States Senator could write such romping stuff as he does. When he arrived from Chicago his salary of eighteen thousand a year was reputed to be the largest ever. His Lakeside vocabulary, however, was new to the infantilism of the average New Yorker, and the process of straightening out the kinks was long and tedious. But now he is readable and can be understood even by other dramatic critics.

Note that he and Anderson sat three rows ahead of me. That meant, of course, that my ticket (price eleven dollars) was for a seat that was below the high line. That is, dramatic critics are classified by the management, although the management never admits this. We are all good fellows. Still the importance of a dramatic critic in New York, as I presume it is elsewhere, is measured by the distance his seat is from the footlights on the opening night.

On this night, down the left aisle came Alexander Woollcott, now of the *World*, formerly of the *Times*. Last year they put on *Hamlet* in London in sports clothes and London liked it. They brought it over to New York and most people, apparently, did not like it, although later they came to like it better. Alec Woollcott told us exactly how he felt about *Hamlet*. He was prepared not to like it. He was compelled to like it. That is the only thing a real dramatic critic can do—he can tell us how he feels about a play.

After Woollcott left the *Times* he was succeeded by Stark Young, who wrote in a high-brow style, as the term is, and the story is told that one day Adolph Ochs, the newspaper owner, sent for him and said:

'Mr. Young, don't you think it would be possible for you to write your dramatic stuff so that our readers would know what it means?'

'I think not,' replied Mr. Young. There the conversation lagged.

The next day, or almost at once, Young left the *Times*. He is now with the *New Republic*. In my humble opinion, he is one of the best writers on the drama in America. For one thing, he has studied it, and he has studied it in the right way, at the sources. He cares about what he writes. There are no explosives in his criticisms. He doesn't fire off a Mills bomb every few rods to let you know that he is a critic.

One dramatic critic who has been at it long and who has done continuous good work for the man in the street is Alan Dale, whose right name, by the way, is Alfred J. Cohen.

After Stark Young left the *Times*, he was succeeded by J. Brooks Atkinson, who up to that time had been editing the Book Review Sunday

ction of the *Times*. Mr. Atkinson riginally came from Boston. Why he unted to be a dramatic critic I do not ow. It is possible that, as he lived in ew York itself, he had nowhere to go eenings, and therefore became a amatic critic in desperation. That is obably what they all do it for.

Mr. Atkinson, probably bearing in nd the fate of his predecessor Stark oung (who, being on the *New Republic*, can write as unintelligibly and optically as he cares to), is actually iting dramatic criticisms so that we ow something about the plays he hs seen. Woollcott writes how he fls. So does Dale. So does Hammond.

Fifteen thousand dollars a year is nt much for the best dramatic critics ad some of them make much more by iting odd pieces and getting out a bok occasionally. Their expenses are h;h. Burns Mantle, of the *News*, oe of the most conscientious of critics ad a hard worker, runs a syndicate in th bargain and each year gets out a bok of the best plays of the year pvious.

If a fellow wants to take a girl to th theater in New York and entertain h· and nourish her with food, assumir that he is a clerk with a fair salary, itwill take about all of his salary. If h lives in the suburbs, there is the cfare, which will run to nearly tro dollars. The tickets will cost him a least eleven dollars. There are inumerable places where he can get a dner for $1.50 a plate, but these pces are generally crowded and not alays clean. It costs about five dlars to get a good dinner for two in Nw York and if flowers are added, th young man will have to charge up nrly $25 to profit and loss for his evning's amusement.

Take the plays away from New Yrk, and most theatrical people belive they are doomed to financial faure.

'The competition of the movies is tc much for us,' said a press agent, 'added to the high cost of travel.'

Yet it is a fact that in New York there have never been so many plays and so many good plays as during the past season. Bernard Shaw is said to derive royalties of $100,000 a year from his American productions. I was at the opening of his *Androcles* and was greatly impressed with the evident enjoyment by the audience of genuine satire and with the sincerity and fairness with which the production was treated afterward by the critics.

At the height of the season in New York there are about fifty theaters running to full or part capacity. It is very difficult to judge of the actual profits because in each instance so much depends upon the cost of production. The leading musical comedy, *Sunny*, ran around $40,000 a week during the holidays. At the same time, *Abie's Irish Rose* (which the majority of dramatic critics damned and which has had a longer run than any other play) was running about $8,000. These fifty theaters I group will take in at the height of the season about $500,000 a week. This is only a small part of the grand total.

The real function of the dramatic critic is not only of great and growing importance, but it seems to be wholly misunderstood by the majority of readers, if I may judge from hearsay. No defense of dramatic critics has ever before been attempted to my knowledge and the following observations are based on somewhat intimate knowledge of New York first nights, while at the same time I must disclaim any deep knowledge of the drama itself. I once wrote a play and it ran for one night—which is as much as almost any dramatic critic can claim. It is often said, indeed, that if these gentlemen make such sorry work of writing plays themselves, why do they presume to judge the work of others?

The answer is that a critic is a critic, fashioned by the Almighty for that particular purpose. A dramatic critic has just as distinct a temperament as a plumber or a carpenter. He has to pose a bit, and he has to develop a kind of mask. During the past season I have sat behind all the dramatic critics in New York at many of the comedies and musical shows, where some of the funniest things were being said and done, and I never saw one of them betray the slightest emotion. If one is a dramatic critic, one cannot. Also, among the topnotchers, there is an etiquette as severe as among doctors over someone to be operated upon. Naturally each critic holds himself sacrosanct. The first act being over, they all make a bee line for the lobby, or if the weather permits, gather in knots on the outside, violently smoking.

I attended last year the opening of a play called *The Cradle-Snatchers*. It never remotely occurred to me that it would succeed. It was indeed condemned by some of the best critics. After the first act I was for going straight home, but one young critic said to me, 'Yes, it's all you say it is, but it will get over. It's funny and what Broadway wants.' His prediction came true.

Here let me tell a true story.

I was invited to attend the opening night of a musical comedy by a dramatic critic. The girl who took the leading part was a slight young thing with a pretty face, a divine dancer, graceful as a fawn. My friend said to me: 'She was in the office this afternoon.'

'What do you mean?'

'Well, you see, this is the first real part she has had and she came down to ask me to help her out all I could.'

We learned that she had been the rounds of the newspaper offices in the same way. This is an exceptional instance, but it would take too long

The first act being over, the critics all make a bee line for the lobby or gather in knots outside.

and be a story all by itself to tell of the desperate things done by those who are trying to break through the barriers to publicity or to real fame.

Occasionally a seemingly slight incident will turn the tables. Lawrence Tibbett, a young American singer who had the part of Ford in the opera *Falstaff*, sang so well that the audience recalled him. This was unusual, for as a rule the foreign singers at the Metropolitan Opera House secure most of the applause. The audience, moved by his singing, insisted on bringing him out and he came rather reluctantly. This occurrence was, however, noted by the critics and when the copy came into the office of the New York *Times*, the acting editor, a real newspaperman, saw its news value and immediately transferred the story to the front page of the *Times*. The result was that young Tibbett found himself famous overnight.

THE real problem before the dramatic critic is not alone to say whether the play he reviews is necessarily popular or 'good to see or look at' from the popular standpoint, but whether it is worth while as an artistic performance, and here there enter a great number of minor problems. Many dramatic critics have been accused of being influenced not only by the box office, but also by the newspaper owners themselves. Occasionally there have been lawsuits. But this is almost never true. The late Frank Munsey was supposed to influence his writers, but Woollcott, after Mr. Munsey's death, came out with a frank statement that this was not true, that he never had been spoken to by Mr. Munsey.

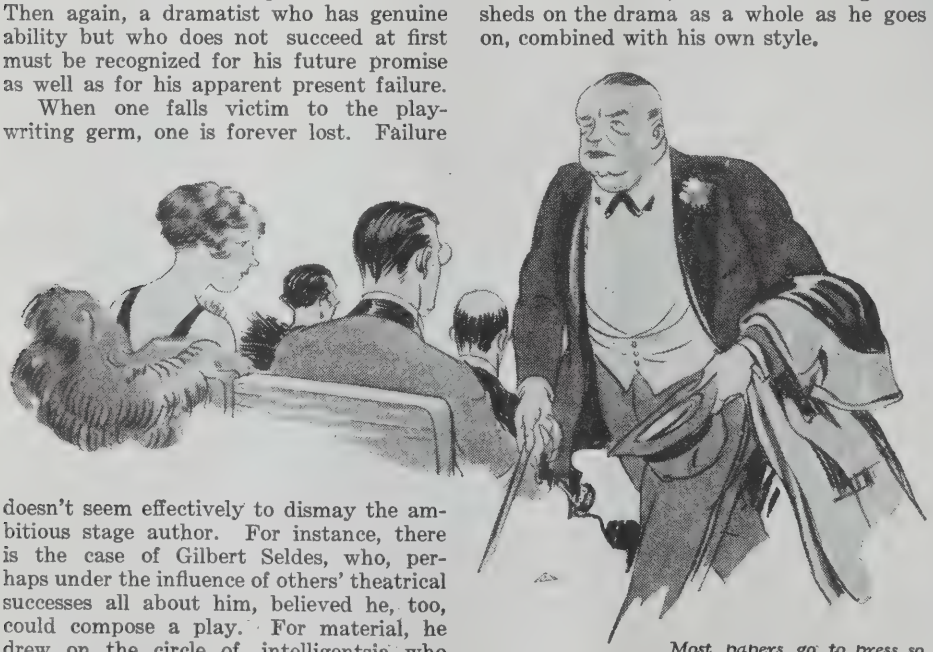
In some instances large sums of money have been expended on casts and scenery, and besides this, the members of the cast themselves are painstaking, hard-working artists and to condemn the performance in a wild, reckless, even in a brilliant way, is not always good judgment. It too frequently occurs that if an indecent play is 'panned' too loudly this serves to draw attention to it and give it life. This has happened several times within the past two seasons. Then again, a dramatist who has genuine ability but who does not succeed at first must be recognized for his future promise as well as for his apparent present failure.

When one falls victim to the play-writing germ, one is forever lost. Failure doesn't seem effectively to dismay the ambitious stage author. For instance, there is the case of Gilbert Seldes, who, perhaps under the influence of others' theatrical successes all about him, believed he, too, could compose a play. For material, he drew on the circle of intelligentsia who inhabit the Algonquin, many of whom were once dramatic critics. Some still *are* actively engaged as dramatic critics. To aid in his enterprise, Mr. Seldes engaged the services of the bold Mexican caricaturist and painter, Miguel Covarrubias. In reviewing the production after the opening, the dramatic critics, of course, 'panned' Mr. Seldes' effort. They allowed that he was an 'excellent writer,' but that he lacked a 'dramatic sense'! In the face of these unfavorable reviews, the play had to be taken off the boards. But Mr. Seldes has felt and responded to the play-writing urge, and at last reports was at work putting another on paper!

Most of the dramatic critics, whatever their ability may be, are honest enough in the expression of their views, whatever those views may be. Their real difficulty, if I may speak for them, is that they are not likely to be read when they write too well, which necessitates their putting jazz into their work.

Most papers go to press so early that the critic has to come out during or even before the last act to get his criticism into the next day's paper. Frequently this criticism is printed in a late edition in order to give him more time and is then repeated in the early issues of the following day. This does not necessarily affect the work of the critic, as in the past some of the most brilliant and lasting criticisms have been written under these conditions. But it is highly discouraging for a man who has passed years of his life in studying the drama and is really concerned to make it better, to know that a criticism which has cost him all that and more, and which requires to be read carefully will probably be skimmed over lightly by the majority of his readers. And while this is true, he also knows that if he injects into his copy a number of clever epigrams or what in journalese is known as 'arresting' copy, he will achieve a wider audience than by sticking to his last. That, it seems to me, is the difference between writers like Stark Young and Percy Hammond and Alan Dale. As between these two extremes, Alec Woollcott to my mind strikes a happy medium.

After all, it is not the *crass* opinion of the critic that matters, so much as the light he sheds on the drama as a whole as he goes on, combined with his own style.



Most papers go to press so early that the critic has to come out during or even before the last act to get his criticism into the next day's paper.

The American Merchant Marin

(*Continued from page 2*)

investors. True, this act may have impos additional burdens upon American shippi but to the outsider it would hardly app as a sole and sufficient reason for lack o proper Merchant Marine. Various measu to lighten the burdens of American shipp have been suggested, such as revision navigation laws, regulation of steamb inspection service, preferential rates, designed to encourage a large and bet service. But so far most of the amer ments have been merely talk. To sum it most of us have come to believe that ther no prospect for a direct ship subsidy, a for that matter, no indirect one unless it preferential rates which the Governm recognized in the Jones Act of 1920. Nor many believe there is any necessity fo subsidy.

THE Jones Act contains a provis giving preferential railroad rates to p sengers and goods carried in Ameri ships, and automatically withdraws th rates from passengers and merchanc transported by American railroads a consigned to foreign ships. However, th was a proviso in the act to the effect t whenever the Shipping Board was of opinion that adequate shipping facili to or from any port or dependency of United States and a foreign country w not afforded by vessels properly do mented, it should certify the fact to Interstate Commerce Commission, and t body could then suspend the operation the section until such time as the Bo was of the opinion that adequate shipp facilities between the ports were afforded

While it is claimed that Congress not intend to give the Interstate Comme Commission power permanently to susp the operation of these preferential ra yet the fact is that prior to the effect date of the act, shippers and shipown throughout the country were so aroused the prospect that they vigorously protes to the Commission on the ground that if rates became effective, they would be prived of sufficient bottoms between p to handle the ordinary run of export. W on the face it looked as if foreign shipp interests had agitated the subject, yet th was no open evidence of this. *The fact that American shipping, even with these p erential rates, had not reached a point w it could safeguard our export handling, cause we had not established sufficient tr routes to care for the business.*

The Commission had a series of he ings, at which it developed that adequ facilities in American bottoms were available. With this evidence, the Shipp Board withdrew its resolution provid for certifying to the Commission that operation of the preferential rate sect should not further be suspended, leaving matter where it was when the Commiss previously suspended it. The first thing the Shipping Board to do is, of course determine whether we have adequ facilities between the various ports to har American shipping, for it is easy to un stand that American industry is not will to subject its export and import busir

unwarranted delay because of lack of coms to take advantage of preferential as. *Delivered cargoes are much more able than those in transit or waiting for oms.* The danger of preferential rates f course the possibility of retaliatory sures on the part of foreign nations.

But all the while we seem to be getting here fast as far as our Merchant Marine oncerned. The business is here, there n everywhere, and it can be secured for erican ships when it is pursued prop-

Our foreign shipping lines are gaining a er foothold on trade routes each year, le we sit by and argue with each other our seeming difficulties. But all we en to hear in response to a call for a eer Merchant Marine is ship subsidy.

IS possible that post-war conditions hasized subsidy. With exports and orts at their lowest ebb, with financial facing shipping companies (who, by way, had not used even childlike judgt in conserving their resources at a time h they were raking in dollars with little o effort) and with our seaboard and the ms entering it lined with double and ie rows of wood and steel bottoms which rican dollars given under patriotic ion had built during the war, the sight one to inspire the most penurious to ghts of financial aid to accomplish the mption of business activity. Forlorn desolate these ships looked, while rican capital stood by, waiting for the ernment to do the pioneer work of buildga Merchant Marine. The effort was ae, of course, and weak as it may be idered, it yet formed a nucleus which rican capital and American enterprise well afford to use as a foundation.

ut it does not grow fast enough to suit American ideas. And again the answer ck of a definite policy of ship construcand ship operation.

merican shippers are asked to favor rican lines as a matter of patriotism, gardless of established trade routes, uency of sailings and other incidental ers in the handling of their export ness. So-called patriotism may secure a al percentage of American foreign trade, uit will always be inconsequential as long s rests on this basis alone. We must uate private capital to the possibilities Merchant Marine based upon effective rce, just as we are educating private pal in the commercial aspects of air-a.

f American shipping cannot be encourge and developed by private American pal to the point where it is worthy to take s ghtful place side by side with foreign le hant Marines, then it is not a business in hi we as individuals or as a Government od engage. If foreign capital is more ourful than ours, if foreign ingenuity is eer, then we should gracefully withdraw on the struggle for supremacy of the seas ndurn our foreign business over to foreign pal to handle as it sees fit.

ut there are few who do not believe hathe problem can be solved. An Ameri-anMerchant Marine is so valuable aside roi its commercial use that a solution must ndwill be found. It is undisputed that hel is a close relationship between our Me hant Marine and our national defense. Of urse, the mere possession of a large lee of commercial vessels does not of itself make a successful Merchant Marine. We must form a business contact through the medium of a world-wide organization by means of agencies for collecting and distributing cargoes, and there must be above everything else a reliable and regular operation. This same fleet, so serviceable in times of peace, would be a valuable adjunct to our navy in time of war, and the higher efficiency we can bring it to in time of peace, the more readily can it be converted to war purposes should occasion require.

We need what is called 'trade good will,' and nothing fosters good will better than an excellent, well-manned Merchant Marine. It is merely a question of organization and the constant and intelligent use of governmental facilities abroad. True, the investment involves some element of chance, but in this respect it does not differ from business in general. Subsidy may start a business, but from a psychological standpoint it has one deterrent feature—*it suggests a lessening of energy, just a little lack in bringing to the job all the ingenuity and intelligence it requires.*

Through our consular agencies abroad, through a campaign to secure the coöperation of our banks abroad and in this country, we could, with a closer knowledge of conditions in this country, place ourselves in a better position than foreign banks or foreign agencies could give us, and could render far better service to American shipping interests in foreign countries than foreign shipping interests do at the present time. Many of the factors such as marine insurance, through bills of lading, terminal facilities, as well as the construction of certain types of vessels, enter into the problems, but all of these combined do not make the difficulties insurmountable.

AFTER all, subsidy or no subsidy, the real method of securing business in competition with the other fellow is to give as good or better service than he gives; to follow every trail where business leads; to establish good will through uniform courtesy, combined with genteel yet thorough aggressiveness; to acquire a sense of service superior to that with which we are in competition; to adjust our shipping facilities to every requirement of shippers rather than to establish an inflexible standard which restricts rather than enlarges our business expansion. American capital may be slow to appreciate its opportunity, but that it will eventually respond is a foregone conclusion. American industry can teach us much.

We must save American industry all we can. To do this we must get away from the old method of handling goods only when boxed, and we must encourage shipments either loose or packed at such a slight expense as to save millions to our American manufacturers. We may require new and improved handling apparatus, but it will come only as the demand for it accumulates.

We must be superior to foreign shipping companies in the handling of all our products. We must take up with other countries the question of modifying their customs acts to permit entry of loose and unboxed materials. And we must first of all build our ships with this class of material in mind. Millions upon millions of dollars will be saved to American shippers when a plan of this kind has materialized.

The chief trouble with most of the fleet of merchant ships remaining after the war and now being scrapped is that they are totally unfit for American tonnage. Hurriedly built, they served their purpose during the war, but as the basis for peace-time commercial activities they are concrete instances of what ship bottoms should *not* be. They are at best a nucleus for an adequate Merchant Marine, but not one to be particularly proud of.

BUT all signs point to some definite plan at a time not far distant. The series of hearings instituted by the United States Shipping Board some weeks ago and now in progress throughout the country should develop what our shipping needs are, and should form the basis for legislative action which shall be the means of realizing the loftiest ideals which we as an American people have had for the maintenance of our commercial supremacy upon the seven seas.

These hearings are pursuant to a resolution passed by the United States Senate and calling for a comprehensive and concrete plan for building up and maintaining an adequate Merchant Marine for commerce and national security with two plans in mind, one through private capital and under private ownership, and another through construction, operation and ownership by the Government.

The prevailing idea may possibly embody the first plan with Government supervision, and a serious attempt may be made to secure a direct Government subsidy. At any rate one consoling thought is that as this report must be submitted to the Senate not later than January 1, 1927, it will be seen that whatever is evolved must take some form within the next few months. Regardless of the plan arrived at, American shipping will have much to gain and little to lose. It is an American problem and must be solved by American brains and financed by American dollars. It will not develop without effort nor will it meet American approval until it arrives at a stage of perfection where it will fulfill every demand of American business.

Our Merchant Marine will come only in proportion as we analyze the needs of our foreign commerce. *It will come just as soon as we are able to shape a definite national policy, and adhere to it long enough to make it effective.* The question should not be a political one. It is purely economic and should be so treated. Once start business upon a wholesome, permanent basis, nourish it with prudence and caution, watch over it carefully and intelligently, and there need be no fear of its ultimate outcome. American shipping is no exception.

We have much to learn from the eighty-year-old Shanghai invader, who, undaunted by previous refusals, climbed flights of stairs on a hot summer day to seek out business for his unsubsidized ships. When we in turn have finally applied the ordinary rules of business to our shipping problem, when we have exercised the courage and foresight which has inspired other lines of business, we will witness from what now seems chaos, the birth of an American Merchant Marine worthy of the name, with ships built not only for our commercial needs but fast enough to be valuable auxiliaries as a national defense, with trade routes to the farthermost corners of the earth, and with the idea not alone of competing with our foreign neighbors, but of rendering the highest possible service to mankind.

Lighting the Corners of the Seas

A Tale of the Thrilling Deeds That Men of the United States Lighthouse Service Perform

By GEORGE F. PAUL

SO GREAT a span of the earth's surface intervenes between Boston and Honolulu that when the rising sun dims the rays of Boston Light, a mariner on the bridge of his ship approaching Hawaii will be checking his position by the far-flung brilliant flashes of Molokai Light in the tropic blackness of early night. Yet great as is the span of distance, even greater is that of time and progress which separates the initial beacon of tallow candles first displayed in Boston Light half a century before the Boston Tea Party and the blinding illumination of Molokai's vapor light, a station hardly more than christened when Boston Light celebrated its two-hundredth anniversary in 1918.

This progress is a measure of the memorable career of the United States Lighthouse Service, and a token of the far-reaching benefits and progress attributed to that oldest federal service. Among the first acts of the first Congress in 1789 was the organization of the Lighthouse Service and the appointment of a superintendent of lighthouses. He was Alexander Hamilton, Secretary of the Treasury. From the first superintendent, with his eight, candle-lighted lighthouses, we pass to the present nineteen superintendents under the direction of the Commissioner of Lighthouses, in the Department of Commerce, whose combined jurisdictions control 17,000 aids to navigation on a coast line of 40,000 miles. And as though to refute the claims of lineage and aristocracy of age, this honorable service has erected in Hawaii, the latest territory to join the sisterhood of the Union, numerous monuments to its advancement in science, which rank with the finest in the world. Molokai Light darts out its dazzling rays of 620,000 candle power to ships 35 miles away, and there is Makapuu with its hyperradiant lens, the largest in the United States.

Wherever ships approach the land there must be buoys, lighthouses and other warnings of danger and guides to harbors. On the coast of the United States this is the responsibility of the United States Lighthouse Service. With improvements in harbors and increase in commerce must come new and improved aids to navigation, while existing stations must be kept in uninterrupted operation 365 nights a year. In these Hawaiian waters, the lights at the crossroads are the guideposts to innumerable wayfarers and must be kept burning

The sites for light stations and fog signal stations are invariably located at the most isolated or treacherous points, to warn of hidden dangers or to serve as guideposts. Many stations are so inaccessible that keepers there are not permitted to have their families with them by reason of the hardships and of dangers which illness might bring. Such keepers are compensated by shore leave with their families equivalent to about three months a year. There are cases, nevertheless, notably on the Alaskan coast, so completely isolated that keepers who go there must remain continuously for three years.

Often such stations are hazardous of access from the sea. They must be supplied periodically with oil, coal and other supplies. For the dual purpose of supplying light stations and of handling buoys, a fleet of vessels, lighthouse tenders, is maintained. The officers and crews of these vessels constitute a class of seafaring men as unique as the renowned Gloucester fishermen. The prime requisite of a lighthouse tender is to flirt with shoals and reefs and to effect shore landings through surf and well-nigh insurmountable obstacles that to every other class of vessel form the category of things to be avoided as death. They must be manned by men who are accustomed to maneuver in tight places and to meet every emergency with hesitating skill.

In this country lighthouses have not b operated for gain, but have always b maintained for the common benefit commerce. Unlike most foreign count today which collect tolls from all ves using their ports for the purpose of ma taining aids to navigation, the Uni States maintains its lighthouses and ot aids free to all the shipping of the wo No other country has so many lighthou so many buoys, light vessels, fog sign or other aids to navigation.

Many think the Lighthouse Service operated by the navy. Up to about time of the Civil War it was administe by the Secretary of the Treasury. Then Lighthouse Board took charge. In 19 through the initiative of President T there was created the Bureau of Lighthou under the Department of Commerce. superintendents of lighthouses, each charge of one of the nineteen districts, all technical men, for this service dema men with scientific and engineering traini

An incident illustrative of the haza of attending to lights in Hawaiian water the following:

The superintendent aboard the lig house tender, *Kukui*, is nearing the com tion of his semiannual inspection. He been thus engaged for ten days. On trip supplies have been delivered to stati where keepers live, all gas buoys and lighted buoys have been relieved, and automatic, unattended, gas-lighted sh stations have been recharged with cleaned and painted.

The tender is approaching Kukuih Light about noon, having attended the station to the south at daybreak.

—Keystone

Kauiki Light, equipped with a sun-valve for extinguishing the light during daylight.

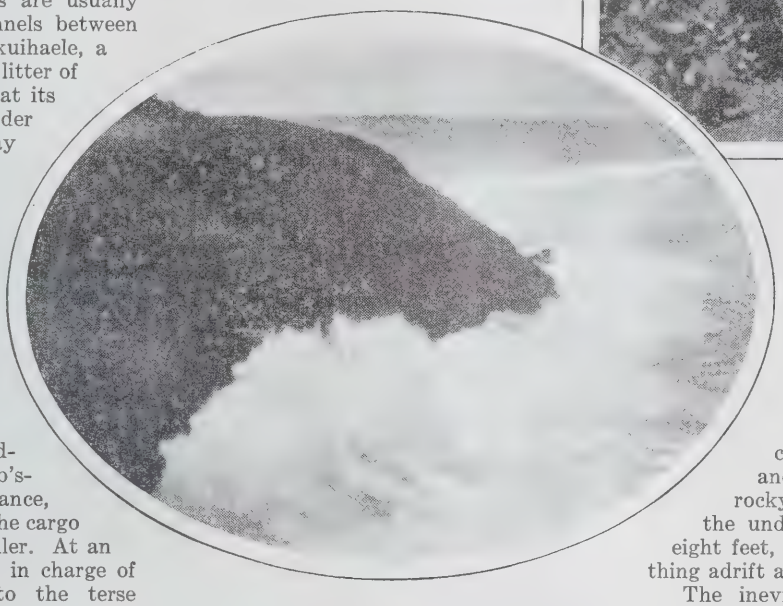
rtheast trade wind is blowing, giving to te vessel an easy roll and pitch as she meets te sea on her starboard bow. The waters ound the Hawaiian Islands are usually rgh, especially in the channels between te islands. Arrived off Kukuihaele, a ld cliff 150 feet high, with a litter of ulders and rock fragments at its se churned to a foam, the tender ws down to mere steerageway a a cargo boat is let fall from te davits. Fending off from te ship's side, the crew of te cargo boat receives the terials needed for te relief and overhaul of te station, working in the sing boat close to the ling, heaving vessel with a ease that would be re-rkable except for the ex-tness of the men. When the at is all ready, the superintend-e clambers down the Jacob's-der and, watching his chance, jmps into the sternsheets as the cargo at rises to the crest of a roller. At an der from the second officer, in charge of th boat, and responsive to the terse Hawaiian from the old coxswain, a native wo has handled the steering sweep of this at for eighteen years, they cast off and sare away for the shore.

Rounding a short rocky spit, the boat sweeps in with the seas toward an old, dnolished concrete landing pier, formerly uid for shipping sugar, now displaced by a aerial cableway reaching to mooring irthe sea. Several rocky projections skirt th pier. When a few boat lengths away, th coxswain drops an anchor over the stn of the cargo boat and pays out a mooring line to be used in holding off from th rocks and breakers. Watching his chnce, the coxswain, with a turn of the stn anchor line over a cleat, holds the bat's nose just clear of the breakers. Two oasmen are alert to his orders; other oars ai shipped. Following the smashing turmil of a series of high waves called 'the siers,' which recur at more or less regular inervals, the boat suddenly surges in close tothe rocks and the bow oarsman leaps stefootedly to the slippery rock, carrying th painter mooring line with him.

Under the double control of bow and stern lines, the boat is now held on and off with the intermittent seas and one after another the occupants leap to the rocks, scrambling out of reach of the seas, except the coxswain and one or two seamen who remain to handle the boat and supplies. With painstaking effort the unloading begins and is continued with interruptions for an hour while the boat surges now out to avoid the breakers, now in for hurried hard work at discharging the cargo. At last the coxswain is left alone to haul the boat out over the stern anchor clear of the breakers, where he drops a fish line overboard and thenceforth conducts his operations as though he had four hands and several more than two eyes.

Two hours later the shore party comes back loaded with equipment. The superintendent has completed his inspection, the equipment and intricate mechanism of the station have been tested and adjusted, new gas tanks have been installed, metal work chipped and repainted, and everything left shipshape. If a new sun valve or new illuminating apparatus has been installed, doubtless the district mechanician has been present to do it. The watchful eye of the district superintendent is sure to detect errors or faulty moves, for these men must be past masters of all these details, accustomed to initiating and developing the plans for all installations of any character, whether mechanical, electrical, solar, gas-operated, light or sound-producing, or radio.

For embarkation, the coxswain eases in his heaving boat, his fish line now in the bottom of the boat with some good-looking fish flopping in the coils. At last everything is stowed and everyone aboard except the bow oarsman, who has tossed the painter into the boat and awaits her last surge toward him to make his get-away. In comes the boat with a rush but the man remains where he is. Something has happened,

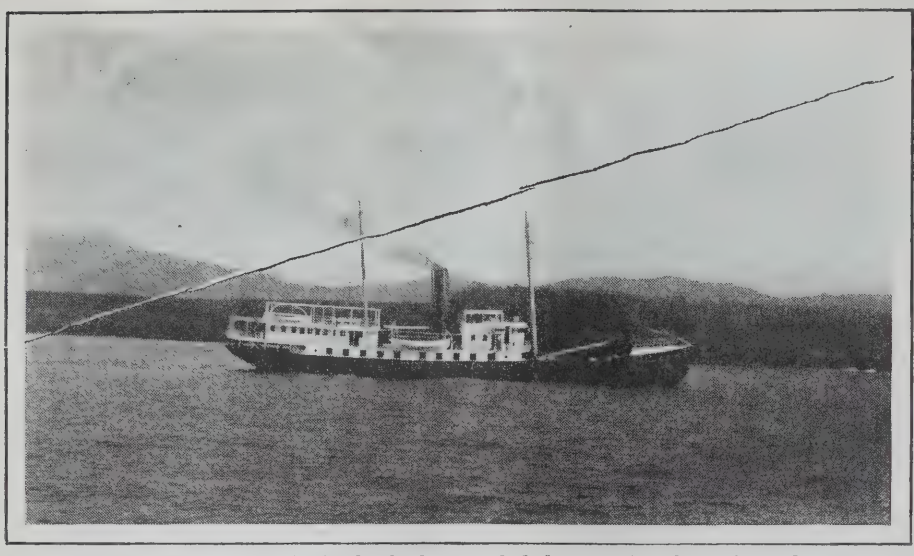


These views illustrate the extremes of landing conditions, and the mighty power of wind and wave. Above is shown the landing for Kilauea Point Light Station, in calm weather, with derrick and hoist situated 90 feet above water level. The same place, from a different angle, during heavy weather, appears in the oval. The crest of the breaking sea is fifteen feet higher than the foot of the derrick.

one of those unexpected freaks of the sea. A sudden cross surge has caught the bow and in an instant swerves it on to a rocky ledge just as the out rush of the undertow drops the stern six or eight feet, so she stands upended, everything adrift and everyone clutching the air.

The inevitable follows when the sea rushes in to swamp the boat. Hopelessly jumbled in the foaming breaker, heads, arms, oars, boxes and what not churn around the heavy boat. Up bobs the superintendent from beneath the brine, his head and shoulders streaming red. A nimble Hawaiian, as truly amphibian as a seal, grabs him. Others, some on the rocks, some astern, right the boat on the next sea. Some note the chief and shake their heads with a mutter; a cracked crown for sure. Sooner than one would believe, this heavy oaken boat is afloat at her stern anchor again, lusty arms bailing her out. The superintendent comes to life in a startling fashion and clambers aboard the sternsheets.

'That bucket of red paint landed square on my head,' he says and wipes the mixed paint and brine from his hair. This gets a big laugh, interrupted by a yell from two castaways still on the rocks. A derisive chorus from the boat tells them to jump and swim for it, which they presently do, scrambling a moment later, dripping and spluttering, over the side of the boat. Some of the oars and floating articles are



The lighthouse tender 'Kukui.' Once, with decks covered thickly with ice, she rode out a 75-mile hurricane for three days at fifteen degrees below zero.

recovered, then with jokes and laughter the return to the ship is made. Another trip follows, to recover some of the heavy steel tanks sunk in shallow water. And that is that—all in a day's work.

In time of war the President is empowered to order employes and vessels and equipment of the Lighthouse Service for duty on the combatant arms. The Lighthouse Service has taken an active and honorable part in all the wars of the United States. During the World War, lighthouse tenders set all the submarine nets off our principal harbors, set mines, set special buoys for war purposes, patrolled for submarines, helped vessels attacked by submarines, and performed many other services. One lightship on the Atlantic was sunk by gunfire from a raiding German submarine when the crew of the lightship tried to send radio warnings of the submarine's presence. Many employes of this service resigned during the war to enter the army or navy. Superintendent Tinkham was a captain of engineers in the navy, having resigned his post in the Lighthouse Service, while stationed in Alaska.

These instances may serve to indicate the scope of the work of the Lighthouse Service. Truly it is difficult to place a value on its real worth to commerce and to the traveling public. An Assistant Secretary of Commerce said recently:

'If the Lighthouse Service should suspend its operations for one day, it would be the same in its relative effect upon the country as the stoppage of all the railroads.'

Broken Promises in Palestine

(*Concluded from page 7*)

gone through the Arabs would have been expected to pay the greatest proportion of the interest. Behind these same doors, the Jewish-British administration has complete power to remove civil and military officials, and this has been used constantly, as in the case of Fuad, to make the proportion of Jewish officials greater than that of Moslems or even British. Even the stately ways of Justice are known to be shady bypaths under the guidance of the Jewish authorities!

Still, the Arabs are a patient people. For hundreds of years they have been politically under the domination of Constantinople, although under a system of representative government. They might have accepted the new rulers in spite of their hopeful fight for freedom, and gone back to their crooked plows, black tents and blue desert hills, had it not been for the attitude that the new rulers assumed toward them.

Backed by the British, the Jews regard the Arabs as unreasonably childish people with unreasonable demands.

The nations not long ago expressed their faith in the Arabs of Iraq and Trans-Jordania when they recognized them as independent countries under Emir Feisal and King Hussein, and members of the League of Nations. The Palestinian population is every bit as capable of governing itself as their blood brothers across the border.

Arabs are divided into three classes: the *fellaheen*, or farmers, who have tilled the same strips of land for generations on end and who live together for protection in squat mud villages perched illogically on rocky rises in the midst of their farms; the *madaniyeeh*, or townsmen, who are generally a mixture of every race under the sun, and give the conventional tourist his idea of the race—mercenary, tricky, and colossal liars; and lastly, the *Bedouin*, the nomads, who form by far the greater part of the population, and are the pure Arab.

The poorer Bedouins live in scraggly black tents in the brown hills, tending their flocks of black goats on the steep hillsides. The wealthier Bedouins live in tribes in the desert east of Gaza, their wealth and best friends being their pure-bred Arabian horses and their racing dromedaries. It is true that an Arab will never sell his mare, although stallions are occasionally given away as a mark of great favor. The only way that the mares and dromedaries are exchanged is by the frequent and exciting process of raids among the tribes. This is the quickest way, surely, of increasing the wealth of a tribe!

The British are policing the desert rather thoroughly now, however, and the tribes have been very quiet of late. T governor of Lower Palestine, a you Syrian, has under him six hundred men swift horses to see that his unruly charg pay their taxes on time and keep on th own patch of desert.

The Bedouin, too, is the soul of hon and hospitality is almost a religion with hi If his worst enemy should by any chan eat of his salt, and thus become a guest his house, he will entertain him royally three days, and then provide him a suita escort on his homeward journey. A Bedo will keep his given word at the expense his life, and this is one of the reasons w the Arabs are so sure that the land sho be theirs, according to the promises of t British.

IF THE Bedouin is about to attack an one, the victim can usually save hims by saying '*dakhilak*,' which means, 'I ha taken refuge with you.' One of the Americ colony told us a story of a Bedouin who four years had been following a blo enemy of his who had killed his father in raid. Finally he traced him to a cave in low bluff in the wide, dry Jordan valle He crept up to the door of the cave, nea pinioned the man, and was about to d patch him neatly when the victim of t sacrifice forgot his appointed rôle, a cried '*Dakhilak!*' The first Arab straig ened up, sheathed his dagger, and sa 'Your life is yours.'

While the enemy was groveling thanks, the first Arab noticed a poison snake of the region gliding swiftly towa them. It poised to strike. The man mad sudden movement with his hands; the sna darted forward biting the kneeling man the back of the neck. As the enemy w dying, the first Arab said to him, 'I ga you your life, but Allah has taken it aw My revenge is satisfied!'

The Bedouins are gloriously vain. Wh they come to town on Thursday, which market day, they wear their bright striped *abayehs*, and snowiest *kufiehs*, headcloths, and their carved dagger shea are polished dazzlingly. They stride throu the bazaars, reeking of scent, looki neither to right nor left, *abas* of red or gr or yellow thrown arrogantly over shoulder, swinging with each long st

ALL that is needed to start complete Arabian rebellion in Palestine great occasion, or a great leader, such Lawrence, who will unite them in th common purpose, in spite of age-old bl feuds between the tribes.

When Balfour visited Palestine ear in the year, many people felt that this the great occasion needed to set off tinder. But the Arabs were not ready; t still resisted passively by declaring a day mourning, closing all shops and baza As yet there is no leader in Palesti Possibly if the Syrian rebellion under Druses reaches any great degree of succ the Arabs of Palestine may try their h at pot-shotting the Jews.

At any rate, it is self-evident tha government of a seething, hating mass by arrogant hated handful of usurpers will last, even when it is sponsored by the lightened British Cabinet at 10 Down Street. Britain is holding the Jew on to a powder house, and the Jew, faceti newcomer, spends his time playfully fli ing matches off the roof.

The Other Side of Fifty Years Ago

(Concluded from page 12

Two others of the enemy visited us at t Louis on their return from Uncle hard's military funeral: General Sher- n and General Winfield B. Hancock.

'So you are a Kentucky Breckenridge,' eral Sherman said, taking my mother the hand—my wearing the family name laimed the fact. 'All rank rebels!' is smile was no tinge of malice.

She spoke of the family conviction that le Richard should not have been sent rmed to parley with desperate Modocs.

'A necessity of war!' His tone of calm clusiveness left nothing to be added. same thing about the march through rgia: 'A necessity of war.' So far as I w then, no one questioned the necessity ar itself.

When I was old enough for reflection it ened the war had ended but yesterday, n ended so unfortunately that perhaps t yet something might be done. It was ays 'the Civil War' in our house. I ld no sooner have said 'rebellion' than n.' But slavery we did not want back. thought too much of my mother's ue, though it was twenty years since my mother had seen her. From hearing ften about black Sarah I could visualize as distinctly as if I had been back there, n of my mother's little brothers, listening grotesque and terrifying tales. Back e I saw myself, thirty years before I born, drinking in such awesome words s, He ran and the forty-foot ran, he ran n the forty-foot ran . . . '

A mine of rich romance was Sarah, with inexhaustible tales, her fund of rollicking humor—but a romance that did not well. For when the family moved to llois she just had to be sold. So for the scene in the story of Sarah, she was but to be taken to her new master. The s were rolling down her cheeks, her ils were gripping the bedpost to keep screams, and my mother was standing e heartbroken, a little Kentucky girl.

There was a book—I gathered, a very bjectionable book—that had caused a t deal of hard feeling on the subject; ook that never showed its face in our ne: *Uncle Tom's Cabin*, it was called.

Although,' my mother conceded, 'I w some things . . . But they were ceptional cases.'

One of these exceptional cases—'For the most part, the slaves were kindly ted, even spoiled'—came under my ther's observation when still a child. A friend once took her for a walk and was strolling beside her, smiling and chatting lightly until—

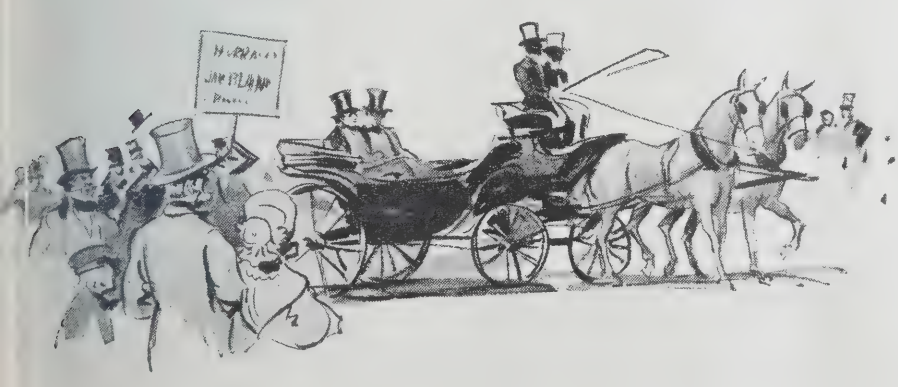
'Wait for me here, darling; don't stir from the spot till I come back.' Pretty, daintily dressed, she passed through the trees out of sight.

Now, to be told to stand immovable in a footpath by one however pretty or daintily dressed put spurs to my mother. Accordingly she slipped through the wood till she came upon an obscure hut. Was her friend hiding inside? Too young as yet to appreciate the obligation of setting a mother's example, she peeped through a chink in the wall of logs, to be transfixed with horror. A black woman, stripped to the waist, was being furiously lashed by the charming lady who had been waiting the convenience of such time as she could properly attend to her prisoner.

During the National Democratic Convention at St. Louis in 1876, excitement was intense. I was only six, but surely no one was more enthusiastic. I grew as familiar with Tilden's name and, presently, with the name of Hayes, as if they belonged to our church over on 17th and Olive. The Joint High Commission surely held its meeting just around the corner. A bad mess they made of it! To me a 'Democrat' was a man always right who couldn't get anywhere. How well I remember my bewilderment on learning that Tilden had not wished success to the Southern Cause—that he was that curious Centaur, half-man, half-beast, known as a 'Northern Democrat,' as one should say, a diving bird, a flying fish.

For me, the Lost Cause! It was the man in gray, going down to defeat before the more powerful man in blue, who attained the poetic glamour of the Scottish Chiefs, the mellowness of romance that belongs only to unfinished dreams.

There was so much talk about the currency in our home, that it never occurred to me we didn't have as much of it as we wanted. On our tongues, 'greenbacks,' 'inflation,' and 'redeemable certificates' were as common as the weather. I was as accustomed to the 'Tweed Ring' and 'Credit Mobilier' as to 'Antigone' which my father was translating from the original for a magazine. I was perfectly aware that not only had Horace Greeley said, 'Go West, young man,' but that he'd been a bitter pill to us Southern Democrats. We had stood behind his back, but with tears in our eyes. As for 'old' Carl Schurz—was he ever young?



—he was 'for' Hayes: that settled him.

Those were the days when nobody believed one man was as good as another; you took a side, then. But often, to my childish mind, issues were sadly confused. Some of my Southern kin had freed their slaves before the war and paid wages to such blacks as refused freedom. Not a soul at 1706 Chestnut but was glad slavery was over. And yet the word 'Abolitionist' was always spoken in a lowered tone as one should say, 'the devil.' And look at the 'Tweed Ring.' Its enormity was discovered and proclaimed by Benjamin F. Bristow. He fought it so hard that he almost got himself into the President's chair (how I should have liked to see that chair!). He was our own 'Cousin Ben Frank,' and we knew him to be a 'Black Republican.'

Also there was my brother coming home after his first few weeks at the public school ('where he should never have been sent'), his eyes big, his voice hushed—

'Mamma! Did your people fight against my country's flag?'

Verses That Lincoln Wrote

(*Continued from page 5*)

greatly enjoyed music such as he could appreciate. I have heard Philip Philips tell of Lincoln's admiration for the hymn *Your Mission* and have seen in his possession Lincoln's written request that he repeat it. He loved such music. He loved negro minstrels, a boisterous but wholesome form of amusement, and it was in them that he first heard and always loved *Dixie*.

He had an excellent ear for rhythm, and an almost faultless ear for rhyme. He had a good degree of skill in poetic expression, if that term may be understood within the limits of what he considered poetry.

Where did he get his poetic forms, his meters, his moulds for his poetic composition?

The answer is plain; he got them from the hymns of his boyhood. All the preachers, however illiterate, knew the distinctions of meter. They were accustomed to announce that a given hymn was 'sung to the use of common meter,' or it might be, long meter or short meter. None of these meters ran into pentameter or hexameter. They were trimeter or tetrameter or combinations of these. In these three forms, each foot had two syllables, one long and one short. Short-meter stanzas had four lines, three feet in the first, second and fourth, and four feet in the third lines: in other words the syllables were 6, 6, 8, 6. Common meter was an alternation of tetrameter and trimeter, 8, 6, 8, 6. Long meter was made up of four feet in each of its four lines, 8, 8, 8, 8.

IN Lincoln's attempts at poetry these forms are used. The predominant form was common meter.

I wonder to what tune he mentally sang his lines? If he had written in short meter, the tune would have been that of *Wicked Polly*. But when he sang to his own muse in common meter, what tune hummed as an accompaniment through his mind? Probably the old tune *China*. No other tune has been used in so many funerals in the United States. It was more popular in its day than *Beautiful Isle of Somewhere* will ever be. That also was in three-four time, with many slurs as written and many more as sung:

'Why do we mourn departing friends?'

All of the lines we are now to consider are in this meter. Some lines attributed to him we are not sure about, but of the longer poems there is no question.

There exists in the collection of Oliver R. Barrett the original manuscript of eight lines in Lincoln's handwriting, which, so far as is known, is his own composition. It is written in a melancholy mood characteristic not only of his own feeling in matters of this kind but also that of his time:

Time! what an empty vapor 'tis!
And days how swift they are:
Swift as an Indian arrow—
Fly on like a shooting star!

The present moment just is here,
Then slides away in haste,
That we can never say they're ours,
But only say they're past.

If this is indeed Lincoln's, it is crude in form and expression compared with lines he later wrote. The mood, the thought, are quite akin to his own, but the literary form is inferior to what we find later.

LINCOLN'S most serious attempt at poetry on his own account was made after his visit to Indiana in the autumn of 1844. He made his journey in the interests of the presidential candidacy of Henry Clay. The political speeches which he delivered took him through the southern part of the state and brought him to his old home. He tells the story in the letter to Andrew Johnston, who had been a lawyer in Illinois but had removed to Richmond, Virginia: 'In the fall of 1844, thinking I might aid some to carry the state of Indiana for Mr. Clay, I went into the neighborhood in that state in which I was raised, where my mother and only sister were buried, and from which I had been absent about fifteen years. That part of the country is, within itself, as unpoetical as any spot of the earth; but still, seeing it and its objects and inhabitants aroused feelings in me which were certainly poetry; though whether my expression of those feelings is poetry is quite another question. When I got to writing, the change of subject divided the thing into four little divisions or cantos, the first only of which I send you now, and may send the others hereafter.'

The first poem which he sent to Mr. Johnston from Tremont, Illinois, where Lincoln was attending court, was dated April 18, 1846, and this is the 'poem':

My childhood's home I see again
And sadden with the view;
And still, as memory crowds my brain,
There's pleasure in it too.

O Memory! thou midway world
'Twixt earth and paradise,
Where things decayed and loved ones lost
In dreamy shadows rise,

And, freed from all that's earthly vile,
Seen hallowed, pure, and bright,
Like scenes in some enchanted isle
All bathed in liquid light.

As dusky mountains please the eye
When twilight chases day;
As bugle-notes, that, passing by,
In distance die away;

As leaving some grand waterfall,
We, lingering, list its roar—
So memory will hallow all
We're known, but know no more.

Near twenty years have passed away
Since here I bid farewell
To woods and fields, and scenes of play,
And playmates loved so well.

Where many were, but few remain
Of old familiar things;
But seeing them, to mind again
The lost and absent brings.

The friends I left that parting day,
How changed, as time has sped!
Young childhood grown, strong manhood gray,
And half of all are dead.

I hear the loved survivors tell,
How naught from death could save
Till every sound appears a knell,
And every spot a grave.

I range the fields with pensive tread,
And pace the hollow rooms,
And feel (companion of the dead)
I'm living in the tombs.

Soon after the first letter he wrote to Johnston again, May 7, 1846, and sent him the next canto of his poem. His letter and poem follow:

'Friend Johnston: You remember when I wrote you from Tremont last spring sending you a little canto of what I called poetry, I promised to bore you with another sometime. I now fulfill the promise. The subject of the present one is an insane man; his name is Matthew Gentry. He is three years older than I, and when we were boys we went to school together. He was rather a bright lad, and the son of the rich man of a very poor neighborhood. At the age of nineteen he unaccountably became furiously mad, from which condition he gradually settled into harmless insanity. When, as I told you in my other letter, I visited my old home in the fall of 1844, I found him still lingering in this wretched condition. In my poetizing mood, I could not forget the impression his case made upon me. Here is the result:

But here's an object more of dread
Than aught the grave contains—
A human form with reason fled
While wretched life remains.

When terror spread, and neighbors ran
Your dangerous strength to bind,
And soon, a howling, crazy man,
Your limbs were fast confined:

How then you strove and shrieked aloud
Your bones and sinews bared;
And fiendish on the gazing crowd
With burning eyeballs glared;

And begged and swore, and wept and prayed,
With maniac laughter joined!
How fearful were these signs displayed
By pangs that killed the mind!

And when at length the drear and lone
Time soothe thy fiercer woes,
How plaintively thy mournful song
Upon the still night rose!

I've heard it oft as if I dreamed,
Far distant, sweet and lone,
The funeral dirge it ever seemed
Of reason dead and gone.

To drink its strains I've stole away,
All stealthily and still,
Ere yet the rising god of day
Has streaked the eastern hill.

Air held her breath; trees with the spell
Seemed sorrowing angels round,
Whose swelling tears in dewdrops fell
Upon the listening ground.

But this is past, and naught remains
That raised thee o'er the brute;
Thy piercing shrieks and soothing strains
Are like, forever mute.

Now fare thee well! More thou the cause
Than subject now of woe.
All mental pangs by time's kind laws
Hast lost the power to know.

In the autumn of 1844, Lincoln's speeches took him through Southern Indiana and brought him to his old home.

O death! thou awe-inspiring prince
That keepst the world in fear,
Why dost thou tear more blest ones hence,
And leave him lingering here?

'If I should ever send another, the subject will be a "Bear Hunt."
'Yours as ever
A. Lincoln.'

The other poem called the 'Bear Hunt' to which he refers in his second Johnston letter was printed in the *Atlantic Monthly* in February, 1925, with an introductory article by Charles T. White of the New York *Tribune*. This is the longest of all the poems of Lincoln, twenty-two stanzas in length.

A wild bear chase didst never see?
Then hast thou lived in vain—
Thy richest bump of glorious glee
Lies desert in thy brain.

When first my father settled here,
'Twas then the frontier line;
The panther's scream filled night with tear
And bears preyed on the swine.

But woe for bruin's short-lived fun
When rose the squealing cry;
Now man and horse, with dog and gun
For vengeance at him fly.

A sound of danger strikes his ear;
He gives the breeze a snuff;
Away he bounds, with little fear,
And seeks the tangled *rough*.

On press his foes, and reach the ground
Where's left his half-munched meal;
The dogs, in circles, scent around
And find his fresh-made trail.

With instant cry, away they dash,
And men as fast pursue;
O'er logs they leap, through water splash
And shout the brisk halloo.

Now to elude the eager pack
Bear shuns the open ground,
Through matted vines he shapes his track,
And runs it, round and round.

The tall, fleet cur, with deep-mouthed voice
Now speeds him, as the wind;

While half-grown pup, and short-legged fice
Are yelping far behind.

And fresh recruits are dropping in
To join the merry corps;
With yelp and yell, a mingled din—
The woods are in a roar—

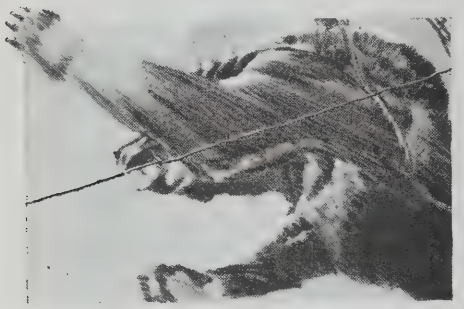
And round and round the chase now goes,
The world's alive with fun;
Nick Carter's horse his rider throws,
And Mose Hill drops his gun.

Now, sorely pressed, bear glances back,
And lolls his tired tongue,
When as, to force him from the track
An ambush on him sprung.

Across the glade he sweeps for flight,
And fully is in view—
The dogs, new fired by the sight
Their cry and speed renew.

The foremost ones now reach his rear;
He turns, they dash away,
And circling now the wrathful bear
They have him full at bay.

At top of speed the horsemen come,
All screaming in a row—
'Whoop!' 'Take him, Tiger!' 'Seize him, Drum!'
Bang—bang! the rifles go!



And furious now, the dogs he tears,
And crushes in his ire—
Wheels right and left, and upward rears,
With eyes of burning fire.

But leaden death is at his heart—
Vain all the strength he plies,
And, spouting blood from every part,
He reels, and sinks, and dies!

And now a dinsome clamor rose,—
'But who should have his skin?'
Who first draws blood, each hunter knows
This prize must always win.

But, who did this, and how to trace
What's true from what's a lie,—
Like lawyers in a murder case
They stoutly *argufy*.

Aforesaid fice, of blustering mood,
Behind, and quite forgot,
Just now emerging from the wood
Arrives upon the spot,

With grinning teeth, and up-turned hair
Brim-full of spunk and wrath,
He growls, and seizes on dead bear
And shakes for life and death—

And swells, as if his skin would tear,
And growls, and shakes again,
And swears, as plain as dog can swear
That he has won the skin!

Conceited whelp! we laugh at thee,
Nor mind that not a few
Of pompous, two-legged dogs there be
Conceited quite as you.

It goes without saying that none of this poetry of Abraham Lincoln had any literary value, but it is of value to us in connection with a study of what Lincoln considered poetry. He had a good ear for rhythm and his rhymes were accurate. Moreover his work was painstaking. His stanzas were in the familiar tetrameter and trimeter form. Lincoln would have called it common meter. Much common meter poetry is content with one rhyme in each stanza, the end of the second and fourth lines rhyming, but Lincoln almost without exception rhymed the first and third as well as the second and fourth. In all the forty-three stanzas of these three cantos there is only one exception to this rule. That is in the second stanza where he had a figure of speech that seemed to him so fine he sacrificed his rhyme to the figure!

'O Memory! thou midway world
'Twixt earth and paradise,
Where things decayed and loved ones lost
In dreamy shadows rise.'

He employed several figures of speech, similes and metaphors and they were rather well chosen.

Of course his rhymes followed his pronunciation. The verbs 'rear' and 'tear' rhyme with 'bear.' Most of Lincoln's neighbors would have said that 'the b'ar would r'ar and t'ar.' Lincoln pronounced 'bear' correctly, but the two verbs rhymed with this noun. Considering his pronunciation his rhymes were almost perfect.

This does not prove that Lincoln was in any true sense a poet. He was not, but he had some elements of the poet in his make-up. We do not know that he gratified his love for this form of expression in the composition of other jingles. So far as we are informed, this threefold attempt to ride Pegasus and go a-wooing of the Muses was his last. Lincoln was himself not much of a hunter. When a boy he shot a wild turkey with a rifle, but after that he never felt like pulling the trigger on wild game but he delivered with real zest and ardor the story of the bear hunt of which he must have been a witness.

Lincoln really hoped that his poems would be published and gave Johnston permission to publish them in a letter from which the following is quoted: 'I am not at all displeased with your proposal to publish the poetry, or doggerel, or whatever else it may be called, which I sent you. I consent that it may be done. Whether the prefatory remarks in my letter shall be published with the verses, I leave entirely to your discretion; but let names be suppressed by all means. I have not sufficient hope of the verses attracting any favorable notice to tempt me to risk being ridiculed for having written them.'

A moment's notice of the 'moral' of the third and longest of this trilogy may close this article. It relates to the 'fice.' A 'fice' is a small, nervous dog. The adjective applied to some meddlesome, irritable people, 'ficety' is an accurate description. A 'fice' is a valuable dog in hunting a bear, for he gives an irritating bark, and a quick snap, and is gone before the clumsy bear can strike, while a large dog is often killed by bruin. Still, it is a ridiculous sight, wh the bear is dead, to see the insignifica 'fice' approach, growl, seize the dead be and shake himself in an attempt to sha the carcass, and thus proclaim himself t dog that killed the bear. Lincoln had w nessed that trait in human life, and afforded him occasion for a rather saluta lesson in this mirthful form.

These 'poems' are not great literatu and I do not know that anyone has ev given them a worthier name than dogger But I think them rather better than dc gerel. And I am glad that the last a longest of them was not a poem of m ancholy.

Coin Collecting—a Neglected Hobby

(*Concluded from page 13*)

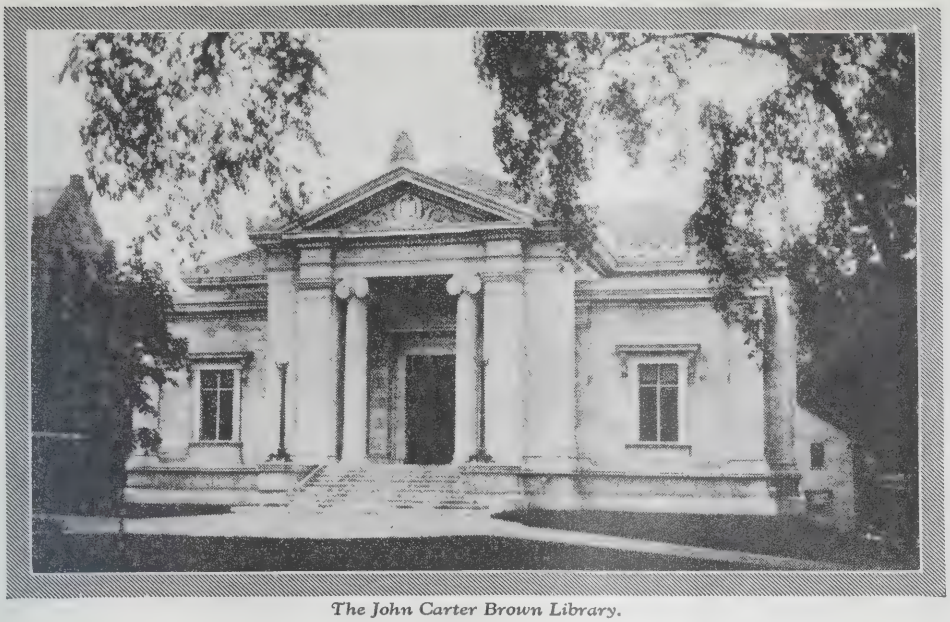
Through little-traveled byways the tr leads, possibly to a 'find,' but more often disappointment, because the layman h an exaggerated idea of the value of t old and thinks if he possesses a coin hundred years old it ought to be worth mint in new money.

I have followed the rumor of old coi to its lair, have interviewed reluct owners, who looked at me with cold su picion and took me for a highwayman wh I told them their treasures were worthl and refused even to make a bid for them.

A short time ago a farmer sent me registered package of coins to look ov but informed me that no offer for less th $500 would be acceptable, since some of t coins were so old that they did not ev have dates. After spending three or fo hours looking over the accumulation I c cided that if I offered to pay twenty-fi cents a pound for them I would be cheati myself. When I returned the coins, i cidentally at my own expense, positive refusing to buy any and informed the own of their real value, I received a letter return mail that expressed the opinion th I had studied under Captain Kidd or o of his brother pirates.

In another instance a gentleman i formed me that he had some coins which might sell if I bid enough for them. Sin he lived in another state, too far away get there on ten gallons of gas, I wrote h to send the coins for inspection. I receiv the reply that the collection consisted o silver dollar eighty years old and twen one-cent pieces almost a hundred years o but that he would not trust any man w them, no matter how well recommend suggesting, however, that I could come him and he *might* show them to me. decided that I would not further put h into temptation.

What is the lure of the little pieces paper called postage stamps? Why did wealthy collector of Utica send an age all the way to Paris simply to gain 'one-cent red' of British Guiana, 185 What prompted collectors to bid $20,0 then $30,000, then $32,000, finally $32,5 for this rarity? Facts like this indic philately's grip on the hearts and mir of kings and children, financiers a coal-heavers, all over the world. There fun, exercise and sometimes a little pro in coin and stamp collecting.



The John Carter Brown Library.

A Treasury of Books

The John Carter Brown Library

a

ut Nicholas
rown, his son,
es s to have had the makings of a real
ollector, for he got together no small
mount of the popular literature of his time,
no ly sermons, and his son, a third Nicholas,
eg n in his twenties to buy the classics and
te ture of the Old World, together with
or few books relating to America. But
ne grace of the older culture fascinated
in and the young collector decided to
ma e Italy his home. On departing, he
ol the American portion of his library
o s younger brother, John Carter.

When a very young man, John Carter
Br wn bought books of travel as they
pa ared in the booksellers' catalogs, and
no ed in their margin any reference to his
na ve state or its founder. And then, as
his study of the present leads to that of
the past, he began buying books like Anne
Bradstreet's *Tenth Muse, Lately Sprung up
in America,* or Ward's *Simple Cobbler of
Agawam,* until before long he discovered
that his chief interest lay in books relating
to America.

At Valencia there was a certain Obadiah
Rich, American consul and lover of books,
who occasionally would collect a trunk
full of old volumes and travel to London
visit them. He opened in London a book-
store of his own and issued a catalog of
books published on America for a hundred
years, beginning 1701.

Henry Stevens, of Vermont, seized the
Rich catalog as a cat pounces upon a mouse;
Mr Brown interleaved his copy, checked
off he books as he procured them, and on
blank pages added titles not included in
the list.

For Americana was becoming popular
as the world commenced to realize that the
new continent was a very considerable part
of it. A French scholar, Henri Terneaux,
working quietly and alone in his study, had
been surpassing both American and English
collectors, and, when his library came up for sale, Henry Stevens, of Vermont, was on the spot to secure for John Carter Brown some of the most important items.

This was a big gain for the Americana at Providence. All the great rival collections, except one, were dispersed at auction or became part of public libraries. James Lenox, of New York, continued to be the *bete noire,* and, at his death, the Lenox collection, now belonging to the New York Public Library, surpassed, in some important features, the Brown Americana.

Yet it was a fair and loyal rivalry, without personal animosity. Mr. Lenox was a friend of Mr. Brown, and his neighbor at Newport during the summer. Winters he enjoyed the advantages of a direct European mail from New York, and Mr. Brown was sometimes put to it to overcome this handicap.

Once, when he was at Saratoga, a catalog reached him, offering for sale the only known copy of the Dutch Vespuccius. Mr. Lenox had doubtless received that same catalog a day earlier, and quite likely his order was now on the Atlantic. Mr. Brown got in touch with a friend in New York who sent a cable to Amsterdam, and procured the book.

Henry Stevens, of Vermont, served also as European agent for Mr. Lenox and he sometimes had a difficult time of it between the two. On one occasion he purchased for Mr. Brown the only known perfect copy of the Pictorial Columbus, for which Mr. Lenox had sent in a bid. Now it happened that this was the very book that Mr. Lenox felt he could never have another happy day without, and, as a technical question arose as to which bidder it should go, Mr. Brown generously relinquished it. It was fifty years before another copy came on the market. Then Mr. Brown's son bought it and the gap in the collection was filled.

Many of the books could tell a story of their lives as strange as the adventures recorded in their pages. There is the only known perfect copy of the *Libretto,* giving the account of Columbus' third voyage, bought by a Florentine bookseller from a peasant and offered to the library by cable. There is a book bearing the queer, symbolic signature (although there is some possibility of its being a forgery) of Columbus, and another which belonged to his son, with his signature and record of his library. There are the books of the unhappy Maximilian, Emperor of Mexico, the confidential letters of George Washington, and, with a curious human interest, his personal cashbook with entries up to a week or so before he died.

And the library itself, with all its strange and awesome books which it would seem no one in the world could read, is a very human place.

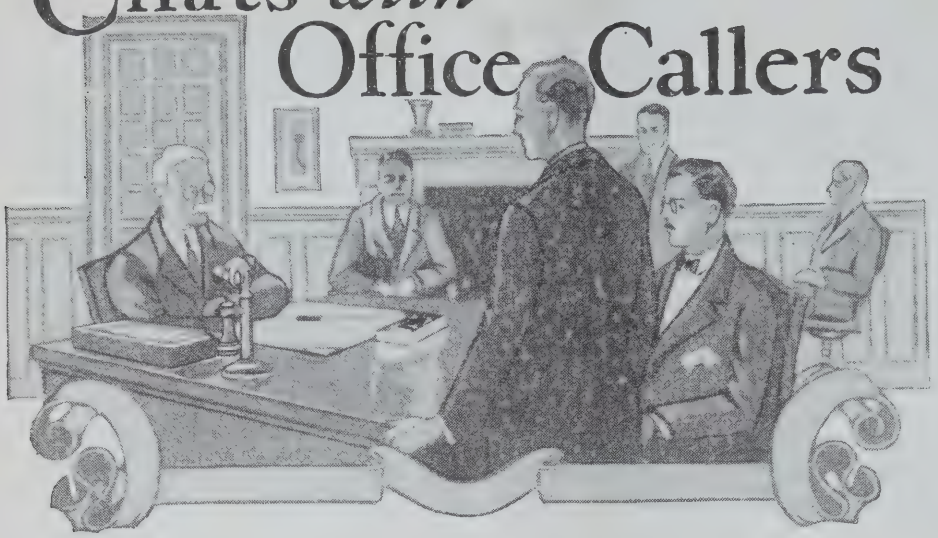
Pictures tell their story through the centuries more simply than do words, and the section of a Ptolemaic maps is most fascinating. There is the Old World atlas of 1472 with which Columbus was doubtless familiar, the atlas prepared by Agnesis at the command of Charles V, Holy Roman Emperor, for his son, Philip II, and the Waldsmüller Cosmographic Introduction with its notable suggestion that as both Europe and Asia were named for women, it was time mere man had a chance.

Champlain has left us a beautiful manuscript now in the John Carter Brown Library with plentiful illustrations drawn and colored by his own hand. In it we get some idea of how the new continent in all its pristine freshness looked to eyes fired with imagination and wonder of what the new discoveries might mean. In the same way the Bay Psalm Book, the first work of printing in the New World, shows us the religious fervor of the colonists and their starved desire for poetry.

With all its atrocious rhymes and horribly contorted phrases, it was so well loved that practically the whole edition was worn to shreds.

The copy in the John Carter Brown collection belonged to Richard Mather himself, the principal composer of the book, and, among bibliophiles, it is considered a treasure indeed.

Chats *with* Office Callers



From Maysville, Kentucky, comes a letter submitting an article on Clemenceau as the most remarkable of great men in the historical record because he retains his faculties at the age of eighty-five . . . But there have been others. What of Sophocles and of Humboldt and of Michelangelo who were going strong when they died at the age of ninety? What of Fabre? What of Hobbes who died when 92? And Diogenes, at 91? And Franklin, and Watt, and Talleyrand, and Herschel, at 84? And Hugo and Goethe, at 86? And Newton, at 80? And Buffon and Palmerston, at 81? And Galileo and Beranger, at 78?

❦ ❦ ❦

'To get more black flies in Greenland,' said ***the Geologist*** recently returned from the Arctic, 'it will be necessary to make the flies smaller. Throughout our entire inland trip it was necessary to wear head nets at all times. The mosquitoes seemed to disappear early in August, and I am quite willing to believe that the black flies crowded them out. . . . . But if the insects are unfriendly the Eskimos are decidedly the opposite. The Danish Government has been at pains to educate them and at the same time help them to retain their ancient customs. Schools have been established in which Eskimos are the teachers and lessons are given in their native tongue. If a native desires to learn Danish he will be taught the language, but no effort is made to cram such unwanted knowledge down his throat. As a result of this and other wise governmental moves on the part of Denmark, the Eskimos of Greenland are a happy, honest people, peaceful and on friendly terms with their governors and white visitors.

'We noticed particularly the absolute honesty of the Greenland native. Probably because the struggle for existence is acute within the arctic circle, their earliest traditions make personal property inviolable, and we were able in utmost safety to leave any part of our equipment in the open and unguarded over long periods. No Eskimo will touch an article which does not belong to him without the owner's approbation—something left on the ground is considered cached and is therefore taboo.'

The talk fell on archeological discoveries, lost civilizations and conquest, one day. ***The Explorer,*** who seemed to have been everywhere, and the man who seemed to have read everything relating to discoveries regarded ***the Book Reviewer*** with a certain astonishment. For the Reviewer was a man who liked his game and took things seriously. And he was full of Henry Dwight Sedgwick's book on Cortes the Conqueror, holding with his author that Cortes stood on a high plane as hero and civilization maker.

❦ ❦ ❦

The Explorer demurred. He pointed to the existence of monoliths, and to evidences of Aztec and Peruvian culture, and to recent archeological discoveries, and to the Maya calendar stones, saying that they gave abundant evidence of civilizations which had been wiped out by Spanish conquerors. He held that there had been destructive waves when martial people swept down upon quiet and unoffensive people, wiping out that which promised to grow into a civilization, and destroying ethical systems.

❦ ❦ ❦

The Bookman was full of facts. He held that the purpose of the Spanish conquerors under Cortes and Pizarro was no different from the purposes of pirates and buccaneers. To conquer and to destroy, to enslave, to enrich themselves at any cost, were their aims. They brought, not order, he held, but disorder, unrest, destruction. The governments for which they fought were seats of foul forms of corruption. And Spain and Portugal died as world powers because there was nothing behind their pushings forward but the greed for gold. For social and moral improvement they cared nothing. The pretence of religion was a cloak to cover the nakedness of bare spoliation.

❦ ❦ ❦

The Poet contended that the translator of poetry could either alter the original material so that it would become a native thing; or, retaining the original, must create a new dialect, as it were.

Somehow, that remark evoked no excit ment, perhaps because a man who had be to the American Library Association at i annual meeting in Atlantic City came i He had a mission, and it was to persua people to read aloud in the family circ The lady from Tulsa, Oklahoma, want to know the titles of books which we suited for both old and young. So ***th Librarian*** named these:

Ruskin's *King of the Golden River.*
Haggard's *King Solomon's Mines.*
Carroll's *Alice in Wonderland.*
Irving's *Knickerbocker's History of N York.*
Stevenson's *Treasure Island* and *Bla Arrow.*

Thus the talk swung back to a form one. But the Librarian declared it was important subject, and wanted expressio from readers of THE DEARBORN INDEPEN ENT. So please write, care of Office Cha

❦ ❦ ❦

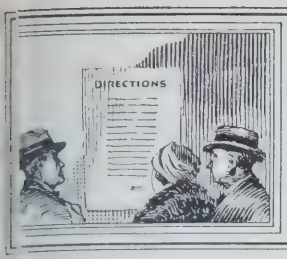
But the prize for odd things told goes ***the Old Railroad Man*** who spoke early pioneer conditions in the Wa Walla valley when the line which is n the Walla Walla branch of the Northe Pacific railway was first laid down. places, the roadbed was made of rawhid and beams were used instead of rails. F transit, the locating engineers used whisky flask half filled with water. Grad and scrapers were handmade, and a tea of forty oxen pulled them. Instead pilot, the engine carried a platform, a hounds to chase wandering cattle rode on Operation ceased during a hard winter, wolves ate the rawhides.

❦ ❦ ❦

Then there was ***the Dog Lover*** w had tales to tell of the intelligence of pets, and who wanted to try a kind evolutionary experiment as suggested Galton thus: 'It would be an interesti occupation for a country philosopher pick up the cleverest dogs he could hear and mate them together, generation af generation, breeding purely for intellect power, and disregarding shape, size a every other quality.' He foresaw a sup dog. But the man with him foresaw n trouble, with his super-dog conscientiou believing man to be inconvenient and deterrent to canine liberty.

❦ ❦ ❦

Talking of faultfinders with the tim ***the Historian*** from Columbus, O said that the breed had always exist He spoke of Hollinshed's *Chronicles,* p lished in 1577, which contained a compla that too many chimneys were being bu that mattresses were being used instead straw pallets, hence people were grow softer and more feeble. Also, he said, in Middle Ages shirts were denounced luxuries, and men were pilloried for we ing them. Voltaire, in his day, declared t England had reached the pinnacle of pr perity and no further advancement possible. Xenophon spoke of the effemin Persians who actually used gloves to p tect their hands. The first man to carry umbrella (Jonas Hanway) in England hooted on the streets for his cowardice.



Can You Tell Me?

QUESTION: Will you give me the meaning of the names of the states in the United States?

ANSWER: Following is a list such as you request, giving the generally accepted meanings of our state names:

Alabama, Indian; 'here we rest.'

Arizona, Aztec; 'silver bearing.'

Arkansas, 'Kansas,' the Indian name for 'smoky water,' with the French prefix 'Ar,' bow or bend in the principal river.

California, *caliente forno*, Spanish for 'hot furnace,' in allusion to the climate.

Colorado, Spanish; meaning 'colored,' from the red color of the Colorado River.

Connecticut, Indian; 'long river.'

Delaware, named in honor of Lord De la ware.

Florida, named by Ponce de Leon, who discovered it in 1512, on Easter Day, the Spanish *Pascua de Flores*, or 'Feast of Flowers.'

Georgia, in honor of George II of England.

Idaho, Indian; meaning unknown.

Illinois, from the Indian 'illini,' men, and the French suffix 'ois,' together signifying 'tribe of men.'

Indiana, Indian land.

Iowa, Indian; 'beautiful land.'

Kansas, Indian; 'smoky water.'

Kentucky, Indian; for 'at the head of the river'; or 'the dark and bloody ground.'

Louisiana, for Louis XIV of France.

Maine, from the province of Maine, in France.

Maryland, for Henrietta Maria, queen of Charles I of England.

Massachusetts, place of great hills (the hills southwest of Boston).

Michigan, the Indian name for a fish weir. The lake was so called from the fancied resemblance of the lake to a fish trap.

Minnesota, Indian; meaning 'sky-tinted water.'

Mississippi, Indian; meaning 'great father of waters.'

Missouri, Indian; meaning 'muddy.'

Montana, Latin; 'mountainous region.'

Nebraska, Indian; meaning 'water valley.'

Nevada, Spanish; meaning 'snow-covered,' alluding to the mountains.

New Hampshire, from Hampshire County, England.

New Jersey, in honor of Sir George Cateret, one of the original grantees, who had previously been governor of Jersey Island.

New Mexico, from old Mexico.

New York, in honor of the Duke of York.

North and South Carolina, originally called Carolina, in honor of Charles IX of France.

North and South Dakota, Sioux Indian; 'Lkota,' 'Nakota,' or 'Dakota'; 'allies.'

Ohio, Indian; 'beautiful river.'

Oklahoma, Indian; 'red people.'

Oregon, from the Spanish 'oregano,' wild marjoram, which grows abundantly on the coast.

Pennsylvania, Latin; meaning Penn's woody land.

Rhode Island, from a fancied resemblance to the island of Rhodes in the Mediterranean.

Tennessee, Indian; meaning 'river with the great bend.'

Texas, origin of this name is unknown.

Utah, Ute Indian; meaning unknown.

Vermont, French; green mountain.

Virginia, in honor of Elizabeth, the 'Virgin Queen.'

Washington, from George Washington.

West Virginia, former western part of Virginia.

Wisconsin, Indian; 'gathering of the waters,' or 'wild rushing channel.'

Wyoming, Indian; 'large plains.'

QUESTION: I would like to know if Benedict Crowell ever served as Secretary of War?

ANSWER: Benedict Crowell was Assistant Secretary of War while Newton D. Baker was Secretary of War, and may have served as Acting Secretary of War in Baker's absence, but was never official Secretary of War.

QUESTION: Will you advise to whom to write for personal attention in regard to pensions or World-War adjustments, with effective results, as to the merits of each case?

ANSWER: Write to the United States Veteran's Bureau, Washington, D. C., or to the Congressman from your district, House of Representatives, Washington, D. C.

In this department we shall do our best to answer questions concerning Government and kindred matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

QUESTION: On what date did Newton D. Baker take office as Secretary of War in Wilson's Cabinet?

ANSWER: March 9, 1916.

QUESTION: When did Joshua W. Alexander take office as Secretary of Commerce?

ANSWER: Joshua W. Alexander was Secretary of Commerce from December 16, 1919, to March 4, 1921.

QUESTION: In a recent issue of 'Questions and Answers' THE DEARBORN INDEPENDENT answered a question as to what was meant by the caliber of a navy gun. Several of our correspondents took exception to our reply. This answer in the first place was furnished us by the Navy Department. Upon referring the criticisms to them we received the following reply:

ANSWER: 'Perhaps the definition in THE DEARBORN INDEPENDENT was not sufficiently clear, but even so the correspondents who have written THE DEARBORN INDEPENDENT are wrong, as they infer that the caliber of a gun is the length of a gun in relation to the diameter of the bore. To be exact, the length of the bore of a gun is measured in terms of the caliber. For instance, the bore of a fifty caliber twelve-inch gun is fifty feet long. The entire gun will measure from three to five calibers longer inasmuch as in the rear of the bore is the chamber which varies in length in different types of naval guns.'

QUESTION: Please tell me where I can secure a complete list of the publications issued by the government, and how can I secure the *Congressional Record?*

ANSWER: The Government Printing Office, Washington, D. C., will send a list of publications on request; also the *Congressional Record.*

QUESTION: How long did J. W. Anderson act as Secretary of Commerce, before Joshua Alexander took office?

ANSWER: There is no record of J. W. Anderson ever having served as Secretary of Commerce.

QUESTION: Some time ago, I read of a Congressional Committee being appointed to investigate oil and gasoline prices. I have not noticed any reports of their findings. Has the investigation been abandoned or will they report this coming session of Congress?

ANSWER: The Federal Trade Commission is still investigating this matter. They hope to finish their report in time to submit it at the next session of Congress.

QUESTION: What are the salaries of Representatives and Senators of the United States?

ANSWER: $10,000 a year.

QUESTION: Is President Coolidge serving a second term?

ANSWER: Coolidge became President at the death of President Harding in 1923, and served the remainder of his term, but he has been elected President by the people only once. Coolidge is in the same situation as was Roosevelt in this respect. Technically, Roosevelt was not elected for two terms, but the people accepted it as two terms and refused to elect him for what they considered a third.

I Read in the Papers

Gilbert K. Chesterton scores another bull's-eye in his readable magazine, *G. K's Weekly*. This time he draws a comparison between 'secret diplomacy' and 'secret democracy.' He writes: 'You may have secret diplomacy; you cannot have secret democracy. Democracy is dead without information. If the people are misinformed about the main facts, we cannot even say that they vote wrong, but rather that they do not vote at all. At best they are voting about something else; something that does not exist. The old defenders of democracy never dreamed of defending this sort of democracy. They assumed that public affairs would be public. They had not foreseen the rise of two things, the dominant things of our own time. The first is the financier who remains entirely unknown; and the second is his servant or debtor, with an "organ of opinion," who decides for everybody what shall be unknown and what known. Till these two monopolies are broken, the whole notion of the citizen is nonsense; and some rude reaction may at any moment sweep it away.'

Chesterton on 'Secret Democracy'

'In Brazil no educated man gets drunk,' affirms a visitor from that country. Brazil's educational system is worth studying.—Buffalo *News*.

ɛ ɛ ɛ

Here's a case of many marriages. Cross the border of the state of Chiapas, Mexico, and whether you can produce a certificate of marriage or not, you are compelled by law to marry again if your wife is with you; also to pay the customary fee. So the National Railway of Mexico has petitioned the government to change matters, as passengers routed that way find many marriages a tax upon the pocketbook. The petition might have carried the old Dutch proverb: To marry once is a duty, twice a folly, thrice madness.

Marriage and a Railroad

We don't believe gasoline is only four cents a gallon in Berlin, but if it is, that settles the question as to who won the war.—Philadelphia *Inquirer*.

ɛ ɛ ɛ

And here is the ex-Kaiser out with the opening chapter of his memoirs in the London *Spectator*. The core of his first installment might be summed up in this passage. 'The memory of any child born in Berlin must be tinged with a military color.' For there you have the mainspring. The child ruler was dressed in a uniform, armies were his toys, military titles his pleasure. And a child's mind is susceptible of impressions. A child's mind is like a sensitive photographic film, and what is printed stays. And for the child Kaiser, Arms and Force were the high and holy things. So wise men will denounce all that stupidity of warping, avoiding any of that kind of fertilization of young soil in their own cases. Like begets like. You can't make an arrow out of a pig's tail, says an old Irish saw.

War Warping the Child Mind

For three hundred years the English people have been trying to decide what to call their neighbors north of the river Tweed. Are they to be known as Scots, Scotch or Scottish? When the Government ruled that 'The Scotch Education Office is in future to be styled the Scottish Education Office,' there was more confusion. Sir James Barrie says in *What Every Woman Knows:* 'Have you forgotten the grandest moral attribute of a Scotsman, Margaret, that he'll do nothing which might damage his career?' Then Burns, with his *Scots Wha Hae Wi Wallace Bled* supports the preference for Scots, although he used the adjective Scotch to some extent. Sir Walter Scott relates that King George IV once said that 'The Scotch are a nation of Gentlemen.' Dr. Samuel Johnson said, 'The noblest prospect that a Scotchman ever sees is the high road that leads him to England,' but then he was not an authority on Scotland. In the case of Sir Walter Scott, however, he in his earlier writi used the term Scot, Scottish and Sco quite impartially, but later in his ca seldom used the word 'Scotch.' Howe one of his earliest published works was *Minstrelsy of the Scottish Border*. Scotl derived its name from the tribe of Sc or Scoti, who came from the north of land, and acquired a dominating influe over the Picts, the original inhabitants the country. St. Columba, the apostle the Picts, was himself a Scot from Irela

An excellent description of a typ Chinese brigand is given by Mrs. Male King in *The English Review*. The described is Chou, merly one of Wu fu's lieutenants. 'The general apparently deligh to see them,' King says, 'and asked a lot of amu questions, evidently deeply curious a foreign ways. He had none of the s stiffness of the educated Chinese, an was therefore possible to get a better of his character as a man. Although washed, his delicately cut features exquisite long fingers gave him the pearance of fine quality that so many of Chinese possess, and about his eyes and head he had that touch of asceticism inherent culture noticeable in some of temple priests. In reality he was a da soldier of fortune with but one absor aim, the desire for wealth. For this he carelessly ran enormous risks, kno full well that, if he failed, the Chili lord, Wu Pei-fu, who had been his fo commander-in-chief, would without a ment's hesitation have him beheaded. told his visitors frankly that his amb was to amass sufficient riches to enable to slip quietly down the great river to Sh hai, and there, in the safety of internati protection, enjoy cinemas and thea and contact with foreign life. With end in view, no doubt, his men were a rifling the mint, and as the two white were getting into their chairs, a strin coolies passed, bearing heavy wooden full of cash.'

MR. FORD'S Page this week discusses the benefits that will derive to the church from the five-day week.

From Stewart Gilman, Mayor of Sioux City, Iowa, comes a vigorous plaint concerning the article, 'The Bond Orgy of the States,' which was one of a series on taxation recently published.

I notice in your issue of October 9th, an article on Page 2, containing a statement that Sioux City, Iowa, has a population of 75,000 and an indebtedness of $2,000,000.

This statement is correct, but why pick on Sioux City and give us unfavorable advertising when there are other places which are much smaller which have a larger debt and other places which are quite a bit larger, that have a debt that is enormously more per capita?

Sioux City's population is approximately 85,000 and its debt is approximately $2,300,000, it having been decreased $200,000 since 1924.

Des Moines, which has a population in the neighborhood of 130,000, has an indebtedness of $10,766,000 and that has increased $102,000 since 1924.

The indebtedness of Dubuque, which has a population of about half that of Sioux City, is $2,457,000 and increased $44,000.

The population of Waterloo is 40,000 with an indebtedness of $2,108,000.

These figures that I am giving you are taken from a Report Municipal Accounts Iowa, issued by the Auditor of State for the year 1925.

I certainly object very much to the kind of advertising that appears in this article. The present administration has been reducing the indebtedness of this city, not increasing it and our indebtedness is very much below the average.

I do not know who this man Crowther is who wrote this article, but if he knows anything about his subject, he ought to pick out some other city beside a city which has one of the lowest per capita debts of any city of its size in the country, and the least that your magazine can do is to publish some sort of a statement which will correct this impression.

This administration has been reducing the indebtedness of the city and I certainly feel that such a statement as the one contained in THE DEARBORN INDEPENDENT of October 9th, is absolutely unfair and uncalled for.

Stewart Gilman, Mayor.

Had Mayor Gilman consulted *Who's Who* he would have discovered that 'this man Crowther' (Samuel Crowther) is the author of numerous authoritative magazine articles and books.

A. M. SOMMERVILLE STORY, noted British war correspondent and writer, was formerly editor of the *Continental Daily Mail* and president of the Anglo-American Press Association of Paris. He is the author of several books. (p. 3)

WILLIAM E. BARTON is probably the outstanding Lincoln biographer of the day, his *Life of Lincoln* being regarded as standard. His articles on Lincoln as a poet are the result of exhaustive research. (p. 4)

GWLAD MATTHEWS recently passed six months in Palestine, Syria and Egypt, studying conditions in those countries. (p. 6)

LADY CYNTHIA ASQUITH is the wife of Herbert Asquith, son of the Earl of Oxford and stepson of Margot Asquith. Her parents are the Earl and Countess of Wemyss. (p. 8)

J. BRECKENRIDGE ELLIS is the author of *Fran, Little Fiddler of the Ozarks, Agnes of the Bad Lands, The Picture on the Wall* and other fiction. His home is in Missouri. (p. 12)

WESTERN STARR is an attorney who has made a special study of current legislation. (p. 14)

THOMAS L. MASSON, former managing editor of *Life*, now associate editor of the *Saturday Evening Post*, once wrote a play which lasted three days on Broadway. He therefore feels himself eminently qualified to discuss dramatic critics. (p. 16)

GEORGE F. PAUL is a Chicago writer. (p. 20)

Widely divergent views of the A. E. F. court-martial system are held by DEARBORN INDEPENDENT readers. Here are two typical letters, one from a brigadier general who is president of the Reserve Officers' Association of the United States, the other from a former private:

I have read with interest the article entitled, "Our Court Martial System" by James W. Beckman, which were published in THE DEARBORN INDEPENDENT September 4, 11 and 18, 1926. I must say that I am not in sympathy with Mr. Beckman's unjust criticisms of the Army Court Martial system.

Many of my old associates of the A. E. F., who are now in civil life, agree with me that these articles are of a vindictive nature, misleading, and do not give an accurate picture of the court martial system as was conducted in the A. E. F. and is now conducted in our Army.

Every one realizes the high standard of THE DEARBORN INDEPENDENT and its fearless stand for truth and justice, and I do not believe you would permit the publication of these articles if you realized they misrepresented the facts and were erroneous. In order that the public may have all the facts regarding this important matter I would like to suggest that you send a representative to interview the War Department with a view to correcting any erroneous statements or inferences which may have resulted from the publication of these articles.

Roy Hoffman
—Brigadier General, Infantry Reserve.

Where did that ex-private of the American Expeditionary Forces serve who criticized your A. E. F. court martial piece as bunk. Personally I doubt if there was a company of boys over there some of whom could not point direct at work of similar nature—in varying degrees—to the un-American work you have pictured. I agree with him that your magazine used to be good, and add that it is improving continually. The worst criticism I have for THE DEARBORN INDEPENDENT is that it should be a daily rather than a weekly.

—A Buckeye A. E. F.
Ex-Buddy.

In next week's issue Carl Sandburg will discuss a letter written ninety years ago describing Abraham Lincoln as a country postmaster. The two-thirds rule of the Democratic Party will be analyzed by Aaron Hardy Ulm.

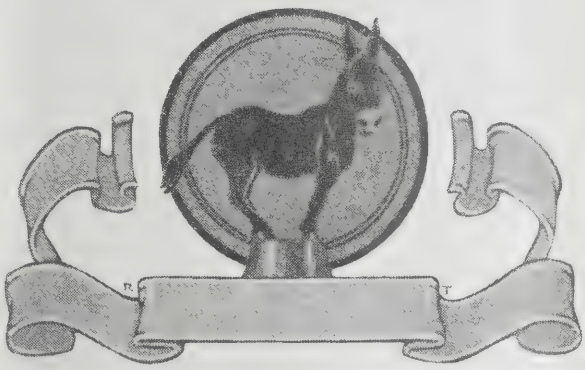
The Destiny of the Democratic Party

Hinges Largely Upon the Two-Thirds Rule

By AARON HARDY ULM



POLITICAL events of the next several years may turn in great part on a phrase. It is the 'two-thirds rule,' which now looms bigger in Democratic Party affairs than do all the names of prospective candidates for that party's nomination for President. For the character of the nomination, with the chance of its being a winning one, is apt to depend on what is done about a phrase that has had much to do with shaping the history of the Democratic Party and the country. The substitution of 'majority' for 'two-thirds' in the Democratic convention rule governing nominations will make the outlook much brighter for some aspirants and much less hopeful for others. Will the change be made? History says, 'No.' This isn't because all the argument is against abandoning the old rule. Logic really has little to do with it.

DURING its nearly century-long prevalence the 'two-thirds rule' has never been adjudged on merit by a Democratic convention. It is one of the curious stories of politics; also one which illustrates the significance of parliamentary law and the enduring effect, sometimes, of political stratagems.

But for the two-thirds rule, the Democratic Party probably would not have gone to pieces, and thus precipitated the Civil War, in 1860. And but for the rule the Madison Square Garden Convention of 1924 would not have become the biggest joke in the political history of the country. Also, because of the rule the Democratic Party may have been saved from nominating some man whom those doing the selecting really did not want.

Yet from its inception the two-thirds rule has been mostly a political stratagem, always favored by those to whom at the moment it gives advantage.

It was as a stratagem that the rule was adopted by the first Democratic National Convention in 1832. Its origin goes back to one of the few old-world kind of intrigues that have figured in the politics of this country.

Back in the early 1830's, when Andrew Jackson was President, official life in Washington was split apart by a controversy about a woman, the famous Peggy O'Neil, daughter of an innkeeper, who became the wife of a member of Jackson's Cabinet. The wives of several members of the Cabinet refused to receive her socially. Chivalrous Andrew Jackson took her side of the dispute. This started the split between Jackson and Calhoun, the latter being Vice-President. Martin Van Buren became a high favorite of Jackson's because of his standing with the President in the Peggy O'Neil controversy.

Other things, such as Calhoun's doctrine of nullification, widened the split. Jackson wanted Van Buren to be his running mate in 1832. Southern Democrats were for Calhoun.

It was settled that the convention which was to nominate candidates would be unanimous for Jackson, which gave the President much influence in the conduct of its affairs.

'Have the convention require a two-thirds vote for the nomination of a candidate for Vice-President,' he was advised by his 'kitchen cabinet,' probably by Van Buren, a clever political strategist.

It is believed that Calhoun was really stronger in the convention than Van Buren. But his supporters, knowing that Calhoun could not command the votes of two-thirds of the delegates, gave up the fight for him when the rule was adopted. Van Buren was named by almost unanimous vote.

After that the rule was applied to the nomination of candidates for both the Presidency and the Vice-Presidency; in 1844 it kept Van Buren from being put forth a third time for President. The man who probably invented it would have been glad to have seen it abandoned at that time. It had much to do with bringing forth the first of the 'dark horses' to win in a national convention. This was James K. Polk, of Tennessee.

Since then the rule has been attacked in nearly all the national conventions of the Democratic Party, but in none has it ever been set aside.

It was attacked even in the convention of 1836, when Van Buren was first nominated for President, the occasion being a fight over the vice-presidential nomination. *(Continued on page 20)*

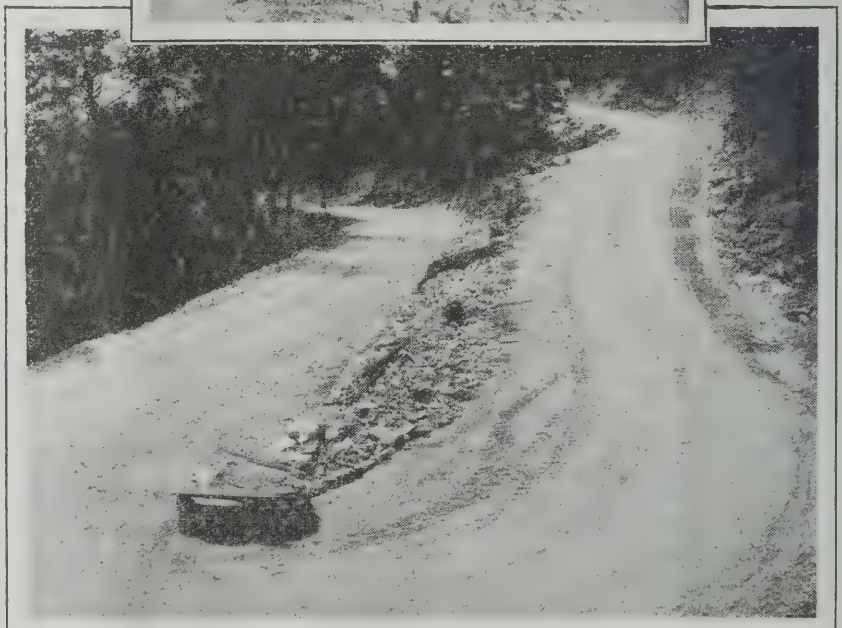
Pay-as-You-Go in Building Good Road

Tennessee Constructs Its Highways With Funds From Current Revenu

By CHARLES ALBERT COLLMAN

IN THE historic past, many a Southern state has had unfortunate acquaintanceship with bond issues, those vast overheads of high interest charges and maturing principals which it is the province of financiers to devise, but which lie heavy and burdensome on agricultural communities. The awakened and progressive South, however, is trying to keep herself free from this incubus, at the same time meeting the demands of modern industrial life.

In the revolutionary improvements that are under way in the South, Georgia and Tennessee are conspicuous in attempting to keep abreast of the times by paying their way from current revenues. Tennessee, especially, has in progress of development a system of public highways so financed that the burden of expenditures shall not fall upon the farmers of the state. It is comparatively few years ago that the touring bureaus in other states were rating Tennessee as a 'detour state,' and visitors and home folk were berating the road conditions there. Taxpayers were growing impatient, and non-motorists as well as owners of automobiles aired their dissatisfaction. Tennessee, with other Southern states, is a large contributor to tourist travel toward Florida. Yet passable as well as paved roads were needed. Barriers of mud and rock separated the more progressive or more fortunate counties from those not so well situated, and although quite often there were miles of well-built asphalt or bituminous macadam, still many were the complaints that no through routes could be used. Other states were progressing steadily with immense construction programs, while Tennessee was apparently in a state of tension, with no well-defined goal in sight. Besides, there w serious financial difficulties, a whatever forward work v taking place was lost sight of the enormous task that ahead.



Hairpin turns on improved road in the Clinch Mountains, Tennessee. This forms part of an important tourist route running through Kentucky and into North Carolina. Above—Average Tennessee road, before constructive maintenance.

Today, after the adoption f her pay-as-you-go plan, Tenn see confidently feels that s can repudiate the old-time st ma of being a detour state. T public has made its compariso and when the motorist h Tennessee roads, he gives a si of relief and steps on the g There are 4,900 miles of smoo roads on which he can drive t the legal speed limit and he m have no fear that when he h outrun a stretch of state ro he may hit some country ro filled with potholes and ru Instead, he strikes a pathway f smooth gravel or bitumino macadam.

The latter type of constr tion comprises the largest mi age of high-class pavement the state, the longest continuo roadway of this sort runni from the Davidson County li through Murfreesboro, Woo bury, McMinnville to the Cu berland County line. Build of this pavement, under t standard road specifications, quires material passing a tw inch screen and no more th eighty-five per c passing the one-in screen, using a gal and a half of bi minous material square yard for pe tration, with or fourth gallon p square yard as a s coat. The specifi tions require that amount of bitu nous material sh not exceed one a three-fourths gall per square yard a not be less than and one-half gall per square yard.

Tennessee's g roads' program w initiated in 19 when the Depa ment of Highw and Public Wo began to functi under the mana

The Rise of Mustapha Kemal Pasha

By GEORGE A. SCHREINER

The president of the Turkish Republic, Mustapha Kemal Pasha, on his famous war horse. The map below shows the situation of the Gallipoli territory which he held against Allied attack. He has moved the capital from Constantinople to Angora.

—Publishers' Photo Service.

OF THE men whom the World War and its aftermath landed at the top of their own particular political heap, Mustapha Kemal Pasha, now president of the Turkish Republic, is easily the most interesting—in the sense that he is no arriviste. I am probably the first who ever mentioned Mustapha Kemal in print. The occasion of this was a quite remarkable military exploit. Colonel Mustapha Kemal Bey was a humble infantry officer in those days—a slight and sprightly chap of Tartar make-up who had just ceased being a major and who had given not the least promise that some day he would have a star of his own. Colonel Mustapha Kemal would have needed the qualities of a prophet to say that he would ever be more than a general in the Ottoman army. The old régime of the Sultans sat tightly enough on the Bosphorus.

No one even as much as dreamed that things in Turkey would ever change, and Colonel Mustapha Kemal probably would have doubted his own sanity had the thought come to him that a few years later he would be the head of a Turkish Republic. Though the Young Turks had put an end to Abd-ul-Hamid, they were in the main loyal to the sultanate and the caliphate. Mohammed Réchad Khan V was a very nice rubber stamp for Talaat Bey and Enver Pasha. It was a very convenient scheme that nobody dreamed of upsetting, and Mustapha Kemal, with the ink on his colonel's commission hardly dry, had no reason to think anything ahead of him but a more or less successful career in the army.

About a year before the outbreak of the European War, Enver Pasha cashiered some 5,000 Ottoman army officers.

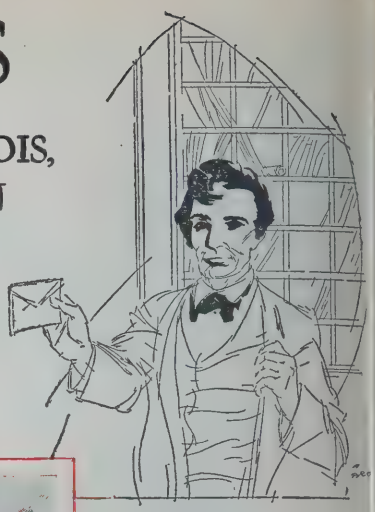
Many of them were superannuated; some of them were too much attached to the Hamidian régime—all of them were considered incompetent. That left ample room for the new blood, but when Turkey finally decided to fight on the side of the Central Powers it was found that young field officers are not necessarily good unit commanders.

On March 25, 1915, General Liman von Sanders Pasha, head of the German military mission to Turkey, was put in command of the Ottoman Fifth Army, charged with the defense of Gallipoli. In his attempts at organizing this force properly, he was hampered by the lack of competent division commanders. Colonel Mustapha Kemal looked likely to him and was put in command of the Nineteenth Division. In the main, Liman Pasha was lucky in his appointments; in none more so than in that of Mustapha Kemal.

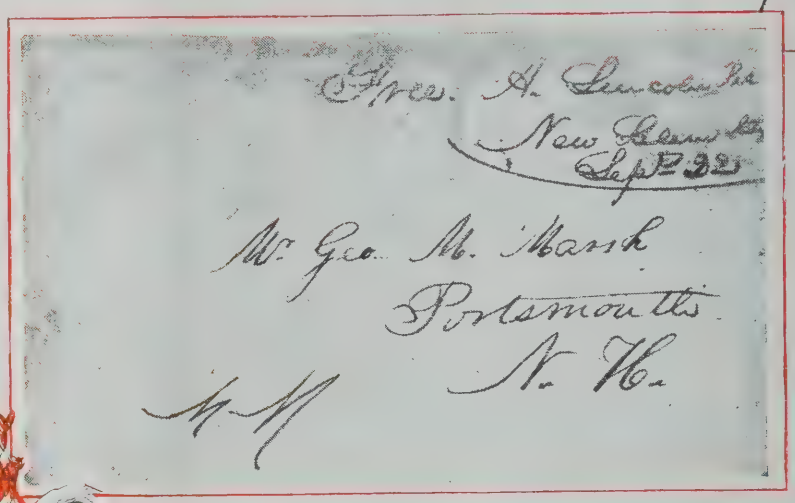
April 25, 1915, proved a hard and disappointing day to the troops under Sir Ian Hamilton, (*Concluded on page 24*)

LETTER *to the* FOLKS

Written by MATTHEW S. MARSH, *of* NEW SALEM, ILLINOIS, *in 1834, and Franked by the Postmaster*, A. LINCOLN



An Hitherto Unpublished Manuscript Now Made Known from the Collection of OLIVER R. BARRETT, with Prefatory and Terminal Notes by CARL SANDBURG, to which is appended a Facsimile of an Envelope Addressed and Franked by the Postmaster, A. LINCOLN.



PREFATORY NOTE

THE site of the little vanished town of New Salem is now a haunt of pilgrims. They ride to it as if, in a true sense, it might be some manner of a Nazareth of the political life of America. It is one of the rare and few hamlets of the earth that once hummed and buzzed with human life and traffic, that in time became empty of its human casuals, and that later in another time, because of the rooted and pregnant memories fixed about it, was restored in almost its original form, stick on stick and stone on stone, as once long ago it had stood.

For those who know somewhat of Abraham Lincoln, for those familiar with the established facts of the Lincoln legend, it is easy to drift into sentiment about New Salem. This because the town was the place where he lived seven years or so just after he turned twenty-one years of age. 'New Salem was Lincoln's Alma Mater,' some have said.

Here he met people who influenced him, touched his character in a time when he was forming habits that would stay and would linger deep in him.

Therefore those who wish to know Lincoln and the human society from which Lincoln emerged are ready to look at any new item of information or evidence that has to do with New Salem essentially and Lincoln incidentally, as is the case with the 2,409-word letter, which is lifted from its sleepy oblivion of ninety-one years.

One might embark in a long thesis on the Lincoln connections from its historical connections this letter, with its own peculiar and forthright frankness tells a fragmentary love story, as fresh as if it were a living thing in our own town today.

CARL SANDBURG

of this letter. It was written a few weeks after the death of Ann Rutledge; it tells how common were the hot weather plagues, in one of which she died; it tells about land conditions, tornadoes, winds, canals.

We learn that Postmaster Lincoln would leave the post office unlocked for hours while citizens who called for mail helped themselves.

The wilderness character of the region impresses us on reading, 'As I was putting up my fence 2 great wolves walked along unconcerned within 30 yards of me—I tried to scare them by taking off my hat and running towards them but they would not quicken their gait.' Yet it interests us that Abe Lincoln has day-by-day chats with a resident Yankee of such scholarship that he writes his 'folks' in these words, 'Farming as it is carried on in this country would be an employment that would suit George and by engaging his attention would dispel ennui, which feeling is almost inseparable from an inactive life. The mind must be engaged on something or if it has not external objects to act upon it will turn inwardly and create dulness and abstraction.' This is hardly what is generally understood to be 'backwoods lingo' or 'frontier dialect.' And finally, perhaps we may note that entirely aside

New Salem,
Sept[r] 17th
1835

DEAR FOLKS:

I have received you letters of July 21st an Aug. 26th, the latte came to hand yesterday enclosing th $100—. The time had expired that borrowed the money for: having de pended on Clarke's return before thi I had limited the time to 6 weeks fro 3[d] Aug.—but his non arrival mad the rec't of yrs. quite opportune. Th Post Master Mr. Lincoln is very car less about leaving his office open & u locked during the day—half the tim I go in & get my papers etc. witho any one being there as was the cas yesterday. The letter was only marke 25 & even if he had been there & know it was double, he would not charged m any more—luckily he is a very cleve fellow & a particular friend of mine. he is there when I carry this to th office—I will get him to "Frank" it- I do not know who could have cut o the figures from my former papers- the side margin is the best place t put them. The corner is often ver much worn so as to render the writin or figures that may be on it unintell gible.—

I will take the July letter first i hand although there is but little tha requires an answer in it. I shoul think that farming as it is carried o in this country would be an emplo ment that would suit George & b engaging his attention would disp ennui, which feeling is almost insep rable from an inactive life. The min must be engaged on something or if has not external objects to act upon

ill turn inwardly & create ulness & abstraction.

This climate is rather amp than dry & subject to idden changes, but we sel- om have an east wind & it ever rains from that quarter. -It almost invariably storms om the S. W., which wind ows ¾ of the year.—The inter sets in about 1st of n.y & lasts 6 or 8 weeks.

Billious Fever & Ague & ever prevails more or less roughout the state particu- irly in the south where the nd is flat or wet. I do not how that it is healthier in e northern than in the iddle Counties. Morgan & ngamon are two as good unties as is in the state.

The River towns & in fact y situation near the water swampy grounds is quite nhealthy, the country being level that the water courses ove slow—The milk sickness which I esume is but little known in the East those who live in such places keep the lowledge of it to themselves in order at they may have a chance of selling t.—It exists in many of the Southern ounties & those that border on the abash—such places are by all means be avoided, for neither the milk or sh of the cattle that are affected with can be used.—The true cause has t yet been ascertained but is sup- sed to spring from the stock eating me weed when the dew is on it. Most the Emigrants to this state from the uth come & still come in their wag- ns & always camp out & expose them- ves very much after their arrival hich is enough to make any one sick: d then the first settlers had no con- niences & when taken sick had no octor or physic and were obliged to ar out the diseases. Either of these seases readily give way to medicine d are the only ones we have here, s that the Doctors have acquired a rfect knowledge of them. The Ague Fever can be cured in 2 days at the pense of $1 or $2. Two or three medies have been made known within year, that stop it on every one who s taken it—I used considerable quinin t fall but it only stops it a short time r the least cold a person gets after- rds renders its return certain. It d not let me have an intermission of re than a week—what is singular it mes only in warm weather & the bject has a great appetite when the ver is not on. This summer my health s been extremely good. I have made e of Bitters made of Indian turnip, od root and sarsaparilla, the first is very warming, the latter two are ellent for the blood. I have no fear the ague now—There has been more sickness this summer than ever was known before—deaths however are rare and I am of opinion that as a general thing people enjoy better health here than in the East for there is hardly a family there but what has some member of it afflicted with some local complaint or other which I think may be attributed to their manner of living; while here where food is simple, people are never sick except in Aug. & Sept. We have not any lingering complaints like Consumption.

I must acknowledge that florid complexions are more rare than in the East. For my own part I am well satisfied with the Country.

Caroline is a good natured girl and this is all that be said in her favour, there never was any congeniality between us—her mind wants discipline.

Emily possessed a more vigorous imagination which gave impulse to her feelings tinctured her conversation with good ideas & rendered her on the whole very pleasing. It was altogether the mind expressed in her countenance & not her features that were attractive. I was made a fool of once & may be again but I now have some experience in affairs of the heart. It seems H. P. is lost to me. —I sent 3 weeks since a paper containing a description of this county to T. W. P. The alterations Geo found in his visit to N$^{d.}$ were probably as great as is to be met with. I was aware of the change when I made my delightful excursions there. The Miss H's are worth looking after. What C. C. wrote about my being attentive to a "sucker girl" had some truth in it.—Yes! her name is *Martha Jane Short* & lives in Morgan County on Indian Creek, the timber of which can be seen from here distant 13 miles acrost a Prairie in the S. West direction. She possesses more qualities which assimilate with my peculiar disposition & comes nearer to the standard of what I consider essential in a wife than any girl I have ever seen. In stature middling height & slim—Light brown hair, black eyes, which suppress half their fire until she speaks, then through their soft disguise will flash an expression more of pride than ire & of love than either—Her age 20. Such is all the discription I can give of the girl who at present stands the highest in my estimation. How long she will continue to do so I cannot assure even myself as I have *naturally* a *fickle* disposition.—But as I have told you all in a previous letter if you would come here to live I never will marry but devote all my attention to seeing you made happy. I have one objection to marrying in this state & that is, the women have such an everlasting number of children—twelve is the least number that can

(Concluded on page 21)

As I was putting up my fence 2 great wolves walked along unconcerned within 30 yds. of me.

I let drive and shot five wild turkeys.

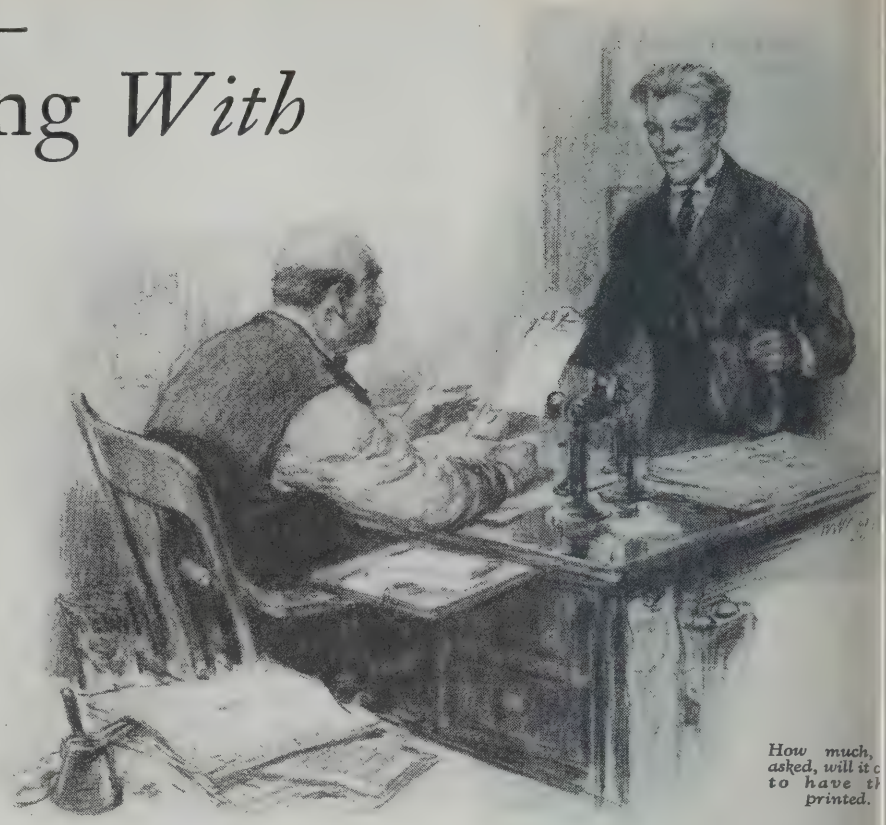
A Newspaperman *Gives Answer to the* Perennial Question—

What's Wrong *With the* PRESS?

By WILLIAM C. RICHARDS

Illustrated by W. W. CLARKE

PART I



How much, asked, will it c to have t printed.

YOU hear the question raised everywhere. The jury snickers when a lawyer asks, 'Well, you don't believe everything you read in the newspapers, do you?' The drys refer to 'the subsidized wet press.' Labor leans upon the expression, 'the capitalistic press.' Ministers launch out at the newspapers.

One reason for the sickness of the newspapers today is that an exacting and biased reading public demands of its newspapers something not contained in itself, and further insists that the press represent and print *its* thoughts and represent and print the thoughts of no one else.

We have the farm bloc working for its own interests and labor pursuing its aims! We have believers in prohibition making claims and we find those who would resummon beer and light wines making counterclaims.

Each four years we are expected to believe the Republican Party was divinely created and that all who think differently are porchclimbers; or we are informed that the grand principles of Jefferson must be perpetuated by a Democratic victory, failing which disaster will come to America.

When we ask what is wrong with the newspapers, the presumption is contained in the question that something is wrong. Certainly something is wrong. Newspapers are man-made. They are not edited in heaven. They err, as you and I err. Humankind is not without selfishness and deceit. But one might observe that one thing fundamentally wrong with newspapers is the reflection one sees in them, for news columns are supposed to be and usually are only a mirror in which the mill run of man can see himself. To diagnose newspapers as a whole would be as silly as for a physician to prescribe the same pill for every patient.

Newspapers suffer from various diseases, some curable, some incurable. If you staffed any of them with their critics, you would only replace bias with bias. We have excellent evidence on that point in the various group publications, single-minded organs which make small pretense of being fair. They are issued for the group and they are written solely to promote the ambitions and desires of that group. Anything that group publishes it calls news; anything printed by opposing interests is called propaganda.

There is no such thing in current popular reasoning as two opposing honest views. If the other fellow disagrees with you, he is dishonest, un-Christian and un-American. Probably more men are called un-Christian and un-American today than at any time in the country's history.

The nation is filled with these rigid-minded fellows, each patting his own group on the back and regarding it as the national salvation. In the bargain a large number of newspaper readers do not think and do not want to think. They are the puppets of their emotions. They vibrate to the words of the newspaper, the minister, the labor leader, the politician—last voice in their ears. They want to ride away from the humdrum. They have adventure vicariously in the adventure of others.

Your most ardent critic of newspapers wishes the press to print all the news—but he wants to be the judge of what is the news. And if the views of the paper do not conform to his views, they are utterly malicious a should not be printed.

There is not (although it oft seems as though there is) an organiz movement to discredit American new papers. Many clergymen and othe attack newspapers, sometimes fr honest motives, sometimes from p sonal spite. Their influence is large. minister takes up what he considers great moral issue. A publisher feels th the clergyman is wrong or that the pu lic isn't yet ready for the issue. T publisher, to the minister, immediate becomes a servant of wickedness.

Most persons do not know the m chinery of the newspaper office. Th know nothing of newspaper codes, e cept what they are told. Recently quiet gentleman walked into a newsp per office in the Middle West. He ha copy of a resolution passed by a Bi class of 500 members calling for strict enforcement of the 18th Amendment.

The minister of that church is well-known newspaper-baiter. storms against them, although he h laudatory articles printed in them wh he was raising funds recently for a n church. Whatever our visitor knew newspapers he knew only from minister.

'How much will it cost,' he aske 'to have this printed?'

'Nothing; glad to print it if it e presses the sentiments of 500 person said the editor.

'Nothing!' The visitor blinke 'But I thought—'

The editor informed him that the ews columns of his paper were *not* or sale.

If a newspaper prints something hat isn't true, it is popular to believe ; does so because it is a dishonest, ying sheet. It seldom occurs to the ayman that the paper has been misnformed or that some reporter blunered in writing it.

MEN who write the newspapers are quaint army. They are full of emoons, while pretending otherwise. They ill duck one assignment and work orty-eight hours without sleep and ithout complaint on another. They re agnostics in politics.

The newspaper business has its neats and its righteous ones, its cometents and its incompetents, but in wenty years of newspaper writing I ave known only one whose integrity ore a price tag. And I have known undreds of good, bad and ne'er-doell reporters—many of the latter.

On the other hand I have known eporters who could write magnificently ut who could not tell the truth, and ho openly complained that facts oiled a story.

I cannot see logic, however, in ondemning newspapers as a whole r these fellows. They are the roanticists of the craft. They believe at if the dramatic elements do not ist they should be created. But let a reader discover a misstatement which he knows definitely to be a misstatement, and he'll issue a blanket indictment against all the statements. It is illogical, of course. Because one minister may turn out a scalawag, does not prove Christianity a failure. Newspapers are of various makes, that's all, and usually they reflect the inequalities and imperfections of the men who compose them.

And there is always the other side of the picture. There are those, be they respectable or be they rascals, who object strenuously to having the truth told about them. A fine example of the latter occurred fifteen years ago, when a dock collapsed at an island in the Niagara River. Hundreds of persons were thrown into the swift current, and forty-two never came up. Many women, incidentally, lost their lives because of false hair. When men reached for them and grasped their bobbing heads, the hair came off in the rescuers' hands.

The story broke at nine o'clock of a Sunday night. In those days a popular Sunday pastime at Eagle Park, a resort on Grand Island in the center of the Niagara, some miles above the falls, was the so-called keg party. This Sunday there had been an excursion. When it came time to return to Buffalo hundreds gathered on the old dock. It was at that time that the dance called the grizzly bear was a vogue, and under its swaying the rotten posts of the dock let go. There was no telling how many were lost.

One newspaper chartered a yacht to go down the river; another engaged a ferry. Other reporters were dispatched to a river wharf where the boat bearing the survivors was going to land. I was in charge of that end.

THEY came off the rescue ship a desolate, bedraggled, panicky lot, but thanking their stars to have been pulled out before the Niagara sucked them down. Some were wild-eyed. They could not find a child or a parent. There were wailing women and dull-eyed men biting their lips and searching . . .

We brought back to the city an unpleasant story. Ghouls had been at work. Rings were missing from the dead, necklaces were gone. The newspapers said so.

Noon again. I engaged an automobile for the day and crossed the ferry to the island. It is two miles or so from the ferry slip to the scene of the disaster. An afternoon newspaperman came to the side of the automobile.

'Got a gun?' he asked.

'A gun; for what?' *(Concluded on page 18)*

One of the men vaulted the bar. Whatever he intended to say died on his lips.

The Changing Fashions of Being

Presented at Court

By LADY CYNTHIA ASQUITH

I WONDER if the débutantes of today await their presentation with as much quivering trepidation as that picturesque occasion inspired in pre-war girls. Whatever conjuring trick in the way of a change of gear was involved in those momentous words, 'coming out,' seemed epitomized by going to Court. Oh, the days of anxiety that preceded the solemn rite! The lessons in deportment, the panic-stricken rehearsals of curtseys, the aching hours of standing while dressmakers, their mouths full of pins, and your mother conferred with all the portentous gravity of physicians in consultation.

The shivering suspense of the day before the night—the hairdresser struggling to fix those difficulties, the nodding white feathers, at the least unbecoming angle (surely the one he chose was wrong), then the final robing with all the household, bent on sightseeing, thronging to your door to admire you in the foamy complexities of your 'simple' dress, and the dignity of the stately train that seemed yards and yards long and stimulated its wearer with all the alchemic power of fancy dress.

Then there was the eternity of the drive to Buckingham Palace, the being held up in the interminable queue of carriages, while you pinched and rubbed your pale cheeks to make them pink, and after arrival, the waiting in suspense—like animals in a pen—till your growing excitement culminated in the final ordeal by curtsey.

I question whether the girls of today can have the same thrilling sense of 'growing up,' of—as it were—being launched like a ship, that we used to have. Nowadays the different phases of life seem to merge into one another almost imperceptibly.

To begin with, how can you know you have crossed a threshold now that hair cannot go up nor skirts come down? Owing to shingling and the general fashion, women now seem to miss out the chrysalis stage. How different it was in the days when all of a sudden you said farewell to your pigtail and 'All hail!' to your *chignon*, and the outward and visible sign made an inward and spiritual change. The word 'flapper' was not then in use, but there was much more demand for such a word.

I'm sure that the inability to make any spectacular change in your appearance must in some measure detract from the glamour of 'coming out.'

No modern girl can guess at the thrilling sensation of hearing one's first long skirt rustling down the stairs behind one, the romance of losing sight of one's feet, nor all the emotions of feverishly trying different ways of putting up one's refractory hair and the anxiety as to whether it would stay up. I cannot imagine being presented in a short skirt.

True, trains are still worn at Court but they are very much curtailed, and their curtailment must make the actual presentation less alarming, as it enables subjects to go past the throne in much quicker succession, so that the self-conscious sense of isolation cannot be so great. One used to feel so framed and conspicuous, performing a *pas seul*, solitarily exposed in the fierce light that beats around a throne, that the experience was like running the gauntlet.

However, at least our curtseying limbs were shrouded by kindly, sheltering skirts. The risk of stumbling over them was more than compensated for by the welcome cover they afforded our awkwardness. The ungainly distortions of our legs were unwitnessed, and so long as you did not actually topple over (and I have never heard of any débutante who so disgraced herself, out of a nightmare) you could scarcely make yourself conspicuous for the awkwardness of your curtsey. There was little scope either for distinction or for disgrace. Of course one's knees cracked. To one's ears the noise sounded like pistol shots.

Now that legs have come out into the open, girls must see that their knees and ankles really know their business or their curtseys will not escape criticism. This is perhaps to the good, and yet I cannot help regretting the banished sweeping skirt—if only for this one occasion. Plumes in the head do seem to cry out for a long skirt to balance them. Besides, the more unusual the apparel the greater and more solemn would seem the occasion. And in these informal days our few surviving rituals should surely moult no feather of ceremony.

MR. FORD'S PAGE

THERE is little excuse in this generation for what we call bad times. There is none at all for abject poverty. Everything that man can use is in the world waiting to be taken: the minerals within the earth, the foodstuffs on the surface, the air above. The elements all combine to supply humanity's needs. All that is left for man to do is to extract, convert and distribute those things which nature has provided. And yet when man falls down on this job he complains of 'bad times' as though they had been decreed by some hidden force over which he has no control.

In this connection we have been told much about the so-called cycles of business—the theory that because we have a succession of good years it must necessarily follow that we are to have a succession of bad years. A belief has grown up in this country that business must rest either upon a high peak of prosperity or in a canyon of depression. Coupled with this belief is another theory that business is regulated by some occult power beyond the reach of human hands and that it is hopeless to intervene when this power decrees that a reversal of good times is on the way. Nothing in America is quite so distressing as the spectacle of supposedly astute business men running for cover at the first rumor of business depression and not making the slightest effort to analyze conditions to determine whether the predictions are justified. In most cases a thorough analysis would show that they are merely the product of unwarranted hysteria.

WE HAVE reached the point in this country where we should know enough concerning the intelligent control and direction of economic conditions to prevent the occurrence of so-called 'hard times.' If people would stop talking about good and bad business and concentrate on normal business, many of the evils would vanish. We must direct our energies toward the steady output and purchase of products needed now. The responsibility lies with the purchasing public as well as with the producer. Only by the regular, consistent buying of goods needed at the time can we maintain a logical prosperity.

The surprising thing about so-called 'hard times' is that they are—in the beginning at least—largely a state of mind. They are brought about by fear. If people would only stop talking about good and bad business and concentrate on *normal* business, many of the evils of 'hard times' would vanish. The cry, 'back to normalcy,' is heard, but in reality we should never get so far away from normalcy that we have to get back to it.

By business we mean the medium through which the needs of the people are supplied. Nobody can ever buy anything that is useful and worth-while but that it does him some good. A steady prosperity is maintained when people buy continuously and regularly what they need *now*.

A need implies the supplying of a deficiency. A nation's needs are determined by that nation's civilization. The needs in America are far greater than the needs of a Bushman in Africa because America is more highly civilized. And as a nation ascends the ladder of civilization its needs increase. But caution must be exercised in determining just what our present needs are, so that an unbalanced supply of needful goods shall not be produced.

The matter of individual needs must be left to individual persons. A microscope may be a need for one man and an absurdity for another. It is for the individual to determine just what constitutes a logical purchase—in other words, a necessity for himself. His reckoning must be based on his logical ability to pay, the use to which he will put the article, and whether that use is a matter of the present or the future.

No business can be justified which is not designed primarily to perform some constructive service to society. Yet it must be acknowledged that not all business is conducted upon this basis of service. And therein lies what small justification there is for the delusion of 'bad times.' When people are led to buy things they do not need *now* and cannot afford, an artificial 'prosperity' is created.

Purchasing beyond ability to pay brings about the exchange of nonessential goods in unprecedented volume and the expansion of debt to the danger point. This gives rise to a wave of hysteria which deludes many people into the belief that we are in the midst of 'good times,' when as a matter of fact we are creating the very conditions which eventually bring about business reverses. When the natural reaction comes, these people become panicky. The alarm of 'hard times' is sounded and fear grips the buying public. Those who have been buying beyond their necessary limits swing far below the line of common sense and refuse to buy even ordinary essentials. This sudden withdrawal of purchasing power affects all classes of industry. There can be only one result. Factories are closed, men are thrown out of work, business becomes stagnant.

Just as many people need things as ever. Just as many need the work. Yet because of the collapse in the boom on nonessentials, the vital connecting link between production and purchase is broken and everybody suffers. The responsibility lies with the purchasing public as well as with the producer. Only by the consistent buying of goods needed at the time can we maintain a logical prosperity.

'Ford Ideals,' 452 pages, cloth bound, contains 98 of these articles. Postpaid $1.00.

EDITORIALS

A Plea, a Warning or a Threat?

IT WILL be difficult for Americans to determine whether it was Mr. Mellon, the Secretary of the Treasury, or Mr. Mellon, the corporationist, who made formal answer to the recent tariff manifesto. Part of his official statement forms an amazing utterance as coming from a public official. It is that part wherein he refers to the Aluminum Company of America, a concern widely known as 'Mr. Mellon's own company,' and one accused of violation of the anti-trust laws by the Federal Trade Commission. Here are Mr. Mellon's words:

> As an example I might cite the case of the Aluminum Company of America. The raw product of aluminum is bauxite, deposits of which occur in the United States, in British Guiana, and in many other countries of the world. The principal cost of the manufacture of aluminum is electric power and labor. The cheapest power in the world is hydroelectric; the cheapest labor is foreign.
>
> The Aluminum Company has many power properties in the United States, but others in foreign countries, and the largest power of all is now being developed in Canada. From its plants in the United States the American market is supplied; from its plants abroad the foreign market is supplied. If the present tariff on aluminum is maintained, developments for the expansion of domestic business will be made in the United States.
>
> If the tariff be removed, those developments will occur in foreign countries, and part of the American market be supplied from abroad. The effect of removing the tariff on aluminum would not in the least be to hurt the Aluminum Company, but to deprive the United States of the benefit of enlarged manufactory here. Less capital will be invested here and less labor employed.

Reduced to simplest terms the statement declares this: Remove the tariff and the Aluminum Company of America will take its factories elsewhere! A strange attitude, surely.

To prove his point Mr. Mellon felt it necessary to cite a company which is 'protected' by an exceptionally high tariff. He said nothing about those industries which are being profitably conducted *without* the sop of a tariff. He mentioned that American labor is the highest paid in the world; but he did not add that it is also the most efficient. He told of the 'danger' of foreign competition; but he did not mention American business ingenuity and management, which have placed this nation at the very pinnacle of the world's industries. Perhaps after all the things that Mr. Mellon did not mention are more important than those he did.

Bigger and Better Debt

THE politician's idea of adequate farm relief is to mortgage the farm. Credit, more credit, and then still more credit—that is the remedy for all farm problems. Does the farmer need help? The solution is easy. Give him bigger and better opportunities to go into debt! Most of the cure-alls proposed in recent years have had this debt feature attached to them. And now comes the report from reliable sources that the McFadden Banking Bill will be rushed through Congress at its coming session—*as a farm relief measure!*

Much opposition has developed to the McFadden Bill in the South. The cotton growers are in difficult straits. Splendid! Now the bill can be urged for immediate passage on the theory that it will alleviate the situation facing the South, through facilitating national banks in the extension of credit to planters and to cotton factors. In the hip-and-hurrah of rushing the bill through to help the poor planter its other features may be forgotten. It may pass unnoticed that the probable effect of the McFadden Bill will be to establish a monopoly of credit, more dangerous even than a monopoly of money.

The Education of Mr. Vare

MR. VARE, of the Southwark District of Philadelphia, is now in a position to knock at the doors of the Senate and beg admittance as a member in good standing. Although he ran far behind the others on his ticket, he was elected by a comfortable Republican majority in the comfortably Republican state of Pennsylvania. But his troubles, according to the witch doctors of the Democratic Party, have only begun. Both he and Brother Smith of Illinois will have some tall explaining to do before they can tilt back in their chairs and gaze placidly at the ceiling decorations in the Senate Chamber. It must be said in justice to Mr. Vare that he learned many things during the campaign just past. He learned—among other things—caution. During the primary campaign he spent $665,000. During the final campaign he spent $133.08.

They Also Ran

ONE fact stands out in bold relief from the election returns. The American people do not like the Senators who voted America into the World Court. Of the seven pro-Court Senators standing for reëlection in states classed as doubtful, six were defeated. Those who survived the primaries were winnowed in the election. Many familiar faces will be missing when the 70th Congress convenes. Among those not present will be:

Senator William M. Butler, of Massachusetts.

Senator James E. Wadsworth, of New York.

Senator Richard P. Ernst, of Kentucky.

Senator Robert N. Stanfield, of Oregon.

Senator Ovington E. Weller, of Maryland.

Senator Ralph H. Cameron, of Arizona.

Senator George Wharton Pepper, of Pennsylvania.

Senator Irvine L. Lenroot, of Wisconsin.

Senator Rice W. Means, of Colorado.

Senator William B. McKinley, of Illinois.

The late Senator Albert B. Cummins, of Iowa.

All voted valiantly for the World Court and all were defeated, either at the primaries or the final election. Apologists for the Court claim that it did not enter into the campaign and did not affect the results, but their plea lacks the ring of genuineness. In virtually every instance where the contest lay between a pro-Court candidate and an anti-Court candidate, the pro-Court man was beaten. The American people have voiced their attitude on the World Court. It probably will not be necessary for them to do so again.

The New Agriculture

PROFIT—rather than price—is this to be the new slogan of Agriculture?

J. W Coverdale, for several years executive secretary of the American Farm Bureau Federation and today an outstanding man in Middle West agriculture, is a proponent of this idea. Another is Arthur Huntington, of Cedar Rapids, Iowa. Today, Coverdale's ideas of efficiency are exemplified in the crusade he is carrying on toward the elimination of needless duplication in elevators in the small towns of Iowa. Huntington has preached and written the gospel of industrialization and electrification of the farm.

'Dollar corn is no longer the slogan,' Coverdale points out. 'The producer is now thinking of corn that can be sold for *more than the cost of production*. He now sees that he must not only get a large return per acre, but a *higher return* per worker. That he must have efficient production equipment, and learn to use it efficiently. Average results are not his aim; if he is to succeed, his practices must be the best in the industry.

'In the past, practically the only thing considered as a barometer of agricultural conditions has been "Price." A high price has been accepted as prosperity; and a low price as calamity.'

Mr. Coverdale, however, defines the correct price of a product as that price which will move the entire crop into consumption without a shortage or carry-over; and provide a profit for the producer.

The first step in coöperative merchandising is the practice of self-restraint on the part of those who would coöperate, claims Coverdale, who also points out that the farmer cannot have both public aid and all his personal liberties at one and the same time. Neither can producers who want to coöperate with others do so unless they are willing to forego their personal liberties for the sake of the coöperation.

The Fringe of Winter

THE evening air is heavy with the odor of burning leaves. Fussy householders rake beneath the lawn trees as the golden autumn colors flutter and fall. The wild geese fly south, low over the housetops. They are tired and will seek water before another hundred miles have passed beneath them. Across the sky a flock of blackbirds take flight, their last twitterings mingling with the breeze that stirs a pile of fallen leaves into sudden activity. There is a new chill in the air that betokens winter. We return from work in the dark; can it have been but a few short weeks ago that we found the sun high in the heavens at dinner time?

Now we know what Robert Frost meant when he wrote

> The leaves are all withered and gone
> Save those that the oak is keeping
> To ravel them, one by one,
> And send them, scraping and creeping,
> Out over the snow, when the others are sleeping.

What care we if the weather be severe? Let zero come on a sweeping winter gale. The family gathers about the table, the tasks of the day done. After dinner there will be nuts, apples and cider, and popcorn that has been drying in the attic for a year. We gather around a roaring grate fire. Why should we seek for pleasures outside the home when everything we could wish for is here? Simple pleasures, perhaps, but joyous ones. Maybe a neighbor drops in, and we make room for him by the fireside and welcome him into the family. Let the wind howl around the eaves. What do we care? It's warm inside—and home!

Forces That Are Reshaping Mexico

A Study of Those Who Ruled the Country Before the Revolution and Those Who Are Ruling It Now

By HELEN BOWYER

ABOVE the eleven or twelve million of the sub-civilized masses of Mexico stand the three million, more or less, whom Mexican official reports characterize as 'living in a state of white culture.' Of these about a million are Creoles, natives of pure white descent, who, however they may have diffused their blood among Indians and *mestizos*, have never permitted these darker breeds to dilute their own life stream. Until the Revolution they formed a feudal aristocracy with powers almost of life and death over the peasants of their vast estates. While they personally took very little part in politics, Mexico was, in the large, run for them. And Mexico reached the year nineteen ten the most backward, illiterate, poverty-stricken, disease-ridden country of the Christian world.

The other two million 'of white culture' shade downward from the near-white whose lineage is mostly Spanish to the swart *mestizo* whose remote European ancestor has been almost outbred. They even include some pure Indians whom the fortunes of war or other circumstance have raised above their blood brothers. On the edges of the lower million the 'white culture' gets pretty hard to discern, but in general even its border members sit on chairs instead of on the floor, wear shoes and stockings, *can* read even if they don't, and have a vivid consciousness of their superiority to the 'low people.' The upper million includes thousands of *profesionistas*, doctors, lawyers, engineers, teachers, a large part of the store and office assistants and of the swarming army of the government employes.

Indeed, large numbers of the *profesionistas* are themselves government employes. There are certainly not too many doctors in Mexico; indeed, for the amount of work in hygiene and sanitation that should be done immediately there are probably not enough. But there are far more than can make a living by private practice among that poverty-stricken people or in those public welfare activities that call for medical training. As for the *licenciados*—lawyers—there is no possibility that the hordes of them could be absorbed in either public or private service of the kind for which their education is supposed to have prepared them.

—Photos, Ewing Galloway.

Types of illiterate peons living in Southern Mexico. This is an Indian family photographed while waiting for their meal to cook.

There ought to be work enough for engineers in a country that has most of its material development still before it.

The *conquistadores* had initiative. In all history there is nothing more intrepid than the conquest of a far-flung empire by this invading handful of five hundred white men. The rest of the three hundred thousand colonists who, through the centuries, crossed from Spain could not, in the nature of things, all be their match in hardihood and daring, but for the first century, at least, it must still have taken high adventurousness to make that long passage of the pirate-haunted seas and go it on one's own in the vast isolation of those Indian estates.

What became of that ancestral energy? If the sons the Indian women bore them did not inherit it, did it go to the sons of their white wives, the Creoles of today?

It did not. The Mexican aristocrat has intellect but he has no energy. He can theorize better than his half-breed brother but hardly more than he, can he act. At least, not in Mexico.

For Mexico lies outside the white man's zone of achievement. Around the northern hemisphere—and far to the south around the southern—there stretches a belt of land whose temperature, humidity and elevation combine to form those climatic conditions in which, and in which alone, the white man can function well for any length of time. Within this zone he works, he thinks, he investigates, he dares, he advances in science, in commerce, in industry. Outside of it apathy falls upon him and the best that he can hope for his descendants is the lordship of crudely cultivated lands, worked and even managed for them by the natives of the soil.

Such, in large part, were the Mexican Creoles before the Revolution. But since then, thousands of them have spent a decade back in the zone of achievement, with the added stimulus of a living to be made under conditions wholly new to them. Those of them who were young enough may well have been reborn into the spirit of the white world and the layman's movement of their Church and the realism of their new economic and political programs may well be the earnest of that rebirth.

But if so, the Creole has still to bide his time. It is the *mestizo* of white culture who is running Mexico.

With him, the incapacity for action springs from sources less easy to explain. Climate and altitude act on him also—he is distinctly less resistant to his enervating environment than is his Indian half brother. But the thing which most operates to paralyze him is his inferiority complex.

The Soul *of an* Ancient City *Lingers Among*

The Little Trades *of* Paris Streets

By
ANDRÉE PRATOUCY

Drawings by
AUSTIN EUGENE BRIGGS

THEY cannot be labeled as 'business'; they do not weigh in the trade balance nor do they inflate the exportation figures for goods; they keep away from the slavery of trusts and cartels; they do not give birth to *nouveaux riches*. The blazing life of the capital pushes them back into the shadow of its luxury. But more than the big *couturiers*, more than the Rue de la Paix milliners and jewelers, more than the amazing displays of the huge *magasins*, the little trades of Paris streets develop that strange, mysterious emotion which makes the soul of the city, engenders the smooth atmosphere whence floats the spirit of the Parisian race.

It has been said that they are fast disappearing—that they are almost a myth nowadays. Yes, persons who land in spick-and-span hotels on the Champs-Élysées, those who haunt the outskirts of the Bois de Boulogne or nestle in the up-to-date buildings encing in Eiffel Tower have scarcely a chance to meet them on their way. But Parisians know where they are, all those who form the humble army of petty tradesmen, little sellers or wandering workers.

Their traditionalism, closely associated with their vocation, makes them reluctant to frequent wide avenues and rich wards; they stick to the old stone quarters, the *Marais* and the real Montmartre, the Latin Quarter and the Islands, where traditions have fled before the invasion of modernism, where our *petits marchands des rues* do not run the risk, when pitching their tents or settling their goods in doorways, of being brushed off by gilded valets or of having their songs mocked by impertinent embroidered maids.

For no matter how hard life may be for them, no matter how dull the day or dreary the task, they sing; that is their only publicity and trade-mark. Strolling along streets in the old Paris, the dearest one to any true Parisian, it is a joy to meet, swinging his hedgehog-like brooms twisted round with yards of rough rope, a ladder tied to his back, this living anachronism; a *ramoneur* (chimney sweep). The *ramoneur!* With his sooty face and his drawling song; *'On ra-a-mone les cheminées du haut-o en bas-a!'* (we sweep chimneys from top to bottom), he is so like the one familiar to my childhood that I sometimes wonder by what magic charm the *ramoneur* can still be here while my childhood is gone.

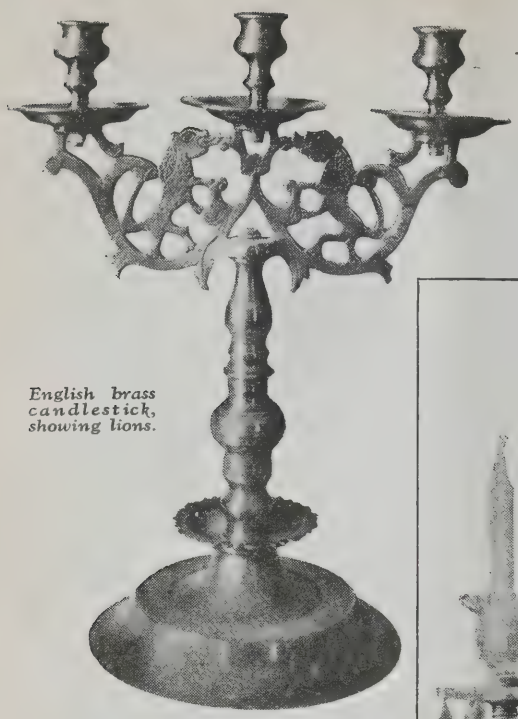
I remember a gray morning in the late autumn, bare branches from the *Jardin des Plantes* trees brushing my window, then a voice in the street waking the tiny girl I was to the sad reality of a world ready for winter: *'On ra-a-mone les cheminées!'* The *ramoneur!* O joy! That meant soon blazing logs in the fireplaces, and stores sparkling with lights in mid-afternoon, and Christmas. Christmas! Who said Santa Claus was white, and red, and furry? No, Santa Claus was ragged and black, as black and ragged as the *ramoneur* whose song was for me forerunner of joy.

Walk any bright afternoon in the Luxembourg park, and you will soon see how well the *ramoneur* is known within that little world:

'Why, Jeannette, just try to pinch your little brother again, and I'll call the *ramoneur!*'

'All right, Pierrot, dip your sleeve into the water and the *ramoneur* will take your boat away!'

But the *ramoneur* does not seem to care. Ever searching the street, his head raised toward the upper floors, he seems to await orders to *ramoner* the chimneys from the sky. He sings with a bit of melancholy, for he is a Parisian by force. Every year the snow of his mountainous (*Concluded on page 26*)

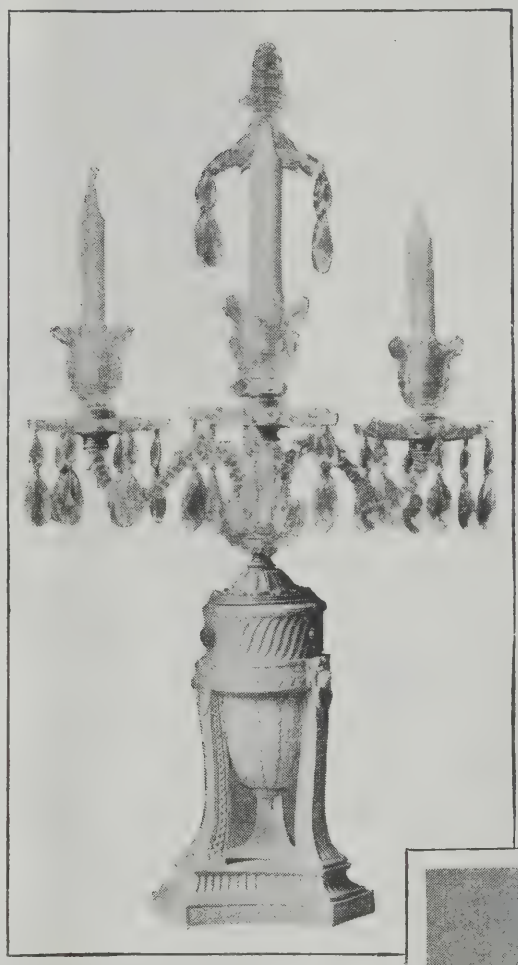


English brass candlestick, showing lions.

Lights of Other Days—

Candles *and* Candlesticks

By MARY HARROD NORTHEND



Crystal candelabrum in the Adams period with Wedgwood base.

PERHAPS our love of candles has been fostered by their pleasant associations with varied events in our lives, with gleaming Christmas trees and happy birthdays, and also of their intermingling with custom and romance. Away back in the year 800 we find the Pope, celebrating Mass in Santa Maggiore, using a candle tied to a cane to set fire to the tow placed on the capitals of the columns, thus symbolizing the destruction of the world by fire.

Throughout Scandinavian countries, as well as in Denmark, Germany and Greece, the candle plays an important part in the yuletide festivities, and lighted candles were a feature of the Jewish Feast of Dedication.

Although the smoke of the pine torch was at first somewhat offensive, and the pitchy drippings from the burning wood a source of no little annoyance to the tidy housewife, still, the easily obtained 'candle-wood' was religiously regarded as a special gift of Divine Providence. These were burned several at a time where much light was required, or singly, for carrying about the room. Much of the evening Bible reading was done by the flickering smoky light of these primitive illuminators.

If the more costly candle was used it is said that it was sometimes extinguished during the long prayer at the end of the day. Apropos of these domestic economies, it must have been one of our Yankee ancestors who invented the so-called 'save-all,' a candlestick attachment of rings and iron pins which held up the last bit of candle.

Josiah Franklin, father of Benjamin, was a tallow chandler, and in his father's shop the future philosopher began his life of labor at the age of ten years, cutting wicks.

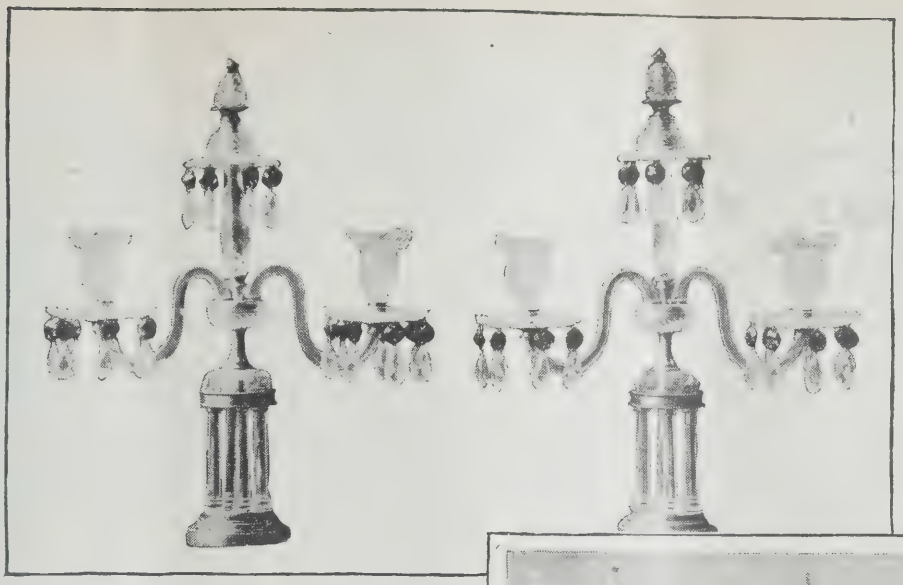
In the early days of the American colonies, when most of the tallow was imported, thus making its use prohibitive, recourse was had to pine torches. Let me quote from a document dated 1629 — 'Although New England has no tallow to make candles of, yet by the abundance of fish thereof, it can afford oil for lamps Yea, our pine trees, that are mos plentiful of all wood do allow u plenty of candles, which are useful i a house. And they are such candle as the Indians commonly use, havin no other; and they are nothing els but the wood of the pine tree cloven in two little slices, something slim which are so full of the moisture o turpentine and pitch, that they bur as clear as a torch.'

At first there were no cattle in th Plymouth colony. About 1630 thre cows were brought from England There is no authentic record of othe importations of domestic cattle unti 1652. By 1660 candle-making ha become quite a common occupatio for the housewives of the colony Tallow was still far from plentiful and to piece out this deficiency, dee and bear suet were mixed with th beef tallow and used for candle-mak ing. Rush lights were simply th pith of the common rush dipped i melted tallow the same as candles.

By 1680 tallow candles had becom

Glass candlesticks are rare. These are about 100 years old, and of American make.

more common but must still have been regarded as somewhat of a luxury, for we are told that they sold for fourpence apiece. Large quantities of English-made candles were imported, as were also cotton and flax for the wick. Among the first letters that Governor Winthrop wrote home to his wife upon arriving in Boston was one in which he directed her to bring a supply of candles and wicking with her when she came to New England.



Crystal table candelabra in crystal base and branches.

Wax for candles was supplied by the wild bees which roamed the great forests and the vast meadows. An excellent substitute for tallow was found in the fragrant wax refined from the bayberry, the fruit of a bush growing abundantly all along the New England coast. An excellent variety of candles was made from the fatty substance taken from the head of the sperm whale, and was called 'spermaceti.' One of these candles afforded more light than three tallow candles. They were, however, regarded as costly in comparison with the 'tallar dip.'

The streets of Boston in 1730 were lighted by spermaceti candles inclosed in little square lanterns. Over the front doors and in the front 'entries' of the larger and more elegant houses were frequently suspended more costly lanterns in which were burned spermaceti candles.

The manufacture of candles early became an important industry in New England, and the wealth accumulated by some of the thrifty tallow chandlers became the foundations upon which were built the social distinction of not a few of Boston's aristocratic families. The making of candles, while a simple operation, involved much care and labor. The earliest method was by the process known as 'dipping.' The twisted or braided cotton or flax wicks were suspended from a stick called a candle rod, the number of the rods being determined by the size of the pot or kettle.

When carefully straightened the wicks were dipped into the melted tallow, receiving a coating of the hot fat. When cool, the operation was repeated until the candle had grown to the desired size. Some housewife first immersed the wick in a solution of saltpeter. This was said to make the wick burn more evenly, and prevent what were called 'candle robbers,' which were simply the burning wicks bending over and coming into contact with the body of the candle, thus melting away what was called gutters. Later, candle molds were introduced. These were groups of tin or pewter cylinders into which the melted tallow was poured, the product being a molded candle, much superior to the 'dip.' Men known as 'candle-makers' traveled about the country with large candle molds holding from thirty-six to fifty candles. These men could easily make in two days a sufficient supply of candles to last a large family all winter.

The coming of the candle-maker was regarded in many families as an event, for usually he was a jolly, jovial fellow, full of good stories, and bringing much cheer into the household. All candles, after being made, were carefully cared for by the prudent housewife. They were packed away in boxes and stored in cool places, protected from the ravages of the rats and mice. Those intended for immediate use were kept in what was called a candle-box, which was a round, tin cylinder with a hinged lid, which hung horizontally from the wall of the living room.

The candle-box also protected the candles, so that they did not turn yellow, which they would do if exposed to the light.

Ever since the days when bayberry dips succeeded pine knots, we have yielded to the witchery of candlelight. They are reminiscent of clicking heels and sounds of revelry. Even today in stately homes the fugitive odor of box and bayberry transports one back to stagecoach days, when homes were lighted by these heralds of rest, harbingers of pleasant dreams.

Crystal sconce with cut drops in garlands. Light touches the pendants and is reflected in myriad rainbow hues.

In the making of candles four methods were employed: dipping, pouring, drawing and molding. Yet, all finished candles were more or less cylindrical in shape. Standing out among them all are the fragrant bayberry dips, so delicate in coloring, and so sweet in perfume that they have retained their popularity since the days when they were first dipped in great-grandmother's fireroom, long centuries ago.

Now Just Who IS Queer—
The Chinese or Ourselves?

By
INEZ MARKS LOWDERMILK

Silhouettes by
BETTY JANE KIDD

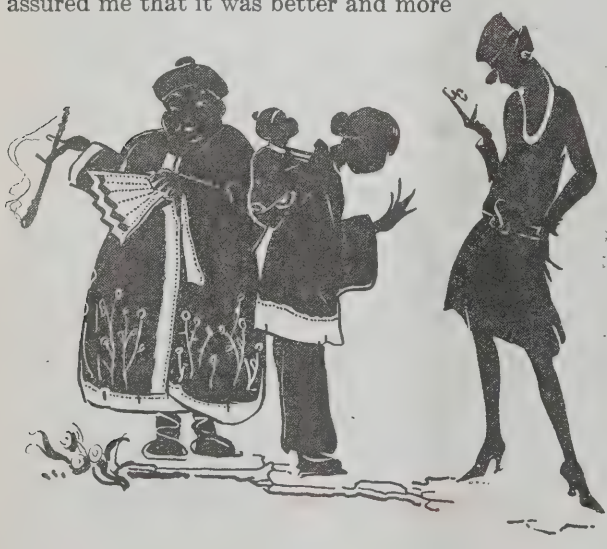
THERE are four Chinese to every one of us.

My Chinese friend, Mrs. Chee, recently surprised me by stating in her polite way that the Chinese feel that *we* are exceedingly queer. Our innumerable and extraordinary idiosyncrasies and ways of doing things are past finding out. We are just topsy-turvy, that's all.

In the following friendly visit, in which I learned a great deal of Chinese psychology, Mrs. Chee and I tried to find out which one of us was queer. Let the readers of this article decide.

How absurd, the Chinese say, to call a person Mr. Smith or Mrs. Jones, when the proper way has always been to say Smith Mr. or Jones John Mrs. or Coolidge Calvin, rather than put the confusing given name first. They wonder how our postal system can do efficient work with our peculiar method of placing stamps on the front of the envelope and the address written in reverse order. The right way, of course, is to put the stamps on the back of the envelope and on the front side write the address with first the country, then state, town, street number and lastly the person's name. We write the day, month and year. The Chinese write year, month and day. Our designation of cardinal directions is: north east or south west. They say east north or west south.

American women seem immodest because they wear skirts. Mrs. Chee assured me that it was better and more modest for the women to wear the trousers with simple upper garments and for the men to wear the long, flowing robes. The men of course should carry out the family social duties and gossip over their teacups and gracefully carry their parasols and fans, content that their wives are tending to the home and babies.



Surely destruction must await these peculiar Westerners who actually put 'ladies first' and allow their women folk to go to social functions where both men and women are present.

Mrs. Chee thought that Western mothers-in-law must be tyrants indeed, for the Western lad has to be unfilial and take his bride away and set up a new home, rather than act according to prescribed Chinese custom and take his bride to his father's home, to be an assistant and servant to his mother. The Chinese mothers think that they have the welfare of their children so at heart that early in life they provide the sons with wives and daughters with husbands. They think Western parents are most unconcerned regarding the happiness of their children by not providing them with life companions.

To them it seems pathetic that these poor neglected children must hunt around for years, and in their unsophisticated judgment choose a mate for themselves. Mrs. Chee thinks it is much more satisfactory to follow the Chinese custom and allow the parents and a middleman to manage for the young people such important affairs.

It was a unique surprise indeed to be told that we do everything backward and are so queer. At least that is what Mrs. Chee, representing four hundred million people, seemed to feel as she cited the following incidents: Why did we make our books to begin at the left and read across, when Chinese books for thousands of years have begun at the right and read up and down? Why put footnotes at the bottom of a page when Chinese place them at the top? The Chinese were the first to invent the compass, and it was made to point to the south, but because we do everything backward, we made ours point to the north. The Chinese cannot understand why we do not have serious collisions, for we sit down to row a boat with our back to the direction we are traveling. They stand up to row, facing the direction they are going.

THEY marvel that we do not injure ourselves because we pare vegetables or fruit with the blade of the knife toward us, while they have the safer method of paring away from them. They strike a match toward them and turn a lock to the left, and we queer folk do just the opposite. In sewing, we draw the needle toward us rather than outward as they do. In traffic, we pass to the right and they to the left and this causes confusion. We have our railway gates across the street, but they put their gates across the tracks and just open up for the trains to pass.

They drain an umbrella handle downward, just opposite from our way. We point with the finger, they with the chin. We beckon with the palm up, they with the palm down and the fingers closing in and out. But all these ways produce the same results, and who is to say which is the better way?

Our queerness extends in all directions, I discovered. In America, a mile is a mile whether it is uphill or on

he level. This seems strange reasoning o the Chinese, for, they say, it is much harder and takes longer to travel up-hill and so it should be so many miles up, say fifteen, and ten miles down.

We weary ourselves by handling all difficult matters ourselves, while the Chinese always have a middleman to do it for them. Neither are we clever in business. Our wholesale price is cheaper than our retail. The Chinese reason that if one has sufficient money to buy in a large quantity, he is rich enough to pay more and so the retail price is cheaper than buying in a quantity.

BUT most curious to Mrs. Chee was *why*, when Westerners are supposed to have so much money, the women cannot afford to have enough clothes. The Chinese woman is well dressed from her high collar to her tiny ankles, even among the poor. But the poor Western woman, in cold weather, has abbreviated clothes, and even then, often does not have material enough left for the sleeves. In America all women wear hats; the Chinese women never do.

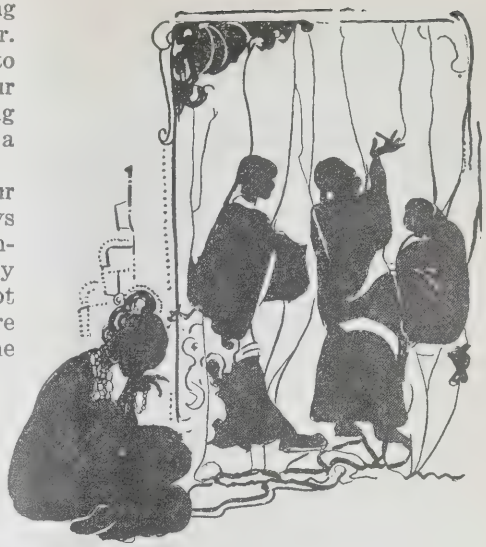
Mrs. Chee thought Westerners very brazen, for a husband will kiss his wife in the presence of servants or other members of the family, all oblivious of the fact that China's sages have decreed that it is improper for a man even to touch a woman's hand in passing an article from one to the other. Then too, we accept a compliment with thanks. The Chinese humbly belittles himself.

Mrs. Chee commented upon our peculiar educational methods. In America the teachers are largely women; in China practically all are men. Our children study their books. The Chinese method is to store up the sayings of the sages by memorizing entire books, to be explained and interpreted later. The Chinese child is saved the distraction of facing the teacher to recite, as do Western pupils, by reciting all lessons with his back to the teacher. Also he is taught to look backward to the 'Golden Age,' but we give our children nothing to tie to by teaching them to look forward to some kind of a golden age in the future.

We are also accused of treating our dead with disrespect. Mrs. Chee says we should wear white for mourning instead of black. We stand tragically self-controlled, when, if we did not know how to wail, we should hire several others to do it for us, so that the departed spirit will hear it and know that his going was a great loss to the family. It is a long, hard journey into the next world and so food and refreshment are placed on the grave. All that greets the weary Western soul is the odor of flowers. We let the departed soul get along as best he can in his new environment, but the Chinese provide for all the needs and luxuries of their dead, by burning, and thus sending into the spirit world, quantities of imitation paper money, paper houses, rickshaws, clothes, and so forth. Thus the discomforts of Hades are minimized, and one can have all the luxuries of home.

We demand quiet at a time of sickness. The Chinese use firecrackers and noise to drive away the evil spirits causing the sickness. We place a tombstone at the head of a grave; they at the foot. All except the poor pay a doctor by the year to keep them well. Mrs. Chee thought our way unfortunate, for we add to the calamity of illness a doctor bill.

That 'East is East and West is West' was exemplified at a dinner party given in my honor by Mrs. Chee. No doubt, however, the dinner party that I gave in her honor was as queer to her as hers was to me, so after all, who and what is queer?



Instead of a dainty white invitation I received an enormous red envelope about eight by ten inches, with large gold letters. According to Chinese custom, we should send in advance a gift of meat or dainties or money, but the Chinese are now so thoroughly convinced that we are queer that ordinary forms of Chinese politeness are not expected of us.

In America the house is inclosed in a yard, but the Chinese house incloses its yards or courts. Mrs. Chee's home was true to type. The back yard was at the front and the front at the back. We passed multitudinous courts of servant quarters and stables and kitchens, where geese, pigs and scavenger dogs abounded. At last we reached a spacious court filled with rockery and flowers, adjoining the living quarters of the family. Here Mrs. Chee met us in her gracious Chinese manner. She vigorously shook her own hands in greeting, and we, in turn, warmly clasped our own hands and shook them at her.

One servant brought us fragrant bowls of Jasmine tea, with the saucer placed over the cup instead of our method of placing under the cup. We were urged by another servant to wash our hands and face with the steaming towels she brought us. We discovered that promptness at a Chinese dinner is not essential, and no one seemed concerned when some of the guests were an hour or two late, for all of the visiting is done first and one goes home immediately after the dinner. In China, an invitation brings not only the one woman invited, but also all her small and voraciously hungry offspring and their *amahs* or servants. This dinner was no

exception. While we were waiting for the belated guests, Mrs. Chee entertained us by showing us her gorgeous livid red wedding dress and veil, which instead of hanging down the back, hangs over the face. Thus the Chinese bride appears more modest to the young husband who is seeing the girl of his parents' choosing for the first time. We spoke of our wedding day as being such a happy event for the bride. My hostess' reply was that any demonstration of joy on the part of the bride would be most unfilial indeed and would be a disgrace. The bridegroom is supposed to be very happy and give feasts to his friends, while the bride sits in a back room and fasts and weeps to show her sorrow at leaving her parents and the home of her childhood. The unconcealed joy of the Western bride is indeed shocking.

Two hours after the time set for the dinner, we seated ourselves at the table. The belated guests had no apology to offer and none seemed to be required. I, as guest of honor, was placed at the left of the hostess, instead of the right. The meal was served in reverse order to ours. The dessert, cold dishes, entrées, vegetables and meats all came first, and the soup and rice were served last of all. Perhaps these delayed dinners are intentional to prepare one for the twenty or thirty courses to follow. This, indeed, was a 'Royal Gorge' as long as the Colorado. The Chinese guests were all polite and showed their appreciation of the dinner by loud smacking and sucking of the food, while we, in our impolite way, ate silently. There was no tablecloth, in order that bones or remnants might be laid on the table. Those who ate the fastest began leaving the table before the rest of us had finished. Their method of excusing themselves was to place the chopsticks on top of their rice bowls and invite us to 'please eat a little more.' Everyone was again urged to wash her hands and face with the towels.

Leave-taking was excruciatingly polite. We energetically shook our own hands at the hostess and thanked her for the delightful time, to which she replied, 'Oh I am sure I have offended you. My food was very poorly prepared and of insufficient quantity, I fear you will never want to come again.'

We repeatedly assured her of the delightful time we had had and the abundance of food, and she just as frequently apologized in the former refrain. At last, after much bowing and shaking of our own hands, we were allowed to depart.

But 'East is East and West is West' and the customs of the East are as old as those of the West are young. There are more than four hundred million of them and about a hundred million of us. After all, *who* is queer?

What's Wrong With the Press

(*Concluded from page 7*)

'They're crazy because of that robbing-the-dead story. You know how hard-boiled they are over there. I wouldn't go over without a gun if I were you.'

Halfway across the island was an old hotel. I went in, identified myself, and asked the proprietor for the loan of a gun.

'I'll let you take a shotgun,' he said. 'It's the smallest thing I've got.'

I couldn't imagine myself walking into the barroom crowd at Eagle Park's pet beer-house with a shotgun, and I went on. As we neared the tavern, I told the driver to race down to the river, where the police boat was tied. There I found Mike Regan, police superintendent of Buffalo, a man of the build of William Howard Taft and the muscle of Jack Dempsey. I explained the situation.

'I'll go with you,' he offered, '—me and the inspector. I'll be just a few steps behind when you go in the door.'

As I walked into the barroom and announced myself, the place was packed with as big a gang of roughnecks as I've ever seen. Behind the long counter were two bullet-headed gentlemen whose probable occupation was robbery, armed. In front of them were others of the same model.

'I'm from the *Courier*. Anyone calling for me?' I asked the assemblage.

One of the men vaulted the bar. As he landed on his feet, the bulk of Regan in all the glory of braid, buttons and brawn appeared behind me in the doorway. Whatever the bartender intended to say died on his lips.

'The *Courier?*' he asked, one eye taking in the police superintendent. 'No, sir,' he said, 'I ain't heard no one asking for you. You ain't heard anyone, boys, asking for him, have you?'

And the assembled boys reported to the man that no one had been asking for me.

The reporter, to quote a colleague, has a strange but ironclad code of ethics. He may steal a story without a moment's warning but he will never break a confidence to get one. (I'm speaking of reporters of standing. No profession is without its cankers.) He may wink at a story for the sake of a friend, but he will go through fire to get and print a story which he has been offered a bribe to forget.

And after that he must know how to talk intelligently with all classes—with the scientist about his new discovery, with the theologian, or the lawyer, or the grafter, or the uplifter. He has to size up a man and decide in his own mind how much that he says can be believed. That some reporters fail in this is evident. At least fifty per cent of the misinformation that gets into a newspaper is got at the source.

Facts are elusive. It is not humanly possible for a reporter to be an eyewitness of every event in the world. He must take his facts from the coroner or the detective or someone who heard it from someone else. And—witness court testimony—few persons remember the same thing in the same way.

The reporter makes no more errors than you do in the conduct of your business. The difference is that you do not publish your errors. When a reporter errs, his mistake is broadcast to the world.

Let us turn to the bad newspapermen—and there are many of them. Some men would be regarded as fools if they were quoted accurately, but many have been made to appear fools by being misquoted. Not, however, that every big man who says he has been misquoted tells the truth. Denial is the favorite weapon of many gentlemen of office.

Many are misquoted, though. They are made the victims of loose reporting This is done not always by what is printed, but by what is omitted. This type of slipshod reporting is one of the large causes, I believe, for the lack of faith in the printed word. It is due to the growing tendency of certain smart-aleck reporters to cull the bizarre remark, the colorful thing, and throw it up in 'punchy' skeleton form. In doing this, a bad reporter tosses the whole sense out of focus.

When I was but a cub, I went to interview Charles Rann Kennedy, the man who wrote *The Servant in the House*. He talked of such abstractions as subconsciousness and interrealism. In those days I hadn't the least idea of what he was talking about. I went back to my office with head swimming and reported that I could not find the gentleman. He was over my eighteen-year-old head. If he sees this, he will know he owes me a deep gratitude.

A Forest Tragedy

Waste Leaves Lumbering Towns Destitute

SCATTERED here and there in the North, and even in the West, are the relics of towns in whose story there is not so much of romance as of tragedy. For these towns perished, not because natural wealth became exhausted in the course of proper exploitation, but because greed and folly removed the source of wealth, when wisdom would have conserved it for decades, perhaps for all time. Let Gifford Pinchot, Governor of Pennsylvania, tell the story of some of the dead lumber towns of Pennsylvania. He speaks simply, but the record cuts to the heart of selfishness and greed:

'Fifty years ago a vast and unbroken forest covered the extreme southwestern part of Tioga County, Pennsylvania. As late as 1870 only two families lived on the site that later became the busy lumbering town of Leetonia. Then lumbering was just beginning in the region, and only white pine was cut. Other trees, such as hemlock, birch, beech, and maple, had no market value.

'After most of the white pine about Leetonia had been cut out, a market developed for hemlock bark. The bark supply was so great that in 1879 a tannery, with an annual capacity of 3,000 cords, was established. Almost overnight the settlement of two families grew to a town of two hundred people. In 1882 a railroad came to town, and in 1897 a sawmill was added. This mill was operated continuously until 1913, when it was replaced by a larger one.

'Leetonia was at its best from 1913 to 1917. Then the town had a population of 500 people. Many men were at work in the woods preparing logs for the sawmill and peeling bark for the tannery. More men were employed at the sawmill and in the tannery. In 1917 it became evident that the town was doomed. In the early winter of 1920 the bark supply was completely exhausted, and the tannery, which had been in operation continuously for more than forty years, was closed down; in 1921 the last log was cut in the sawmill.

'The closing down of the only two industries of the town was the next to the last chapter in its existence. The last chapter was the sale of the whole town of seventy houses, including the tannery, the sawmill building, and 400 acres of land, for $6,500, the price of one very modest city home. In the spring of 1923 only one family remained—that of the forest ranger.

'Forty years ago Gardeau was a young and promising lumber town in Northern Pennsylvania. The only industry the town ever had was a sawmill, which made and kept the town. For twenty years the town was busy and prosperous. At its height 1,000 people lived there and in nearby camps. In 1899, when all the forests around Gardeau were cut out completely, the sawmill had to close down. There was nothing left for the people to do but move. Most of them went about thirty miles northwest to Granere, where they started up another lumber town in the midst of equally fine forests. Today nothing is left of Granere, and only five people live at Gardeau.

'In 1893 virgin forests practically covered the hillsides overlooking the site that in a few years became the biggest and busiest lumber town that Pennsylvania ever had. Then there were only five or six families in the entire valley. In 1895 a sawmill was erected.

'The sawmill was the heart of the town. The annual output of rough lumber was valued in the neighborhood of $1,000,000. Every part of the town was busy, and 5,000 lumberjacks were engaged in the woods.

'In the early days few people thought that the forests about Cross Fork would ever be cut out, but in April, 1909, the big sawmill was closed down, and by autumn of the same year the people were leaving the town in large groups. In the fall of 1913 the railroad discontinued service. Where the lumber company left almost endless stretches of desolation, the Department of Forestry has developed valuable young forests.

'For a short time the town of Norwich held a commanding place in the lumber industry of Pennsylvania. As late as 1909 the entire town site was covered with a dense stand of big hemlock trees. Individual acres were stocked with 50,000 board feet of lumber, and in addition yielded 25 cords of bark. By 1912 a busy lumbering town was hard at work.

'At its height the town had a population of 2,000 people. Many more men worked in the woods. The mainstay of the town was the sawmill, with a daily capacity of 300,000 board feet. It was regarded as the most modern and best-equipped mill that ever operated in the State of Pennsylvania. Over one hundred miles of logging railroads were maintained to bring the wood into the plants. In those days Norwich was a busy place. It turned out 90,000,000 board feet of lumber in a single year.

'When lumbering operations started almost everybody believed that the timber supply was inexhaustible. But the town's active life was less than ten years, for the mill that started in the autumn of 1912 closed down forever on August 20, 1921. The story of Norwich is a forest tragedy. When the timber at Cross Fork was cut out the people went to Betula, and when no forests were left about Gardeau the people went to Granere. When the sawmill equipment was no longer needed at Leetonia, it was shipped to Kinzua; but when the supply of timber at Norwich gave out, in 1921, not a single place was left in Pennsylvania where the mill could be reëstablished.

'The story of Norwich is the saddest chapter in the whole history of Pennsylvania lumbering. The hillsides are bare. No trees of merchantable size remain, and in many places the young growth is sparse and weak. The utilization at Norwich was probably more complete than that of any other large lumbering operation in America. To use what is cut up to the last fragment is good business, but it is not enough. No provisions were made for forest renewal. Practically no old growth and only a thin sprinkling of inferior young growth is now present on the cut-over areas. The land is lying idle, although if it were given proper protection and care it is capable of producing crop after crop of valuable timber.'

NEAR COFFEE
or Real Coffee without the Caffeine

Many people can't drink coffee. Others must stint in the morning and omit at night. All because of caffeine. Such people must choose between cereal coffee and Kaffee Hag.

Kaffee Hag is pure coffee—a rare and delightful blend. So rich in flavor and aroma that the finest hotels now serve it. In countless homes it is the favorite brand.

In Kaffee Hag the caffeine is removed. All the natural coffee flavor remains. All the delights intact. Caffeine has no taste or odor, so it is never missed. The most expert coffee tasters cannot discover its absence.

But the result is coffee all may drink without a thought of harm. Children may enjoy it. One may drink it at night and sleep. Someone in your home desires this coffee. It wins greatest favor with those hard to please. This coupon with a dime will bring a 10-cup package. Clip so you won't forget.

KAFFEE HAG 10¢

1440 Davenport Ave., Cleveland

Send me postpaid, enough Kaffee Hag to make ten cups of real coffee; I enclose 10 cents (coin or stamps).

The Destiny of the Democratic Party

(*Concluded from page 1*)

This fight resulted in the selection of a Vice-President in 1837 to devolve on the United States Senate—the only instance of the kind in the country's history—when Richard M. Johnson, who had been the Democratic nominee, was elected. The fight, renewed, was so bitter four years later that no candidate for Vice-President was nominated by the Democrats, who lost the election.

In 1852 the rules committee of the Democratic Convention recommended that the two-thirds rule be abandoned, but the proposal was defeated—'amidst vehement applause,' says the convention report.

There were too many aspirants for the presidential nomination and too much uncertainty for any group to forego the strategies made possible by the rule. The result of a deadlock which followed was the nomination of Franklin Pierce.

IN 1860 the Southern delegates in the historic Charleston convention stood solidly against any change in the rule, for a majority vote rule would have meant the nomination of Douglas, whom the South opposed. The result ultimately was a break in the party, which put two tickets in the field. This assured the election of Lincoln, who received fewer popular votes than were cast for the two Democratic candidates.

Douglas received a majority of the votes cast in the Charleston convention, as Van Buren had done in 1844, and as Champ Clark did at Baltimore in 1912. Each of those men probably would have been elected President at the time but for the two-thirds rule, under which they were defeated in conventions. For the Democrats won on each occasion.

But was the will of the party, as represented in the national conventions, really thwarted on those occasions? Most students of politics agree that it wasn't. It is doubtful if a majority of delegates in any of the conventions really was for either of the men whose ambitions were confounded by the two-thirds rule on the occasions in point. For had they been, the rule might have been changed when each of the conventions was organized.

This brings up a side light that is not always noticed in considering this rule. Each convention is fully autonomous. It adopts its rules by a majority vote. *Hence if it wishes to do so a majority may assure control by eliminating the two-thirds rule at the beginning.*

Champ Clark's supporters might have done that, for example, at Baltimore in 1912, and thus changed the course of history. But too many of those supporters were nominal only. These followed instructions in voting for Clark but —as in the notable case of William Jennings Bryan— they did all they could otherwise to defeat Clark. Hence it may be questioned if Clark was the genuinely first choice of a majority of the delegates.

Many times in the history of Democratic conventions, the rule has made it possible for delegates to get around instructions, which sometimes were faulty and at other times sound.

It hasn't made always, however, for genuinely first-choice selections. It has been the chief reliance of 'dark horse' candidacies, which have fared much better in Democratic than in Republican conventions as a whole. This is because any candidate or group of candidates having the undeviating support of one-third or more of the delegates in a Democratic convention can absolutely block the nomination of any 'leading' candidate.

A notable instance of this was in the convention of 1924. The unprecedented number of ballots taken at that time owed more to the obstinacy of delegates supporting minor candidates than to the bitterness between McAdoo and Smith forces. At almost any time the supporters of other candidates might have brought an end to the proceedings, by combining on only one or throwing their support to Smith or McAdoo. It was clear, however, that neither Smith nor McAdoo could get two-thirds of the votes, so each of the other candidates held out in the hope of being the beneficiary of the inevitable 'break.'

Thus the two-thirds rule heightens the element of intrigue in Democratic conventions and often foments deteriorating bitterness. The average of Democratic convention fights have been much longer drawn out than Republican ones, and defections on account of convention proceedings have been more frequent in the Democratic Party.

These effects are produced also by the 'unit rule' which runs along with the two-thirds rule in Democratic conventions. It, too, is as old as the convention system, though it never has been fully employed in Republican conventions.

The unit rule makes it possible for a majority of a state's delegates to cast a state's entire vote in a Democratic convention. This is a relic of the party's traditional adherence to the principle of State's Rights. It has been modified since the presidential primary came into existence, but the modification rarely applies.

When delegates are selected on the district system, instead of on an all-state basis, the unit rule does not hold.

This rule usually has been left to state conventions, which might or might not impose it on delegations.

With it in force, the two-thirds rule is necessary to prevent the possibility of an actual minority controlling a convention even in the matter of nominating candidates. It would be possible, as an example, for delegates from thirteen states to constitute a majority in a Democratic convention, and most of those states usually 'go' for the Republican ticket.

Under the unit rule, a majority so constituted might represent the real wishes of only a few more than half of all the persons making it up. This is because only a majority of the majority could control.

Under the unit rule and majority control, as few as 288 out of more than 1,000 delegates might possibly control a Democratic convention as now made up.

HENCE the abandonment of the two-thirds rule would make desirable the abolition of the unit rule. Politicians, however, are rather fond of the unit rule, as it accentuates the power of state leaders.

It is unlikely that anything will be done about either of the rules, despite a formidable movement for a change.

The reason nothing is apt to be done is in the fact that the situation is analogous to the case of the man who couldn't fix his roof when rain was falling on it and there was no need for fixing it when rain was not failing.

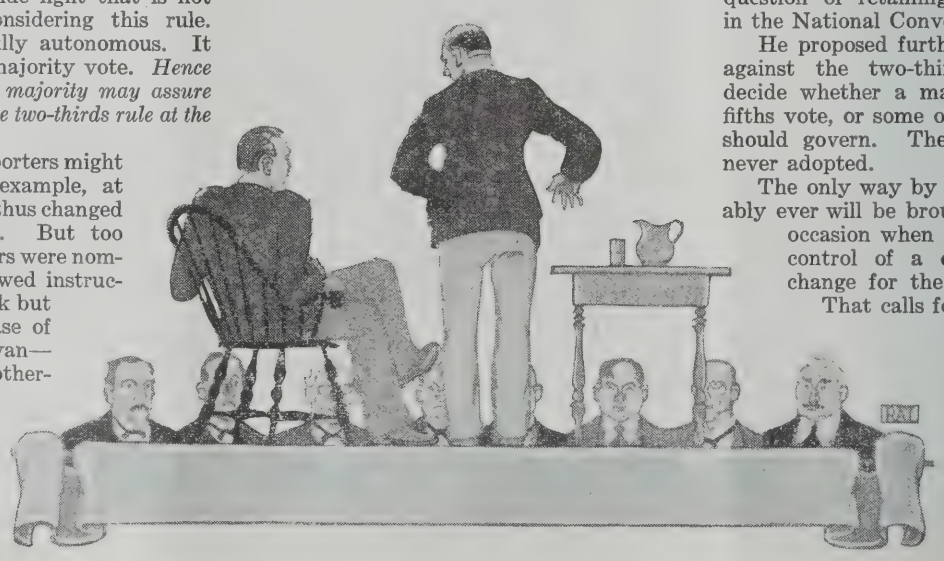
Remove all questions of incidental expediency, and the Democratic Party would vote quite probably by almost unanimous voice to abandon both rules. But when no such questions are involved, the rules make no difference and nobody bothers.

Edward Stanwood, in his excellent *History of the Presidency*, published in 1898, suggested that the Democratic State Conventions be asked to vote on the question of retaining the two-thirds rule in the National Convention.

He proposed further that if they voted against the two-thirds rule, that they decide whether a majority vote, a three-fifths vote, or some other specified fraction should govern. The plan, however, was never adopted.

The only way by which a change probably ever will be brought about is on some occasion when a candidate clearly in control of a convention decrees a change for the party's future good. That calls for more boldness than any candidate hitherto has dared to exercise.

It is quite probable that the next Democratic convention will be beset by the old rules—and another row may result.



Letter to the Folks

(*Concluded from page 5*)

I counted on. The natural increase of this state I know is greater than any other, which, with emigration will run the population this census (1835) to at least 250 or 80,000.—

I am glad that there is some enterprise left among the Portsmouth capitalists & that you have the Railroad in prospect. If Real Estate rises in value in consequence of the contemplated work—sell out & come here where the money can be so much more advantageously invested.

I am sensible of the difficulties to be encountered in winding up. Mr. B. *appears* very friendly to me & I believe is a little afraid of getting me displeased. I heard from M. & S. A. in a letter dated about 25th July in which S. A. told me of her illness & your letters (that from N. Y. & Portsm°.) arrived together as generally happens.—I have not heard from W. Belcher,—Sorry Geo did not see the lilly's. I still have my eye or rather mind on 3 girls there & they are Martha,—L. I. Hill & Miss Giles.—Do let me know how the letter *comes* on—don't fail.—You ask is there a prospect of my place growing rapidly. I suppose you must mean New Salem—No; that stopped 2 yrs. since. A town (in a bad place) 2 miles lower down on the River is likely to become the County Seat of a New County which will be made by dividing this one & taking some off of others.—This County is now miles square.—The town (Petersburg) is only one by name having but 2 stores—2 houses & a Cobler's shop.

S. Haven acted indiscreetly in regard to the Turnbull affair—I hardly expected Clarke would go to P.—as I look for him every day & the mail does not go out till the 22d. I will omit till then a conclusive answer in regard to the money: & the article sent by him.

I have no hesitation in saying that money could not be better invested than in land & there is not any question of its safety. Land will always be valuable here as every foot of it is susceptible of cultivation—No stones or broken land to obstruct the free course of the plough. Not less the 7000 acres is entered monthly at the Springfield Land Office & Speculators are taking it up wherever they can find, some individuals have entered 20,000 acres in one day. Prairie & timber adjoining cannot be entered any where in the state.—It is difficult finding where the unentered lands lay, nothing can be found out from the settlers as they wish the range open. The land is not surveyed to the buyer, who must pick the land out & procure the numbers. If the land is adjacent to any he owns, he can guess pretty near—One person is not allowed to enter but 2—40 acre lots & then has to take an oath that he wants them for farming purposes & not for speculation or in trust for another.

I have already entered my 2—40s. Any one can enter as many 80s as they chose. There is some first rate prairie about 2 miles S. W. of this that I should like to enter 160 acres off, as a company intend taking the whole tract and I could almost oblige them to take this. What regards them is the difficulty of getting timber of which there is none to enter any where near this. Distance appears the same on these prairies as on water & in fact as there is no hills 2 miles is as easy to haul over as one with you. I do not know, but that there has been more land entered the past year than there had the five preceding.

M. S. M.

On the night of the 17. Aug.st a tornado passed over this place, laid the fences flat, rooted up trees, blew down corn & done other damage. The next morn by daylight as I was putting up my fence *2 great wolves* walked along unconcerned within 30 yds. of me. I tried to *scare them* by taking off my hat and running *towards* them but they would not quicken their gait—these are the only ones I have seen.

High winds seem to be common every where this year, so the papers say. There has been a flock of wild turkies round my house since I cut my oats and as I had not shot at them but twice they were pretty tame. Seeing them last week I took out my gun which had a great charge in (that I intended to shoot a Bull with who had badly hooked Clarke's horse) and as their heads all go up together when they see any one I let drive & *shot five*, but could not catch but 3, had I a dog or another person with me I would have saved all.

Prairie Hens are very plenty this fall, they are all the color of a 'gray duck' & their feathers lay closer to them than to barnyard fowls. With a trap a person could catch as many as they could eat during the winter. Partridges are too small game to shoot at. If you were only here, we could live like princes.

I do not know exactly where I shall go yet,—but if no better chance offers, I shall teach a private school on Indian Creek, Morgan County, where M. J. S. lives. As N. Salem is the nearest post office, you can still send there. I wish your house, barn and shop could be transported here & then how happy could we all live together. They would be worth $2500 here.

There is still a 40 acre lot west of No. 8 but I can't enter it, but luckily a speculator can't either. C. has also a lot west, which he can & will enter. When we came we could have entered N. W. or South, but then we thought there was so much land in the state that no one would want any so far out & that we could have the use of it for nothing but the emigration has been enormous. If I had laid out $2000 in land round here, (say within 3 miles) when I came, it would have been worth $10,000 now.—but as before said, I had no idea of its value.

A Canal route 2 miles East of my farm & half a mile from my timber is about being surveyed.

Love to all

M. S. M.

Sept. 20th.

M. J. S. very much resembles Mehitable—

TERMINAL NOTE

An inquiry by Oliver R. Barrett, whose collection has this letter, resulted in finding that Matthew S. Marsh, the writer of the foregoing letter, married Martha Jane Short, the woman of whom he wrote so seriously. She was one of three children of Stephen Short, who came from Long Lick, Washington County, Kentucky, to a settlement later named Prentice, Ill.; a land grant dated 1826 refers to lands granted to Short in 1820. Marsh and his wife went to Prentice where he kept a general store.

They later moved to Springfield where he was employed in the land office, again moving to Jacksonville to educate a daughter. Their next place was Chicago where they had a residence on Washington Boulevard. Matthew S. Marsh through life maintained the tone of austerity and piety noticeable in this letter; he died in church while leading fellow-worshipers in prayer.

C. S.

Pay-as-You-Go in Building Good Roads

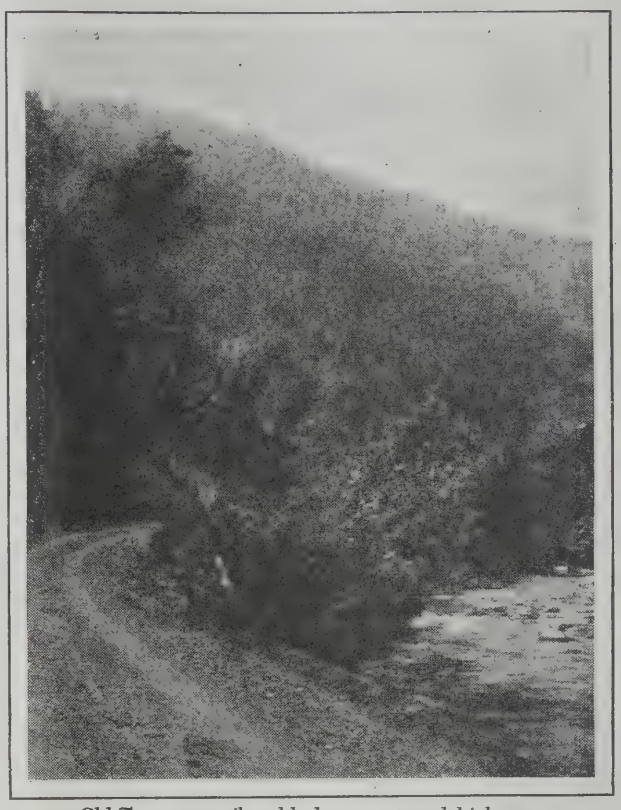
(Continued from page 2)

ment of J. G. Creveling, Jr., who was the first Commissioner of Highways. In those days the people of the state appeared to have little faith in the Highway Department, and so it was the twofold problem of the new commissioner to make better roads and at the same time gain the approval of the public. His successor, C. N. Bass, the present commissioner, when I saw him in his offices in the Memorial Building at Nashville, told me that in the comparatively short time of three years Mr. Creveling succeeded in placing Tennessee in a favorable light on the road map.

'The biggest single forward step of the State Highway Department,' said Mr. Bass, 'was taken before the year 1924, when it took over all the roads designated as state roads, for maintenance, and kept these thoroughfares smooth and passable for the entire year by the expenditure of a small amount of funds. They included fair all-weather roads, county roads and turnpikes. For hundreds of miles, especially in the central section of the state, condemnation proceedings were begun against the owners of turnpikes, tollgates were removed, and the maintenance of such portions of the highway was adopted by the state. Some were operating under charters from the legislature by turnpike companies, but most of them were donated by the counties.

'Roads that were put under maintenance were in most cases narrow and rough, full of chugs, holes and big rocks. The culverts were short and often in places there were no drains at all. The right of way frequently was grown up with weeds and bushes, and in places the ditches were from three to four feet deep and therefore very dangerous to a traveling public. The drainage on most of the roads has been the most expensive feature of the reclamation work. The old wooden and rock culverts are being replaced and lengthened by building culverts having abutments of stone or cribs of poles filled with field stone. The floors are made of locust poles or planks, spiked to pole stringers.

'It is often the case in some counties that a poor road is widened, straightened and cleared of sight-obstructions only to lead to a narrow bridge or underpass which was built in days when travel was principally the traffic of horses and buggies. The false idea of security that a newly widened road gives a motorist often brings disaster when he drives too fast and dashes onto one of the bridges which may be already occupied by another vehicle. The state is endeavoring to relocate all roads which have sharp turns, bad grades and dangerous places and to replace obsolete one-way bridges with modern structures.



Old Tennessee railroad bed, now a paved highway.

Building road through lowlands, from one levee to another.

'Our program differs radic from those of most other sta principally in the methods financing, our idea being to for improvements with cur revenues. We set about to b and finance the system witho large state bond issue, as wished to avoid the creation large state debt. The prog now calls for an expenditure about $14,000,000 yearly; $ 000,000 for construction three to four million dollars maintenance. We have sp approximately $40,000,000 are just now getting into the work. The counties have bon themselves for a total of $13,0 000 and at this legislature, nothing happens to prevent the state will take over this en $13,000,000 bonded debt from counties and will itself carry the entire state program.

'The Highway Department an income made up from sources: auto registration, three-cent gasoline tax, fed aid and county coöperation. auto registration tax is levied license fee on motor vehicles brings in annually $3,500, The gas tax is collected from distributors and nets $4,000, a year. Under the Federal Road Act, and from the annual appro tion of $75,000,000, Tennessee's allocatio $1,700,000. The counties then contri from county bond issues, or in some c from current revenue from land tax, third the total cost of projects within t confines. The last legislature, realizing desirability of an annual road progra from thirteen to fifteen million, author the issuance of short-term notes in amount of five million dollars for biennial period ending January 1, 1927. that date the partment will h actually used half of this amo and will have ried out a fourt million-dollar gram each year. bill which seem have the appr of the coming leg ture provides this 2½ million be combined the money owed the counties and entire debt assu by the state, t paid off with third of the th cent gas tax.

'It is prop that this amort tion shall not b until the end of next biennial per or the year th after, county

)peration being continued until that time, ıfter which the entire financial load will be)orne by the state. By that time the total lebt will be slightly less than twenty mil-ion dollars, which one cent of the gas tax vill easily retire. The gas tax is increasing ınnually at the rate of 33⅓ per cent and the .uto tax at the rate of about 20 per cent. Computing the gas tax at the conservative ate of increase of 25 per cent, and the auto egistration annual increase at 20 per cent, he current revenues from the remaining wo cents of gas tax, and the auto registra-ion fees at the time county coöperation is iscontinued on January 1, 1929, will be leven and a quarter million, which, added o federal aid, will almost make up the rst year the annual budget sought.

'We are paving the roads as fast as we an. A total of 4,892 miles of state road has een taken over; 890 miles, let to contract, re already completely paved; 2,000 other iles are paved with macadam or gravel. Ve are awarding contracts at the rate of 00 miles a year for grading, draining and aving, and in the next five years this will ive us an additional 12,000 miles of paved ighway at a cost in the neighborhood of 45,000,000. Our important job is the aving of the 4,892 miles of highway; the ork of improvement, of course, can never e completed, as it must continue as the ears roll by, but as we view the situation at resent, the sum of $85,000,000 will be eeded to complete our program.

'The greatest single factor in the road ork has been the confidence of the public the Highway Department; that has not me easy, and its accomplishment has been ıe result of hard work on the part of our ficials. Highway improvement has been ıe great influence in reëlecting Governor ustin Peay for his third consecutive term.'

It has been found in Tennessee that the emands of its traffic require variations in avement type, and a general rule has been avoid the use of rigid pavements on cal service roads except in instances of nusual conditions of material supply. nprovements have been conducted through rogressive stages; first comes grading and ainage; then the use of sand clay, gravel ıd waterbound macadam; then bitumi-ous macadam surfacing and a crushed stone ase; then bituminous macadam surfacing ıd a plain cement base and finally a plain ement concrete pavement.

N MAY, 1925, there were, according to a estimate made at that time, 4,650 miles state highway under state maintenance; averaging counts at adjacent points on e highways and multiplying by the stance between points, a fair average was ained of the total vehicle mileage on the ad. The estimate showed a daily total of 9,600 vehicle miles on the primary system; 1,000 on the secondary system and 189,-0 on the State-Aid roads, making a total 1,130,100 vehicle miles daily on state ıd federal systems. This signified 412,-0,000 vehicle miles throughout the year. is expected that by 1930 vehicle registra-on will have increased to 400,000 and the affic will have increased an equal amount.

Meanwhile Tennesseeans are proud of ie record of their state in its program of ighway construction. 'Tennessee,' said ie of its native sons, 'has made marvelous ogress in roads in recent years. Anyone no has done much going about in an tomobile knows that this statement can-not be controverted. The road now from Nashville to Chattanooga is safe, and most of the way ideal. It is practically no drive from Tullahoma to Chattanooga. Roads that have not yet had attention are getting it.

'Our roads are not perfect by any means; nor have we all the roads that we need. It is probable that we never will see any good roads program completed and we will have to keep everlastingly at it to have the most essential ones kept in shape for traffic. But the tourist parade is a great thing for any state and we want to make Tennessee the parade ground of every automobilist who visits Florida or other points south.'

Candles and Candlesticks

(*Concluded from page 15*)

Almost one can see the family procession starting out on a cool autumn day for a bayberry frolic, a holiday that occurred after the first frost; see them returning with baskets laden with the blue-gray berries, a bushel weighing from thirty to forty pounds. It required one quart to make one candle.

Candles and candlesticks came into use in the days of ancient Rome and were called by one poet the 'handmaids of the lamp.' They were in everyday use throughout England in the Elizabethan period, and came to America soon after its first settlement.

Candlesticks were very fashionable among the wealthy, for did not John Hancock send to England a request for sets of them when furnishing his Beacon Hill house? And Thomas Jefferson had in his spacious parlor at Monticello, not only well designed, but richly ornamented candlesticks, together with candelabra and a beautiful chandelier filled every day with fresh tapers, for he made a special point of having his house properly illuminated. The festive board at Mount Vernon, during Washington's régime, was also set with candelabra.

Rude iron and tin candlesticks were among the first articles of purely domestic manufacture in New England.

An important furnishing in the old colonial mansions was the candle-holder known as a sconce.

Brass candlesticks were imported from England, but they were also manufactured in Newburyport and New Bedford, Massachusetts, early in the history of our country.

Early in the 18th Century, snuffers were invented and proved so useful that they became very popular. They generally stood on a table near the candlesticks and were used to trim the candles when they grew smoky. Most of these snuffers consisted of a tray with a box-shaped pair of scissors resting on the top, but there were also cones attached to the candle by a chain.

When candlesticks were first used, they were brought from all parts of the world, including France, Holland and Russia; consequently, there was a great variety. They were made of iron, tin, copper, beaten brass, and crystal. In connection with them were mural sconces and mirror candelabra which were quite expensive. These bring big prices today, especially the hand-type variety. Candelabra are found in sets of three, the center holding three candles and the sides one. The bases were designed to illustrate different subjects, such as Paul and Virginia, Shepherd and Shepherdess, and other pastoral subjects.

Chippendale has left us some of the most beautiful examples, graceful and simple in design.

There is no period with which crystal lighting-fixtures are not in harmony, which makes them popular today. Nothing is so beautiful from a decorative viewpoint, when the pendants, gem-like in coloring, show scintillating rainbow hues and the light catches the dancing prisms, darting shafts of yellow, green and violet which fall across the walls and furniture.

It was the revival of things colonial that again brought candles and candlesticks into fashion, and the fireplace, with its mantel, is a fitting place for the setting of candelabra or a row of brass candlesticks. The hostess of today, more especially she who has inherited fine old pieces, is appreciating more and more the magic of the mellow candlelight.

Hundreds Owe Their Good Health To This Coupon

LAST YEAR a coupon appeared in half a dozen magazines. Today hundreds of the people who signed it owe their good health to Albuquerque, New Mexico, where tuberculosis is being cured on a gigantic scale.

If you are threatened with tuberculosis you owe it to yourself and to those who love you to find out about Albuquerque and its marvelous all-year climate. The coupon will bring you this information in the form of our new book: "Putting 4-wheel Brakes on Tuberculosis", illustrated with more than 130 actual photographs.

It will tell you why Albuquerque is the premier health city of the world; why its location, a mile above sea-level, in conjunction with its southerly latitude, is responsible for winters so mild that you can live outdoors without cumbersome wraps; and summers so perfectly tempered that blankets are necessary for comfortable sleeping even in July and August. From the weather charts reproduced you will note that Albuquerque has but 7.6 inches of rainfall yearly, only half as much as Colorado, and one-fifth as much as Eastern health resorts; that here the relative humidity is as low as in any habitable part of the globe.

It will give you authentic information about living expenses in Albuquerque. It will tell you about the excellent hotel accommodations, the cost of living, the many good sanatoriums and their rates. It will tell about the type of homes and apartments you can rent furnished or unfurnished, and how much you will have to pay for them. It will be sent gratis to the names you suggest.

Rise of Mustapha Kemal Pasha

(*Concluded from page 3*)

who had been thrown ashore along Gallipoli during the first landing. The Turks held the elevations above the beaches in the face of a most gruelling bombardment from the Allied ships. Fearing that the gross of Sir Ian Hamilton's troops would be set ashore near Bulair, Liman Pasha had rushed there to direct operations, leaving to Essad Pasha the defense of Ariburnu, and to Weber Pasha, another member of the German military mission, the defense of Sid-il-Bahr.

At dusk on April 15, the Allied troops had made but little headway. Over in Kum Kaleh, on a point of the Anatolian coast directly opposite and nearest to Sid-il-Bahr, the French had landed and were still hanging on, while on Gallipoli the British landing parties had a hard time keeping what little ground they had gained. At six on the following morning operations were resumed. Sir Ian Hamilton succeeded in setting a considerable force ashore under the headland of Kaba Tepeh—a little south of the sector that had been assigned to Colonel Mustapha Kemal.

With more transports steaming close to the shore, the commander of the Nineteenth Division had no reason to occupy himself with more than his own task, which was to hold the line from the Kaba Tepeh to Ariburnu, at which latter point the Anzacs had been landed and had gained considerable terrain overnight. Back of that line lay the town of Maiidos, and the bay of that name—part of the Dardanelles. The town was no longer standing. The bombardment of the previous day had razed this fine base to the ground. But Allied troops reaching the bay, and so the Dardanelles, was to be avoided at all costs.

With the British troops master of the peninsula from Ariburnu to Maiidos, the Ottoman troops south of these points—those at Sid-il-Bahr—would have been cut off; and, with the elevations in the Kodjatchemen Dagh and Pasha Dagh as likely sites for British artillery, nearly all of the Turkish coast batteries, which on March 18 of the same year had defeated the Allied armada, would have been subject to dangerous flank and rear fire.

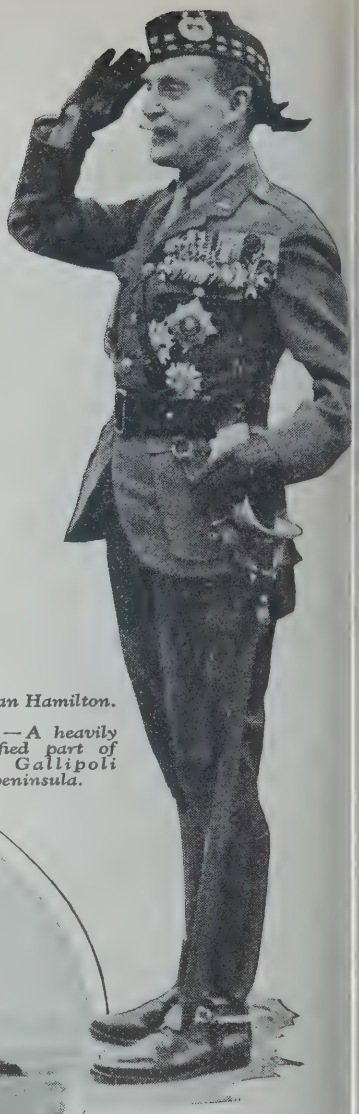
Colonel Mustapha Kemal realized all this, so when the British troops that had been landed under Kaba Tepeh marched north to reinforce the Anzacs, he abandoned the position to which he had been assigned, contrary to specific orders not to do so, and fell into the flank of the newcomers.

Then started as bewildering a series of military evolutions as was ever played on the checkerboard of war. To make his first attack, the commander of the Nineteenth Division marched his men on the double-quick to the southeast. When they reached the Maiidos-Krithia road, they faced about and charged northwest. The British lines broke under the impetuous assault, but their van made off toward the Anzac position, while the rear fell upon the small force Mustapha Kemal had left in position along the beach.

With the Turks no longer directly in their flank, the gross of the Anzacs began to move eastward, toward Maiidos, and for a time it seemed to the colonel that what he wanted to prevent had been promoted by his action. The terrain being most unfavorable to him now, owing to deep gullies, and ridges on which his men would be too much exposed to the fire of the Allied ships, Mustapha Kemal had to fall back as far as the village of Kodja Dereh. At the cemetery of that place, he rallied his men and then led them in a charge against the van of the Anzacs.

But the Australians and New Zealanders proved valiant enemies. Several rushes by the Nineteenth Division failed to dislodge them from the foothills of the Kodjatchemen Dagh. Meanwhile, the British who had landed at Kaba Tepeh were moving into the flank of the Nineteenth Turkish. By noon, Mustapha Kemal Bey was fighting the Anzacs ahead of him, whose progress he had now arrested, and was holding off the Kaba Tepeh landing party in his flank.

To leave the Anzacs in the terrain they had gained would have been most dangerous. They were less than a mile from the ruins of Maiidos and the Dardanelles shore. Meanwhile, even the hardy Turkish infantrymen had come near the verge of exhaustion. To leave matters in that state would have meant that Colonel Mustapha Kemal would have been held responsible for a very nasty situation. Essad Pasha, his immediate superior, famous as the man who held Yanina during the late Balkan War and as such was the last Turkish general to evacuate the Balkans, was too good a soldier not to have foreseen at least



Sir Ian Hamilton.

Oval—*A heavily fortified part of the Gallipoli peninsula.*

in part that the command of the Nineteenth would g into the pickle he was in. N at all minded to face a cou martial, Colonel Mustapha Kem decided that the job he had started had be finished.

The losses of the Nineteenth had be heavy, while the British transports we literally casting new troops ashore. T opportunity Sir Ian Hamilton had look for was at hand and not to be slighte Reinforcements for the Nineteenth Divisi were out of the question. Down at Sid-Bahr every man was needed, and the troo personally commanded by Liman Sande were a good eighty miles away. Colon Mustapha Kemal, then was up against t necessity of meeting the situation unaide

His maneuvers grew more brilliant the action continued. Feints by sm parties of his force drew smaller contingen away from the British gross, who were th given attention by the wily commande By three o'clock much of the terrain lo to the British had been regained, and wh the sun sank the Nineteenth Division e trenched itself on ground which during t previous night had been held by the Anzac On the following morning, the British th had landed under the Kaba Tepeh we forced to retreat to their transports wi heavy losses. The Allies never regain that point, nor did they ever again attem

General von Sanders Pasha.

) land there at any time of the operations. There being no doubt that Colonel Mustapha Kemal had saved the day for the urks, he was promptly rewarded by getting higher command. Throughout the riburnu operations he distinguished himself, and when Sir Ian Hamilton landed his cond expeditionary forces in Suvla Bay, August, 1915, Liman Sanders placed emal in charge of the Ottoman troops olding that terrain from the Kodjatchemen agh to Keretch Lepeh on the sea west of uerchuenkoi.

So far I knew Colonel Mustapha Kemal ıly by reputation. He was not especially nd of war correspondıts and was one of the w Turkish commandrs whose guest I had not een. I had seen him at he headquarters of iman Sanders Pasha at alova, but not well ough to recognize him hen I ran into him, as e saying goes.

In the second week August the British ere doing their best to ccupy the Keretch epeh, a point on the ore of the Aegean that arked the extreme ght flank of the troops der Kemal Bey. To e how matters stood I tended going to that nt, and for the purse Liman Sanders had laced one of his few tos at my disposal. he field gendarmes of the Turks were a quick and wary crowd—fellows who often shot first and asked questions afterward. It was best to stop when hailed, but this time I was in a hurry and told the driver to go ahead. To get to the Keretch Tepeh I had to go over several high ridges exposed to view from the Aegean, and the British small craft that patrolled the beaches and coast had the unfortunate habit of shelling anything that came into sight.

But the man in uniform who had hailed us had a good horse, and roads on Gallipoli were not such as to encourage fast driving in a car. For some moments the inquisitive one disappeared in some gardens close to the village of Tuerchuenkoi; when I saw him next he had driven his horse over a hedge. Both steed and rider landed neatly in front of the car, though the road floor was fully ten feet below the top of the hedge.

It was an angry face I looked into. I had mastered enough Turkish to understand what the chap wanted. He wanted to see my papers. The papers he found in order, but he gave me to understand that these papers did not include the privilege of my visiting the front at Keretch Tepeh. That was true enough. The documents I held from Enver Pasha, then Ottoman minister of war and vice-generalissimo of the Ottoman forces, as well as those Liman Sanders Pasha had given me, simply allowed me to be at the front—visits to sectors strictly subject to the approval of the sub-commanders. Still under the impression that the man was an officer of field police, I gave him to understand that I would take this matter up with Colonel Mustapha Kemal Bey, to whose headquarters I would report anyway.

To my astonishment, the man on horseback informed me that I would not have to report at the Kemal headquarters—that he was the man I wanted to see there. In future it would be best to secure permission beforehand, he added. This time I could go on.

By that time I was more interested in the colonel than in his front. I began to interview him. What was he doing in the rear—in a tunic that showed no rank, was indeed devoid of any military insignia? Well, came the answer, the field police also needed some attention. Some of the fellows preferred the shade of the olive trees and cypress groves to doing their work. With so many Greek spies around, and with so many Armenians taking French leave of the working columns in which they served, that would not do.

Kemal Bey became quite talkative as he rode beside the car. Yes, that had been quite an adventure down there at Kodja Dereh. He remembered seeing my write-up of it—published in the papers of Constantinople through the Milli news agency. Presently, he said that he was glad having met me, and that he would appreciate it did I have supper with him that night.

Colonel Mustapha Kemal Bey was in many respects a most extraordinary soldier when measured by the standards of the old Ottoman army. Not only was he a good tactician and strategian, but he also went to pains for those under him. Kemal Bey would raise the roof when the food of his men got too bad—of good food there never was the question in the Turkish army. He would make the rounds and taste the *pilaff*—concoction of rice and mutton and raisins all boiled together; he would see to it that there was at least enough bread when all else failed, as often it

Santa Sofia Mosque, Constantinople.

Angora, Turkey, an uninviting city, but safe from enemy attack.

did. He even interested himself in coffee and cigarets for his men, and saw to it that medical attention was as good as it could be made.

Always master of the situation on his own front, he was able to send his troops into rest. He was probably the one commander on Gallipoli who never tired of digging trenches and covered ways of communication. Best of all, he rarely lost an action. Most of the heavy losses sustained by the British in the Suvla Bay theater of war were due to him. Still very young, energetic, untiring, and above all a gifted soldier, Kemal Bey came to be a byword on Gallipoli. His prestige traveled to the very front, and when débâcle finally overtook the Ottoman empire, the one man who could rally the Osmanli about himself was the same Mustapha Kemal.

His campaign against the Greek army on the Anatolian high plateau must be rated as one of the most brilliant performances ever made by an army that had been defeated by the misfortunes of its allies. Often likened to Enver Pasha, Kemal Bey was by far the abler soldier—the former knew how to pick his commanders, Kemal proved to be a genius not only in that, but he could attend to the details of military matters with judgment.

In his point of view, Kemal Pasha is distinctly of the West. Like nearly all the younger officers in the Ottoman service, he was in matters of religion an agnostic. And in Turkey that meant much if not everything. What the Occidental is pleased to call Orientalism is largely a matter of faith in Islam and Mohammed. The Ottoman empire was a backward state because of the ultra-conservative religion its government and ruling classes subscribed to.

Kemal Pasha did not believe in the wooden water-buffalo cart, and the two ruts in which it traveled. He used to say that the only safeguard of the Turkish state was modernization in everything—from motor truck to *muezzin*, starting with the *muezzin*, if that was necessary. Like all his class—and that class was large already when Turkey entered the war—Kemal had little patience with the vaporings of the Arabian camel driver—*devedji*.

The day came on which Mustapha Kemal turned his back on the sultan the Allies had set up in Constantinople. With the remnants of the old Ottoman army he retired to Anatolia, and made Angora the capital of Turkey. London and Paris fumed and threatened, and the League of Nations went through its natural function of looking displeased.

Kemal Pasha assembled a new Turkish parliament and advised it to fashion a Turkish republic, with the Swiss Federal Constitution to be the model for it. Though as yet Mustapha Kemal was not absolut his advice was promptly heeded even b those who found it hard to break with th traditions of the Ottoman sultanate an the caliphate. Kemal Pasha informe them that the past was dead, while Turke had to live. Thus the Turkish Republi came into being.

With one of the best constitutions t start with, the new Turkish government of which Kemal Pasha got to be more an more the major part, decided upon a rathe thorough revision of its laws. The old saw of the Kadis as taken from the Koran an modified to suit successive ages went by th board, and Turkey adopted a code which i largely Swiss in civil and criminal practice and mostly German in what concerns purel socio-economic legislation.

The Turkish Republic was to be modern state. Polygamy was abolished Western solar time and calendar were intro duced and made legal. Even the fez had t go. Taxes under the sultans had beer farmed out, much as in the days of Rome they are now being collected by the govern ment itself, and the taxpayer is getting some of his money back in better roads public buildings, better mail service an police protection. For the first time i centuries, the Turk has something to say i local government; officials are elected, in stead of appointed by the Sublime Porte.

The Little Paris Trades

(*Concluded from page 13*)

Savoy drives him toward the soot of the city for all the autumn and winter months. A snowbound little *chalet* pitched up on a steep path—is this the nostalgic vision which makes so soft in his blackened face the look of his dreamy eyes?

A mountaineer, too, is the *marchand de marrons* (chestnut seller). But unlike the *ramoneur* he comes to stay. The bleak Auvergne, rich in picturesque sites, rich in children—and rich in chestnuts—is poor in everything else. As she cannot export her sites, she exports children and chestnuts, the former selling the latter. Clad in a homespun suit and blue and white checked apron, his face half eaten by a fan-like beard, his tough black hair peeping from under a broad-rimmed hat, the Auvergnat *marchand de marrons* is, by tradition, a Parisian silhouette.

He dwells on the boulevard sidewalks, at any street corner. To prevent the rain from rusting his frying pan he borrows one square meter of the café's veranda of which he is as close a neighbor as is the parasitic ivy to the oak. The smell of roasted chestnuts curls off in light blue smoke from his rickety stove and the ten sous of *marrons* quickly wrapped in a paper cone provide with calories the numbed fingers of the *midinettes* hurrying to the autobus, warm up the schoolboys who, on their way to the home of Latin declensions, get a free course in Auvergnat dialect: '*Chauds, les marrons, chauds!*' (hot, hot, hot chestnuts).

Chestnuts are a ready-made dessert served any time of the day, but the Paris streets supply their passers-by with special delicacies for breakfast or luncheon. When the rows of flickering street lights begin to fade out at the peep of day, the night workers on their way home meet the day workers on their way to work around the bowls of *cafe au lait* and *chocolat* set steaming under the shelter of doorways. Bowls and cups by the dozen piled on the very sidewalk, tin cans of milk washed by the rain and

watched by a tribe of cats, coffee slowly filtering on an alcohol stove—this means breakfast for the early Parisian tide.

Two hours later tin cans and bowls have disappeared and the second tide of toilers will find only the cats licking the spilled milk which runs in tiny rivulets between the cobblestones. A smell of fried fish and potatoes invades the street and I frequently cannot resist the temptation to join the *midinettes* who are waiting in line for the five sous of golden *frites* which will be, with a *petit pain* (crusty bun), the only course of their lunch.

Voices echoing in the light atmosphere, making a whole symphony in honor of fruits and vegetables: the *marchands des quatre saisons* (sellers of the four seasons) thus bring into Paris the colors and perfumes which the four seasons spread lavishly over the open country. Each *marchand* has a particular song evoking visions of winding streams, trees in blossom, and a free sun bathing the fields. '*La Montmorency, Mesdames!*' And that means for *mesdames* the riant red of ripe cherries. '*Le cresson de fontaine, la sante du corps!*' (watercress, health for the body). And for all the little gaudily clad and gay prisoners, the feathered balls which warble, cackle, whistle, twitter, and quarrel amid the overhanging flora of the Parisian balconies, here comes the '*Mouron pour les p'tits-z-oiseaux!*' (chickweed for little birdies).

Then, even during the darkest winter days, the flowers of the Azure Coast, velvety golden mimosa, masses of carnations, roses, lilacs, for a few sous brighten with the rainbow of their colors the gloomiest dwellings.

Pushing their carts along in the most congested thoroughfares the *marchands des quatre saisons*, like their immortal brother, Anatole France's '*Crainquebille*,' are forever breaking the law.

Forces That Are Reshaping Mexico

(*Concluded from page 12*)

Maya Indians of Mexico, who typify the result of first-class schooling.

human problems. But the experience of the civilized world was exactly the thing the new statesmen did not want—what they set themselves to do was nothing less than to create a new civilization.

In this they have been gorgeously egged on by foreign radicals at loose ends—Jews from Russia and New York with a sprinkling of other Europeans and Americans. There are radicals and radicals—those who have something real to work out are for the most part engrossed with it in their own lands. Those who have haunted Mexico are principally undisciplined, egocentric personalities who find themselves at war with all societies which man has so far succeeded in organizing and so join hands enthusiastically with the *mestizo* politician in the job of creating a new one.

A Mexican scholar wrote recently, 'Traveling those sections of Mexico away from the beaten path, sections which comprise ninety-nine per cent of its territory, I have come to realize that the progress of the nation is entirely superficial, and even that is localized in a few prominent centers.

'The greater part of the republic is still unbelievably undeveloped and neglected. The extent to which the virtues of the people are lost in their abject poverty explains in part the moral, economic and political instability into which the declaration of rights precipitated the country.'

What are the hopes for the Indian, for that twelve million of sick, unimaginably poor, sub-civilized people, who, none the least, there is now no color line in Mexico. But the *mestizo* spent his formative years in the pathetic position of the higher mixed-breed everywhere, humiliated by his kinship with the dark masses beneath him, denied the fraternity he yearned for with the white few above. His spectacular rise to power has not yet released those energies his long suppression atrophied—rather it has evoked the megalomania which so often the inferiority complex calls out to cover itself.

After the fighting was over the task of the new directing class lay before it in the three primal needs of the masses: health, bread and education. Not one of them, on their simpler levels, depended on the recognition of their government by the world powers, and there was not a civilized country on earth but would gladly have contributed of its experience and its technical knowledge to the working out of these universal

A letter-writer on a sidewalk in a Mexican town, taking dictation.

less, one feels, have such a contribution to make to human happiness, if only they could get half a chance to make it? And what of the children, in whose eager, formative years such miracles of awakening and personality-building might be performed? Suppose we, in America, had the will to help in their upbringing, to whom in Mexico could we proffer this help?

We should find some voluntary organizations, most of them still weak, some of them still incipient, which, none the less, constitute the most promising sign on the social horizon. For the Mexican is incredibly lacking in the power to organize with his fellows to achieve a common end.

When, therefore, he has succeeded in doing so, when his organization has survived those jealousies, disloyalties and irresponsibilities which tear most of them to shreds at the beginning, one may be sure that the active members are persons not of vision only but also of purpose, of force and of self-control.

In these voluntary organizations women are taking a leading part. And perhaps this is the most hopeful thing in the whole situation.

For in many of the qualities that must be brought to bear if the nation is to be regenerated, the Mexican woman is immeasurably the superior of the Mexican man.

Some of his defects she shares, for she has been subjected to the same unfavorable natural environment as he. But also she has been subjected to him, to his egocentric-ness, to his self-glorified incompetency, and it has developed in her patience, self-sacrifice and a passionate maternalism.

When these qualities have been vitalized by that 20th Century outlook which the upper class *mestizo* woman is now acquiring, the future of Mexico will look brighter than it does.

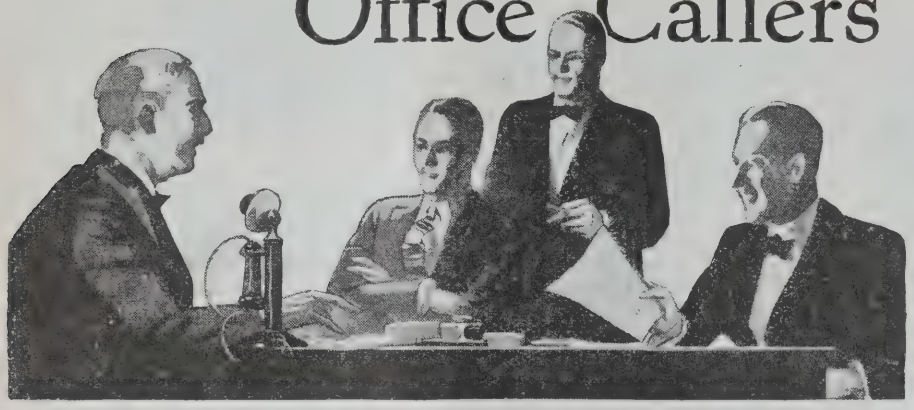
Chats *with* Office Callers



There was a discussion by ***the Lawyer*** of men born before their time. 'Take the case of Robert Owen, who died fifty-eight years ago this month.

He was laughed at in his day as an idealist, for he advocated such extraordinary things as an eight-hour working day, and the abolition of child labor in factories, and universal education, and healthy dwellings for workmen, and an examination of the monetary question and banking and currency problems. He approached the English Parliament, offering a suggestion by which pauperism was to be abolished by the simple plan of finding work for paupers and paying them enough to enable them to maintain their self-respect. He told ignorant lawmakers of existing conditions, as he knew them; of twenty-five per cent of mill employes being children between the ages of ten and fourteen, while their fathers, driven out of work by cheap labor and the competition of their own flesh and blood, were idle.

'But Owen was not an idle theorist. He was an executive, first manager, then owner of mills. And he was willing to back his theories with his pocketbook. So he financed schools for children. He put his businesses upon a five-per-cent-profit basis, turning excess profits into sanitary improvements. How many in this day of great industrial enlightenment would be willing to go that far?'

❦ ❦ ❦

And one day something was said of recent developments in human society, with a man growing quite unnecessarily angry about what he called the Tendency of the Age, and short skirts, and bobbed hair, and brick-colored cheeks, and thickly powdered noses. He was in an ecstacy of denunciation. But ***the Cynical Gentleman*** from Baltimore, not Mencken, by the way, opened his heart in this way: 'Short skirts and loose conduct! Nothing of the kind. In the whole history of mankind, dress has had nothing to do with conduct nor conduct with dress. People were furbelowed and frilled and petticoated and covered up enough in the days of Charles II, but all we have to do is read Pepys for information as to their conduct. Here is the unexplained thing in all this discussion. How is it that women, so careful in their appearance, so keen to hide the slightest deformity, will jump to reveal their physical imperfections at the call of fashion? That's what I don't understand. For never was such revelation of widespread ugliness as we have today. Fashion decrees this or that, and only a small percentage of the female population has courage enough to defy fashion and dress with individuality enough to set off their own particular beauty to the best advantage. But mark what will happen when some witty caricaturist gets in his work, when women begin to see themselves as men see them.'

❦ ❦ ❦

The Book Reviewer remarked: 'More often than not, the best seller is the result of fashion, just as collars and ties and hats are, forgotten as soon as popular, killed indeed by its popularity. Who can tell offhand the best sellers of twelve months? Who reads Michael Arlen? Who would dare to broach the *Green Hat* at a dinner party? As well try to get up an excitement about free silver.'

❦ ❦ ❦

Said by ***a Father*** of five children, when someone remarked that the fashion of the day seemed to be for children to attempt the training of parents: 'I don't mind being lectured by my children so long as they have something vital to say.'

❦ ❦ ❦

And from ***a Louisianan*** comes a story of a talk with a negro at a country fair. It was in the poultry exhibit, and a colored man was holding forth. The writer asked him what breed of chickens he considered the best, and the negro made answer: 'Well, all kinds has merits. You see, the w'ite Leghorns is easiest to find, but the Dark Barred Rocks is easiest to hide after you gits 'em.'

❦ ❦ ❦

'The other evening I saw a marvelous display of the control of mind over body,' said ***the Theatergoer*** as he dropped into the office. 'It was Houdini's opening Detroit performance and he forced himself through the two hours and a half of it with a ruptured appendix. He went through one stunt after another and finally wound up with an open forum on fake spiritualistic mediums. After composedly answering many questions shot at him from the audience, he stated that he was tired and ill —walked off the stage and collapsed. I saw him for a minute afterward and learned that his temperature throughout the show was 104. When operated on this afternoon the surgeons found that he was suffering from acute peritonitis and had been in that condition for some hours. It was an exhibition of magic seldom witnessed —the magic of self-control. Since seeing this, I can understand the Spartan ability to withstand torture.'

❦ ❦ ❦

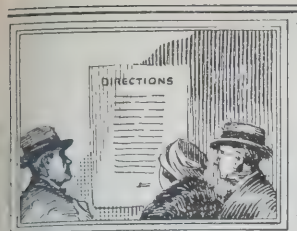
'Behold the learned man and his reconstruction of the past!' exclaimed ***the Humorist***. 'A man in Georgia found a stone axe on the banks of the Oconee River, and carried it to a gentleman of scientific bent who had written a treatise, a portly and learned volume. Now the axe, they say, weighs 300 pounds, and measures 29 inches from back to edge. So, it would seem, if the man who had used it was in any mood rude, coarse or boisterous, it behooved those fronting him to acquiesce in his point of view. For consider the manner of man he was, this reconstructed primitive. And we are assured that it is simple to reconstruct him, theoretically. Thus: If a ten-pound axe is used by a 180-pound man, what weight would a man be who used a 300-pound axe? Now, being of those who was used to turn to the answers in the back of the book, we gave the problem to a Scholar, who verified the learned gentleman's findings thus:

$$\frac{180 \times 300}{10} = 5400 \text{ pounds.}$$

And if a man who stood six feet weighed 180 pounds, then, proportionally, a man weighing 5400 pounds would stand some 180 feet in height. But then what would be the size of a proportional hypothetical ox? For had the oxen been the size of those of our own day, the man would not have used so crushing an axe, any more than a man of today would use a barn door for a fly-swatter. And tremendous oxen seem to imply gigantic grasses; and trees; and leaves and nuts. Especially nuts. Imagination fails in the promised largeness, as Shakespeare puts it. Almost one grows skeptical as Voltaire.

'A certain author of two volumes of involved character, considering similar huge stone battleaxes and trying to account for them, advanced an interesting theory of an erratic planet which approaches this earth at times, coming so close that its careless giant inhabitants either drop, or fling their weapons on our earth. So there are two interesting hypotheses or speculations, both by men of acumen.

'Let me,' begged the humorist, 'add another, wildly problematical, based upon the assumption that primitive men played. That they made things for ornament. That they fashioned miniature things such as tiny arrowheads, because they were pleased to, or wished to amuse the children. That they made stone dolls, no more intended as idols for worship than you intend the doll you give your child to be taken as an idol though you expect your child to have an affection for it. And my theory, quite unscientific, is that primitive men, having time and imagination, and finding a likely stone, chipped out a huge axe for the fun of it; exactly as they etched pictures on stone and tusks for the fun of doing it.'



Can You Tell Me?

QUESTION: What is the area, popula-on and wealth of the United States?

ANSWER: The area of the United States 3,026,789 square miles; the population as estimated to be 113,493,770 in 1925; ie wealth is estimated to be approximately 320,800,000,000.

QUESTION: What is the value and eight of gold?

ANSWER: The unit in weighing gold the troy ounce. A 'fine' ounce means an nce of pure gold. The mint value of gold es not fluctuate but remains constant at 20.67183462 per fine ounce.

QUESTION: What per cent of the stu-nts who enter West Point graduate?

ANSWER: Records at West Point show at during the period 1800 to 1917—7 years—the average percentage for aduation as compared with admission was proximately 59.35 per cent. For particular asses the figures fluctuate between 52 d 59 per cent.

QUESTION: Did President Lincoln at y time offer to pay the Southern slave-lders for their slaves if they would set em free?

ANSWER: On July 14, 1862, President ncoln sent the following message to ngress: "Fellow-citizens of the Senate d House of Representatives: Herewith the draft of a bill to compensate any ate which may abolish slavery within its nits, the passage of which, substantially presented, I respectfully and earnestly commend.'

QUESTION: Where are the Indian res-vations? How many Indians live on em?

ANSWER: There are Indian reservations Arizona, California, Colorado, Florida, aho, Iowa, Kansas, Michigan, Minne-ta, Mississippi, Montana, Nebraska, Ne-da, New Mexico, New York, North rolina, North Dakota, Oklahoma, Oregon, uth Dakota, Utah, Washington, Wiscon-n and Wyoming. There are 326,309 dians living on them. Of these, approxi-ately 225,000 are under the supervision of e Indian Bureau.

QUESTION: Where did the name 'taps' riginate, as applied to military salutes?

ANSWER: In the daily life of the soldier, e sounding of 'taps' at eleven p. m. is e signal for 'lights out,' announcing the d of the day, implying that the cares and bors of the soldier are ended for that day. signifies 'rest in peace.' From this practice the daily sounding of 'taps' comes the stom of blowing 'taps' at the burial of e soldier. It is a custom that involves deeply felt sentiment, signifying, as it does, the end of his day—the 'lights out' of his life—his 'rest in peace.'

QUESTION: How many deaths were there in the American Expeditionary Forces?

ANSWER: The War Department states that 77,771 men in the A. E. F. died while abroad.

QUESTION: Under the pending debt agreement with France, when do the payments begin, and what is the amount?

ANSWER: Payments were supposed to begin on June 15, 1926, with $30,000,000. The pact had not been ratified by the French Government, or by the American Government, on that date, so payment was not made.

In this department we shall do our best to answer questions concerning Government and kindred matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

QUESTION: Is the United States dispute with France in the matter of the French indebtedness to this country concerning the debts contracted prior to the Armistice or since the Armistice? If the debt now in dispute is for the money this country advanced France prior to the Armistice, is France paying this country the debt she contracted since the Armistice?

ANSWER: According to a statement made by Secretary Andrew W. Mellon on July 16, 1926, the pending French debt settlement calls for payment only of the money which was advanced to France after the Armistice was signed. The debt to the United States which France incurred during the war has been cancelled.

QUESTION: Can we find in Washington a record of the services of our great-grandfather who was killed by the Indians as he carried the United States mail near St. Augustine, Florida, during or perhaps before the Indian War? Please tell us to whom to write and if information will be free.

ANSWER: The Post Office Department advises that these records have all been destroyed, and that there is no other department where records of this nature are kept. However, a letter to the Post Office Department, Washington, D. C., giving name and dates, might elicit some information. There is no charge for this service.

QUESTION: What would have been the consequence to the late President Wilson if he had refused to declare war against Germany after the Senate had voted in favor of it?

ANSWER: Congress alone has power formally to declare war, but where the President finds an actual state of war existing he may take the necessary steps in the absence of Congressional action. A formal declaration is unnecessary; a recognition of a state of war by engaging in acts of hostility is sufficient. Any statement as to the effect on President Wilson if he had refused to declare war would be opinionated.

QUESTION: Give percentage of protection in Republican tariff bills back to McKinley Bill.

ANSWER: Under the Dingley law, effective July 24, 1897, dutiable goods paid a tariff of 46.52 per cent. The percentage of protection for all goods, free and dutiable, was 25.49 per cent. Under the Payne-Aldrich law, effective August 5, 1909, dutiable goods paid a tariff of 40.73 per cent, while the percentage of protection for all goods, free and dutiable, was 19.32 per cent. Under the Fordney-McCumber law, effective September 22, 1922, dutiable goods paid a tariff of 36.35, while the percentage of protection for all goods, free and dutiable, was 15.03 per cent. These figures cover the period up to and including 1924.

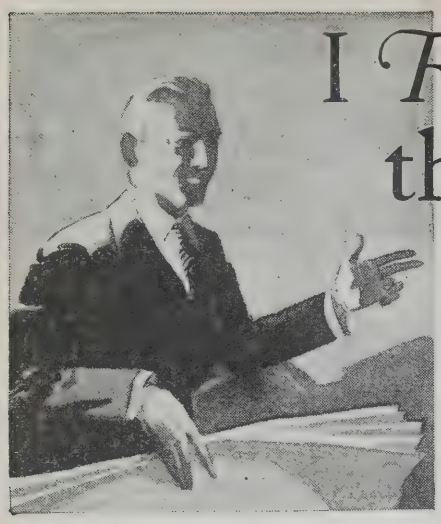
QUESTION: What was the amount of money in circulation in the United States at the close of the World War?

What is it at present?

ANSWER: The estimated amount of money in circulation in 1918 was $4,366,000,000; in 1925, $4,774,000,000. However, it should be noted that official estimates of volume of currency in actual circulation in the United States are not accurate, and they are no longer made the basis of judgment by economists. They are arrived at by taking from the estimated volume of money the holdings of the Treasury and Federal Reserve Banks, not more than a third of the banks in the country. They cannot, of course, include hoardings, pocket change of individuals, counter change in business houses, or the increasing volume in use in foreign countries. Losses by the destruction of money, in various ways, are not known.

QUESTION: Was the Walker tariff passed under a Democratic administration?

ANSWER: Yes. The Walker tariff was passed in 1846, during President Polk's administration.



I *Read* in the Papers

What is a 'coast'? Is it a border, or does it include a hinterland? No less a body than the judicial committee of the Privy Council of Great Britain has the deciding of the question in its hands; and on its decision will depend the outcome of an investigation which has extended over twenty years. Lexicographers do not help much in determining the niceties of meaning comprehended by this five-letter word. One good authority describes it as the 'land next to the sea; the sea-shore.' Another, also a bulwark of reference, defines it as 'the sea-shore; or land near it.'

A Five-Letter Word Meaning What?

To aid the Privy Councillors in their deliberations, four tons of documents have been collected, requiring two court rooms for storing. Newfoundland is the proponent of the definition which would extend inland; the Dominion of Canada would confine it to the shore alone. The stake is barren Labrador, whose seaboard is conceded to be Newfoundland's. The question is: Where does the coast end and the rest of the country begin?

Few legal battles have lasted so long or have required so much testimony. The interior of Labrador is believed to be rich in mineral deposits, and in the possibilities for hydroelectric development, so the decision is of vast importance to the parties concerned. No decision is expected for several years.

ɾ ɾ ɾ

A minority party has one advantage—it builds up a great reputation for virtue.—Los Angeles *Times*.

ɾ ɾ ɾ

With sociologists and legislators doing their utmost to devise a means for stemming the crime wave, surprise is expressed in many circles at the proposal in Texas to erect a memorial to Billy the Kid, probably the most notorious renegade in the history of the Southwest. Efforts have been made of late to picture the outlaw as a man much maligned and much persecuted who shot only in self-defense, but the fact remains that at the time of his death (at the age of twenty-one) he had, by his own count, killed twenty-two persons 'not counting negroes and Mexicans.' And it is generally conceded that it requires something more than the plea of self-defense to justify the slaying of a score and more of humans.

In Memory of a Renegade

The estimation of Texans at the time Billy the Kid was shot some fifty years ago is probably a better one than that of sentimentalists of this generation who would make a hero of him. At that time it was the widespread belief that the world was well rid of 'the most desperate and cruel outlaw in the annals of crime in the Southwest.' When his career was ended by the well-aimed bullet of a sheriff a breath of relief went up from all Texas. But in the reversion to sentimentalism an attempt is now being made to paint Billy the Kid a glowing white, and the sheriff who put him out of the way as a treacherous murderer.

A cowboy who once rode the plains with Billy suggests that 'the friends of the sheriff and the twenty-one men the Kid killed might well be consulted as to the propriety' of the proposed memorial. And the Houston *Post*, sharply criticizing the attempt to make homicide a virtue and hold up a desperate outlaw as a model for youth to follow, asks why it is necessary to 'single out one killer of a particularly despicable type.' If monuments are needed, why not one to Wild Bill Hickok, thoroughly as renowned as the Kid, and a man who did his killing on the side of the law? Or, the *Post* adds, still more appropriate, a memorial to Texas pioneers would be 'a covered wagon with children's faces peering from the oval in the rear.'

ɾ ɾ ɾ

Gullible Chicago pays $7,000,000 a year to fortune tellers. Most of the victims are told, 'You will probably meet a swarthy man with a gat.'—New York *World*.

ɾ ɾ ɾ

Colonel the Master of Sempill, the eldest son of Lord Sempill, a Scottish laird, in a paper read before the Royal Aeronautical Society, has pointed out that the Bible contains many references to petroleum products. 'For instance,' he said, 'we read in the account of the building of the Tower of Babel: "Slime had they for mortar." ' The slime was bitumen.

Petroleum in Ancient Times

The speaker further mentioned that Pliny and other ancient writers refer to the use of 'Sicilian oil' for illuminating purposes. The Dead Sea, originally named the *Lacus Asphalites*, provided bitumen which was sold to the Egyptians for embalming purposes. In the East the petroleum industry was a going concern long before the Christian Era. Earlier than this the Chinese and the Japanese had sunk oil wells and ventilated the shafts by means of bellows. In Japanese history it is related that the 'burning water' was found in the reign of Tenjitenno, which was about 1,260 years ago. About the year 1600 a Japanese named Magara found oil, which he subsequently distilled. The product was sold as an illuminant and it is thought that this provides the first instance where an attempt was made to split up the crude oil into its component parts.

The Master of Sempill is a noted aviator and has made a special study of oils both ancient and modern. His family name is Forbes-Sempill, and in accordance with custom in the Scottish peerage, the eldest son of a baron is called the 'Master.'

Investigations show that the story of Joshua and the walls of Jericho seems to be true, thus crediting Joshua with the invention of the saxophone.—The Detroit *News*.

ɾ ɾ ɾ

Fragments of navy cloth, a piece of shoe leather, a block of oak from an ice sled and a whitened skull, picked up by Peter Norberg, a trader, on Thunder Cove, Adelaide Peninsula, near King William Land, are believed to be relics of the ill-fated Franklin Expedition, an account of which recently appeared in THE DEARBORN INDEPENDENT. The fragments were found near the point where the *Erebus* and *Terror* were abandoned seventy-eight years ago. They were taken to Edmonton by an inspector for the Northwest Territories and Yukon branch of the Canadian Government. Anthropologists and surgeons who examined the skull pronounced it that of a Caucasian. Only one tooth, a molar, was found in the jaw, the bone of which is pitted as though decayed with scurvy. The navy cloth is similar to that used for generations by the British Admiralty. The oak strip is part of a rib from a snow sled shaped and cut off at one end with a saw. The leather is evidently part of a white man's shoe. Thunder Cove is almost in the direct line which the survivors would have taken had they followed the west coast of King William Land south to Simpson Strait and then headed south toward the Great Fish River.

Franklin Relics Are Found

Briefly Told

THE LONGEST WORD IN literature, *honorificabilitudinitatibus*, occurs in the first scene of the last act of Shakespeare's *Love's Labor's Lost.*

NEATNESS IS CITED by the Boston University as one of the chief obstacles to a happy marriage. Husbands are said to prefer orderly but not neat wives.

ONE CHARLES NEWBOLD, of Burlington, New Jersey, took out the first American patent on a plow in 1797. Newbold's plow could be drawn by two oxen whereas other plows required strength of eight or ten.

A NEW BRITISH BANK has as its armor a special steel which, if attacked by an oxy-acetylene torch, will send out a shower of sparks of such magnitude that the burglar will be driven away.

FEWER SPANIARDS BECOME American citizens than any other type of immigrants, only about ten per cent becoming naturalized.

BARBERS AT A RECENT convention estimated that blondes have 150,000 hairs on their head and redheads only 30,000, on the average.

PIE IS NOT BAD for the digestion, according to the editors of the *Journal of the American Medical Association.*

FIVE THOUSAND DOLLARS was the record price paid for a teacup in Tokio recently. It belonged to the late Marquis Inouye.

A NEW YORK GIRL has a dress made of thousands of tiny gold plates put together by hand. The material is so assembled as to resemble the finest silk.

AN AIRDALE WHO travels from door to door in London with a box and sign hung around his neck has collected $500 for a dispensary for sick animals.

THERE IS A SPECIES of ant which carries an umbrella of petals or leaves when it rains.

A HORSE CAN CARRY about one-half as heavy a load as a camel.

A NEW QUARTZ LAMP, recently perfected, is said to detect good pearls from bad.

TUBERCULOSIS MAY BE transmitted to humans through eggs.

DEVELOPMENT OF THE Everglades of Florida is depriving the Seminoles of their means of livelihood. For centuries they have lived on what they could get by hunting and fishing.

DECLARING THAT HE thought a minister should not be paid more than the average income of the people of his congregation, the pastor of a New York State Presbyterian church refused with thanks a salary increase of $500.

POTATOES, IMMACULATELY scrubbed and carefully wrapped in tissue paper, now come from the state of Idaho.

FRIENDLY PENGUINS have been known to make advances to humans by following them about and attempting to present them with pebbles.

A GUN HAS BEEN DEVISED that will throw a rope to the highest buildings in cities. It will be used by fire departments in rescue work.

A 5,100-POUND seaplane was recently shot from the deck of a battleship at San Pedro, California, by a catapult in which a charge of powder equivalent to that used when an eight-pound shell was exploded.

A RUBBER SURFACE HAS been laid in Newbridge Street, London, for test purposes.

GREENLAND IS SINKING into the sea at the rate of six feet six inches each century, according to the report made by a Danish expedition.

RED GLASS IN FORMER times was made by adding gold to the raw materials.

MORE THAN ONE-HALF the people in the United States have names of English origin.

IT IS ESTIMATED that there are 7,000,000 dogs in the United States.

A HINDU MILLIONAIRE of the Jain sect, who believes in non-killing, is experimenting on a large scale in rearing non-carnivorous dogs. These dogs are fed an entirely vegetarian diet, and it is aimed to wean them from instincts of killing and meat-eating.

MORTALITY FROM MEASLES in England in the past fifteen years has been twice as great as that from scarlet fever.

THE SPEEDY MOTORBOAT is taking the place of the picturesque gondola in Venice.

HENS SCRATCHING IN A sand pit on a golf course at Fleetwood, England, uncovered four hundred Roman coins.

TOKIO PETITIONERS ARE being tried for lese majesty for having plotted to present publicly a petition to the Prince Regent. A public petition to the throne is against the laws, regulations and dignity of the Imperial household.

BY AN EXPERIMENT in England whereby indestructible tags were attached to their legs, it was discovered that rats would travel 190 miles to obtain food.

AT THE MODERN WAGE RATE, it would have cost more than $6,000,000,000 to construct the great pyramid of Egypt.

IN THE UNITED STATES there are 47,461,588 church members and 214,583 ministers.

OWING TO THE UNNATURAL heat of the autumn months, chestnut, apple, and pear trees and lilacs have been blooming in France for the second time this year.

A RUBBER COLLAR has been devised to serve as a buoy for a swimmer.

OXYGEN IN LIQUID form may be carried in vacuum bottles, as the result of experiments by M. Garsaud, of the French Academy of Science. This is a boon to aviators who fly to great altitudes.

LIVE HOGS ARE BEING tattooed in an attempt to trace diseased pork back to its source.

PORTRAITS OF SIXTEEN Presidents of the United States and nineteen other persons prominent in American history have been used as the subjects for our stamps.

A TOY BALLOON, WITH a note attached, was sent up by a boy at Manchester, Michigan. It was recovered a few days later at Glendale, California.

SEMAPHORE AND WIGWAG signaling, which has been used since 260 B. C., is to be discontinued in the United States Army. Developments in radio and telegraphic communications have rendered it unnecessary.

A NEST OF THE RARE surf bird, sought for one hundred and fifty years by ornithologists, has recently been found. It was 1,000 feet above timberline on Mt. McKinley.

THE FIRM THAT EXPORTED the celebrated chests of tea that figured in the Boston Tea Party is still doing business.

A STATUETTE OF THE Babylonian Venus having bobbed hair with a fringe or bangs in front has been found.

MR. FORD'S Page this week discusses the utter lack of necessity for what we call hard times.

ɤ ɤ ɤ

Perhaps we shouldn't; but we want to take just a minute to call your attention to this issue. Frankly, we are proud of it. Every story in it is timely, well written, interesting and readable. And look at the variety of topics: politics . . . good roads . . . Lincolniana . . . the Court of St. James as it is today . . . early American candlesticks . . . newspapers . . . Mustapha Kemal Pasha . . . byways of Paris . . .

ɤ ɤ ɤ

And every story is written by an authority in that particular line. Just glance at the next column. The articles are written by persons who *know* what they are writing about, and who can write so that *you* will know after you finish reading them.

ɤ ɤ ɤ

Allan L. Benson scored fifty per cent with his two recent articles in THE DEARBORN INDEPENDENT, in the opinion of a Chicago reader. The first of the articles met with hearty approval and the second with hearty disapproval:

> It was a great pleasure to write recently complimenting you on the Benson article, 'The Genesis of the Constitution,' but in the next number appears another article by Mr. Benson, with the contents of which I am almost 100 per cent at variance. Based on a rather careful study and observation over a considerable period of time, I have come to the conclusion that the greatest menace to our institutions is the drift away from the theory of the mechanics of government as laid down in the Constitution to direct action of various kinds as endorsed by Mr. Benson.
>
> B. F. Affleck.

ɤ ɤ ɤ

There comes a letter from Sandefjord, Norway, referring to a recent editorial about 'firsts.'

'You ask, "who braved the laughter of society by being the first to use a fork?"' the writer says. 'Perhaps that will never be known. But the first to use one in England was Thomas Coryat who left a book of travels rather enormously entitled *Coryat's Crudities hastily gobbled up in Five months Travells in France, Savoy, Italy, Rhetia, commonly called the Grisons Country, Helbetia, alias Switzerland, and some parts of Germany and the Netherlands.* In it he declares:

> I observe a custom in all these Italian Cities, and townes through which I passed, that is not used in any other countries that I saw—nor do I think that any other nation of Christendom doth use it, but only Italy. The Italian and most other strangers that are cormorant in Italy doe always at their meales use a little forke, when they cut their meate. For while, with their knife which they hold in one hand they cut the meate out of the dish, they fasten the forke which they hold in their other hand upon the same dish, so that whosoever he be that sitting in the companie of others at meals, should unadvisedly touch the dish of meate with his fingers from which alle at the table doe cut, he will give occasion of offence unto the companie, as having transgressed the laws of good manners . . . I myself have thought good to imitate the Italy fashion by this forked fashion cutting of meate . . . sometimes in England since I came home.'

ɤ ɤ ɤ

All the letters that come into an editor's office may not be complimentary, but they are sure to be interesting. Here is one chosen at random, which happens to be both:

> I have this moment laid the paper down after reading 'The Harvard of Our Forefathers.' It is impossible to express the delight with which I have read it. I have read nearly all of the last number. It is such clean, wholesome reading, and of so intensely interesting a character. I earnestly hope you will be able to maintain the high standard you have set for this, without question, the best paper that comes to my table—and I have several of very high excellence. It contains so little a good reader would be willing to omit, and so much of the finest character.

Stock Market Manipulation And the Federal Reserve System

By GEORGE G. DeMORE

CRITICISM of the Federal Reserve Banking System brings forth a storm of vituperation upon the head of anyone who suggests that it might contain some slight particle of imperfection. Like Caesar's wife it is supposed to stand above reproach. Following the ruthless deflation policy of 1920, criticism and protest met with disfavor. Likewise today, to suggest the Federal Reserve is not only countenancing but abetting unrestrained and unjustifiable speculation in Wall Street is held to be an act of treason, the notion of a rebellious imbecile.

However, the plain facts are indisputable—the most rampant speculation in the history of America has been in progress the last two years. And even yet it shows no signs of terminating.

TWO institutions in the United States are held sacrosanct—the Constitution and the Federal Reserve Banking System. The Constitution has been proved by one hundred and fifty years of successful operation. But the Federal Reserve has been in operation less than twelve years. Conceived in an atmosphere of politics, thrust upon a nation ignorant of its possibilities, it has swept ruthlessly forward to a position of power unsurpassed and without precedent. It is the dictator of all phases of our economic existence.

In November, 1924, there began a series of violent upward swings in stock prices characteristic of a 'bull market'—a period of rising prices for securities listed upon the New York Stock Exchange. This 'bull market' has exceeded all expectations, amazed numerous farsighted economists and brought to grief students of stock speculation who based their calculations upon previously accumulated data.

One by one the shares of industrial and railroad corporations were manipulated to dizzy heights and unloaded upon a gullible public. Every variety of industrial corporation was exploited, not only the standard industries, such as steel, automobile and merchandising, but companies producing breakfast cereals, washing machines, safety razors, threshing machines, motion pictures, soft drinks and yeast, to name a few.

It was during this period that a plan was hatched for a billion-dollar bread trust, and only prompt investigation by Government authorities and opposition of the Federal Trade Commission prevented a wild speculation in the shares of companies producing this essential commodity. The most amazing speculation of the entire period, openly engineered by one of the greatest banking institutions in Wall Street, has been in stock of a company manufacturing food containers of tin. The most spectacular failure was the collapse of a 'pool' operating in the shares of a paint company.

The stock dividend is often just a clever piece of advertising to facilitate distribution. There is a much broader market for shares selling at seventy-five dollars than for those quoted at one hundred and fifty. This is another reason for the capital split-up. Its announcement invariably finds the 'pool'—a group of insiders—prepared to sell out.

In days gone by the 'pool' faced an element of risk. There might arise tightness in the money market. If banking support was withdrawn the 'pool' was forced to liquidate on a falling market before an opportunity was presented of unloading on the public. This happened in the so-called 'rich man's panic' of 1907. But it could never happen today under the present policy of the Federal Reserve. In fact, during the present 'bull market' there has been presented evidence that the Reserve is in reality a bulwark for the Wall Street banker, guaranteeing a plethora of funds to sustain the market until a satisfactory distribution of stocks has been made. This is a grave charge. But the evidence at hand warrants it.

Previous to the Federal Reserve, a 'bull market' had its beginnings in an accumulation of funds in Wall Street from outside sources. Banks in the West having surplus funds forwarded them to New York where they were loaned out on call—which is to say, for stock-market purposes. The 'bull market' terminated when the movement of crops in the West and the demands of industrial centers for expansion funds necessitated the recall of this money from Wall Street.

Today the West calls for funds and industrial centers proceed with ambitious expansions, but the 'bull market' continues merrily on. There is an assurance that funds for 'legitimate' speculation can be had from the Federal Reserve.

Once it was that a series of weekly deficits in legal reserves of the New York Clearing House banks carried a grave warning. Today a deficit means simply additional rediscounting with the Reserve.

In 1919 the average price of twenty industrial securities, as compiled by the *Wall Street Journal* and known as the Dow-Jones averages, reached a peak of $119.62. On August 14, 1926, these averages registered $166.64, or 47 points above the previous high record for all time—virtually a 'bull market' on top of a 'bull market.' This August peak compares with a low of $85.76 in October, 1923.

The average of twenty railroad stocks September 3, 1926, was $123.33, as compared with $91.13 at the highest point in 1919 and with $76.86 in August, 1923. The explanation of this frenzied speculation is found not here but in the practically unlimited funds provided Wall Street to work with.

While in 1922 brokers' loans were estimated as low as $750,000,000, this year they have soared to $3,535,000,000 (New York Stock Exchange figures) and even at the low point have stood at $2,408,000,000 (Federal Reserve figures).

There is evidence that while the furious speculation of last autumn and winter was going on, the public, private speculators, and even the editors of financial newspapers had no hint of the tremendous amount of money being utilized in Wall Street. In December, 1925, the *Wall Street Journal* estimated brokerage loans at $2,800,000,000—a record for all time. However, when on January 6, for the first time in history, there was made public a reliable report of the funds used in speculation, brokerage loans totaled $3,141,000,000.

The 'pools' and insiders in Wall Street were secretly amazed at the magnitude of their operations. All the while a cheerful front was being presented to the public, a frenzied effort was being made to distribute stocks. Delinquent 'pools' worked with feverish activity. The public was gorged with stocks until it would not, could not purchase more.

The last week of February brokerage loans reached their peak and in the first few days of March the storm broke. There were three days of panic, demoralized selling, complete sacrifice of securities such as had never before been witnessed in Wall Street in so short a time. The small speculator and investor's profits, accumulated (on paper) slowly through months of rising prices, were wiped out in a few hours.

On March 2, sales of stocks on the New York Exchange totaled 3,182,000 shares. On March 3, a new record was set with 3,873,700 shares. On this fatal day the stock ticker, printing the record of sales and prices, normally stopping a few minutes past three, the hour the exchange closes, continued printing until nearly six o'clock. Two hours and a half after the market closed this electric machine had not caught up with the frenzied trading which had closed at three o'clock on the floor of the exchange.

That night the electric lights in every brokerage house in Wall Street burned until morning. Clerks were busy calling customers for margin, more margin, and still more margin. But in the case of thousands upon thousands of small speculators there was no more margin to be had. Their credit facilities exhausted, they were ruthlessly 'sold out.' The panic was stopped as only it could be stopped by the buying of bankers and individuals with unlimited credit resources. It is significant that their purchases were made 'on the bottom'—at the low prices prevailing following the decline. In ten hours—the two trading periods of March 2 and 3—the losses of small speculators throughout the country totaled hundreds of millions of dollars!

Could the 'bull market' stand such a blow as this? Wasn't this sufficient to halt for a time at least the exploitation of industrial corporations and the public by the powerful Wall Street syndicates? It was not! Wall Street, drunk with power, swelled with pride at its previous success, bloated with the profits of stocks distributed before the crash, decreed that the 'bull market' should be resumed!

There were pools and syndicates which had not finished distributing to the public. There were the powerful Wall Street interests which had bought stocks at the end of the crash to stem the panic. There were new cliques and 'pools' being formed—some sponsored by banking institutions—with new stocks to be exploited. It was imperative—imperative to Wall Street—that the 'bull market' be resumed. And the 'bull market' was resumed with the aid of the Federal Reserve!

For a time the market was allowed to drift lower while brokerage loans were being reduced—representing the squeezing out of the little fellow. These loans were reduced over three-quarters of a billion dollars. But all the while loans and discounts to individuals of the New York banks were increasing, evidence that stocks were being accumulated by powerful interests, insiders who could 'foresee' that the 'bull market' would be resumed.

Suddenly, on April 22, the New York Federal Reserve Bank reduced its rediscount rate to 3½ per cent. There was no change in industrial conditions or even in the money market to warrant this. The action was arbitrary. None of the other banks lowered their rate. The New York Federal Reserve alone took this action. Immediately the stock market pointed upward.

The previous speculative excesses were again committed, 'pools' again manipulating picked stocks to dizzy heights and the stimulant of stock dividends applied. The shares of two of the leading industrial corporations in the country led the advance, assured that this new outburst of frenzied speculation was countenanced and even supported by the great international banking house which sponsors these two companies.

With the advance well under way, the public was again drawn in as the new expansion of brokerage loans testifies. These loans, as this is written, again top the three-billion-dollar mark. The first of September they were reported by the New York Stock Exchange to total $3,142,000,000, an increase of more than one hundred million dollars during the month of August.

It is significant that with the 'bull market' once again in operation, the New York Federal Reserve Bank on August 13 *raised its rediscount rate to four per cent.* The lower rate stood less than four months, and during this time no other reserve bank changed its rate. At the time this swift manipulation of the reserve bank rate was made, conveniently (for the stock market) downward and as suddenly upward, the loans and investments of the reporting member banks of the Federal Reserve were advancing to the highest level in the history of the country—August 18 totaling $19,685,000,000, more than two billions more than the 1920 peak of $17,284,000,000, made October 15 of that year.

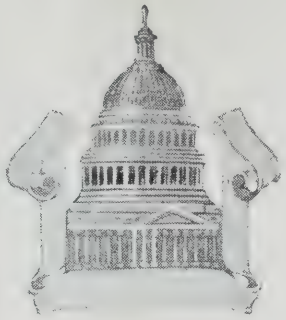
The present policy of the Federal Reserve in regard to (Concluded on page 22)

THE common practice of a 'pool' or syndicate is to manipulate the shares of a particular company to a high figure and then distribute to the public—comprised of green speculators and small investors. News services and newspapers are flooded with 'bullish news'—items favorable to the company—and whenever possible a dividend is declared.

Of all devices of modern finance, let it be known, the stock dividend is the most delusive. It is supposed to capitalize the surplus previously accumulated in the treasury or earnings of former years 'plowed back' into the corporation. But in many instances it is used purely and simply as a bait to attract buyers for stock selling above its intrinsic worth. The stock dividend gives the shareholder additional stock, but all other things being equal it is immediately deducted from the selling price. Thus a one-hundred-per-cent stock dividend on shares selling at one hundred and fifty dollars a share doubles the stock outstanding, but the new shares have a market value of only seventy-five dollars.

This to YOU

An EDITORIAL



From the August 14, 1926, number of THE DEARBORN INDEPENDENT

THE press states that House of Commons criticism of the United States will cease, on the orders of international bankers. Outbreaks against Americans in Paris will be discontinued by the same orders as soon as the diversion created thereby has served the political purpose. That, plainly, is where we have arrived through the handling of our public affairs—we are under the protection, if not in the custody, of the international bankers.

No, patient reader, we are not going to discuss the international debt. We prefer today to discuss YOU. YOU are a somewhat greater mystery than the debt. If we could only understand YOU! If, after reading this, you would write to us and tell us just what YOU are thinking about it.

And here is part of the mystery of you. For ever so many years now you have been told by President, Cabinet and Press that the policy of the United States was not to cancel war debts, but to determine the amounts due us, and make the best arrangements for payment that we could. That is what YOU have been told; that is what YOU believed. When you heard that the 'U. S.' was being interpreted as 'Uncle Shylock' throughout Europe, you understood the reason to be that our Government insisted on collecting the debt. It is true that YOU had no greed for that money; you might even have been willing to forgive the debts if you had been convinced that the benefit of such action would have flowed past the bankers down to the pitiful people of Europe. Undoubtedly you would have said: 'Just the principal; not those mountains of interest too.' And if you had chanced to think of the difference between the purchasing power of the dollar which Europe borrowed from us, and that of the dollar we are demanding, doubtless you would say, 'No more value than we lent, not a penny.'

HOWEVER, you were not consulted, and Mr. Andrew Mellon does not do business that way—at least, so you were told. The Republican Party told you the debts would be collected. President Coolidge told you that cancellation was contrary to his policy. As long as you understood this, you understood why Europe howled.

BUT—just the other day Mr. Mellon told you in letter and statement that this Government was not collecting any war debts at all, except from Great Britain. The war debts of France, Italy and the others have been cancelled. We are collecting only the loans made since the Armistice.

Just as coolly as that, Mr. Mellon informed you that everything which you had been told about the loans was not true. And there is not a ripple from the country.

The bludgeoning of the good name of the American people goes on overseas. It is the international bankers, the Press says, who are intervening on our behalf.

YET not a ripple of astonishment, not a word of protest, not a sound of inquiry from YOU—from the American people. Misled, hoaxed, misrepresented—then publicly told about it—and yet dumb. This is not to say whether Mr. Mellon did right or wrong; it is to say that all the while YOU were being told that one thing was being done, it was really the opposite thing that was being done. And you swallow the fact without even faint protest.

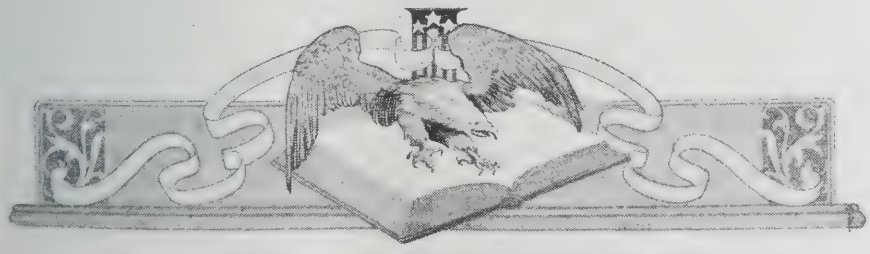
There is a reason for your being so placid—what is it?

But is it any wonder that our public officials think that they can play with you as they do?

Or maybe you are wiser than they, having the deep instinct of the common people that what officialdom may do today means nothing to tomorrow. It may be that Mr. Mellon and Mr. Churchill do not matter after all.

But feelings of nation for nation do matter. There are FACTS which all the nations ought to have. These FACTS as they regard the United States have patently been distorted. And there is not an authoritative voice in the country to declare or even to inquire the extent to which the policy of the United States has been pawned into financial control.

Why is it that you, John Citizen, have been silent about it? There is a reason. What is it?



MORE *From You* Regarding *This to YOU*

PROBABLY the outstanding feature in the majority of letters received by THE DEARBORN INDEPENDENT in response to the editorial, 'This to YOU,' is the sharp strain of pessimism they reveal. The almost complete collapse of the war-time ideals of the Allies has made its impression on the American people. Resentment is expressed at the attitude European nations have taken toward the United States not only in the matter of debts but of participation in the war itself.

A vein of futility also runs through the letters. The question, 'What can we do?' recurs again and again. The people realize they have been fooled in the matter of international loans and debts, but they don't know how they can remedy matters. They are opposed to cancellation of the foreign debts because they know that the chief beneficiaries would not be the people of Europe, but the international bankers who are interested solely in their private loans. They know further that much of the propaganda for cancellation originates with these bankers. But they do not know how to combat it. The letter of Henry P. Zickgray, of Cleveland, Ohio, is typical of many others. Mr. Zickgray writes:

'As a nation I believe the United States entered the World War with as high an ideal as well-nigh any nation has ever done. We felt we had no axe to grind, and that our cause was just and to the interest of humanity in general. America to most of us, I believe, meant peace. It also meant a deep-seated contempt for the jealous, scheming and avaricious rulers of Europe. The American soldier sailed across to Europe with the slogan "war to end war," firm in his heart. Yes we were willing to give "the last full measure of devotion" to make the world safe for democracy. We even believed down in our hearts that our ideals would at least be a little nearer realization, after having won "the war to end war."

'The story of how miserably we failed to realize the least of our hopes is too well known, too tragic to bear repeating. "War to end war," and we gave our blood for nothing more than to give one greedy nation an ascendancy over another. "War to end war," and we have flung at us the uncharitable accusations of those we tried to help. Americans, by nature lovers of peace, have but one

Newspaper Faking *as a* FINE ART

By WILLIAM C. RICHARDS

Illustrated by W. W. CLARKE

SOME faking is done by American newspapers. Part of it is so raw as to be clearly discernible. Some is deft and cannot be detected by the average reader; some is a downright swindle, and some is harmless and amusing.

An outstanding specimen of faking is the signed article which some sport champion or the principal in the latest scandal is supposed to write. Probably a large part of it was never even seen, let alone written, by the supposed author.

A baseball player participates in a world's series. Three hours later (and sometimes sooner) an article under his signature appears in newspapers all over the country. He gets a fixed sum for permitting the use of his name. In most cases the only writing he does is to sign on the dotted line. He may make a few comments to a trained reporter who reduces those comments to English and expands them to a column. Or he may not even see the reporter. If he doesn't, the reporter will take care of things.

Some years ago one baseball team was on the verge of disruption because of what one player-author was supposed to have said in one of these articles about a player on his own team. Matters were squared when the player-author acknowledged he hadn't seen the article that appeared under his name.

A tennis player takes part in a strenuous championship match. A few hours later a long article appears in a number of newspapers. I presume a lot of people believe that the player quit the net, sat down at a typewriter and wrote that comprehensive story of the play. In some cases he does; in a majority of cases some of the stuff is faked.

Recently a fifteen-year-old girl married an elderly man. Not more than a week later there appeared under her name in a number of newspapers a trashy series of articles on 'How to Make Love.' They were introduced by the statement that in the 'exclusive' series this adolescent would lay down 'the simple rules for happiness in marriage.'

That any one can enjoy that kind of drivel, or any newspaper with an ethical standard print it, seems beyond belief.

Next in the faking line is the growing practice of giving rainbow color to the gray tale, or in other words injecting dubious facts into a story to make it read entertainingly or provide a thrill which might be missed if the bare truth were told.

Under this system some fisticuffs or jostling among two or three men in a crowd becomes a 'riot,' two hot-heads may be identified as a 'mob'; a homely woman becomes a 'noted beauty,' and three or four cheap drug peddlers wake up some morning to find themselves 'an international narcotic ring.'

There is much humor and there is much evil in this quackery. There is as much humor as there is in 'the sacred cow.' This is the name given those stories in which the proprietor is especially interested. These policy stories are more or less a development of the last decade. Most of them are stories in which the business office is interested and they are usually based on some project which is expected to win circulation and good will.

One newspaper buys a polar bear and presents it to the school children of the city. Very well; daily there appears on the first page of the donor newspaper a story 'pointing with pride' to the donor newspaper and giving 'news' of the bear. A star man is assigned, for only a seasoned reporter could make interesting the diary of a bear day upon day. No prima donna could receive more liberal treatment than the bear, and the public is treated to much rot telling how delighted all the little children are or will be when they see the jolly old thing.

The reporter had to cross the ice to an island, and made the journey with horses and sleigh.

It may be a debating contest, a guessing contest, a field meet or spelling bee—all are policy stories; and for weeks the public, whether it gives a hang or not, is treated to such articles on page 1, and indirectly absorbs the impression (or at least the newspaper hopes it does) that the newspaper concerned is a public benefactor and certainly the one the baby asks for when it opens its eyes for the first time.

Faking is not always the fault of the newspaper itself. One paper ran numerous splendid stories on a dog sled expedition taken by one of its reporters. The reporter had to cross the ice to an island to get a special story. He made the journey with horse and sleigh. This was not especially dramatic. He felt the story would be much more satisfying if he made the wild ride behind a pack of mushers, so he said he did. Excitement prevailed in his office when he returned several days later.

'The boss wants a series,' he was told, 'on that dog sled ride of yours.'

Not knowing a great deal about dog sleds, the reporter went to the library and crammed for it. He pored over articles on Alaskan travel. He learned the vernacular, and thus outfitted he

ent to work. He did some mighty fine riting. The newspaper printed the ries and was duly glorified for the itiative of its loyal, adventurous nployе. The story's only drawback as that it wasn't true. That was not ie publisher's fault, however. He idn't know it wasn't true, and prob-bly never will.

Neither was a New York newspaper willing partner some time ago to a ke about a bootlegging floating alace supposed to have been anchored the Atlantic beyond the three-mile mit. A reporter deemed highly de-endable brought in that story. He id he had been aboard. He wrote his ory—later found to have been clever ublicity for a movie.

Competing newspapers scouted the eas next day. They wrung their hands ecause they had been beaten on a orking story. They came back from ie three-mile limit without discover-ig the boat, however. So did Govern-ient cutters. The authorities informed he newspaper its story was not true.

THE editors called in the reporter nd he acknowledged he had faked the arn. That night the paper sent over he wires a story announcing the ccount carried on its syndicate wires as false, publicly apologizing to the eading public.

There have been numerous harmless akes. One dull night fifteen years ago, n Rochester, New York, news was carce. The world was well behaved. Ve were not going to have enough to ill the local columns.

'Can't you tear off something for ne?' pleaded the city editor. 'I've ot to have some more copy.'

I wrote a story. It was a sinless yarn intended to amuse. On a down-town avenue was a zoo. I had two monkeys escape, climb on a street car, dangle on the fare rope, and scramble back and forth ringing up fares as two German conductors pursued them with expletive and umlaut. It was not much of a story, but it answered even though it was untrue. The next evening I was on the way to the office. Behind me was a man, escorting a young woman.

'I had a funny experience last night,' he was saying. 'I was riding downtown on a street car, and right here two monkeys got on—real ones—and got up on the fare ropes. You should have heard the conductor and motorman try to catch them.'

Out West some time ago two political writers staged a hoax which they considered a good one. They went to the office of the state game warden, and won his consent.

The next day their respective papers, widely separated, printed a story which ran something like this:

A deputy game warden, accompanied by his dog, was going along a railroad platform in Apogee. (This was a small town hidden in the backwoods, and was selected by the two fakers because it was outside the area of their newspapers; no one in Apogee would see the story, and consequently no one would rise to call them liar.) There was a pine coffin on the platform, the story went. As the hound came to it he pointed. The deputy, who had reached the end of the platform, whistled to him. The dog wouldn't budge. The deputy walked back to see what the trouble was. He called the station master. They ripped open the box. Instead of a body, they found scores of birds shot unlawfully out of season.

The story was promptly forgotten by the two perpetrators, but not by others. It was not more than three days before seasoned hunters began to write the papers declaring that the story could not be true. No hound, they said, would point for dead birds. The publishers of the papers wired the state game warden. He had been fixed, so he wired back that it *was* true. The publishers were placated. But—

ONE of the hoaxers personally received a letter from a friend in the region of Apogee. He said he had read the story and had been highly entertained.

'Unfortunately,' he said, 'the railroad station at Apogee was abandoned and torn down three years ago and the road rerouted.'

Some years ago I was sent to London, Ontario, to travel on the royal train with the Prince of Wales. Upon arrival in London, I went immediately to the railroad siding where the train was standing, received most genial hospitality from the London newspapermen aboard the train and was told many interesting anecdotes about the Prince. Then I walked up the main street of London to kill time before the departure of the train.

On the street a half-mile away another newspaperman greeted me.

'Up on the Prince, eh? I just got in,' he said. 'How do I get to the train?' he asked.

He said he had *(Concluded on page 19)*

Competing newspapers and Government cutters scouted the seas for the bootlegging floating palace.

LINCOLN and TEMPERANCE
The Truth and the Myth

By WILLIAM E. BARTON

IT IS difficult to talk chastely about chastity or temperately about temperance. Indeed, temperance is a word that we have nearly discarded.

For a long time an honest effort was made to fight intemperance with temperance, but the results were so discouraging that the attempt has been abandoned as a method of warfare. Prohibition might be defined as an intemperate attempt to meet intemperance after the latter had proved an outlaw against all decency. Personally, I am a prohibitionist both in practice and in my approval of the 18th Amendment and the Volstead Act.

But I do not delude myself with the notion that either of these is a temperance movement, and I deplore the fact that with our appeal to law we have so nearly abandoned the appeal to reason, conscience and judgment as to persuade men to kill the liquor traffic by inducing them to let liquor alone. But there was a time when the enemies of the liquor traffic called themselves 'friends of temperance' and they were not necessarily or usually prohibitionists.

ABRAHAM LINCOLN was a temperance man in principle and a very temperate man in his practice. Judged by the standards of his own day, he was almost an extremely temperate man. But his position on the question of the use of liquor has led to a wide variety of statements on the part of those who wish to prove him one thing or the other, and I gladly respond to the request of the editors to tell the readers of THE DEARBORN INDEPENDENT just what we mean when we speak of Abraham Lincoln as a temperance man. This I do without any attempt to align him with any movement as it stands at the present time, but only to learn the truth.

I think it cannot be proved that Abraham Lincoln was a lifelong total abstainer. It would have been very surprising if he had been so. He came out of an environment in which whisky-drinking was general. Whisky was a medium of exchange. When Thomas Lincoln sold his property in Kentucky and migrated to Indiana he took his pay in whisky. Peter Atherton had set up his still at the mouth of Knob Creek on Rolling Fork, and there he distilled for many years a brand of whisky that became famous.

Anyone who thinks that prohibition has helped the liquor business should visit Athertonville today. The ruins of the Atherton distillery proclaim the effectiveness of the 18th Amendment as far as the big Kentucky distilleries are concerned. Thomas Lincoln was not a total abstainer; neither was he a drunkard. He was a very moderate drinker for his day.

IT WAS not so with all their neighbors, nor even with all their relatives. Thomas Lincoln's Uncle Thomas, for whom the President's father was named, had a tragic domestic experience through the presence of a still on his farm. I have rarely read more touching legal documents than those that tell the story of the family dissension and demoralization that grew out of this still and its effects. The President's Uncle Mordecai, eldest brother of the President's father, died in the winter of the deep snow, 1830-31, partly by reason of the cold and partly because of what he drank to keep out the cold.

Abraham Lincoln saw enough of drunkenness to give him solemn warning. His own family escaped the curse of drunkenness, but that does not mean that they never drank whisky. Almost everybody drank. The minister whom Lincoln first heard preach in his boyhood, the Reverend Mr. William Downs, was excluded from the church for drunkenness. The minister who preached the funeral sermon for Lincoln's mother was in bad standing because of intoxication. Nor were the Roman Catholics any better. The Knob Creek home of the Lincolns looked out on a settlement of that faith, and Mordecai Lincoln married Mary Mudd, a Catholic. The priest who married this couple, and won the first nominal convert in the Lincoln family from their stiff Baptist faith to Catholicism, was a notorious drunkard, whose successor publicly denounced him for that and other sins.

NO CHURCH building was 'raised' without the use of liquor. Subscriptions for the Little Pigeon Church, which Thomas Lincoln joined by letter and his second wife joined by experience, accepted payment of its building subscriptions in 'manufactured corn.' Whisky fluctuated less in value than wildcat currency. Talk was cheap, but it took money to buy whisky, which practically was money.

Coming out of that environment, it is remarkable, not that Thomas Lincoln was not a total abstainer, but that he used liquor in habitual moderation; not that Abraham Lincoln never knew its taste, but that he so seldom touched it as to have the reputation of being a total abstainer. Practically, that was what he was. He sat around the tavern barroom swapping stories, and saw other men drink to excess, and himself let liquor alone.

I think we are not at liberty wholly to cast out the testimony of men who have declared that they remembered seeing him taste liquor, but his partner, William H. Herndon, said that Lincoln did not use liquor because he did not care for it. Whatever the reason, he let it alone. He was practically a total abstainer.

AFTER Lincoln had been in Congress for one term and was not requested to go back, and was vainly seeking appointment as Land Commissioner of the United States, he made a trip to Washington to further, if possible, his interests in this direction. He traveled as far as Indianapolis by stagecoach. In the coach were two men who offered him, in succession, a drink, a smoke and a chew. He declined all three invitations, stating that he did not use either liquor or tobacco.

When they parted at Indianapolis, one of the two men gave Lincoln a little warning. He said he had always noticed that men who had no vices were likely to have very few virtues. Lincoln was fond of telling this story about himself.

So much for Lincoln's habits, and I think this is all that we need ask and all that we could reasonably expect. Now as to his attitude toward the sale of liquor and toward the prohibition question.

There is in circulation a card, distributed by those who seek to discredit the Volstead Law, quoting Lincoln as warning the nation against oppression of those who would destroy their liberties through prohibition. *I challenge the people who circulate this card to adduce the evidence that will show when and where Lincoln said those words.* He did not say them. They are a fraudulent lie.

But unfortunately, good men have

ed almost as badly on the ther side, quoting utterances f Lincoln that cannot be ound in any accredited edi- on of his writings and peeches, and talking like a 0th Century prohibitionist. am not in favor of lying ven when the purpose is to ıstain a good cause.

What do we know about incoln's attitude toward law nforcement, and toward the ıle of liquor? We know so ıuch that we have no need to xaggerate. And that is one eason, and I might give more, hy I wish good people would e content with the truth. In ıe long run the truth is safer, nd is generally good enough ithout doing it violence.

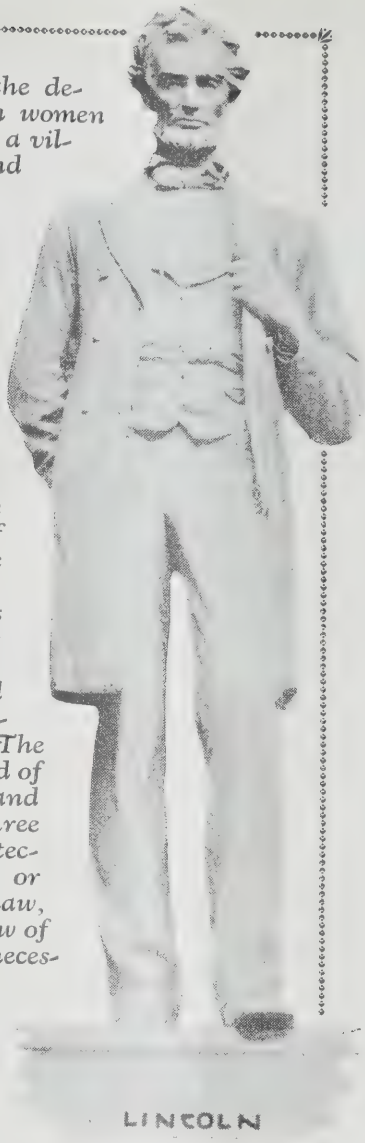
Lincoln believed in law. [e loved freedom, but he new the necessity for re- straint and even for the unishment of crime. His first rinted address dealt with his subject. He was speaking efore the Young Men's Ly- eum at Springfield, January 7, 1837. It was the first im- ortant public address which e gave in that city after he ad removed thither.

The *Sangamo Journal*, also alled at different times the *angamon Journal* and the *llinois State Journal*, owned y Lincoln's friend, Simeon 'rancis, printed the address ı full, and we may be sure nat Lincoln not only fur- ished the copy but read the roofs and saw it through the ress. He had worked hard n that address. He always ked to see his speeches in rint, and he must have had special pleasure in his first xperience of that character.

He was speaking on the erpetuity of American in- titutions, and he spoke with rdor. He based his hope of he durability of free demo- ratic government on the iberty of the people to make heir own laws, and of their evotion to the laws.

He went back to the be- innings of America to show ow sacred a thing this iberty of ours is, and how oyal we all should be to it. o him a law was not a thing o be obeyed if we liked it or ound obedience convenient; t was a sacred obligation, a art of our free heritage as citizens.

Let any man who finds himself empted to say that because he thinks he Volstead Law to have been unwise, ıe will not personally obey it, read what Lincoln said about obedience to law, and about the crime of those who disregard the law, and think if he will what Lincoln would probably have had to say about that attitude:



IN 1855 Lincoln came to the defense of a group of fifteen women who had raided a saloon in a village in DeWitt County and smashed the barrels of liquor. They had provocation, in all conscience, but they had violated the law. Lincoln was not an attorney in the case, but he was present in court. The plaintiff, Tanner, had engaged a good lawyer, and he had the law on his side. The attorney for the defense lacked tact, and the case was not going well. One of the ladies asked Lincoln if he would sit in as associate counsel. Lincoln's partner, William H. Herndon, gives the substance of Lincoln's plea:

'In this case, I would change the order of the indictment, and have it read, The State vs. Mr. Whisky, instead of The State vs. The Ladies; and touching these there are three laws: The law of self-protection; the law of the land, or statute law; and the moral law, or law of God. First, the law of self-protection is a law of necessity, as evinced by our forefathers in casting the tea overboard, and asserting their right to life, liberty and the pursuit of happiness. In this case it is the only defense these ladies have, for Tanner neither feared God nor regarded man. Second, the law of the land, or statute law, and Tanner is recreant to both. Third, the moral law, or law of God, and this is probably a law for the violation of which this jury can fix no punishment.'

Herndon continues:

'Lincoln gave some of his own observations on the ruinous effects of whisky in society, and demanded its early suppression.' This testimony I count as valid as any concerning Lincoln can well be. Lincoln was very loath to give his assent to arguments in favor of 'the higher law,' but in this case he boldly appealed to that law in defense of these women.

The judge took the case away from the jury, not permitting them to retire for a verdict. The judge said:

'Ladies, go home. I will require no bond of you, and if any fine is ever wanted of you, we will let you know.'

'Let every American, every lover of liberty, every well-wisher to his posterity, swear by the blood of the Revolution, never to violate in the least particular, the laws of the country, and never to tolerate their violation in others. As the patriots of seventy-six did to the support of the Declaration of Independence, so to the support of the Constitution and laws let every American pledge his life, his property and his sacred honor—let every man remember that to violate the law is to trample on the blood of his fathers, and to tear the charter of his own and his children's liberty.

'Let reverence for the laws be breathed by every American mother to the lisping babe that prattles on her lap; let it be taught in schools, in seminaries and in colleges; let it be written in primers, spelling-books and in almanacs; let it be preached from the pulpit, proclaimed in legislative halls and enforced in courts of justice. And in short, let it become the political religion of the nation; and let the old and the young, the rich and the poor, the grave and the gay of all sexes and tongues and colors and conditions, sacrifice unceasingly upon its altars.'

This is sometimes inaccurately quoted; but as here given its text is that which Nicolay and Hay approved for their *Complete Works of Abraham Lincoln*, Gettysburg edition, Volume I, Page 43. I have no doubt that if compared with the files of the *Journal* in the library of the Illinois State Historical Society, it would be found to have followed Lincoln's own copy with strict literalness.

To be sure, Lincoln was not speaking particularly of liquor, but no one can doubt what he would have said to those who hold that if a law is passed which one does not like or approve, he is at liberty to disobey it. Lincoln's *(Continued on page 26)*

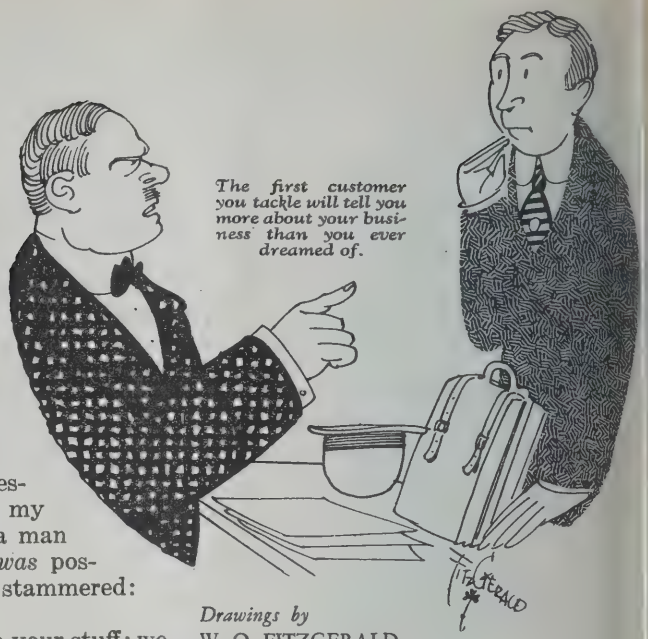
The Art of Letting Yourself Go



Drawings by
W. O. FITZGERALD

Mark Twain, once or twice in his life, owing to some accident of subject or matter of memory 'let himself go,' and wrote *Tom Sawyer*, or *Life on the Mississippi*. The rest of his work consists either of fun which will be remembered only as fun or of serious writings (such as *What Is Man?*) which is already forgotten.

—Graham Wallas in *The Art of Thought*.

MANY years ago, inspired by a feeling that I didn't care much what happened, I sat down and wrote a book telling in effect what to do when you feel perfectly terrible ('That Silver Lining') and since then every once in a while somebody comes around and asks me what to do. A considerable experience has convinced me that, in cases like this the best advice is to tell people to let things go. To show what I mean I will tell a story.

About a year ago a young man in whom I was interested got a job as traveling salesman for a large corporation. He had a certain territory assigned to him, and, not being familiar with the business, he was handed a mass of material to learn and digest. Armed with two brief cases and a large bag of statistics, he suddenly landed down on me to get my advice.

It happened at the time that we had a spare room in our house, so I told him to stay overnight. As soon as he had washed up, he brought out his material, started to spread it out on a table and began to talk. He talked so fast that I couldn't get in a word edgewise. He told me how he got the job, what a big job it was, how he was scared for fear he wouldn't make good, and above all what he had to learn. He had a long typewritten paper containing instructions for himself which he had sat up several nights to copy. It apparently contained everything in heaven and earth about economics and in particular about the business in which he had engaged himself.

As soon as he had come to a pause through actual loss of breath, I said to him:

'Can you dance?'

I had to repeat the question before he gathered my meaning. He was like a man possessed. Indeed, he *was* possessed. Finally he stammered:

'Why, I guess so.'

'Then,' said I, 'put up your stuff; we are going to have a party. Meanwhile let's go out and take a ride. There is some wonderful scenery near here.'

'But I came here to talk business?'

'I know you did but you are not going to. For one thing, business bores me. I won't listen. Now you have a new job, and you think the world depends on your making good. It does. Therefore, dump all that stuff in the river, and go out and sell your product—as man to man.'

'But I've got to learn what I'm talking about.'

'You mean that you have got to obscure what you know already by memorizing a lot of useless bunk of which the recital will bore every prospective customer you have.'

'But I must know something about my business.'

'How did you get your job?'

'They sent for me.'

'You didn't know as much about it then as you do now—possibly.'

'But they hired me because they thought I could learn.'

'They did not. They hired you because they sized you up as being a good prospect. That'll be all for today. Pack up your troubles in your kit bags and we'll go out and see things. When you sell goods, take nothing with you. Let yourself go. Put your mind on what you are doing, think out for yourself the why and wherefore, but don't bore other people with it and don't act as if you knew it all. The first customer you tackle will tell you more about your business than you ever dreamed of—he will tell you why he doesn't want to buy from you. There's your start. Come on.'

We had the party and a fine one it was. My young friend got the cobwebs out of his brain. The next morning when he took his leave, his paraphernalia was left behind. 'I get you,' he said as he went away. I saw him recently and he remarked:

'The people in my office don't understand why I get so many orders without any material to work with. They think it's wonderful.'

'It *is* wonderful,' I replied. 'One of the hardest things in the world is to let things go.'

In this same book from which, in the beginning of this article, I have quoted, Mr. Wallas has something more to say about the psychology of letting things go. 'We cannot,' he writes, 'by a direct

(Concluded on page 20)

He started to acquire a mass of information and then threw it all aside and thought it out for himself.

OF THE DEARBORN INDEPENDENT

TO BUY anything merely for the sake of buying, or merely because a thing is cheap, is an unwise and unreasoned principle. As well eat merely for the sake of eating, not to appease hunger or for the nourishment of the body. Overeating will be detrimental to bodily health and doctors' bills will be the inevitable outcome. Senseless buying will have similar consequences as far as financial loss and consequent worry are concerned.

It is a safe principle not to purchase anything until occasion for its use arises, no matter whether the article purchased is perishable or not. If it is perishable, such as fruit bought for preserving purposes when the opportunity for preserving it is not at hand, the fruit will rot and may be entirely lost; if it is a manufactured article of some lasting material, for everyday use, such as a microscope or a mousetrap, and occasion for the use of that article has not arisen or is not in immediate prospect, months or years may pass before it can be utilized, and in the interval it may have depreciated in value because a better article for the purpose has been put on the market.

To get the up-to-date article which has become a necessity, the purchaser of the microscope or mousetrap may have to sell his original bargain at a considerable loss.

Unwise purchases carry with them another serious disadvantage. Although the buyer may acquire something that he may, after some thinking, create a use for, it will be at the expense of something that is really more essential at the time. Another disadvantage of this haphazard buying is that it sometimes becomes epidemic, thus giving rise to an unbalanced demand for certain products, a demand that is frequently illogical and destructive to prosperity.

People bring so-called hard times upon themselves by illogical and prodigal purchases. If things were bought as common sense directed and necessity dictated, the even balance of things would be preserved and prosperity would take care of itself.

The requirements of the moment should always be kept in view; the things essential to the accomplishment of immediate human needs should be the first to be acquired. If things are produced in their proportionate, needful quantities, it will preserve the necessary balance.

Overproducing is akin to overpurchasing. For example, there is no sense in producing 200,000 of a certain object of utility when it is possible to make use of only 100,000. The extra thousands will be produced at the expense of something for which society has a greater need, and both the producer and consumer will suffer. If there was use for only 100,000 quarts of milk and 200,000 were delivered, and no provision was made to take care of the surplus, half of this product would probably go to waste, whereas it might have been converted into butter and cheese for which there was also a real necessity.

However, there never can be a general overproduction of things that are really needed, although there may be overproduction of one commodity at the expense of another more urgently required.

UNWISE buying is one of the disturbing factors of modern economics. To blindly purchase things that cannot be put to immediate use and which may deteriorate in the interval is one of the follies of the modern citizen. Such buying is done at the cost of things that are more urgently needed, thus upsetting the economical balance. If the various essential articles are produced and purchased in their proportionate needful quantities, it will preserve the necessary balance of trade and insure a fair measure of prosperity. The needs of the moment ought to be first considered and contingencies made supplementary. It is only thus that production and consumption can be properly regulated.

The requirements of the moment must always be kept in view; otherwise society will suffer and progress will be checked. That which is most essential is that which is most useful and is that which will confer the greatest benefit to the largest number.

By certain intensive methods of salesmanship and the exercise of mental anesthetics of advertising, people are made to believe that they want lots of things that they do not need. This is in the end bad business for everybody, because the artificial strain put upon the purchasing power reacts upon production and trade receives a blow from which it is hard to recover. Normal buying and normal selling are what are needed. Some high-pressure salesmen will sell a man a gun when there is nothing to shoot, when what he really wants is an axe to split wood for the winter fire.

There can be no prosperity without the exercise of judgment in buying and selling. Prosperity is weighed out in usable quantities by well-regulated and timely production and consumption, and the scales must be in perfect order. Overproduction and wrong distribution of anything may become a huge barrier to legitimate development. A man may become burdened with food or clothes, although normally these things are necessities. The well-regulated production and use of both must be kept in view. So also with all the things that man makes use of in modern life.

Otherwise energy will be misdirected and curtailed, efficiency undermined, waste will increase and valuable advantages will be thrown away.

That Big Wet Victory

IT WAS to be expected that the anti-prohibitionists would glean a big wet victory from the election. That was the inevitable result of their special brand of logic, a logic which takes into account only those things favorable to the cause and happily ignores the unfavorable. They might just as well have jubilated before the election, for their triumphs, such as they were, all came in wet states where everyone expected that they would win. And even these triumphs have an empty ring. Not one letter of the national prohibition law has been changed; *and even the wets admit that there is not the slightest possibility of change within the next two years at least.*

The referendums, cry the wets, we won the referendums. And so they did, some of them. But which ones? New York and Illinois passed hazy resolutions calling upon Congress to let each of the states determine for itself just how much liquor is necessary to make its inhabitants drunk—a plea palpably impossible of fulfillment.

Wisconsin voted for 2.75 per cent beer, a vote which is not particularly amazing when one considers the one-time leading industry of Wisconsin's leading city. Montana repealed its state prohibition act, as did Nevada, where there are fewer voters than jackrabbits. *But* Illinois elected a dry Senator, Nevada elected a dry Senator and Montana elected a dry Congressman. In California, Colorado and Missouri attempts to repeal the state prohibition laws were beaten.

State referendums for prohibition, however, and state referendums against prohibition have no more actual effect on national prohibition than do the funny straw ballots conducted in wet newspapers. Prohibition is written into the Constitution of the United States; the only way to repeal it is first to repeal the 18th Amendment. This would take a two-thirds vote in each house of Congress, and a majority vote in three-quarters of the state legislatures.

The only effective victory the wets can gain, therefore, is to elect wet Representatives and wet Senators. *But the final results of the election show that 321 of the 435 members of the House of Representatives in the new Congress are classed as dry, and at least 73 of the 96 members of the Senate.* In the face of these figures the big wet victory seems to pale somewhat.

Vikings Turn to Peace

THE Vikings, once the most warlike of European peoples, seem now the most peaceable. For more than a century the North Countries—Denmark, Norway, Sweden—have not actually seen war, with the exception of Bismarck's incursion into Schleswig-Holstein. Nor is this era attributable solely to isolation. The Balkan States are likewise at a distant corner of Europe, yet for generations they have been a breeding place for war. The same irritations which have brought conflict to other nations have also been faced by Scandinavia, but they have been faced and solved more honestly. Even when Norway decided to sever its traditional union with Sweden the break was accomplished amicably, and the two countries are still on the best of terms.

Norse blood once swept over most of Europe, conquering as it went, and Norse ships were undisputed rulers of the seas. And this bold spirit is not lost in the descendants; it is merely turned into other channels. Where the Vikings were once first in war, their sons are now first in peace. Where they once ventured into uncharted seas, they now venture into new realms of science, of literature, and of the fine art of citizenship. It is highly significant that the great Nobel Prizes, established by the Swedish originator of dynamite, are awarded to those whose work in science, literature, and furtherance of the world's peace is considered of most benefit to humanity.

Prophets of Gloom

THOSE gloomy prophets who while away the idle moments by viewing the future with ill-concealed alarm fail to consider the ingenuity of the future in their calculations. Consider the matter of the span of human life: Irving Fisher and other authorities declare that in another century Americans will be a race of octogenarians; that is, that the average life length of fifty-eight years will be increased to eighty years. Good news, this, but the gloom hunters promptly rush forward in a body with their dire predictions of overpopulation.

Suppose there are more humans alive a century hence than there are now; what of it? The earth is not taxed to its capacity to support humanity, and it probably never will be. If more people are alive in the 21st Century, then proportionately that much more will be produced from the earth and from man's machines. An acre of ground will be made to yield double or treble what it yields now; new machines will be devised to yield new commodities in undreamed-of quantities. Problems force their own solution; and this will be as true in the future as it is in the present. Science and religion are steadily making life better. If you do not believe it, compare life today with that in the period of Benvenuto Cellini as expressed in his autobiography. Life is even more complete and more worth the living today than it was a generation ago; and a generation from now it will be better than it is now. The most useless occupation extant is that of worrying about the future. The future will take care of itself.

In Line of Duty

CADET Aviator Charles M. Wisely, of the United States Army, died in line of duty. But duty in his case took on a strange and unfamiliar tinge. News dispatches state that he 'met death while playing the part of a German aviator for a motion picture' in which 'the play called for him to simulate a dive into the American troops advancing up a hill.'

A motion picture is a commercial enterprise, just as the manufacture of silk hosiery is a commercial enterprise, or the making of wooden toothpicks. An employer who requested the loan of United States troops during harvest to pick peas for his cannery, or a private contractor who asked for a corps of Army engineers to help him build a bridge would be laughed out of the country. Yet the theory seems to have gained credence among some high officials of the Government that it is perfectly permissible for movie magnates to obtain the services of American soldiers and American sailors, gratis, for the making of their films. A bridge spanning a large river serves fully as important a purpose as a motion picture, but the bridge builder must go into the open market to hire his labor while the movie producer borrows his from a benevolent Government.

A year and a half ago a widespread protest was voiced against using the graduation exercises at the United States Naval Academy as a background for the making of a commercial picture. The protest was overridden and the film was made, with the help of the Secretary of the Navy. The garish publicity attendant upon the whole proceeding may have helped the movie, but it is doubtful if it helped the Navy. Subsequent to this the Government was again made ridiculous when one film company boastfully announced that it had exclusive right to the services of the United States Marines in the making of its productions—a 'right' that was vigorously assailed by its rivals.

And now the matter, which has heretofore been largely absurd, takes a tragic turn with the unnecessary death of an Army aviator. The practice of lending American soldiers and sailors to money-making movie companies is far more subversive to the dignity and prestige of the armed forces of the nation than a hundred soap-box orations by red agitators. It is to be deeply regretted that an American cadet had to die to bring the practice before the American people.

The Last Laugh

THE Toronto turfman who bequeathed $700,000 in brewery stock to six worthy Methodist ministers on the condition that they draw dividends and vote in the management for ten years may have thought he was placing them in an inextricably embarrassing position.

Possibly he was; but he was by no means creating a situation that is new. The problem of so-called 'tainted money' has agitated clergymen in the past and it no doubt will in the future, and it will never be settled to the satisfaction of everyone. But in late years it has largely been shunted aside in favor of more important things, with the general agreement among most churchmen that it is sanctionable to accept money from dubious sources, provided the money is used for wholesome purposes.

The present instance differs slightly from those which stirred the people a decade or so ago, in that the clergymen must participate in the active management of the brewery in order to benefit by the bequest. Perhaps this will form an insurmountable obstacle in their minds. On the other hand they may reason that the brewery will continue to operate whether they vote in the management or not, and that it will continue to produce just as much beer.

Then, too, it may be that they themselves possess almost as great a sense of humor as that so widely heralded in the jolly turfman. It might be that they would derive keen enjoyment from spending the proceeds from beer brewing to spread the gospel of prohibition. Theirs at least is the advantage of the last laugh.

The Judge Resigns

JUDGE ENGLISH followed a wise course in resigning before his impeachment trial came up in the Senate. Even had he been acquitted of the charges brought by the House, much of his usefulness as a jurist would have been impaired; and had he been convicted an unwarranted shadow would have been thrown over the entire federal bench. The noteworthy feature of his case is not so much that a federal judge should have been accused of malfeasance in office as it is that so few have been thus accused. The federal courts have been an integral part of the Government since its founding a century and a half ago. The number of judges has been gradually increased through the years until now there are approximately one hundred and eighty. And yet of all that have served during the life of the nation, only three have been found guilty of high crimes and removed from office. The record speaks well for the type of men who occupy the federal bench.

Cotton

OF THE many remedies proposed for the relief of cotton, has anyone included a suggestion to increase its use? Much has been said of the overproduction and of storing the surplus against another year, and of cutting down the area to be planted hereafter. Much of the proposed relief seems to hinge largely upon credit for the cotton planters, but credit is at best a temporary and unsatisfactory remedy. And all these plans intimate that America has reached her limit in the use of cotton. This most certainly is not so. There are possibilities that synthetic gasoline can be made from cotton. Substitute silks are already in use. Numerous other valuable co-products can be derived from cotton with proper study.

Things to Be Considered When You Say

'I Want *Exactly* the Same Color'

By DONALD A. LAIRD

ANYONE who has ever tried to match a piece of dress goods has discovered the hazards with which it is beset. Sometimes the sales clerk is blamed for the match which looks so impossible when the goods are home. It is not the sales clerk, however, who is responsible. The trouble lies in our own eyes.

This psychology of color causes the artist much anguish and justifies the long and careful study the successful ones give to the color of a scene they want to paint. It is also responsible for many of the failures of camouflage early in the war, before the National Research Council had organized a group of scientists familiar with the psychology of color to eliminate the errors which you and I make when we try to match a ribbon.

When we go to the theater, for instance, moonlight is represented by blue lights. In paintings blue is also used. But is moonlight really blue? It is not. It is merely pale white light, weak reflected sunlight. To the human eye it looks like blue, and the artist and stage technician must know this or their productions will appear unreal.

The little boy who wondered how the polecat could stand its own odor was on the verge of a sound psychological fact. This fact is that our senses are fatigued sooner or later by continued stimulation. In smell, for instance, the first few minutes we are in a tannery or rendering works the air seems positively unendurable. In a short time, however, we no longer notice the odors. The sense of smell has become fatigued so that it no longer responds.

Red is used here as a background, but it is such an advancing color that it seems to be in front of the remainder of the picture.

A great part of the danger of mine gases lies in this gradual fatigue of the nose so that the presence of the gases is not noticed until a disaster occurs.

The eye is fatigued by color more rapidly than any other sense organ. If you have been looking at a piece of red dress goods and then examine a sample of green, the green will look greener than it actually is. Or if you have been looking at a red and then turn to a yellow it will seem to have a tinge of green. When the red and green are placed side by side each one appears more saturated with color. For accurate matches only brief glances should be taken.

Counters where colors are to be matched or seen in their true values should be especially equipped for this purpose. The expense of this is very small. The surface of the counter should be covered with a medium gray, or psychological neutral gray, on which colors are not distorted. Other bolts of colored goods should be kept beyond sight. And a special electric bulb should be provided in case artificial light has to be used.

The electric bulbs used in most homes give a light that is predominately red and yellow. Colors seen under these bulbs have their true hues somewhat altered, the red and yellow being accentuated. I have seen a housewife furious at a sales clerk because the ribbons matched in the store did not match at home when viewed under the electric light.

'Wait until morning,' she was advised. 'They may match in the daylight.'

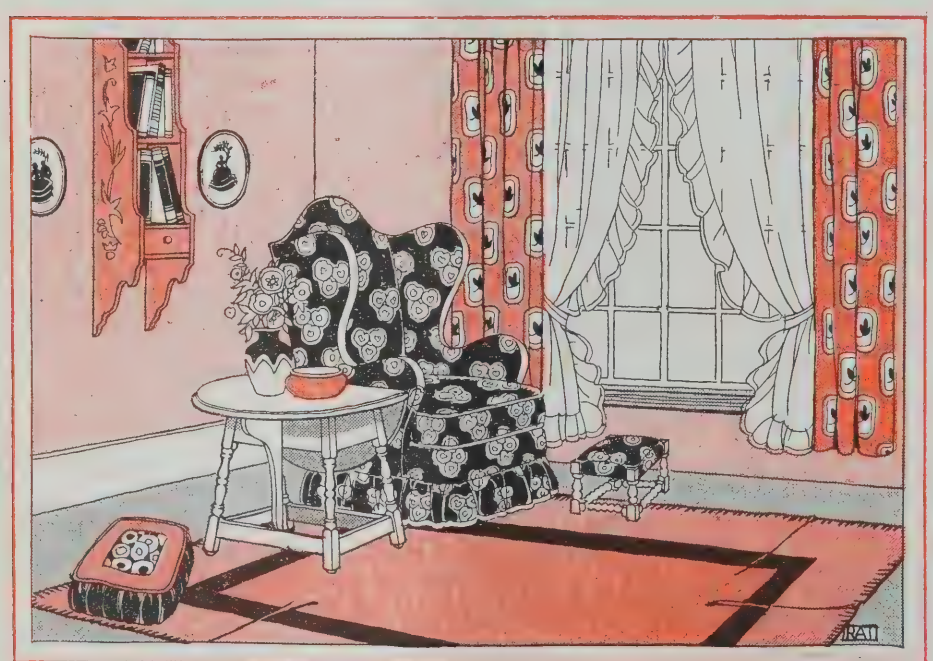
In daylight the colors were a perfect match.

Many department stores provide small bulbs that duplicate daylight for matching colors; but of course that is not surety that the colors will match under all kinds of light.

The mercury vapor lights used in filming motion pictures so alter colors that if an actress were to be made up with the same colors as the flapper her cheeks would appear sunken. Special make-up has to be used which will look right under the peculiarly colored Kleig lights.

The story is told of a Hollywood actress who invited several of her rival actresses to a party at her home. The actress guests were powdered and rouged as they would have been for appearance on the street. But their hostess had her home lighted with Kleig lights. She was powdered with this in view. The result was that one movie star appeared beautiful and the others looked like beady-eyed witches.

When the kindergarten pupil covers a paper with blue crayon, and then marks over it with yellow, green is produced. Early in the war when



This picture of the interior of a room, compared with the one on the facing page, will show how color can create a warm or cool 'feeling.'

Note how differently and unobtrusively the blue background serves in this picture, as compared with the same illustration on the opposite page.

painters were employed to camouflage objects they would cover them with blotches of blue and yellow paint. The blotching made the outline indistinct and deceptive. They had thought that the yellow and blue would also blend *in the eye* to give the appearance of green.

But yellow and blue blend in the eye to give gray! The psychology of color is radically different from the mixing of paints.

A criminal case not long ago hinged largely on circumstantial evidence. A figure had been seen fleeing the scene of the crime which took place at twilight. Witnesses of the figure said it wore a dark blue or black jacket. The defense attorney then introduced evidence to show that the defendant was wearing a red sweater at the time of the crime.

The state's attorney recalled part of his course in general psychology and introduced as witness the psychologist from the local college. The psychologist testified that in dim illumination, such as twilight, red appears black while yellow will be seen as yellow. This, he said, is the Purkinje phenomenon of twilight vision.

To convince the jurymen, a red sweater and a blue sweater were placed side by side and the courtroom darkened. Both sweaters looked alike in color!

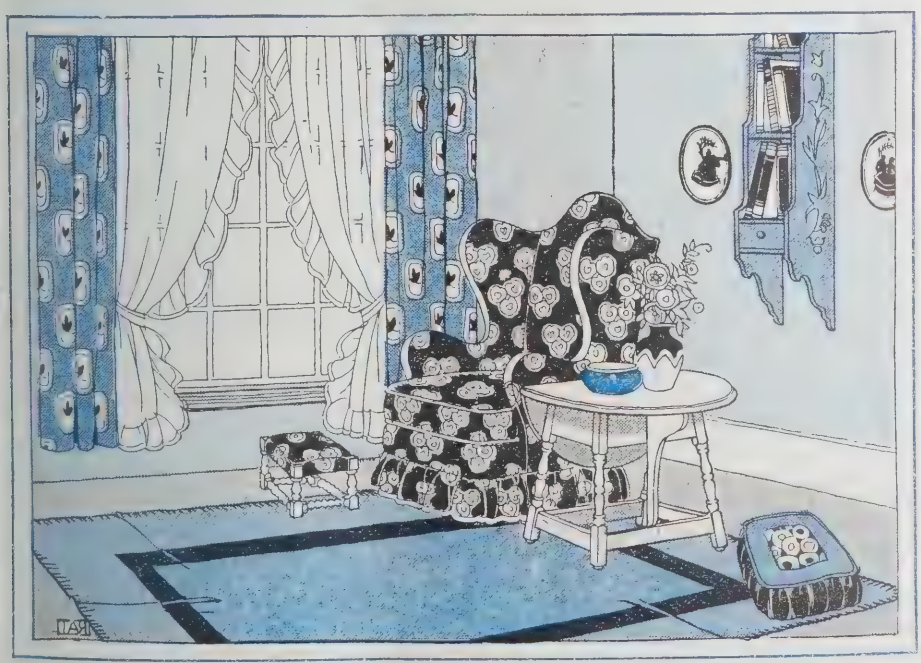
Billboard advertisers a few years ago were not aware of this phenomenon. Large posters with red lettering on a blue background were used. Of course the red became invisible with twilight and much of the effectiveness of the signs was lost.

Colors can be used to make a room look warm or cool. Reds and yellows are known by psychologists as warm colors. A furnace advertisement has the impression of heat intensified if the rug in the illustration is in reds. On the other hand, an electric fan seems to be more effective if it is advertised on a blue or green background, since these are cool colors. A summerhouse with blue drapes and upholstery seems mentally cooler than it actually is.

Red objects also appear to be larger and nearer than blue objects. The setting sun appears to be larger than at noonday because of its reds.

A picture with a red background does not have the right appearance since red is an advancing color and sometimes looks as if it were actually an inch or two in front of the picture.

So we cannot recommend red to the large woman who wants to appear small. In conclusion it may be said that the blue color of the sky, according to Lord Rayleigh, is due to the scattering of light by small suspended particles and air molecules, which is most effective in the case of the shorter light waves (blue). The green color of the sea water near the shore is also due to the scattering of light.



Reforestation *as a* Phase *of* Farming

THERE is some inferior land on nearly every farm which will never be used for agricultural crops, but which could grow good timber.

A Senate committee held hearings in sixteen different states on the problem of timber supply, and was particularly impressed with the possibilities of making forest products one of our great staple farm products.

The committee found that there are two reasons why the old law of supply and demand is not automatically solving the timber problem of this country. The first is the immense fire hazard confronting the owners of forest lands; the second is the unscientific method of taxing growing timber crops.

An average of 33,500 forest fires occurred annually for six years, burning over more than 7,000,000 acres of forest land. Most of this loss was in the South, where eight states had no organized fire protection. There are now several belts in this country known as 'black belts,' because they have been charred by fire until they are almost worthless. These black belts total about 80,000,000 acres.

Annual taxation of growing timber compels the same crop to pay taxes many times. An outstanding present need, the committee said, is a system that will defer the principal burden of taxation on growing forests to the time of harvesting the crop.

Effective interest in reforestation dates only since the Roosevelt Administration. Roosevelt and Gifford Pinchot believed that the starting point should be to place the forest lands in public ownership under a form of administration designed to protect and renew timber growth. So Roosevelt created the National Forests out of the public domain in the West. In 1911 Congress carried the policy of National Forests to the East. There being no public lands in the East, the forests had to be bought. In a short time 2,500,000 acres of forest lands have been acquired.

On account of local opposition, which crystallized in Congress, Roosevelt and Pinchot were never able to complete the task of putting all the available forest lands in the public domain under the National Forest System. Congress even went so far as to pass a bill taking out of the President's hands the power to create National Forests in most of the Western states. Roosevelt felt constrained to sign this bill, but in the ten days of grace allowed him Roosevelt added about 80,000,000 more acres of the public lands to the State Forests

Primitive gem-cutting mills with undershot water wheels, on the Idar brook.

The Gem Cutters *of* Idar-on-the-Nahe

By EDWARD H. KRAUS

TOURISTS in the United States and abroad are familiar with the ubiquitous little shops or bazaars which specialize in varied assortments of souvenirs. In these small establishments the visitor usually finds a number of pieces of jewelry and other articles made of the striped and brilliantly variegated mineral known as agate. As he handles them and notes the careful workmanship of their cutting and polishing, he perhaps wonders what the story may be which lies behind the preparation of this mineral, sold the world over in an infinite variety of forms and colors.

In Western Germany there is a quaint little village called Idar-on-the-Nahe where for centuries the agate industry has flourished. Precisely when the inhabitants of this region began to cut and polish this material is not known. However, according to tradition, as early as 1454 two of the small shops where gems were cut and polished were in need of repair.

It was natural that the inhabitants of this region should become interested in this industry, as agates were found in abundance in the valley of the Nahe River, and its tributary, the Idar brook, furnished the power necessary for the fashioning of the stones. Small gem-cutting mills developed along the course of the stream, a guild of the workmen was formed in true medieval style, and the products were sold at town fairs and by peddlers wandering from castle to castle.

The guild enjoyed a monopoly of agate-cutting and in succeeding centuries the industry was restricted almost completely to the vicinity of Idar. In this way it continued to flourish until the unsettled times of the French Revolution and the Napoleonic period when the workers were compelled to abandon their guild regulations, and the monopoly which they had possessed so long was destroyed.

By the treaty of Luneville of 1801 the district was brought under the control of Napoleon and the workers were recruited for the French armies. But with the return of peace the industry was resumed and even encouraged by the Oldenburg Government which controlled the Birkenfeld region in which Idar is located.

The next difficulty which the agate workers encountered was a threatened lack of raw material. The resources of agate in the Nahe valley were being exhausted, and unless material could be imported the industry would be ruined. By a curious accident an adequate supply was discovered. Some German musicians had emigrated to South America where they formed a small band and wandered from place to place. In Southern Brazil they recognized agate occurrences similar to those in the Idar district.

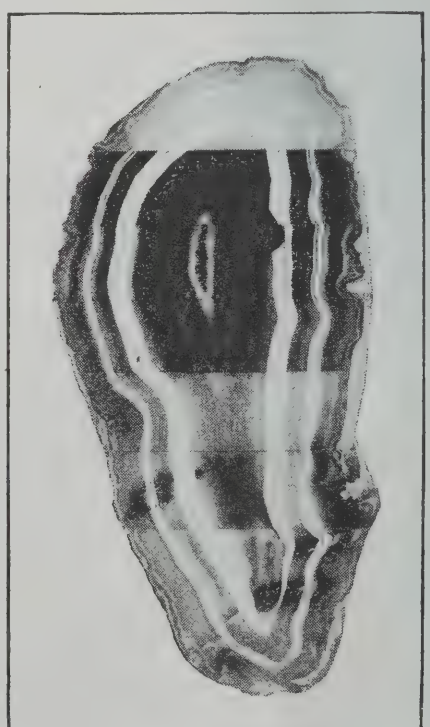
These agates were more accessible than those in the Nahe valley, for whereas the German agates required blasting from the rock, the South American variety could be easily picked up from the stream beds. Moreover, the area of occurrence was large, extending into Uruguay and Paraguay. Since 1834 these South American agates have formed the supply for the Idar workers.

Today, with the great demand for gem stones of all kinds this agate industry flourishes for about ten miles up the Idar valley and the occupation has been expanded to include gem-cutting in all its various branches. In a population of about seven thousand, nearly three thousand are engaged in this work, and although modern methods of industry are gradually being introduced, there are many survivals of medieval craftsmanship both in organization and technique.

The factory system is quite generally absent, for the work is done either in the many small gem-cutting mills which dot the course of the Idar brook or in the homes of the workers, nearly every house having a room or two devoted to some phase of the industry. This extreme decentralization and scattering of the work among so many separate establishments is counterbalanced somewhat by the strong unifying force of a medieval institution, the guild.

All the workers of the entire district are members of this organization which protects the industry as a whole by legislating on its behalf, fixing prices, and regulating the quality of the product. Today the guild possesses in the village of Idar a *Gewerbehalle*, or central guild and exhibition hall, where samples of the skilled workmanship of its members are displayed and sold.

The small, mill-like buildings which follow the course of the rapidly flowing brook are equipped for the cutting and polishing of agates and other gems.



Agate, naturally gray and white (as at the top) cut into seven sections. Six have been artificially colored at Idar, Germany.

Electrically operated lapidary shop, where gems are cut, polished and fashioned.

Each of these one-room structures contains four or five huge grindstones mounted in parallel fashion and in such a way that only a part of each wheel is above the level of the floor. The wheels are of sandstone and are generally about five feet in diameter and from fourteen to eighteen inches thick. Deriving their power from an undershot water wheel, these gigantic grindstones make about one hundred and fifty revolutions a minute.

The entire arrangement is simple and in some cases is so primitive that water is used as a lubricant for the bearings. The raw material is first hewn with a hammer or cut by diamond saws or carborundum wheels into the desired shape and then is held against the surface of one of these rapidly turning grindstones. If the material is to be finished with a rounded surface it is held in one of the grooves which have been ground into some of the grindstones.

When installed these large wheels resemble ordinary grindstones. To secure greater economy each wheel is used by two cutters who begin to work at opposite edges. Due to abrasion these edges are replaced in time by broad, sloping surfaces.

The method of working at these grindstones is unique. To obtain the pressure necessary to grind the gem stone, the operator lies face down, on a specially constructed support and braces his toes against cleats on the floor behind him. The whole weight of the body is thus thrown against the grinding wheel and great pressure can be exerted on the gem material which is held unmounted in the hands. The facets which are cut and polished by this method are determined wholly by the eye, while the material is manipulated in the fingers.

The remarkable skill and expertness of the workers are revealed in the amazing accuracy and symmetry with which the facets are cut. This general method has been employed for centuries but is very injurious to the workers. Because the position requires that the support of the body rest on the stomach and chest, a tubercular tendency often develops and this condition is aggravated by the unavoidable inhalation of fine, sharp particles of the gem material.

At present a more modern and hygienic system of cutting is gradually being adopted. By the new method the operator sits upright on a special type of chair, the grindstone is mounted above the floor and the worker, in directing his force against the wheel, presses on the collarbone instead of the chest. The final polishing of the gems is done in these same small establishments often by women and children using grooved, revolving cylinders of wood with tripoli or infusorial earth.

More modern in arrangement and method are the lapidary shops which are replacing slowly the older gem-cutting mills. In such establishments modern machinery and electrical power are employed. The cutting and polishing are done on small horizontal carborundum wheels so placed as to provide a comfortable position for the operator. The material is mounted on lapidary sticks and with the better general equipment can be cut and polished with greater accuracy and rapidity than by the older method. The lapidary workers seem to specialize on certain gems such as amethyst, tourmaline, topaz, opal, jade, and synthetic rubies and sapphires.

A special group are the workers who devote themselves exclusively to the cutting of diamonds. In the Idar district they number about three hundred and, as is usual among gem cutters, form an aristocratic class.

In addition to the fashioning of the raw material there are certain more specialized phases which constitute an important part of the industry as a whole. One of these is the boring process which is essential to the making of beads. The method used is simple and primitive, yet the operation is so delicate that it cannot be performed by machinery. The worker sits at a table with the beads before him cemented in orderly rows to a plate. Under his left arm is placed a lever to which is attached a drill with a diamond point. The movement of the arm controls both the pressure and the position of the drill, while the motive force

In nearly every house in Idar some phase of the gem industry is carried on.

The OZARKS
AN ALABASTER LABYRINTH

There are formations like lacework, like molded wax, like suspended lusters.

BY
CHARLES J. FINGER
DRAWINGS BY
PAUL HONORÉ

WE SAW things in the Ozark country of the kind which stand out in memory to become part of one's life. There was Tonitown for example. No man interested in sociological matters should miss that place if he is in the neighborhood. It is a corner of Italy transplanted, and by it you may gather something of what transplantation may mean. For the experiment has succeeded in every way, quite as well as a similar experiment made in 1837, when almost a whole village of people moved from Lake Bala in Wales, to Chuput in The Argentine.

Tonitown's population, its industries, its social atmosphere are all strongly charged with a flavor of Italy. For, some decades ago, there was a good priest who bought a parcel of land in a warm fold of the hills, then took his flock to settle there.

All went to work in the way they had been used, planting and tending vineyards and making wine, though the last they had to give up; but they turned to the making of vinegar and grape juice.

So now, everywhere in that vicinity, you see long straight lines of rich massed foliage, and countless clusters of dark grapes, a glory of color when the sun strikes the valley at dawn. As for the people, as I have said, they are Italian, but with something added and with something lost. Of the sunny idleness of their forefathers they know nothing. Nor are they over-vociferous in the manner of their countrymen who live in Calabria. Something, it may be climate, or it may be economic conditions, or perhaps it is due to different ideals, or maybe to experience, but something has made a change some time. That vivacity which you expect to find in Italians is not in them.

They are a quietly energetic people, full of self-respect. And they still have the agreeable cordiality of Southern Italy. But, I think that to some extent they have lost their native love of color; also something of their original delight in music. And certainly they have not that individuality in the home and its appointments which you expect to find in Italians.

Then there is Eureka Springs which stands out well in memory as a very un-American-looking town. It is built on a mountain side, therefore is a place of crooked and narrow streets. There are grottoes and rockeries; and there are winding ways from which you look down upon house roofs; and you find unexpected paths which lead to unexpected steps, those in their turn leading to unlooked-for streets on levels high above the streets you have left.

It is a clean town, an oddly interesting town, a town of gardens riotous with flowers. And being there, if you are fortunate, you may discover a potter, a handicraftsman of taste as well as skill, who will fashion a vase for you, a well-proportioned piece, making it out of the native clay which is strangely stratified blue and gray and red and white and yellow. But if, instead of going to the potter, you should follow the high road which twists and turns, you will soon find yourself in a climbing valley which leads to a plateau. From that, you may see, far off, the long line of the Boston Mountains, often shrouded in a delicate mist. So Eureka Springs seems to stand like a gate to what is beyond.

But the quaintness of the town may hold a certain drawback, if what a blacksmith's boy told us was true. For he said that because of the nature of the streets and the hilliness of the country round about the place, no circus had ever been there, nor was likely to get there. He went on to emphasize his opinion of his forefathers who had chosen so unpromising a site for a town, all the while quite unmindful of, or quite indifferent to what the mineral springs may mean to honest men who have been careless or injudicious in their diet. However, things balance themselves. For while the lad had a fine and equal disregard of indigestion as well as of wealth, there are people owning property in the town who affirm that in the whole wide world there are no waters with the curative properties of the springs about Eureka, an opinion which may well be born of excessive civic pride, if not of economic interest.

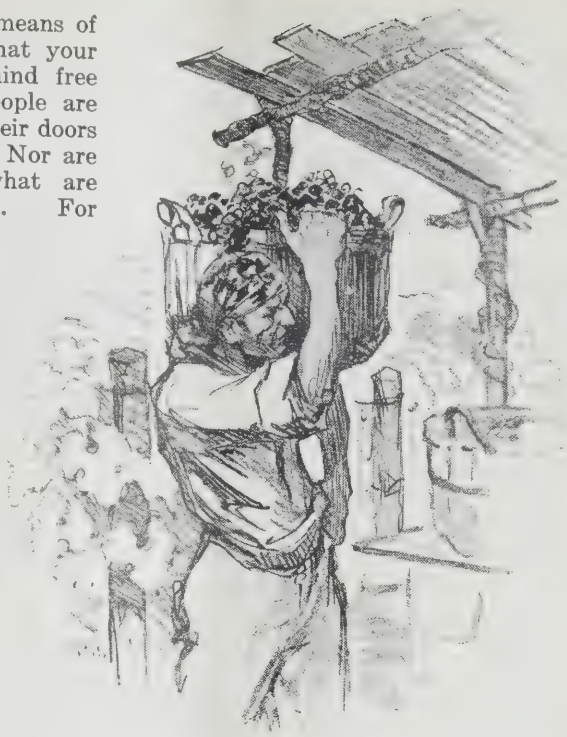
To get back to our journey. We crossed the plateau, and between noon and sundown found the town of Jasper, in the heart of the mountains. I say town, but it is really a village, although a county seat, yet for all its primitive smallness a place to give infinite joy to anyone pleased to accept things as they

ar, and who does not foolishly look
o city things where things of the city
hould not be. For there are such
or who try to arouse that sort of
aghter which is like the crackling of
hrns under a pot, saying silly and
houghtless things about country places,
cffing and deriding to display their
nibleness of wit. Yet, to put the shoe
on the other foot, all the world would
a a man a lunatic who made merry
ecause there were not village pumps,
or uggies, or plows to be seen in a city.

Jasper is Jasper, unpretending, car-
n little what lies beyond the hill or
oss the river, standing itself four-
quare. It is a frontier settlement
nch as Ozona was when Crockett
County, Texas, formed part of the
Wd West; or as Ely, Nevada, was
ore that destroying and short-lived
gol rush. It is a place without history
n without fame, but by no means
vinout interest. The spirit of ac-
cumulation is not in its people. They
ae not been swept into a cataract
of xpense for things they can do with-
u

The river is Jasper's waterworks.
Th town has no electric light plant.
f you send a telegram there, the
nsage must be relayed from a distant
on over country telephone wires,
n it may be, as it was in our case,
h; if you are bound there you will
rive before your message. No rail-
oil touches the town. If you would
oto it from a certain direction you
ust ride on horseback. There is
ther amusement park nor motion
icture theater there. If you opened a locksmith's shop there, as a means of livelihood, you might find that your business largely left your mind free for higher things; for its people are honest and trustful, leaving their doors unlocked when they go out. Nor are men overmuch given to what are called 'businesslike' qualities. For instance, consider the inn. Its keeper greets you as if you were a personal friend, invites you cordially to the homely comfort of his house, remembers you and calls you by name if you have been his guest before, will entertain you by the stove-side telling of the destinies of the place.

As for other things which struck me as being interesting, there are these, among many. The art of bread-making is still known to women, and the bread has flavor. The butter is home-made, and is rich and creamy and delicate. At evening and early morning you may hear the soft tinkle of cow-bells as the animals dawdle and loiter on their way to the milking place. And when a man has a notion to paint a sign for his business house, he sets to work boldly and spiritedly, giving his fancy free rein, quite careless of critics of art, doing what he has a mind to do with an abundance of detail. One such sign Honoré and I looked at with great interest. It was inspiriting and imaginative and unaffected, boldly done in strong colors.

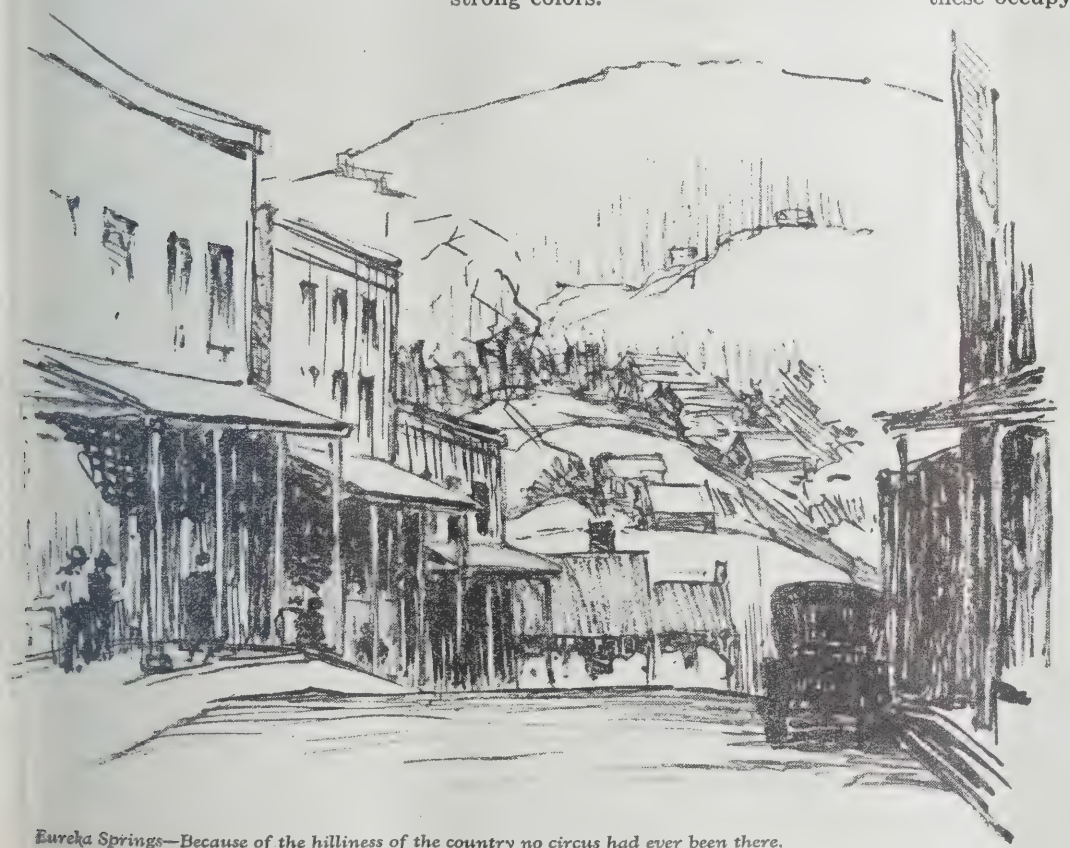


Tonitown—As for the people—they are Italians.

Jasper, I hold, is a pleasant place in which to stay awhile; pleasant because restful; pleasant because its folk are full of contentment and live lives which are not to be hurried through as if existence were a service of special express trains. Questions of state, of political factions, of commercial crises, these do not much interest them. But questions of loyalty, and of fidelity to friends and neighbors, these occupy them, and very strongly. The welfare of one is the happiness of all. The loss of one is the grief of all. And he would be a fool who went to them with an idea of exercising influence or of molding opinion. As for the small change of conversation, the sale of a horse or a cow, the late arrival of the stage, the state of the roads, the health of an ailing neighbor, the daily happenings at the cave—these are entirely sufficient.

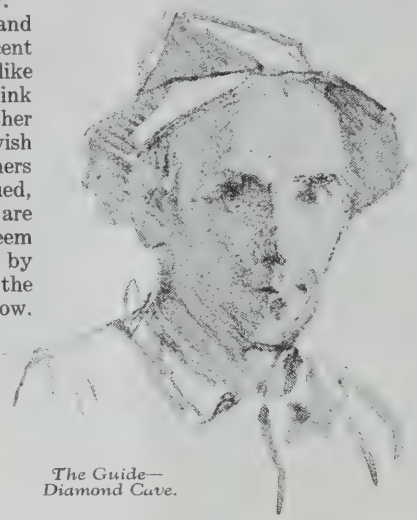
I spoke of the cave.

There are many caves in the Ozark country, some well known, some partly known, some which remain to be explored. This particular cave is four miles from Jasper. Long ago, someone named it the Diamond Cave, and the name has been retained in spite of its unsuitability. For the word 'diamond' connotes hardness, and brilliancy,



Eureka Springs—Because of the hilliness of the country no circus had ever been there.

and durability, among other things; but the cave does not suggest those qualities. Better, I think, would have been the name Alabaster cave; for alabaster it is, a glory of Oriental alabaster.



The Guide—Diamond Cave.

There are halls and passages of translucent mineral, sometimes like onyx so that you think of an Arab mosque. Other passages are yellowish milky in color; others again are orange-hued, like sardonyx. There are tall pillars which seem like ivory touched by moonlight. There is the softness of wet snow. There is pearl and there is mother-of-pearl. Or you get glimpses of crystal efflorescence against walls of cadaverous white. Or at a turn you seem to be in a vast and gloomy cathedral built from an apocalyptic dream, in which faintly luminous wraiths peer at you from shadows. Or you are in some legendary palace where fantastically beautiful pendants have the white softness of satin, where from ceilings hang fringes which are almost iridescent when the light strikes high.

At such times the whole cave appears to have the texture of tapestry. But never, never, never is there a sense of hardness, and surely the word 'diamond' prefigures that. Neither is there any flashing brilliancy, for the tone is one of subdued harmonies. As for durability, you do not have the feel of it. There are hangings like tremulous draperies. There are formations like lace-work, like molded wax, like suspended lusters which might vanish with a wind. And in the massing of lights and darks you have a sense of arrested flow—as if, suddenly, all that dripping and dropping, and flowing and gliding, and pushing and sliding had ceased, momentarily, for your inspection. But you do not feel durability. Rather it seems as though, when you turned to leave the place, the movement of the ages would go on; as if all that enameled panorama had slid out of bitumen and black, paused for an instant, then, unseen, would go gliding into gloom from everlasting to everlasting.

My first impression in the cave was a sense of overhanging calamity. In places over which we passed there were great rocks, many tons in weight, which had fallen from the overhead blackness. Looking up where the roof was lower, I saw other rocks quite as mighty, apparently insecurely lodged. So there came fear. But that fear fled when I saw stalagmites a foot and more in height on the fallen rocks, for by those it was evident that the roof had fallen long before Leif the Lucky saw Vinland.

But swiftly a new terror shot into my mind. For the passage of time must have brought nearer that moment when other rocks would come down. And what if that moment was now? In spite of myself, my mind conjured up the crashing down of vast stones, the dislodgment of others, a thundering avalanche! Then black darkness; and blind groping trying to find a way out. And strange things felt and heard. Blood-chilling ululations and roarings. Perhaps vast living creatures. For tradition has it that the cave is twenty miles long—is forty miles—is a hundred miles! Some have said that it is endless, and winds about and about forever, down into the bowels of the earth where are swift and black rivers; down to silent, moveless seas. The truth is that the passages reach a length of less than five miles.

Our guide told us that, and he had the appearance of a direct and truthful man, and all that he said to us we found to be true. What is more, he struck us as being a giant of capability in his way, as indeed he had to be, having spent the best part of fifteen years of his life in that underground place. So his massed knowledge was something to wonder at. He could point to a broken stalactite and tell a tale of some vandal. He knew the different depths of the cave river, to an inch. He had made experiments in petrifaction and showed us things which he had watched for years, and warned us against touching, lest his experiment be marred.

Jasper—One such sign we looked at with great interest.

Deep in the cave he pointed out to us stalactite about the thickness of a man' arm, which had been somehow broken of But depending from the broken piece was new growth, the size of a lead pencil, bu very much longer. What, he asked, coul have broken the great piece? A man Certainly not. The smaller stalactite showe that the break had occurred many, man thousands of years ago. A wanderin animal from the outside? No known anima could have found a way there along thos passages, about that labyrinth and alon the narrow way through which we had t wriggle, prone. A blundering bat? No ba was heavy enough, or had force enough i its flight. Earth pressure? But the stalactit had not touched its stalagmite when i broke; besides, why was only that on broken? Then, like a wise man, he left u wondering, stating the problem but offerin neither solution nor guess.

At another time he spoke of cave life so I pricked up my ears, having explore there before with the entomologist Baerg at which time we came to the conclusio that no life existed down there, but th guide said that he knew of 'a white kind o lizard, deadly poison,' and also 'a whit kind of bug,' both far in the recesses of th cave. He gave a swift description, the drifted into his usual talk, calling attentio to fanciful figures, telling what someon had said, offering statistics.

But an hour or so later we came to pool, one so dark and still that it was har to believe that water was there. The cav man stooped, pointed, flashed his light, an we bent, peering closely. And, sure enough there at the bottom of the pond was th creature; a salamander, agile and etiolated So again multitudes of questions presente themselves. Upon what could such creature subsist? Did they devour each other? A for the 'bugs,' they were white and wing less, he said, with long legs. Then he wen on, talking as he walked largely about 'scientifi doctors' who wanted t persuade him to captur the creatures so tha 'they could pull 'em t pieces,' which he con sidered an aim wholl absurd. To such, if h suspected them, he woul show neither salamande nor insect, and he alon knew where they lay hi So I believe that th character he gave h salamander when he said it wa poisonous was rather in the na ture of protection for his pet.

Thus ended our cave explora tion. We went underground i the light of late afternoon, an came out between nine and ten a night. Out of that white stillnes we climbed, to find ourselves i a beating rain. But it wa good to take deep breath to feel the sharp sting wind and water on the fac The world, with its energy and joyfulnes its ardor and its genial fellowship, struc us as being a sweet and desirable place.

There are other worlds than ours whe sunshine and rain are non-existent and r flowers grow, but in which we need no dwell. In this thought there is comfort.

It was good to be alive.

Newspaper Faking as a Fine Art

(*Concluded from page 5*)

ben to the telegraph office filing a little yrn. Later I picked up the paper con-tning his 'little yarn.'

It was a plain fake. He told, among oer things, of stumbling upon the Prince in the railroad yards the night before, of t Prince asking him for a cigaret and of tiir joking back and forth. (Isn't it just li a Prince to go wandering around dark r road yards late at night and exchanging nry banter with anyone who happens to b up in the darkness?) At the hour the sty was printed, the reporter who wrote it adn't even located the train.

A woman reporter had a tremendous fdness for dogs. They helped a story so rch, she insisted. This flair reached such a pnt that she had a dog in nearly every hman-interest piece she wrote. One morn-in she was sent on a story involving two cldren. A photographer went with her. Te children owned a dog, much to the dight of the reporter, but the dog's attude didn't please her. If ever there w a vicious dog, he was one. He re-fud flatly to be photographed.

The sob sister simply *had* to have a dog. Sl went searching the neighborhood. Down th street suddenly trotted a beautiful coie. He gave the girl a couple of friendly wrs.

'Come pose for your picture, dog,' she nted.

The collie seemed to know at once what wa wanted of him. He walked over to the tw children, put a paw on one child's kne, and looked into the camera. One wld have sworn he was a dog that some nespaperman had trained just for such pitures. At noon the paper came out with th story and a four-column picture. One nor later the police department received a elphone call. The collie was a blooded nmal which had been stolen three months ere.

With a million dogs in the city, I had to ick that one, of course,' said the woman reprter drily.

The police got in touch with the parents of he two children. They said they didn't knw anything about the collie and the pose sniggered in disbelief. Didn't the nespaper say it was *their* dog? When the reprter confessed the truth, the police did't believe her any more than the hildren. The muddle was cleared only wh a house-to-house canvass of the nighborhood finally revealed the stolen nmal.

That vicious faking takes place on some enspapers is true beyond doubt. Much of t is inexcusable—in fact, pretty nearly all o . I know, personally, a score of pub-lishrs who would not countenance the prctice if they suspected some of this embroidering that goes on under their noses. Others, of course, with eye to finance, antion it tacitly if not openly.

This style of newspaper writing revealed itself in a recent trial which engrossed the Mi le West. One night my editor talked to e over long distance.

What about the riot today? There's nothing in your day or night report about it,' aid the news editor.

What riot?'

'Well,' he said, 'one of the afternoon papers carried a "banner" in its last edition saying there was a riot and that two women were hurt.' A 'banner' is an eight-column headline extending across the page.

I assured the editor the story was wrong and the incident was closed as far as my paper was concerned.

There was no riot and no semblance of one. There was a crowd in the courthouse lobby at noon awaiting the opening of the doors, but there was no disorder. If there had been, the state police on duty in the building would have quickly put it down. The crowd sat around on the stone floor playing cards and eating the lunches they had brought with them. The story simply had been 'blown up.' Some newspapers print six or seven editions. It is a rule that on a 'breaking' story where news develops regularly, each edition shall carry a fresh lead, particularly if public interest is high.

Art of Letting Yourself Go

(*Concluded from page 8*)

effort of will make sure of feeling happy, or sorry, or angry, or grateful, at any given moment, or in any particular situation . . . the mental processes which constitute the higher forms of thought, and which lead to the formation of new and useful ideas or decisions by distant and unaccustomed links of association, are very imperfectly controllable by any direct of will.'

Mr. Wallas, who is an English teacher of psychology and the author of many books distinguished for their common sense, tells in his book about one of his students, a young native of India, who had passed through a native university and during his stay in England had obtained high honors. 'All his thoughts, or rather all the phrases and words which he selected from the books of the recognized authorities, apparently came to him as visual images of paragraphs in an examination answer.'

Mr. Wallas despaired of doing anything for this boy, although he had unusual self-control. He was given a severe course of study, involving much mental discipline. But apparently no progress was made until, 'At last,' the boy said, 'I began to feel my way a bit. My teacher had been all this time dinning into my ears, "I want to know what you have got to say of your own." '

Later, after many severe strains and failures, he began to feel what he had never felt before, 'an emotional stimulus.' Mr. Wallas then adds significantly to his story, 'If my Indian student had, from the age of twelve, been familiar with the elements of thought-psychology, he need neither have waited so long for thoughts of his own, nor suffered so severely during their birth.' In other words, he didn't know how to let himself go.

What, indeed, does letting yourself go mean? It undoubtedly lies at the heart of all real success. It is the basis of all real art and culture; it is the keystone of all genuine achievement. So remarkable and so rare is this trait, that it serves as perhaps the best test of the world's greatest men.

We need to know more about ourselves in a purely impersonal way.

A large proportion of those who have the greatest achievements to their credit paid but small attention to public opinion.

If, as Mr. Wallas suggests, all parents and all young people could be made to see, by a few simple instructions in this same thought-psychology, just what it really does mean, our whole society would be raised to a new level.

To put it simply, letting yourself go is merely to put aside all outside formalities and just be yourself. When my young friend the salesman got rid of his trappings, he freed himself by so much. He immediately became human. He learned from his customers. During the war General Foch expressed it when he said that he got his information from the enemy.

In the *Personal Memoirs of General U. S. Grant*—a book, by the way, that every American citizen should read once a year—is a perfect instance of this principle. In charge of a regiment first at Palmyra (before he became commander), he was assigned to the command of a sub-district embracing the troops in the immediate neighborhood of Mexico, Missouri. He states that since the Mexican War the arms had been changed and Hardee's tactics had been adopted. 'I got a copy of tactics and studied one lesson, intending to confine the exercise of the first day to the commands I had thus learned. By pursuing this course from day to day I thought I would soon get through the volume.'

You will notice that right here, Grant was doing exactly what my salesman boy-friend started out to do. He was trying to master a technic imposed upon him by someone else. Now, see the result:

> We were encamped just outside of town on the common, among scattering suburban houses with inclosed gardens; and when I got my regiment in line and rode to the front I soon saw that if I attempted to follow the lesson I had studied I would have to clear away some of the houses and garden fences to make room. I perceived at once, however, that Hardee's tactics—a mere translation from the French, with Hardee's name attached—was nothing more than common sense and the progress of the age applied to Scott's system. The commands were abbreviated and the movement expedited. Under the old tactics almost every change in the order of march was preceded by a 'halt'; then came the change, and then the 'forward march.' With the new tactics all these changes could be made in motion. I found no trouble in giving commands that would take my regiment where I wanted to go and carry it around all ob stacles. I do not believe that the officers o the regiment ever discovered that I ha never studied the tactics that I used.

Here it will be seen that Grant did no despise the tactics he did not use. He re spected them but realized that he could no use them. Now we may say, and the would be much truth in it, that this kin of genius which made Grant—togeth with Alexander, Caesar, Napoleon an others—cast aside all precedents, was di to a combination of courage and imagin tion. Still, we must also remember th Grant let himself go in other ways especially after he became President, whi was not altogether to his credit—and th when Alexander let himself go, he kill his best friend in a fit of rage because th friend refused to endorse his divinity.

The right kind of modern psycholo makes this plain. There are unfortunate wrong kinds of modern psychology whi do not add much more than bad teachi to bad beginnings.

Without going further into the intrica matter of psychology, a highly controversi subject, if we now look over the list of t world's greatest men, we shall find that very large proportion of those who have t greatest achievements to their credit h what may be termed a kind of shamele ness. They paid small attention to pub opinion. Thus genius has come to mean a general way an erratic, unstable quali

YET this is true only of a part of t world's greatest men. These men also themselves go, *but they did this, not far as their tempers or their appetites w concerned, but only so far as breaki precedents.*

'In the year 1776,' writes Henry Thom Buckle in his *History of Civilization*, 'Ad Smith published his *Wealth of Natio* which, looking at its ultimate results, probably the most important book that h ever been written, and is certainly the m valuable contribution ever made by single man toward establishing the princip upon which government should be base This first statement is in my opinion ex gerated, but allowing for that, we may s as Buckle goes on to declare, that 'such the way in which great thinkers cont the affairs of men, and by their discover regulate the march of nations.' Adam Sm undoubtedly let himself go. In other wor he did what my salesman friend did— started to acquire a mass of informat and then threw it all aside and thought out for himself.

The fact is this: We need to know m about ourselves in a purely imperso way—not to further our own selfish p poses, nor to achieve the power to m others small, but only because this rea knowing ourselves is the most interest occupation in the world. And because i this, it is the most useful. Death thus comes an incident.

Letting yourself go means in real making yourself more human, so that share everything with everybody e while, conversely, everybody else sha everything with you. Naturally you h to inform yourself. You cannot be i At the same time, you learn to discar as Grant did—information which is appl ble only to other conditions. You learn trust yourself.

More From You Regarding This to You

(*Continued from page 3*)

ltrnative. Forget the hideous nightmare f war to end war." '

A long letter comes from William L. iiards, Fargo, North Dakota, salesman. t ntains many novel thoughts that are at a worth careful consideration:

The press today is full of ideas, reports statistics advanced, submitted and com- il respectively by men who are known as notchers. They make more or less of a ness of bursting into print either from alt or for purposes of remuneration. In th words, we hear from artisans. Houses, ar statues and articles are alike con- ted by men who have specialized in er in forms of the mechanics of fabrica- o That is all fair enough. Far be it from e even to attempt to change it. But after l s the great mass of the citizenship of he United States properly represented? e use a man can write in such a way that ecle will pay to read his copy, must we el ve that he is equally capable of study- g he reactions of his fellow man to such n xtent that he is able to tell the wide rol just what his fellow man has been ding and what his reactions have been ndoubtless will be! I don't think so. So nu for the professional writer.

We have yet to deal with the genius nche politician. We can dismiss the latter it a short sentence. We all know that he illay in public only that which he knows illbrove beneficial to his personal ends in e uture. When he speaks of his public, e ill employ complimentary terms ex- usively. As for the genius, we are told or early childhood that a genius has to more or less cracked or he would not be gnius. Very well then, let's ask him to ell us about his particular line. There is ned for him to tell us about any other r we wish to learn of another line than is e can go and consult some other ens who has specialized in that par- cur line.

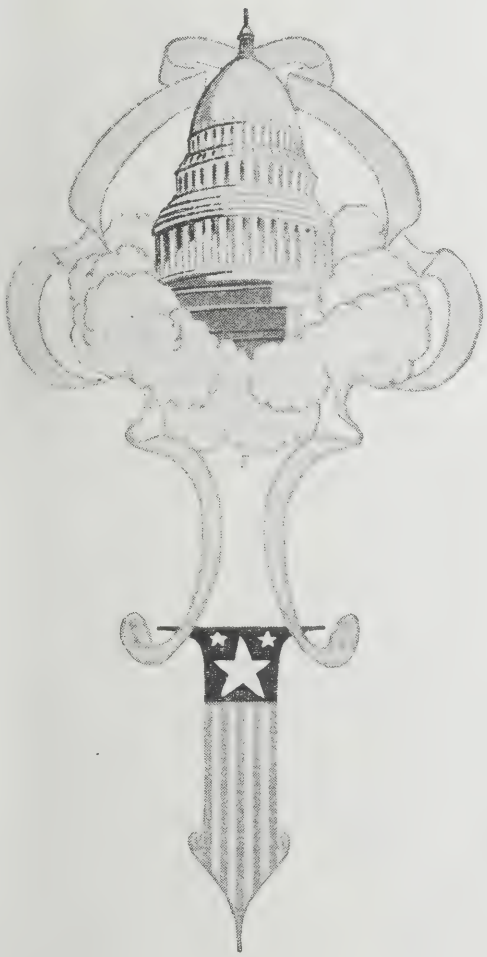
Now we come down to me and my as I am one of the middle class. I am ot genius. I am not a politician and ou already know by the above that my am has never been attached to a manu- ri . I have never before written to a agzine except to state that I enclosed a nec and would they see to the rest of it. Now you and I may differ but it seems to e at I am better qualified to answer your dit ial than any member of the three ass s I have mentioned. Like many men kn w, I am a college graduate who spent a cions doing jobs that were different nd n different parts of the United States nd abroad. I have worked in factories, mines and in the oil fields. I have been in ffic and am now a salesman. I was born nd aised in the East and came West a year go more for my health than anything else. am twenty-five years old and have a wife nd wo children.

'You see I am almost extraordinarily rdinary. It is that fact alone which makes my message worth while. Now that that s out of my system, let's get on with the message.

'The sum and substance of the whole matter is that I don't care a hurrah on a dime night what Mr. Mellon does or what Mr. Churchill does or what the papers say they do. You have answered your own question in your third from the last paragraph. I would only add that not only does it make no difference tomorrow, it doesn't make a bit of difference today. That is the reason that I and the millions for whom I am writing have remained silent. But that is not all. There is a further question. Why is it that we feel as we do? Why don't we care?

'In the first place the House of Commons will continue to knock us just whenever they feel like it regardless of a boatload of international bankers. That is, the papers will say that we are being knocked. We all know that we are probably not being knocked at all. We further know that reports concerning such knockings and concerning outbreaks against Americans in Paris have to be put in periodically in order to sell the papers. I have been abroad while outbreaks have been going on according to reports at home and I must say that peace and quiet were almost oppressive where I was.

'There is feeling of course. Any man who has ever lived in a city across a river from a small town ought to know that as long as we represent the city, the countries across the ocean are going to play the part of the small town with all its petty jealousies. There is nothing in the world more natural. To carry the simile even further, you and I know that we can go to that same small town and we will be treated politely and respectfully so long as we treat our hosts respectfully. But if we must yelp and shout around about how we are big boys and there



is no place like our grand and glorious city, we will doubtless be taken in hand by some people who have every right to be proud of the town in which they live even though it may not be the biggest and wealthiest.

'As for the debt itself, it will not make the slightest difference to me or to the many millions whether it is ever collected or not. In the first place, what the President, the Cabinet and the Press say to me doesn't cut any ice anyway. I know why they say it and I know they don't mean it. I further know that they can't mean it for just about the time something is about to be done it comes along another election year and then everything is all off anyway.

'If they have told me for years that every cent of the debt was going to be paid, they wasted their breath for I didn't even hear them. Politics is their business and promises are their stock in trade. That is the part of your editorial that I almost resent. You seem to think that we millions believe all that rot. Why the only reason I vote is to prevent some man that I think isn't quite so good from getting the job away from the man that I think isn't quite so bad.

'Why should there be a ripple, Mr. Editor? What good would it do if any one or any million of us would ripple or create a tidal wave? Mr. Mellon would still be Mr. Mellon. He is without doubt a fine man. Members of our Cabinet are all fine men and so is our President but they are just as much in business as anyone else. What right have we common people to interfere with their directors' meetings? Where would we get if we did? The public officials aren't playing with us. We just won't play. They are playing all right but it is among themselves. Big business, very big business, is all that will be affected by the international debt anyway and they are the ones that are playing. They are the ones that make politics. When they make promises they are talking to themselves . . .

'No, Mr. Editor, we millions are not in the least worried. We have been so properly force-fed on rot of that kind that it is a luxury to read the funny paper.'

A defense of the European sentiment is uttered by Joseph A. Letourneau, Boston insurance man. He declares:

'My three sons who were born in good old New Hampshire are ex-service men, as well as John Citizens. None of us have given much thought as to whether or not some $12,000,000,000 or more are paid back to the U. S. A., because if such a gigantic sum is repaid, who will get it? Will it have any material effect on the price of a loaf of bread, or the price of a gallon of gasoline?

'Furthermore, are we entitled to all this enormous sum of money? If we entered the war in 1917, why not in 1914? The German of 1914 was not different from the German of 1917. England lost billions of dollars in sunken mercantile shipping. Wherein do we share in material compensation? We were allies, were we not? England and France lost more than 2,000,000 men, killed in battle, not counting more millions of wounded veterans. We lost 50,000, killed in battle. Wherein do we share (in the final reckoning) in this human holocaust?

'As John Citizens, we are perfectly aware that our opinions count for nothing, inasmuch as we realize that our Government is a government of the rich, by the rich, and for the rich, but to satisfy your query "This to *YOU*," you have our answer.'

Frank J. Wilson is frank in acknowledging he has been deceived. He writes from Albuquerque, New Mexico:

'As Will Rogers says, "All I know is what I read in the papers." I did not know that the only money we want from France are the debts created since the Armistice. Anything they got before that time or during the war, has been given them. Ninety-nine Americans out of every hundred are in the same boat. I think the same thing could be said of all Frenchmen, also, Italians. In intelligence, I am an average American. In-so-far as I am concerned I would be willing to cancel all foreign debts to Europe. If they would use the money for any purpose, but war equipment, or getting ready for another war. Of course, France is a little nervous on account of having been jumped on twice by Germany, during my life. If all our European debts were cancelled, they would just get ready for the next war. I except England from this statement. The Common European ought to hear the facts.

Harry Neelly, attorney, of Searcy, Arkansas, declares that the people can be awakened to the full import of the situation only by being personally affected:

'In response to your editorial, "This to *YOU*," will say that if a direct tax of $2 were levied upon each citizen of this country, a howl would go up in this country that would make the shrill of a wild-cat whistle sound like an evening zephyr. On the other hand there could be levied an indirect tax of $100 and nothing would be said about it.

'The trouble is that the average American is doing fairly well, most of them reading the baseball scores and the market quotations. The people of this country have been told so often that they were the Government that they fail to grasp the truth of this statement. Further it is almost impossible to get a concerted action from among the mass of people except during election time and then the candidates are usually elected because of their ability to shake hands, organize voters and the exuberance of their promises. No one wants to go to the trouble to organize and fight for a principle that does not directly effect them. Most of us are too busy running our own business and let the politicians run the country unless they make such a mess of it as to effect us personally. And last but not least, I am of the opinion that there isn't one person in a thousand that has given any thought to the war debt or have any idea about its workings.

Stock Market Manipulation

(Concluded from page 2)

rediscount rates is at variance with the policies of the majority of foreign central banks of issue, most prominently the Bank of England. In London the rediscount rate is kept above the open market rate to discourage borrowing. Thus on August 13, when the Bank of England rediscount rate stood at five per cent, call money was quoted 3½ to 3¾ per cent and six months paper 4½ to 4⅝ per cent. The policy of the Federal Reserve appears to be to keep the rediscount rate below the open market rate. This tends to encourage rediscounting with the Reserve.

Today, with industry aiding in financing itself with a quicker turnover and smaller inventories, it would seem the Federal Reserve goes to Wall Street to earn an honest penny. In doing this it lays itself open to the charge of aiding and abetting unrestrained speculation through supplying practically unlimited funds. It is also in danger of more serious charges. Why was the New York Federal Reserve Bank rediscount rate lowered in April at a time when the stock market visibly needed stimulation, only to be raised again in August?—during which time no other reserve bank deemed it necessary to change its rate. Even so orthodox a publication as the *Wall Street Journal* has expressed disquietude regarding Federal Reserve methods. The following was published November 21, 1925:

As almost everybody is eligible for the Federal Reserve Board in Washington, even a banker, it is timely to offer a little friendly counsel which should be taken in good part. A banker, and above all a central agency which is to set an example to all bankers, should know that we must avoid even the appearance of evil. There is a certain sloppiness about Reserve Board methods, as inferred in the recent past, which is disquieting.

A Federal Reserve center cannot change its discount rate until the resolution of its Board of Directors to do so has been approved in Washington. Here is the regulation, a ruling of the Washington Board itself:

> 'Announcements of rate changes which have been approved shall be made as nearly as possible simultaneously by the Federal Reserve Bank concerned and the Federal Reserve Board, and such announcements shall be made immediately after the close of business at the bank concerned *on the day on which the rate change was approved and not sooner.*'

Although it is not the custom to italicize in these columns, the clause of this rule contained in the last thirteen words is vital, in view of the possible market effect of bank rate changes. If a Federal Reserve Bank, as for instance Boston, decides to advance its rate from 3½ to 4 per cent and its Board of Directors communicates the resolution to Washington; if there is no reply from Washington for a week and the Boston bank repeats its action, the prospects for a leak are by no means unremote, while the reserve center concerned in the meantime does not know where it stands.

As a matter of record it may be said that the recent advance by the Boston Reserve Bank is credited with more market influence than it could possibly have had, that the similar action by Cleveland merely coincided with a weak day's trading and that in the case of Philadelphia any market influence had completely waned. A ruling of the Reserve Board says, 'Directors and officers of Federal Reserve banks are cautioned to refrain from discussing prospective and actual rate changes.' It is to be hoped and expected that those associated with the Board in Washington will be equally circumspect. An advance in the rate in Philadelphia was generally expected in Wall Street on Wednesday, was denied on Thursday morning and was announced on Thursday afternoon, after the close of business.

No imputations are here made beyond a certain slovenliness of which the Reserve Bank of Philadelphia may perhaps be assumed to be guiltless. The Reserve Broad in Washington cannot possibly make it too clear that its rulings apply to itself.

In face of the present unrestrained speculation in securities, the operations of the New York Federal Reserve Bank in regard to its rediscount policy and the tremendous volume of stock market loans, is it not permissible, in fact obligatory, that the country at large inquire into the degree of Federal Reserve influence upon stock market manipulation?

The Gem Cutters of Idar-on-the-Nahe

(Concluded from page 15)

is furnished to the drill by a string and bow drawn by the right hand.

Another special phase of the industry often carried on in the homes of the workers is the coloring of agates. Although the agates that were obtained from the Idar region possessed interesting colors, the product imported for nearly one hundred years from South America has lacked this quality which is so large a factor in the attractiveness of jewelry.

But the Idar workers have overcome this deficiency by devising and perfecting certain methods of coloring the stones. Most of the technique by which gray, neutral colored agates can be transformed into bright and interestingly colored stones is a trade secret. But the fundamental principle of the processes and some of the more usual methods are known.

Agate is a mineral formed of layers of quartz deposited in cavities in the rock. These layers possess different degrees of porosity and therefore will absorb liquids in varying amounts and ways. To produce alternating bands of black and white, an unattractive South American agate is soaked for a time in a solution of sugar having the consistency of honey. It is then treated with sulphuric acid which chars the sugar and forms the black bands which alternate with the white or gray of the uncolored portions. By the use of various solutions many bright colors may be obtained.

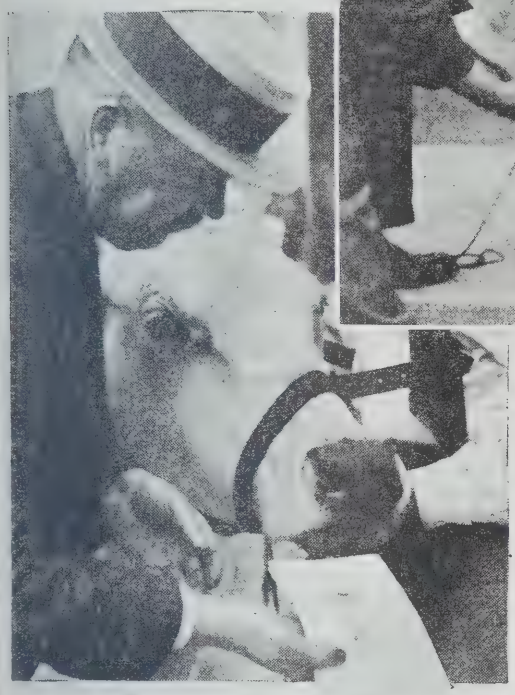
Some of the agates contain iron salts which cause unattractive colors. When such stones are heated the iron compound changes and the color becomes red. Thus in a variety of ways, the latent possibilities of the rough gem material are developed to the full by ingenious artificial means.

Another specialized branch of the Idar industry is that of engraving. This work demands an extraordinarily high degree of skill and the Idar workers have become famous for their remarkable workmanship. Some of these engravers are so clever that it is possible for them to cut cameos from no other likeness than a photograph.

Many of the Idar workers are also engaged in making from agate, smoky quartz, rock crystal, jasper and other semi-precious materials, articles of a more or less utilitarian character. The umbrella, cane and knife handles, the jewel cases and match boxes, the paper weights and chess sets and the crystal beads which are found commonly in the shops both here and abroad are all examples of the skilled craftsmanship of these workers.

It is noteworthy that the Idar gem cutters possess a rare artistic ability which combined with their unusual technical skill, has produced exquisite work with relatively primitive methods. Their sense of the beautiful is revealed not only in gems deftly cut and polished and cameos perfectly engraved, but also in the most common articles, each of which has been fashioned with the spirit of the artist as well as that of the artisan. Buyers of gems from every nation flock to this district, and material from all parts of the world is sent there to be cut and polished or engraved.

PETS Recorded *by* Nose Prints



—National Photo.

Perhaps the first nose print will be good—or maybe the dog won't appreciate the general idea at all. Left—'Bossie's' nose print which will be filed for identification purposes.

UPPOSE that you are the owner of a handsome, faithful dog. Some thief may come along and steal Bowser. If the robber clipped your dog or otherwise disguised his appearance, how would you identify him? Could you recognize your dumb friend—if he did not identify you immediately—if you visited the kennel or dog pound in which he might be confined with hundreds of others?

Nose-print records have proved dependable for identifying pet animals.

A number of sheets of mimeograph or newsprint paper about four inches square and some black stamping pad ink are necessary equipment. Ordinary writing fluid or blue or red stamping pad ink will not be suitable. Smooth-texture papers cannot be used.

Having secured the right kind of ink and paper, wipe the dog's nose dry with a piece of flannel; then press the stamping pad well-inked—against the dog's nose. Attach the piece of paper to a small slab of wood and then press it against the inked nose of the dog. Begin with the lower edge of the paper at the base of the upper lip and roll upward the face. Wipe the ink from the dog nose and nostrils and the task is finished.

Certain special glands underneath the skin of the dog's nose which form little spots, lines and grooves, no two of which are exactly alike, are the identification signs.

Nose prints have been made of the noses of puppies every month during their babyhood and no changes in the identification spots, lines and markings have ever developed. Of course, an enlargement of the nose occurs as the dog grows older, but the spots and marks remain the same.

Fraudulent dealers who handle purebred and registered dogs sometimes substitute mongrel animals of poor breeding that resemble full-blooded prize-winners and sell them under bogus registration papers. When the system of nose-printing dogs becomes commonplace, such frauds will be detected. Furthermore, it will serve to discourage the theft of prize pets whose owners have the nose-print identification records.

A nose print of a cow is made in exactly the same way. The average cow perspires freely through her nose so you will have to be careful to make the prints as soon as possible after wiping away the moisture from the animal's nose.

One of the largest dairy farms in the country made nose prints of more than 350 cows. The records show that the nose marks are dependable sources of identification for the bovine family. The branding of cattle is a cruel practice and wastes valuable leather in the resultant hide.

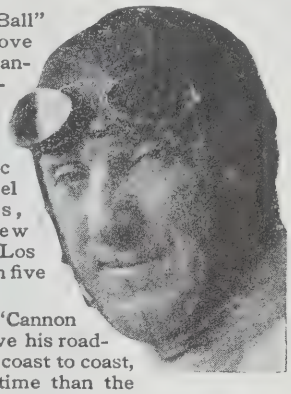
The nose-printing method may also be used advantageously in proving the identity of horses.

Most of the animals which you see in the ordinary zoölogical park can be dependably identified by making paper print records of their noses. The monkey is the single exception, since it has a hand much like that of a human being. Any expert, however, can quickly tell the difference between a monkey finger print and that of a man.

"Cannon Ball" Baker

Smashes Records with

TUTHILL SPRINGS



"Cannon Ball" Baker drove his own standard roadster, equipped with Tuthill Titanic Alloy Steel Springs, from New York to Los Angeles in five days.

Briefly, "Cannon Ball" drove his roadster from coast to coast, in faster time than the trip has ever been made in any motor vehicle with one man driving.

Thirty-three hundred miles over mountain trails and desert sands — flooded streams and rough, mud roads—through sand and rain storms—in five days! Hundreds of miles of detours, literally a network of chuck holes and loose stones, were travelled, night and day at 35 to 45 miles per hour.

And the Tuthill-Titanics took the punishment without injury — protecting car and driver that this epochal feat might be accomplished.

This is another proof of their amazing stamina, which makes it possible to guarantee Tuthill Hump-Center Titanics against center breakage.

What Baker Says:

"The Springs certainly received fearful slams. Nevertheless they gave fine service all the way and were in condition to do it over again when I finished in Los Angeles.
"I can heartily recommend Tuthill Springs."
"CANNON BALL" BAKER

The Famous Unbreakable Hump Center

Tuthill Titanic "hump center" Springs are guaranteed *forever* against center breakage. This guarantee is your insurance for many thousands of trouble-free miles. With Titanics on your car you can forget about spring breakage and enjoy easy riding comfort.

Titanic "hump center" Springs are equally strong from end to end. *They have no weakening bolt hole* punched through the center where eighty per cent of spring breaks occur.

Instead they have the famous Titanic hump center—just prominent enough to keep the leaves from shifting and providing full strength where the strain is greatest.

Titanic Springs are made for all cars. Install a set of these resilient, durable springs, now. Don't wait until you are stalled on the road.

'Monymusk,' an Old Dance's Home Tow

By J. GRANT FORBES and ALEXAND KEITH

Dancing competition at a Highland gathering.

'MONEY MUSK' is one of our most popular dances; a favorite now as it was with our forefathers. In the following article the history of 'Monymusk'—to spell it correctly—is given. For the facts which make up this story we are indebted to the research of the Reverend J. Grant Forbes, Minister of Monymusk, and Alexander Keith, M. A., a distinguished graduate of Aberdeen University, both authorities on the subjects which make up this interesting contribution to that knowledge of the past which leads to our better appreciation of the present.

ABOUT eighteen miles northwest of Aberdeen, Scotland, under the shadow of the 'Mither Tap' of Benachie, so dear to every Aberdonian's heart, in the fertile valley of the Don, lies the parish and village of Monymusk.

Monymusk differs very little from its neighbors, save that in beauty it outshines them all. The parish is about six miles long and three broad and contains 10,816 acres, one-half of which is woodland and moor and the other half agricultural land.

The hill of Benachie, which a Scottish poet calls 'the Fujiyama,' or sacred mountain of Aberdeenshire, stands slightly less than 2,000 feet high, but can be seen from every corner of the county, among the Cairngorm Mountains and from the shores of the Moray Firth. Charles Murray, the foremost poet of Scotland today, who was born a little farther up the river Don in the vale of Alford, has often sung its praises.

Monymusk is a sizeable place as villages go, for it has about 1,100 inhabitants. Anciently it was called a town from the fact that there was once a priory there, and that the residences of those who lived on the church property were called the 'toon' or 'kirkton.' There may be some cottages in the 'toon' of Monymusk which still have their thatched roofs on which golden stonecrop and olive-green mosses flourish, but the majority are of the modern type with slated roofs and built of glittering gray granite from a hillside quarry, for the present laird and his father have been mindful of their tenants and constructed a model village.

Some have gardens in front, in which primroses and pinks bloom almost all the year round, and where there is always a sprig of southernwood to be picked, or a bit of rosemary or mint. At the rear the kailyard, relieved from its severe utilitarianism by a sweet-scented brier bush or two.

At one time any convenient barn was the scene of local festivities, if it was big enough, but now there is a community hall in Monymusk—the laird has seen to that—where the village folk and their rural friends

The House of Monymusk.

for miles around hold their da and other 'shines,' particu in the 'lang nichts' when the are white and the glens rend more remote through imp transportation. The Donside are proud of their dancing t tions, and the district has prod some fiddlers without equal i wide world of reels, jigs, fl and sprightly strathspeys.

What the word 'Monym means no one knows for cer Undoubtedly it is Gaelic. suggestion is 'monie,' which m a 'moss' or 'peat' bog, 'musgach,' which means 'di Another is, that the 'musk Irish Gaelic 'mosg,' which means And yet another is 'manadh,' meani 'hill,' and 'uisge,' meaning 'rain' or 'wa None of the derivatives are satisfactory, all we can say for certain is that it mea 'moss' or peat bog of some kind. A some authorities say that the name is rived from two Gaelic words meaning hill by the river,' and others m tain that it comes from the s words, but with the meaning, hill and the marsh (or low grou It is seldom, however, that any Celtic 'authorities' agree as to interpretation of a place name.

The ancient Priory of M musk was without doubt the seat of Christianity in the Gar district of the county of Aberd The priory is first heard of a 1200. Here the poet Gavin Dou was prior in 1496 and later bec Bishop of Dunkeld. His transla of Virgil's *Aeneid* into 'braid S entitles him to rank as one of great early Scottish poets. He longed to the Douglas family famous and powerful in Scot history.

Here in Monymusk the gi poet, John Skinner—admired Burns, and who is the autho *Tullochgorum* and *The Ewie*

Crookit Horn—was schoolmaster in 1740. Skinner, who was born in 1721 and died in 1807, was the author of many famous Scottish songs. It was at Monymusk that he wrote his first Scots poem, *The Monymusk Christmas Ba'ing*, describing very humorously an old game, no longer played, which somewhat resembled Rugby football, but in which no sides were taken, every man (and woman) playing for his own hand and sadly battering the shins and persons of their opponents in the excitement.

It may be that Skinner gained his fondness for Scottish dance music while he was at Monymusk. For years afterward, when he was an Episcopal minister at Ingside in Buchan, he wrote songs to dance tunes, like *Tullochgorum* and the *Marquis of Huntly*—both reels—and other airs. At Monymusk, Skinner also wrote an English poem, not a very good one, unfortunately, on the beauties of the Don and the site of 'Paradise.'

Here on two occasions, 1761 and 1764, John Wesley preached in the parish church, paying a remarkable tribute to the singing. He says: 'Thirty or forty sung an anthem after the sermon with such voices as well as judgment that I doubt whether they could have been excelled in any cathedral in England.'

For long the lands of Monymusk were in possession of the Forbes family. First they gave the monks loans of money and in the end became the possessors. In 1713, like many of the county families of the time, the Forbeses found themselves in financial difficulties and sold the land to Francis Grant. This Francis Grant was born at Ballintome in the parish of Knockando, Morayshire. At the age of fifteen he was sent to King's College, Aberdeen. He then went to Edinburgh and Leyden to study law. Returning to Scotland he practised at the bar and soon acquired an extensive connection. He was made a baronet by Queen Anne in 1705, and was raised to the bench in 1709, taking the courtesy title of Lord Cullen, after the estate which he owned in Banffshire. Selling his land in Banffshire he bought Monymusk, then little better than a ruin. That he 'rued his bargain' we know definitely. However, under the capable management of his eldest son, Sir Archibald Grant, who succeeded him, in a very short time a remarkable reformation was effected. In a few years he transformed a bare, bleak, neglected countryside into a region of fertility and beauty.

Sir Archibald Grant introduced turnip-growing into Aberdeenshire—turnips are now the staple food of the herds of purebred cattle for which the county is so famous—and was the first to plant trees extensively in that district. His descendants have followed his example of constant public service and attention to their estates.

It is said that Sir Archibald planted no fewer than 48,000,000 trees on the estate. The Norway spruces in Paradise, on the banks of the Don, were planted in 1720, and the other large trees there in 1740. Some of the spruces are 120 feet high, while the larches are well over 100 feet. So kindly did the trees take to the soil that Sir Archibald lived to see some of the trees he planted two feet in diameter. Dr. Keith, in his book on agriculture published in 1811, says: 'His son and grandson have already sold wood to the amount of much more than the estate cost a century ago.'

Sir Arthur Grant, Bart., of Monymusk.

There are several beauty spots in the parish. There is Paradise, already referred to, known far and wide and much frequented by picnicking parties. At one time a large staff of gardeners were kept here, and here in the summer months Lady Grant and her family spent the afternoons. There is also New Paradise, with its lake and moss-house, once the pride of Monymusk but now a duck pond.

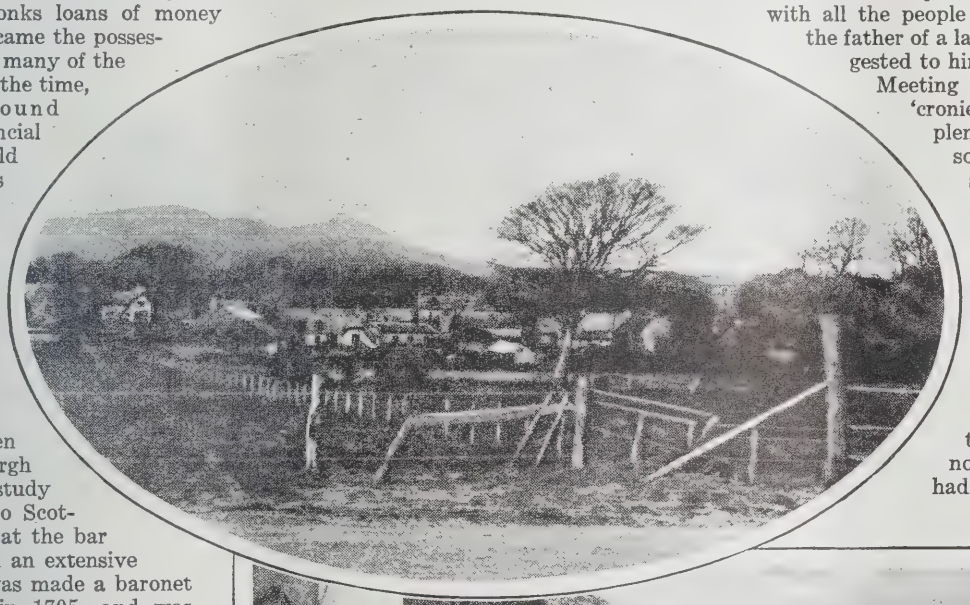
There are two Druidical circles near the village, and about half a mile from the House of Monymusk is the Campfield where Robert the Bruce's army is believed to have encamped on the eve of the Battle of Inverurie, which marked the turning point in the Scottish War of Independence.

There is a story told about the custodian and chief gardener of Paradise, John Thomson, who was rather fond of a dram. On one occasion Sir Archibald chanced to catch him very much the worse for liquor and dismissed him on the spot. Relenting at parting with an old servant, Sir Archibald asked if he had anything to say for himself. Old Thomson, standing with a spade in one hand, and holding the branch of a tree with the other to steady himself, looked Sir Archibald full in the face and said:

'How lovely is thy dwelling place
Sir Archibald to me;
The gravelled walks of Paradise,
Their like I'll never see.'

The whine in the 'never' and the tears at the final 'see' softened the heart of the good laird, and with a hearty laugh the sentence was revoked and Thomson told to go on with his work.

Not so many years ago there was a distillery in the village, and many are the stories that are told of the 'worthies' of the place. For example, an exciseman of the name of Mackay was 'good-fellow-well-met' with all the people of the district. Being the father of a large family, his wife suggested to him the keeping of a cow. Meeting with two or three 'cronies,' and whisky being plentiful, the 'gauger' was soon more than 'half seas over.' Instead of buying a cow he bought an old horse. Arriving home with his bargain he hastened to the house to get his wife to come and milk the 'cow.' To her amazement, on arriving at the byre, milking pail in hand, the good woman saw not the bovine animal she had expected but the brok-



Paradise Road, Monymusk, and, in oval, a prospect of the village.

52 CHRISTMAS GIFTS

That you can send as easily as one!

A gift a week for all the year!

That's one way of spreading the Christmas spirit over all the calendar.

And you can make such a gift by simply filling in the blank below, and mailing it with $1.50. We do all the rest, even sending a special Christmas card to the person you designate advising him or her of your gift.

We need not sing the praises of THE DEARBORN INDEPENDENT to you, a reader. But we can promise that it will be as entertaining, as informative, as appealing next year as it has been in 1926.

Chronicler of the Neglected Truth

en-down steed. For some days afterward the 'gauger' was scarcely seen in the parish.

The Grants of Monymusk, being Edinburgh lawyers, spent much of their time in the Scottish capital. In the Edinburgh society of that time there was no couple more popular than Sir Archibald and Lady Grant. The historian Hume, in a letter dated 'Edinburgh, 5th June, 1770,' speaks of them as 'Making everybody in love with the marry'd state.' This accounts for the Edinburgh musician and violinist Donald Dow naming his famous Strathspey after them.

Donald Dow was born in Perthshire in 1732 and died in Edinburgh, January 20, 1783. He was a teacher of music and concert-giver in Edinburgh from 1763 till the time of his death. He published various collections of Strathspeys, in one of which 'Monymusk' appears under the name of 'Sir Archibald Grant of Monymusk's Reel.' The date of this composition is somewhere about 1774.

Dow was a member of the famous Neil Gow's band, which used to make a circuit of the Scottish country houses, and Monymusk House among them.

Probably to this tune more than to anything else the parish of Monymusk owes its fame. Many, who do not know where Monymusk is, know this King of Strathspeys.

The tune appears in a very rare collection of Scottish music, *Davie's Caledonian Repository*, first series, which was published before 1829, and it is mentioned in Sir Walter Scott's *St. Ronan's Well*, the scene of which is also laid in the beginning of the 19th Century. The first part of the tune used to be sung to a still more ancient folksong, for these happy Scottish cottar folk danced while they sang and sang while they danced, a custom which is not entirely forgotten.

At the 'Highland Games,' as the athletic gatherings held in the fall of the year are called in Scotland, dancing forms one of the principal attractions, and 'Monymusk' is as much of a favorite as it was a century and a half ago.

Burns has sung of the music of 'the trembling string,' and Scott has eulogized it in his references to Neil Gow, the master fiddler of them all. The bagpipe is not the national instrument of Scotland, but only of the Highlands and the Celts of the Borders. There are five fiddles for every chanter in Aberdeenshire and all the districts outside the Highlands. Neil Gow, the composer of *Caller Herrin'* and many other celebrated tunes, was a Perth man. Marshall who furnished the tune to Burns' exquisite lyric, 'O' a' the airts the win' can blaw,' was a native of Morayshire; and both were fiddlers. Burns himself played the fiddle, and John Skinner, in the *Marquis of Huntly's Reel*, writes:

> Tune your fiddles, tune them featly,
> Play the Marquis' reel discreetly.

The House of Monymusk, the residence of the laird, occupies one of the fairest sites on the banks of the winding Don. With Benachie for a background and the smiling valley in front, a more beautiful spot can scarcely meet the eye. The ancient parish church is a Norman building and belongs to the 12th Century. It is hoped that some day it may be restored to something like its ancient splendor.

Lincoln and Temperanc

(*Continued from page 7*)

own attitude on the Fugitive Slave Law in point: he did not like it, but he believ that so long as the Constitution recogniz slavery, a fugitive slave law was a necessa part of the legislation to make the Constit tion effective, and that the South was e titled to such legislation till the time, which he hoped, when slavery itself shou be made illegal. He did not approve t violation of the Fugitive Slave Law, mu as he disliked it.

But five years later Lincoln delivered address in Springfield in which he definit did speak of the sale and use of liquor. T was his address before the Washingtoni Society, February 22, 1842. Here again have Lincoln's own printing of his speec

'Of our political revolution of '76 are all justly proud. It has given us a degr of political freedom far exceeding that any other nation of the earth . . .

'Turn now to the temperance revolutic In it we find a stronger bondage broken, viler slavery manumitted, a greater tyra deposed; in it, more of want supplied, mc disease healed, more sorrow assuage By it no orphans starving, no widows wee ing. By it, none wounded in feeling, no injured in interest; even the dram-mak and the dram-seller will have glided in other occupations so gradually as never have felt the change, and will stand rea to join all others in the universal song gladness. And what a noble ally this to t cause of political freedom; and with such aid its march cannot fail to be on and c till every son of earth shall drink in ri fruition the sorrow-quenching draughts perfect liberty. Happy day when— appetites controlled, all poisons subdue all matter subjected—mind, all-conqueri mind, shall live and move, the monarch the world. Glorious consummation! Ha fall of fury! Reign of reason, all hail!

'And when the victory shall be comple —when there shall be neither a slave nor drunkard on earth—how proud the title that land which may truly claim to be t birthplace and the cradle of both the revolutions that shall have ended in th victory. How nobly distinguished th people who shall have nurtured to maturi both the political and moral freedom their species.'

This is uncompromising. Lincoln h been speaking of the sacrifices which h secured the political freedom of Americ and he counted those sacrifices worth whi But he believed that two things remaine one to make all men politically free, a the other to liberate humanity from t bondage of strong drink. That deliveranc he maintained, could be accomplished wit out bloodshed, and even the liquor deale would be the better for it. He want America to lead in that revolution whi should banish both slavery and drunkenne

Inasmuch as Lincoln indubitably sa such things, it seems a pity to invent othe which can add no weight to these utte ances. And that is why I do not like su stories as are told of his having deliver prohibition speeches in 1855 with t Reverend Mr. James B. Merwin. That M Merwin himself delivered such addresses beyond doubt; that Lincoln joined him in prohibition crusade in that year is not on unproved but wholly opposed to all pro ability.

It ought not to be necessary for me to ge reasons for this statement, but I am ›pared to do so. And because this is the ›t of this article that is sure to bring to r letters of protest, I think I must do so. r already I see readers reaching for their npots to write to the editor or to me, demding whether I knew that the Reverend M. James B. Merwin was a holy man, and lt what I am saying implies that I think ıdied.

I do not wish to imply anything except vıt I am saying, and I am saying just vıt I intend to say. I do not believe that A aham Lincoln in 1855 made one single nıibition speech in company with Mr. Mrwin. Here are the reasons:

First, Mr. Merwin's own speeches are or record. He went up and down Illinois sne born out of due time, trying to induce eple to favor the enactment of the Maine ‹r in Illinois. By the way, the bill that vı introduced into the Illinois legislature nrporating this feature is alleged to have ben framed by Lincoln. Not much framnı was necessary, for it was virtually the Mne Law, and I have no opinion that I a here and now to express whether Abaham Lincoln performed the wholly elless task of preparing such a bill, which va already prepared, for presentation to a eglature of which he was not a member.

Mr. Merwin made speeches, and the od newspapers tell of them. If one single od newspaper tells of Abraham Lincoln s eing present and speaking also, I have o found it.

Abraham Lincoln was at that time, next o tephen A. Douglas, the most prominent na in Illinois. He could not visit even Chago, much less Smithville or Jonesboro, nget away without mention in the papers. Dthe Smithville *Bugle* and the Jonesboro *Gatte* give large space to an unknown man, Merwin, and totally neglect to tell of the rence of the noted Abraham Lincoln?

SO FAR as I can learn, Mr. Merwin's rs printing of this story of Lincoln's anpaigning Illinois with him in 1855 an 1910, sixty-five years after the events hh he thought himself to have remembered. If it was true, why did he not elt fifty years sooner?

Mr. Merwin many years afterward was cstomed to display a watch which he adhad been presented to him at the close f tat campaign, and in the back was an ngıved inscription, declaring that it had ee presented by Abraham Lincoln. That he watch, or *a* watch, was so presented, there s eidence in a local paper; but the paper s sent on the one thing that would have nterested its readers most and would nos interest us, namely, the participation n te event of Abraham Lincoln.

Secondly, I do not believe that Abraham Lincoln joined in such a speaking tour beau he had just come through a campaign n wich he made an unsuccessful attempt to eete the senatorship from Illinois, and he ad been beaten by Lyman Trumbull. Lincoln had been out of his office a long imand he was neither professionally nor inancially in condition to go out on another ampaign.

Thirdly, if any man will name a place nda date where he claims that Lincoln and Merwin spoke together, in the year 854 I will very nearly promise to prove an alib! For when Lincoln got back to his cou work in that year he worked so persistently that he can be found at one or another of the fourteen county seats of the Eighth Judicial District on almost any day when he might have been speaking for prohibition. That was a year when Lincoln had to work hard to make up lost time. And we know where he worked.

Fourthly, the prohibition question was not an issue in the campaign of 1854 and was not to become an issue in 1856 or 1858, and Lincoln was preparing for those two dates. He received 110 votes as a candidate for Vice-President at the Convention of 1856. He had come back into politics under the conviction that the slavery issue called for his whole moral support, and he was looking forward a long way. He was not at that time hunting up issues that would divide his constituency and defeat the ends for which he had reëntered political life.

Fifthly, Abraham Lincoln needed every vote he could get, and especially needed the German vote. The Irish vote was Democratic, almost to a man; and the Irish were engaged in railroad building and were capable of being loaded into wagons and transported to two or three poling places on the same day, and as an actual fact this was done.

THE Germans were naturally Democratic except that they did not love slavery. Their having left Germany as a result of the revolution of 1848 was Lincoln's basis of hope for their vote, and in the main he got it. He left no stone unturned to secure that vote. He secretly bought and owned a German newspaper, and personally sent copies of 'our new German newspaper' to prominent Germans in Illinois requesting them to secure subscriptions.

I have myself seen the contract, in his own handwriting, under which he made this purchase, and he owned the paper till after his election as President. I have also seen and handled some of those letters. Now the Germans were not as a rule drunkards, but they were almost to a man beer-drinkers, and Lincoln could have driven that whole vote from him by one futile and foolish prohibition speech in 1854, that would have accomplished nothing for prohibition and have lost him his largest single block of votes. Lincoln was an honest man, but he was an astute politician. He held the German vote.

But there is one thing that ought to be remembered, and I think it significant, because, like this story of the German newspaper, I discovered it: On January 23, 1853, while the Illinois legislature was in session, the Reverend Dr. James Smith, Lincoln's pastor, delivered a sermon on 'The Bottle, Its Evils and Its Remedy.' The text was *Habakkuk* 2:15. Dr. Smith took the ground that it was not fair to condemn the saloon-keeper for making men drunkards so long as the state accepted his license money and derived a profit from his sales. He called on the legislature then in session to pass a law forbidding all sale of intoxicating liquor excepting for medicinal, mechanical and sacramental use.

SUCH sermons were common enough forty years later, but rare in 1853. That sermon was heard with profound interest, and the thirty-nine men who heard it, and called themselves 'Friends of Temperance' joined in a letter thanking Dr. Smith and requesting a copy of his sermon for publication. It was published, with Abraham Lincoln's name in the list of those who had asked for its printing.

Now let it be said and admitted that not all of those thirty-nine men may have approved of every position taken by Dr. Smith; but they certainly were in hearty accord with his main position, and Abraham Lincoln was one of those men.

So I do not spend much time arguing about the possible and the improbable in the utterances of Abraham Lincoln on the liquor question. The indubitable truth is good enough for me, and ought to be good enough for all friends of temperance and righteousness and the sanctity of the law.

I shall be asked, Did not Lincoln and Berry have a license to sell liquor in their store at New Salem? And I shall answer frankly that they did have such a license, and did sell liquor with other goods, as was the universal custom at the time.

But there are two other things to be said about that. One is that the sale of liquor was in Lincoln's mind so incidental a feature of the business of the store, so inconsequential in his thought of what constituted their merchandise, that when Stephen A. Douglas in 1858 accused Lincoln of having kept a grocery, as a saloon was then called, Lincoln denied it, and said, 'Lincoln never kept a grocery, either there or anywhere else.' And the other thing is that if Lincoln had never hated liquor before, he found reason to do so in that very enterprise; for his partner was the best customer of that part of the store, and Lincoln came out of the wreck loaded with a debt which took years to pay.

Considering the character of the society out of which he emerged, the almost universal habit of the people of the time, the customs of the taverns in which he spent a portion of his life, it is a very remarkable fact that Abraham Lincoln was practically a total abstainer from the use of alcohol in all its forms, and not only so, but that he did not use tobacco.

These are the indisputable facts about Lincoln, and not a word he ever is known to have said can give comfort to any wet or scofflaw. Lincoln was no lover of the bottle in the hands of others nor was he a user of it in his own office or home.

NO ONE knows what he would do if he were living now. Of one thing I am sure; he would not countenance law breaking, and he would not make any more use of liquor than he did in Springfield and in Washington, which was virtually none. He did not use it himself nor offer it to others.

The enemies of prohibition will not hesitate to invent any story about Lincoln which they think will aid their cause. They will write speeches which he never delivered, expressing sentiments which he would have denied. The friends of temperance and prohibition have no need to do so, and should be far above such methods.

When Abraham Lincoln was nominated for the Presidency, his Springfield neighbors offered to assist in preparing for the delegation that was coming to Springfield to bring official notification. Especially they offered to supply him with wine. He refused it and his guests drank water and only water.

He did not use liquor on his own table. He habitually refused it when it was offered to him. He was a member of a temperance society. He knew the evils of strong drink and in effective manner went on record against it.

CHATS WITH OFFICE CALLERS

The Preacher was talking: 'Now, after the course of long centuries, it would appear that not only does the Bible circulate with increasing volume, but that the Book itself has attained a greater material value than that of any other printed page. A vellum copy of the Gutenberg Bible was recently purchased from the St. Paul monastery in Carinthia by a bibliophile who is said to have paid $305,000 for this first printed edition, in addition to a government tax of ten per cent, a commission of ten per cent and a contract stamp tax of two per cent. It is held by the purchaser to be the finest copy of a Gutenberg Bible in existence, bearing the appearance of having been printed only yesterday, with remarkable illuminations, the covers being original and in perfect condition. The price paid is described by the National Arts Club, Gramercy Park, New York, where the owner is exhibiting his collection of incunabula, as "the highest price ever paid for a printed book."'

* * *

The Analyst followed the preacher. 'Here is a fine example of inaccuracy taken from an article, the tendency of which is to denounce inaccuracy and to warn the world against fake statistics,' he said. 'The passage runs: "It is safe to say that 80 per cent of all the metropolitan grocers of the Republic have an English vocabulary limited to something under 150 words."

'Now mark this:

'"Roland G. Kent, Professor of Comparative Philology in the University of Pennsylvania, points out that fifty words compose half of all words written. They are:

the	it	at	dear	has
of	is	on	are	were
I	as	by	me	would
in	not	my	one	or
you	be	his	they	her
and	was	we	from	very
to	will	he	all	been
a	have	but	so	she
that	with	this	if	there
for	your	which	had	an"

'Assuming that the hypothetical grocer used each and every one of the fifty above given, and it seems fair to assume that much, he would then have left only a hundred words to use in dealing with all the names of things seen in the street, in the home and in the motion picture theater, to express himself in the course of the common amenities of commercial life, and to name the stock on his shelves. It seems to me that when gentlemen write articles in which they show themselves to be indignant at misrepresentation, they should not indulge in it themselves.'

* * *

'There is a certain age with most individuals,' said ***the Inventor***, 'when the mind seems suddenly to jell; to freeze into a certain set mold incapable of further changing. In some it is a superiority complex brought on by a subconscious knowledge of an actual inferiority which the conscious mind refuses to admit; in others, a mere laziness of intellect which is too ennuied by past events to get any kick out of new ones.

'Inability to absorb new things with enthusiasm is a warning of approaching age, and of impending greased skids under the business. When one becomes obsessed with the idea that finally all his decisions are right, and the young man or old gets a swelled head, it is merely a sign that a teacher is needed and that one has got to a stage where he cannot see his own mistakes. The world will move on just the same whether one's ideas are changed or not, for it is the individual, not the world, that will be left behind.

'Many a man still wants to drive a coach and pair in memory of the days when he was young. He does not yet admit that the motor car is an advance. He will soon pass on. His grandson is in aviation.'

* * *

A Scottish Vocalist touring America called. We asked him the meaning of the lines in the old favorite Scottish song: 'The Bonnie Banks o' Loch Lomond.'

Oh! you'll tak' the high road and
I'll tak' the low,
And I'll be in Scotland afore ye.

'There is a sad story attached to this refrain,' replied the vocalist. 'It is the swan song of one of the Jacobites before his execution by the English after the battle of Culloden. His sweetheart set out to overtake the English army and actually did so at Carlisle, just across the border from Scotland. She managed to see her lover before he was hanged and his head displayed over the walls of the city.

'According to a Gaelic legend, anyone who suffered a violent and sudden death traveled instantly by an underground pathway to the place of his birth, and from there passed to heaven. Thus the girl would take the high road back to the bonnie banks of Loch Lomond, their former home, but her lover, going by the low road of death, would be there first and would have taken his final departure before her arrival.

'Much of the long-standing popularity of the song is due to its sweet and plaintive tune, which is a very old one.'

* * *

'By what *vestigia* will today's civilization be interpreted and described, in the year 3926?' mused ***the Archeologist***. 'Will future archeologists stumble upon heaps of bones and dumping grounds, in which the broken ginger-ale bottle will have as its companion the empty cold-cream jar? The dumping pits of the ancients are ransacked and their treasures hailed as valuable finds. In many of the largest cities of America today, fills are being made, water areas drained and the ground spread out; and in all of them, rubbish is being carefully buried away. From such refuse, the broken bottle and the discarded jar, future students may seek to read some of the riddles of this generation.

'Just as in Hertfordshire, England, the Roman rubbish heap is now furnishing thrills to modern scientists, so may those of today provide unknown data for the talented diggers of the future. Maybe we should plant a few articles of useful value in the heaps—that Americans may not seem have been altogether vain and lackin culture and energetic pursuits.'

UESTION: If an alien came to this ɔurry in 1916 as a tourist and stayed ɛreuntil the present time, what effect ɔu that have in the event of his applying ɔr ıturalization papers?

ANSWER: Naturalization is granted by ıe ɔurt only where evidence appears that ıe ıien petitioning for naturalization has ıad full compliance with the immigration ıwsin other words, that he has been lawıllyexamined under the immigration laws by the proper officials and permanently admitted to the country, after such examination, medical and civil, and payment of head tax. What the courts would do as to an alien who entered as a visitor prior to the present laws limiting immigration is largely problematical, of course, but it is likely that the action of the court would be influenced by the attitude of the immigration officials toward such admission. Visitors admitted in 1916, a date prior to any quota restrictions, would probably be given by immigration authorities, if they remained in the country, a verification of arrival, which would be accepted as evidence of compliance with the immigration laws, on the ground that the same formalities at that time had to be complied with for entry by a visitor as by one seeking permanent admission. Anybody entering as a visitor since the first quota law effective June 3, 1921, could not be certified by immigration authorities as having been duly admitted for permanent residence. Presumably such candidates would not be granted naturalization by the court.

QUESTION: What salary do the United States air mail pilots receive? How long are they in training?

ANSWER: The base pay is from $2,000 to $3,600 a year, depending upon the character of the country over which they fly. They are also paid mileage at the rate of 5, 6 and 7 cents a mile for day flying, and 10, 12 and 14 cents a mile for night flying, in addition. The Post Office Department does not train pilots. Only men thoroughly experienced, with 500 hours or more flying experience, are put on the eligible list, and after one is chosen, he is given a test to show that he is able to operate the plane satisfactorily. They must also furnish credentials and references which are satisfactory to the department.

QUESTION: What can I do to retain my citizenship? I have been out of the United States one year, five months. To whom should I write?

ANSWER: Register at the office of the American consul in the town nearest you. He will be able to advise you what you should do.

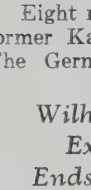
QUESTION: Is there an organization of Spanish-American war veterans, and what is the secretary's address?

ANSWER: There is a national organization known as 'United Spanish War Veterans,' with offices in Washington. The secretary is James J. Murphy, 712 Woodward Bldg., Washington, D. C.



I READ IN THE PAPERS

Eight months from now the exile of the former Kaiser officially comes to an end. The German law excluding him expires next July. There may be a great deal of difference between the two statements, before the year rounds to its close. Apparently the former Kaiser has his plans all made. Preliminary arrangements have already been completed for his taking up residence in Hamburg. His wife, the Princess Hermine, is said to be active in furthering the negotiations.

Wilhelm's Exile Ends Soon

It is doubtful whether the German Government, at least as at present constituted, will sanction this return, even though only for the summer. Other laws excluding him can be passed to replace the one soon to expire.

It will be a quirk of fate if von Hindenburg has thrust upon him the duty of signing the decree keeping his erstwhile sovereign across the borderline.

Yet the pews are seldom empty unless the sermons are.—Detroit *News*.

❦ ❦ ❦

Lovers of chop suey may be surprised to learn that it and other dishes served in Chinese restaurants in this country are unknown in the Orient. P. W. Kuo, president of the University of Nanking, China, says a Chinaman knows how to order real Chinese food in these eating places, but the regulation standard dishes with Chinese names are made entirely for American consumption.

Chop Suey Is Alien to China

Chop suey has a peculiar origin. Li Hung Chang, the great Chinese statesman, was touring America some twenty years ago. He longed for his native food and had some prepared. Reporters found him eating and asked him what he ate. He hurriedly replied: 'Chop suey,' which means 'miscellaneous bits.' At once the craze for something typically Chinese began and everyone asked for chop suey. The quick-witted Orientals, sensing the situation, invented the dish we now know as chop suey and as a result many retired on the money they made through its sale.

Englishmen are again beginning to travel, a news item says. They probably want to get a look at the Prince of Wales.—El Paso *Times*.

❦ ❦ ❦

Great excitement has been created among the Jewish population of Palestine by the action of the British Government in granting the contract for the repair of Rachel's Tomb to an Arab. Members of the Jerusalem Chief Rabbinate and representatives of the Jewish Community Council have lodged an official protest with the Governor. The English are reported to find it difficult to understand the grievance.

Repairing the Tomb of Rachel

Although the Jews have a praying place at the tomb, so also have the Moslems, and as a matter of fact it is revered alike by Christian, Jew and Arab.

It is related in the book of *Genesis*: 'And Jacob set a pillar upon her grave; that is the pillar of Rachel's grave unto this day.' But it should be remembered that there was an Esau as well as a Jacob, and that the descendants of one have as much right to venerate the tomb of Rachel as have those of the other.

Rachel's traditional burial place is today marked by a small modern building surmounted by a dome. For many centuries the tomb was marked by a pyramid of twelve stones, each stone representing one of the tribes of Israel. The Crusaders erected a building on the site, and since then the tomb has been repeatedly restored. It is another restoration that has caused the present rumpus.

❦ ❦ ❦

History repeats itself, and we suppose 150 years from now some Rupert Hughes of that day will announce to a shocked and indignant country that it's all a mistake and the real Calvin Coolidge spent money like a drunken sailor and drank a quart of corn liquor every day of his life before breakfast.—*Ohio State Journal*.

❦ ❦ ❦

Among other things Mustapha Kemal Pasha has done is to abandon the traditional marriage customs of the Turk and introduce those of Christian Europe. Hitherto marriages in the case of Mohammedans have been celebrated in the presence of an Imam, or Moslem church official, and the bride and bridegroom each had to provide two witnesses. As the bride had to be veiled and was not supposed to appear in public, she was sometimes represented at her wedding by a proxy. When the marriage took place in the bride's house, she stayed behind a door and the Imam called out in a loud voice, 'Do you agree to take——as your husband?' This question was repeated three times and then the marriage was considered binding.

New Marriage Customs in Turkey

Until Kemal took things in hand, a girl of nine could marry with her parents' consent, but now the age limit is seventeen for a girl and eighteen for a man. According to the new civil code the Imam is no longer to officiate at marriages. Only the bridegroom or his proxy will have to appear before an official called the 'marriage clerk,' and the license will consist of the words: 'We, the undersigned, betrothed since——declare by these presents that we have decided to get married. Please carry out necessary formalities.'

This is quite businesslike, and qui accordance with the military concisene Kemal's other decrees. To encou marriages under the new code, there fee, unless the ceremonies are celeb outside the mayor's office, when a t $2.75 is charged. But perhaps the drastic change that Kemal has introd is that the Turk must now be content one wife, notwithstanding the sa Moslem law which permits every Mo to have four.

MR. FORD'S Page this week discusses the relation between purchase and production.

❦ ❦ ❦

Two weeks from today comes our Christmas number. It's an issue that breathes the very spirit of Christmas, the old-time, joyous spirit and not the strained, commercialized thing that occasionally passes as its substitute today. The writers and the artists have caught and confined on paper something of the Yuletide glow; their stories will give you renewed understanding of the meaning of Christmas.

Prohibition, apparently, is a subject close to the hearts of many readers. Being somewhat controversial, it evokes numerous letters. Here are three that speak for themselves:

Cadiz, Kentucky.

I do not remember to have read a more concise, clear-cut, straight-to-the-point article than the opening one in THE DEARBORN INDEPENDENT of October 23, written by John Bolster Hatch. It 'hits the bull's eye' and will go far toward removing the tension among many who 'do not know where they are' in the state referendum. While writing I want to take occasion to say that in our section THE DEARBORN INDEPENDENT is the most talked of publication that comes to our office.

J. W. CRANSHAW, M. D.

New York City.

. . . The story ['New York's Little Joke on New York'] is the best analysis of the situation that I have seen.

Arthur J. Davis,
State Superintendent,
Anti-Saloon League of New York.

Charlotteville, Va.

I will not renew this year as the paper is getting too 'dry.' Pardon this; even the greatest of us have our lighter moments. Aside from the stand taken by your paper in prohibition, I have enjoyed my subscription immensely. I enjoyed those articles on the prohibition question, in fact, in those instances where I had the time to find material on the other side of the question

It's difficult to be fair in a proposition such as that, however, and if you're sincere in your proclamations, I wish you luck. I wish it were possible to get a popular vote on the question, each man to vote according to his thirst. Then we could probably see how difficult it is to find a public officer intelligent, although dry.

JUDGE ARMSTRONG.

Praise and censure are distributed impartially by a Pacific Coast sportsman, who writes in to comment upon recent editorials:

Macdoel, California.

In your editorials of October 16, there is one entitled 'Fun in the Killing,' which might be considerably misleading to anyone not having had some experience with both hunting and with butchering. Stag hunting may be an exception to the general sport of hunting, but deer, duck and goose, quail, sage hen, grouse and any and all hunting that I know anything about from actual experience is a more noble form of procuring the daily meat than butchering. Like all true sports, it has the spirit of fair play, while butchering has not.

Butchering either on the farm or in the slaughtering houses does not give the animal the slightest chance for its life, while all the hunting I know anything about does give the animal a chance, and quite often a good long chance. The fun is not in the killing, else butchering would be more fun, as it offers opportunity for more killing. The fun is in the same way that all true sports are fun—the pitting of your strength, endurance, steady nerve, intelligence, etc., against some moving animate thing, whether it be animal or human. Any tightly contested sport has more of a kick in it than an easy walk-away, and in hunting—the bigger the game, or the more fierce when wounded, the more fun to the hunting, or the more cunning or fleet—in other words, the more nearly a match they are or the tighter the contest the more the fun.

As for the humanitarian aspect: if I were an edible animal I would rather have a fighting or a running chance for my life than be butchered in cold blood, with no slightest chance.

Sincerely,

H. A. GRIPE.

P. S.—Your editorial in the same issue entitled 'A Senator Speaks' is fine and should do a great amount of good. The Senator's carelessness did the French people a great injustice, which your editorial will help to correct.

DR. WILLIAM E. BARTON'S article outlining Lincoln's attitude on the liquor question will undoubtedly provoke wide discussion, as do most of his stories. A spirited controversy is now raging around his story about the sleeping sentinel, which was published some weeks ago. The article, 'Lincoln's Vein of Poesy,' printed in the October 30 issue, moves a Western woman to a brisk rejoinder, not because of anything Dr. Barton said about Lincoln, but because of his remarks about an old-time song:

Entiat, Washington.

I have received your magazine quite regularly for a year, receiving much pleasure, some information, and no cause for complaint until I read in the current number the article on 'Lincoln's Vein of Poesy' by William E. Barton.

I don't happen to know Mr. Barton and he doesn't happen to know my well-loved friend Tom Moore, for he has mis-spelled and mis-interpreted his Irish ove song, and mistaken his English in a way that Mr. Lincoln could not. I refer to his comment upon 'bathing the lady' I learned the poem when I was a romantic school girl, many years ago, and I insist there is nothing ridiculous about it, as an Irish drinking or love song. I am Irish myself.

MRS. WINIFRED M. VAY SAGE.

THE LIBRARY OF THE
UNIV OF ILLINOIS
URBANA ILL

MOST of all to be remembered are those friendly circles gathered so often round the winter's fire; not the stove, but the fire, the brightly blazing, hospitable fire . . . There is no restraint, certainly no affectation of style. They tell stories, they laugh, they sing. They are serious and gay by turns, or the young folks go on with some play, while the fathers and mothers are discussing some hard point of theology in the minister's last sermon, or perhaps the great danger coming to sound morals from the multiplication of turnpikes and newspapers! Meantime the good housewife brings out her choice stock of home-grown exotics, gathered from three realms—doughnuts from the pantry, hickory nuts from the chamber, and the nicest, smoothest apples from the cellar. And then, as the tall clock in the corner of the room ticks majestically towards nine, the conversation takes, it may be, a little more serious turn, and it is suggested that a very happy evening may fitly be ended with a prayer.

'RESERVATIONS'

"A Word in Season"—Safety!

When a woman's holiday activities have the added comfort of safe, carefree motoring, she conserves time and energy for the crowded days—and the festive season takes on new joys.

It is largely this matter of Safety which makes Firestone Full-Size Gum-Dipped Balloons so popular with the woman who drives. On snowy hills, or slippery streets—on any treacherous footing she knows the safety angles of the broad tread will hold the car true in its course.

The instant response of the tires makes driving much simpler especially in traffic; her nerves are relaxed, confidence unshaken—she enjoys a more restful ride. The famous extra process of Gum-Dipping also insures long mileage with freedom from mishap and delay.

With woman's loyalty toward these things which serve her well, she who has enjoyed these benefits will insist on Gum-Dipped Balloons ever after. Your Firestone Dealer will be glad to call and fully explain their advantages.

Reservations—*the New Diplomacy*

Will the So-Called Senate Safeguards Actually Protect America From Dangerous Foreign Entanglements?

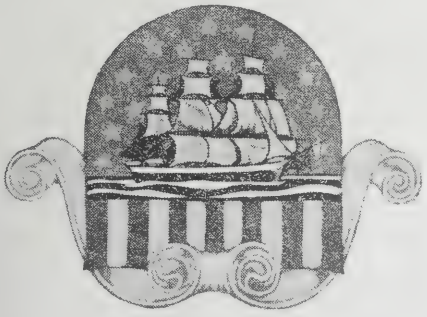
By WILLIAM E. BORAH,
CHAIRMAN, SENATE COMMITTEE ON FOREIGN RELATIONS.

IT SHOULD be constantly borne in mind that those who advocate our joining the League of Nations without reservations and those who advocate our joining with reservations ultimately reach the same destination—that is, full membership in the League. Both by their course accomplish precisely the same thing, that is, the abandonment of our foreign policy as heretofore maintained. Each would take us into European politics and both would entangle us in European affairs. They propose to do so upon slightly different terms, but the goal of each is that of full activity in European affairs. The reservations do no more than seek to modify the terms of the Covenant. But after modification we are to become members and full participants in the activities and duties of the League.

In announcing the foreign policy of this Government, under which we have so long prospered and strengthened, Washington declared that the controversies and politics of Europe were essentially foreign to our concern; that therefore we should never through treaties or alliances or leagues involve ourselves in European affairs; that while we should cultivate peace and harmony with all nations and that all with justice and in good faith, nevertheless, if we wanted to preserve our independence and enjoy our free institutions, we should not interweave our destiny or involve our affairs with other nations or entangle our peace and prosperity in the schemes and ambitions of other peoples.

Do the reservationists propose to preserve this policy? Not at all. It is as completely abandoned as it would be if no reservations were offered. No reservation can, and no reservation offered proposes to reserve this policy. This great policy, dear to the American people and vital to their happiness and to our prestige as a nation, is as supinely surrendered by the reservations as it would be by the Covenant in its original terms. The substance, the vital principle, is forfeited, surrendered, abandoned. The reservations would change the terminology, phraseology, of the Covenant, and to some extent the machinery of the League, but in the end and as a practical proposition, they drive for European affairs and plunge into European concerns with the same ultimate result as would follow the acceptance of the League as first proposed.

During the debate on the League, Viscount Grey, of Fallodon, the distinguished English statesman, came to Washington. He was deeply interested in the League and one of its ablest advocates. After studying the reservations offered and finally adopted by the Senate, he wrote a letter home advising that the other governments willingly accept our reservations because, as he declared in effect: Once the United States is a member of the League, the reservations will amount to but little or nothing. He was perfectly clear in the proposition that once our traditional foreign policy was abandoned, the reservations proposed would be of no avail in protecting the interests of the United States as against the general program. He entertained no doubt that as these reservations would



RESERVATIONS have come to be the dominating strategy of our foreign policy. No plan for 'world peace,' no scheme for the administration of international justice, can be regarded as safe without reservations. And no scheme for 'world peace,' no league, no court, can be regarded as unsafe if we are permitted to tack on a few reservations. Every proposition for international cooperation is to be rejected unless we can add reservations. Any proposition is to be accepted if we can write in some reservations. Without reservations, the scheme is highly dangerous, must be rejected; with reservations, it is entirely safe and may be accepted. It behooves us, therefore, to consider the possibilities of reservations in the matter of preserving our rights and interests and protecting the people of the United States against involvements in foreign affairs.

in practice be construed and applied and executed by the League, their force and effect would be brief.

The great struggle in this whole controversy over the League has been to preserve the policy announced by Washington. The isolationists, so-called, have been criticized because they would not be satisfied with these reservations, as it was urged they protected our interests. Our view was, and is, that they surrendered the real principle for which we were contending. The reservations seemed to us to be the spawn of expediency, the dire resort of those who thought it dangerous to go in and impolitic to stay out, so they compromised by going in and professing to stay out.

ARTICLE XIV of the Covenant of the League of Nations provides for the creation of a court, which court is to be a part of the League system. When the committee of jurists was appointed, it was advised by the secretary of the League that 'the Court is to be the most essential part of the organization of the League of Nations.' This was clearly understood upon the part of the committee. Elihu Root, one of the members of the committee, declared:

'We must consider that this new court must be provided for as a part of the system of the League of Nations. We cannot accept the invitation of the Council and recommend a plan for a court which is not going to form a part of the system of the League of Nations.'

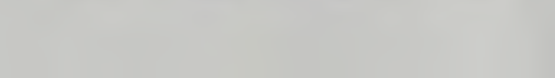
The report of the committee, after it had finished its task, declared: 'The new court, being the judicial organ of the League of Nations, can only be created within the League . . . As it is to be a component part of the League, it must originate within the League and not from a part outside of it.' The committee clearly understood that it was to create a court which was to be a part of the League system. It had no other purpose or design and undertook no other task. It did not understand that it was to create an independent judicial tribunal, one wholly separated from the League, but that it was simply creating what Judge Loder, now a member of the Court, declared a court which occupies the same place in the League of Nations that our courts occupy in the different states. They finished their task in full fidelity to their instructions—they organized and set up a dependent of the League, and that is the department we have signified our willingness to join.

We have, therefore, this situation. The League creates the Court. It elects the judges. It fixes the salaries of the judges. It pays the judges. It provides for the increase in the number of judges. It pays the salaries of the employes of the Court. The Court is the adviser and counsellor of the League, not by reason of the statute creating the Court, but by reason of the Court's relation to the League. Its judgment and opinions are to be enforced by the League. The League controls the accessibility to the Court. No one not a member of the League can use the Court other than upon the conditions provided for by the League.

If the League breaks down, the Court must go. When we become a member of the Court, we are a member of an institution which is the most 'essential part' of the League system. We are a member of the department which is the adviser, the counsellor, the attorney-general of the League.

Now, what has been the effect of all these reservations as far as separating the Court from the League or changing the relationship of the Court to the League? I venture to say that the actual working relationship of the League to the Court and the Court to the League will be precisely the same in the future as if no reservations had been offered and accepted. I am assuming, of course, that the proposal of the United States is ultimately accepted. The League will still elect the judges, fix the salaries of the judges, pay the judges, have the power to increase the number of the judges, pay the salaries of the employes of the Court. The League will still have power to call upon the Court for advice and counsel relative to 'any dispute' arising in Europe. The League will still enforce the judgment of the Court. It will still control the accessibility to the Court. In fact, the reservations have not in any substantial particular whatever changed the relationship of the Court to the League. So far as European affairs are concerned, they have not even modified the relationship.

UPON the important and vital question of separating the Court from the League, no step whatever has been taken. The final result, in other words, of the reservations offered to the League would have been the complete abandonment of the policy so long maintained by this Government against all entangling alliances with foreign governments. The final result of reservations offered to the Court s ute is that they leave the Court precisely the same relationship to League that it sustained in the instance. We will be a member of institution which the League may upon for counsel or advice concer 'any dispute' in Europe. We will member of a department of the Lea and that department is the 'essential part' of the League.



What is the difference betw being a member of the Court w advises and counsels concerning E pean affairs and being a member of League which advises and coun concerning European affairs? The difference is that by being a mem of the Court and not being a membe the Council, we have the disadvant of being the agent instead of the p cipal, of being in a position where may be called upon to act with sitting at the source of power w we might prevent action or deter the kind of action to be had.

SINCE the action relative to Court at Geneva, there has been m interest in Reservation Five which proposed as a condition to our adhe to the statute of the Court. Reser tion Five deals with the advis opinions of the Court, and advis opinions, it will be remembered, provided for, not in the statute of Court to which we would adhere, in the League which we have not joined. Suppose it should become accepted construction of and the set practice under the Covenant of League that the Council of the Lea has the right by a majority vote call for an advisory opinion of Court upon 'any dispute' which engage the attention of the League.

Suppose it becomes—if it is already—the opinion of the C that it must, in respect to the fun mental law relative to advisory o ions, respond to any request thus m by the Council. Suppose this opin requested were concerning a ma in which the United States claimed interest. Would not the questions have to go to the Court? Because power to ask for an advisory opin is provided for in the Covenant of League and not in the statute to wh we have adhered. The fundame law which controls is the Cove and it remains the fundamental until it is changed.

We are not a member of the Lea and have no say in the constr tion of or change in the Cove But we are to join a Court wh is thus controlled and guided the Covenant of the Lea Suppose the request is made the Court proceeds to consi the question submitted, what we to do?

Two WISE MEN *of the* EAST

A Week-End With Gandhi and Tagore

By BISHOP FREDERICK FISHER

MAHATMA GANDHI! Rabindranath Tagore! These are magic names in the Empire of India; an empire, to equal which in population we should have to lump together the people of the Philippines, the entire Hawaiian group, plus the entire United States, the Dominion of Canada, Alaska, all of Latin America, Mexico with her 16,000,000, Central America, the entire South American Continent with its fourteen republics and 58,000,000 people. Let us add the populations of all of the Atlantic islands east of our shores, the British Islands, France and Belgium.

In this vast empire these two names are magic words; words which are familiar to every man and woman of the 320,000,000.

Not only have these two magic names penetrated into the far jungle areas of India, and up to its mountain peaks, but they have reached out into the Western world. Tagore has been translated into every language. The story of Gandhi has seeped into the souls of all humanity. Hundreds of editions of Tagore's poetry have been published and sold in the United States, and a few years ago this great Indian poet was brought to America for a lecturing and reading tour. Santiniketan, where Tagore lives, is at Bolpur, the heart of Bengal.

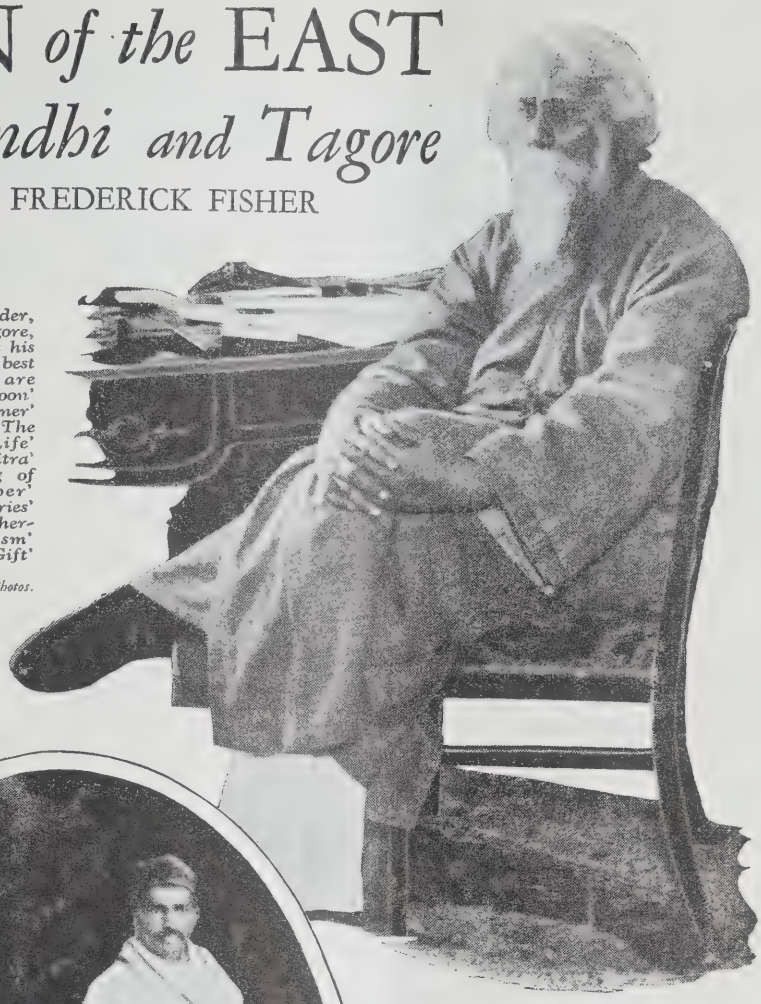
The Abode of Peace,' which for generations has been the home of the Tagores, a distinguished Indian family of culture and wealth, patrons of art and beauty, is the gathering place of the intellectual and spiritual leaders of India, as well as the rendezvous of all of those of the Western world who are interested in seeing the leaders of India.

To this beautiful spot came Gandhi, India's greatest political leader, and the day I had the honor of visiting its greatest spiritual leader, India's greatest poet.

The living room was wide, great columns at each of the four corners supporting arched passages which led to the guest rooms which one could see from the great central apartment. This great room was open on all four sides into a beautiful garden, with the majestic mountains in the distance.

In the center of this living room was a long low stone table, low enough to recline at, on which lay the working materials of the poet. It was covered with brown sheets of paper on each of which were scribbled innumerable lines.

This great room was open to the rising sun. To the south the warm winds penetrated, to the west there was the red glow of the sunset, and to the north came the cool breath of the plains.



India's spiritual leader, Rabindranath Tagore, 66 years of age at his study desk. His best known writings are 'The Crescent Moon' (1913); 'The Gardener' (1913); 'Poems'; 'The Realization of Life' (1913); 'Essays'; 'Chitra' (1913); 'The King of the Dark Chamber' (1914); 'Short Stories' (1915); 'Fruit Gathering'; 'Nationalism' (1917); 'Lover's Gift' (1918).
—Wide World Photos.

Oval—*Mohandas Karamchand (Mahatma) Gandhi, 57 years of age, and his wife.*
—Brown Brothers.

The floor was covered with rich oriental rugs, with lounging mats scattered about.

Into this beautiful chamber came the poet. All India calls Tagore simply 'The Poet.'

His entrance was unobtrusive. Like all Indians, he had risen with the first faint streaks of dawn to get his work done before the intense heat of the day.

Tagore is six feet two inches in height. He has deep-set and kindly brown eyes. His eyebrows are shaggy like the crags of Mt. Everest, his forehead is high like its giant cliffs. The hair, parted in the middle, flows down over his shoulders, as white as the mountain snows. His nose is aquiline, his mouth broad, his chin firm. Thrown around his shoulders is a long flowing robe of gold-colored cloth. His entry through that eastern opening down the path of the rising sun, his sandaled feet gliding across the rich oriental rugs, makes an unforgettable picture.

When he speaks his voice is soft and languid. He makes one feel at home. It seems that one has always known Tagore, and that he has been taken into the heart of the poet's innermost sanctuary.

That was my first glimpse of this intellectual Mt. Everest.

After a few words the poet stepped out into the garden and disappeared. He had not asked me to follow him, so I remained in the big living room.

I looked out after a few minutes, and saw two strange happenings:

On the other side of the inclosing hedge I saw an Indian boy herding goats. Then I heard a call from the poet. The boy left his goats and nimbly leaped over the hedge. He ran up to the poet, who gathered him into his arms and kissed his cheeks. Then they walked over to Tagore's favorite rose bush and the poet plucked a bloom and gave it to the little brown shepherd boy. I thought of that beautiful verse in which Joaquin Miller describes the scene when Jesus took little children into his arms and blessed them:

Then reaching his hands he said, lowly:
'Of such is my Kingdom' and then
Took the little brown babes in the holy
White hands of the Savior of men;
Held them up to his heart and caressed them,
Put his face down to theirs as in prayer;
Held them close to his
cheeks and so,
blessed them,
With baby hands hid
in his hair.

The little herder of goats had hardly gone before I heard a whistle. I could not tell whether it came from the poet's lips or elsewhere, but in a minute a tiny brown girl climbed over the hedge from another direction and with a little run leaped into the tall, white-haired poet's arms. Then the poet, with a lilt of laughter, carried her to a fountain from which the birds drank and let her slake her thirst. Then he gave her a kiss on the cheeks, a rose from his garden, and sent her off, laughing into the sunlight. Turning from this rendezvous with childhood Tagore walked through his garden.

The wind blew through the open sides of the great room where I was standing and scattered some of the brown papers across the floor. I picked them up and put them back under the stones on the low table from which the winds had snatched them.

One of these fluttering papers had a poem on it entitled 'Broken Prayer to Jesus.' The poet stepped in unexpectedly as I read this before putting it back.

'Ah, I see that the good bishop is stealing my fruit,' Tagore remarked with a friendly smile.

'I'm just drinking out of one of your other fountains, like the little girl. I've been reading your beautiful broken prayer to Jesus.'

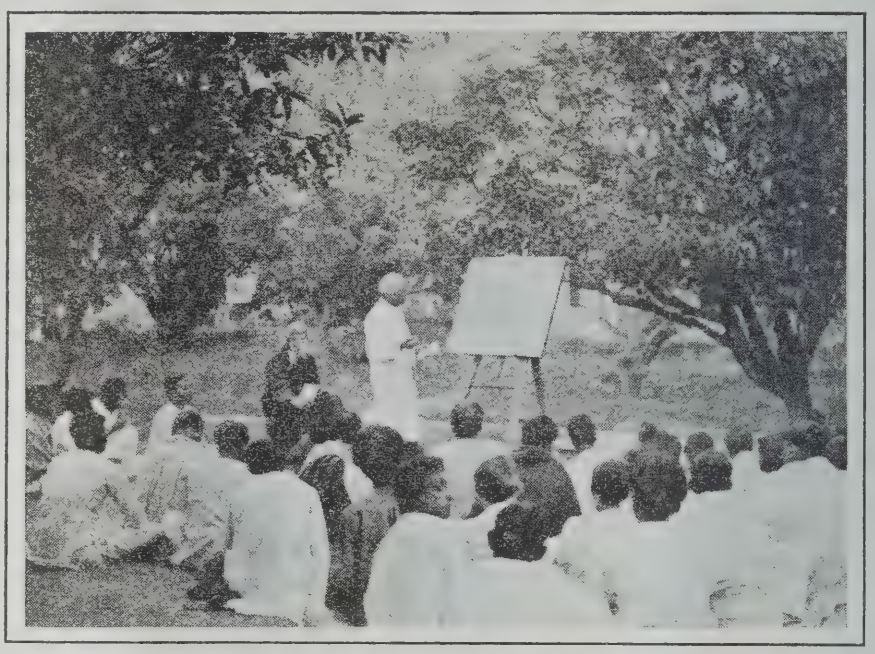
'I don't know that anybody can ever finish a prayer to Jesus,' said Tagore, adding, 'And our lives are certainly all of them broken prayers to Jesus—prayers full of pain.'

'The wind blew your papers to the floor and I was putting them back, Mr. Poet. Will you read it to me?' I asked him.

'No! You read it to me,' replied Tagore.

Then he seemed to change his mind and added in evident haste: 'I'll read it to you!'

There as we stood in the early dawn —for it was not yet the full-blown dawn—the room glowing with the new sun and the garden taking on a new light, in soft well-modulated voice he read:



Class at the university founded by Tagore in 1921, as a cultural meeting place between the East and the West. Study includes rural reconstruction; Western science; Sanskrit literature; Buddhist philosophy; Islamic, European, Chinese and Japanese culture.

'Accept me, O Lord, accept me,
I have wandered in pursuit of voices that
drew me, yet led me nowhere.
Do not turn away thy face from my heart's
dark secrets,
But burn them until they are alight with
thy fire.
My world is still, with the expectation of the
great pain of thy coming into my life.
Thou hast done well to send me thy fire
of pain—
For my incense never yields its perfume till
it burns, and my lamp is blind till it is
lighted.'

My heart, too, was 'still' as he read. I said to him: 'Do you realize that you have caught the secret of Christ's coming into a life better than half of those who worship him in our Western World?'

'What do you mean?' the poet asked me, bluntly.

'I mean that the coming of Christ into a soul, or a nation, means pain. It means giving up things. It means giving back unfairly gotten gains. It means destroying old idols. It means suffering, and sacrifice, and—pain—just what you have said—I had never seen it quite in that light before:

"My world is still, with the expectation of the great pain of thy coming into my life."

'That is the secret of Christ's coming. You have caught the real meaning of it better than we of the Western World have caught it!'

'But you must remember, Bishop Fisher,' admonished the poet, 'that Christ was an Oriental. He was a brown man. We understand him here in India—perhaps—better than you in the Western World—perhaps—after all?'

And suddenly into the midst of this discussion came the other of India's great figures, Mahatma Gandhi.

Tagore is the Mt. Everest; Gandhi is a cataract.

There is a way in which a cataract flings itself down the mountain side into the valley in sheer torrent and beauty. There is also a way that the cataract has of turning the wheels of commerce, lighting the city streets and homes, warming the valley's hearths. There is a way also that a cataract has of turning the desert into a garden until it 'blossoms as the rose.' Such is Gandhi. He throws his life away in reckless abandonment, and the millions in the valley find refreshment and light from his power.

Gandhi was graduated from the Indian schools in his own land and learned the English tongue with fair success. He then went to the University of London to study law. For several years he had law offices in London, South Africa and India. He was the head of a prosperous firm and always a friend of the poor.

When he heard the call of his countrymen in Africa, he went among them.

Have You Ever Seen a GHOST?

OR Do You Only Think You Have?

By DONALD A. LAIRD

She turned toward the dining room. There was a bright face!

A COUSIN of mine saw a ghost not long ago. Her mother, who had lived on the farm with her, had been buried only a few days before. While pparing the evening meal Cousin D. sa her mother's face in a doorway.

I am sure this was not a mere phntom of the imagination.

At first the face was indistinct, and sn disappeared. D. paused in bewlderment, and the face reappeared, as f to reassure her of its genuineness. Sme of the details of her mother's fetures could be seen on this second apearance, which occurred only a scnd or two after the first.

Cousin D. was on the verge of spaking to the apparition when it agin disappeared. She was so awed tht her eyes would not move off the spt in the doorway. And, after a sl htly longer interval, the face apeared a third time! It was less distnct this time, but 'a sad, comfortale expression was on mother's face.'

The ghost disappeared and D. cdapsed into the kitchen rocker, where h husband found her a few minutes lar when he came in from the chores. D was in a nervous sat, rubbing her eys as though the lis were growing tocther.

Even now when sh recalls this episde she is seized with a involuntary shudd, but she always smiles sympathetically at the memory bcause of the portat of the comfortae expression on h mother's face the lat time it appeared tht evening.

Had her mother rlly appeared in the dorway?

D. was busy prepring a winter supp in the farmhouse kitchen. A flickering kerosene lamp stood in a wall bracket on one side of the stove. The kitchen was dimly lighted.

She lifted one of the round lids from the stove top to place the teakettle over the opening so that the fire would start the kettle's song sooner and make the house seem less lonesome. Just before D. set the kettle over the opening she looked intently at the fire to see if it needed replenishing. The glowing bed of coals fascinated her and she had to 'pull herself together' to hide them under the kettle.

Then she turned toward the dining room, mindful of lighting the lamp hanging over the table and setting the table. As she walked toward the dark doorway of the dining room she stopped in astonishment.

There was the bright, rosy face; it was indistinct but nevertheless there!

Note all of the above details, then make this experiment for yourself:

In a dimly lighted room light an ordinary household match. Look intently at its flame until it is just dying away. Then close your eyes. You will see the outline and color of the match flame wavering in front of your closed eyes.

That isn't imagination, is it? You really see the flame, it is not like a daydream. And yet we can't call it the spirit of the match.

But you may not have to close your eyes to see the ghost of the match. With a little practice you can get the after-image of the match, as it is technically called, to follow your eyes wherever you look. If you look at the ceiling you will find the phantom flame there, if you look out of the window you may see the flame applied to your neighbor's house.

After a second or two the phantom will disappear. If you close your eyes, though, it will soon appear again, and again. I can oftentimes see these recurrences as many as eighteen distinct times, each time a little fainter than the preceding.

Cousin D. saw the after-image of the glowing disc of *(Concluded on page 21)*

I was thinking of a former student as I passed a young man. I recognized his face as that of the former student.

When the Newspapers Are Dripping With YELLOW INK

By WILLIAM C. RICHARDS

Illustrated by W. W. CLARKE

LET us agree at the outset that much of the criticism of newspaper readers against the emphasis on scandal and crime news, the chief cordwood of sensation, comes from persons whose good taste is honestly offended.

They shrink before the daily news and particularly before that part of it which seems to them to canonize crime. Their embarrassment is justified, especially in a new type of pictorial journalism which has come on the market recently and goes a distance farther than all but a few newspapers ever dared or cared to go.

On the other hand we have a class of critics whose blushes are manufactured and whose outcries are hypocritical. They are not as embarrassed as they would have us believe. And there is the third group—a great mass whose fealty is pathetic at times and which is sufficiently comforted by the daily journalistic boiled dinner of funnies, cartoons, dress patterns, crime, want ads and news of filibustering and pork-barrel statecraft.

I say that cant is rife on this point because for one person who complains against the printing of some lurid story, 500 write to take sides, if the matter be controversial, and street sales always mount during the progress of some sensational trial. During a recent case of criminal assault brought by a college girl against the son of a wealthy manufacturer, a subscriber wrote to my newspaper to say it was a pity newspapers printed such trash. She asked us to forego future reference. At no time did the reader stop to figure publicity as a bayonet in the side of potential assaulters.

After the verdict, she wrote a second letter: 'I wrote you some time ago asking you to suppress the —— case. It was disgusting and I was pained by your attitude. *I read every word of the stories that followed* and there was no improvement in their tone.' (The italics are my own.)

A gray-bearded citizen once testified at a meeting in Denver:

'I get up an hour earlier in the morning to read those terrible exposures of vice in the *Rocky Mountain News*.'

Are newspapers on the whole sensational? Often in our moments of discouragement we get a wrong perspective. Especially is this true if we incline to dwell on the good old days. Styles change in everything. If something does not seem to measure up to old standards, part of our disappreciation and intolerance may be in our inability or unwillingness to accept the new order.

I rather side with the managing editor of a Toledo paper, Grove Patterson, when he says:

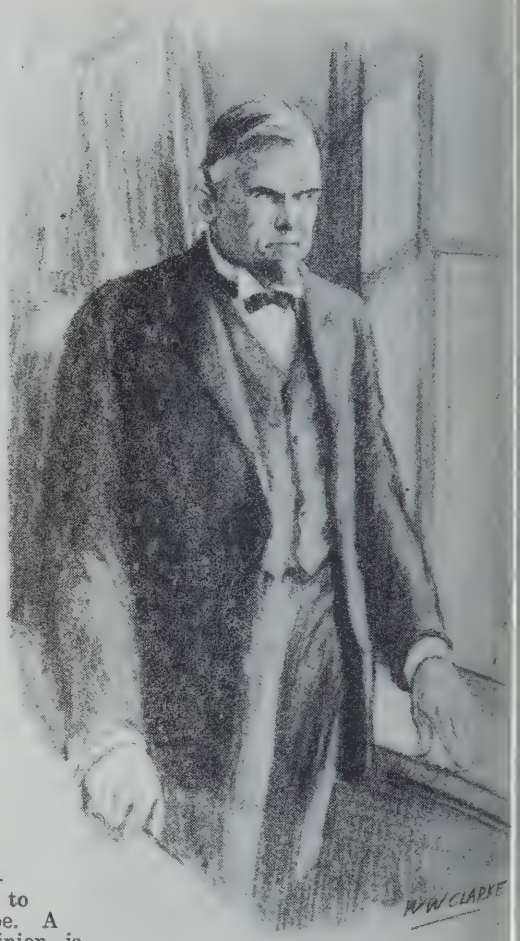
> Much of the criticism of newspapers is based upon ignorance as to what a newspaper is meant to be. A newspaper, contrary to common opinion, is not meant to be a record of the day's events. It is meant to be a record of the day's unusual events. The modern newspaper grows out of the herald of old, and no herald of old ever lashed his horse to foam to bring the waiting multitude the news of a commonplace.

When we say sensational, we mean sensational in the light of what? I do not find a definition of 'yellow journalism' in the reference books, but I find sensationalism interpreted as the doctrine that all knowledge originates in sense perceptions.

We are in the throes of evolution. Newspapers evolve into new patterns as civilization takes on new form. Twenty years ago we would have gagged over the customs, writings, dramatic pieces of today. Whether the evolution is good or bad is beside the point.

NEWSPAPERS are in flux. They change, as the world changes. They change in answer to demand, usually. If so-called yellow newspapers were printed and no one bought them, or if certain newspapers which printed an excess of crime and scandal were ostracized, we should have no yellow papers. 'Yellow' news is printed because there is a public for it.

For the most part a publisher permits his editors their fling in judging news values, and if their judgment is vindicated by leaping circulation—



The publisher ordered a sordid story boiled to the bone, despite the fact he could see a mob on the street below calling for the rival paper which was running this story in all its details.

and that is the general barometer of the day—the newspaper owner would be a singular fellow if he said the editor didn't know what the public wanted. Of course, the perfect formula of news never has been discovered.

Not that the publisher is always quiescent. The successful referendum of the pennies and the publisher's good taste do not square many times, and I know several publishers who stand out against public demand because they cannot reconcile it with their personal ideas of decency. I know one who ordered a sordid story about a motion picture actor boiled to the bone, despite the fact he could stand at his private window and see a mob on the street below calling for the rival paper which was running this particular story in all its most intimate details.

The Old Man came into the local room a few months ago with a copy of the morning paper.

'What are you trying to do—dramatize this thug?' he exclaimed. He pointed to a story on Gerald Chapman sent out by all the press services. Two days later Chapman expiated his crimes and the news editor, to whom the Old Man's wishes had not been transmitted, threw a line of big type across the top of the page

'he boss was sardonic that morning 'ha he arrived at the shop.

What I say doesn't count, I sup- os' he said. 'I presume tomorrow oning we'll have a lot of emotional ss fras about the funeral. If we do ndit gets on the first page, there'll e house-cleaning here.'

he next day's follow-up, two ar graphs in length, was found with iff ulty under some ads in the back of ne aper.

ensation is on the brain, however. Vhe I was writing the above, a mes- enger boy delivered at the desk a eleram from a staid New York ubishing house which said:

Gilbert Frankau, famous English ovlist-publicist, arrives your city iving the date). He has been es ged by press in cities visited thus ar, as he talks *sensational* copy on te national relationship and wo- en'

Ve find more conservative news- apers drifting to big type and detailed ca lal than we find sensational papers ak g the veil of conservatism. And e re entering even a new stage of en tionalism. We find certain pic- ured papers cashing in on the Chinese ro erb that a picture is better than 0,00 words, and setting new and gly disputed standards of decency nd ndecency.

broad the outcry against sensa- or lism has crystallized in Lord Dar- ng bill in the English House of ors to regulate press reports of er in law cases. Under this measure, ul ication of any 'indecent matter' wh h comes out in court would be pun- sh ble by imprisonment not exceeding tw months or a fine not exceeding $2,500, and a special prohibition would be put on publishing medical, surgical and physiological details which 'might injure the public morals.' In divorce cases the newspapers would be confined to the printing of the names, addresses and descriptions of the parties to the suit; the grounds on which the suit was brought and defended, as set forth in the legal papers; the action of the jury and the judgment of the court, provided none of these violates the general clause prohibiting the publication of indecent matter. France has a similar law.

To this an American editor retorts:

'Libertines would rejoice at such a press gag.'

RUSSIA has erected a unique editorial council called the *Gosizdat* which must pass on every manuscript before it can be set up in type. Peru has had a quaint sort of punishment in store for errant writers since 1823 under a law which provides:

'Authors or publishers of printed publications described as obscene or repugnant to good morals shall be liable to a fine equivalent to the value of 1,500 copies at the selling price, and if they are unable to pay the amount in question, they shall be required during the period of four months to inter corpses in the cemetery.'

Brazil has taken a flyer in advanced legislation by prohibiting the publication of advertisements of quack medicines which are not approved by the director general of public health. China solves the problem of the emotional sob sister by explicitly prohibiting 'any statement which tends to excite the public to plead in an unauthorized manner in a criminal case.' Colombia makes newspapers and periodicals state their 'political color.' In Italy there is a prohibition against the publication of adherence to 'another form of government.' It is not a Mussolini measure. It dates to a period nearer the time of Garibaldi. In Persia there is a very strict law against the publication of articles or pictures 'against honor and chastity.'

The Archbishop of York says:

'The pollution of the public mind by the wholly unnecessary publication of unsavory details in judicial proceedings where sex matters are involved is one of the most serious evils with which we have to deal. In one leading Sunday newspaper in London 238 columns of such matter were counted within a year.

'The evil lies particularly in the insidious suggestion made day after day by an accumulation of this scandalous testimony. It is perfectly demonstrable that the total effect is to defile the imagination and the mind of the people and especially the young. We feel indebted to the managers of most of the newspapers of the country for the expulsion of matters that are really obscene or indecent, but the evil does not lie so much in that as in this continual pressure of sex suggestion.'

When the Archbishop of York argues for suppression of sordidness on the ground that the evil of one man may influence another to evil, he is repeating a psychological fact that is known in every newspaper shop. The fact is that many American newspapers assented years ago *(Concluded on page 21)*

On Mothers-in-Law

By LADY CYNTHIA ASQUITH

It is the man's mother-in-law who comes to stay and perpetually puts the fat in the fire.

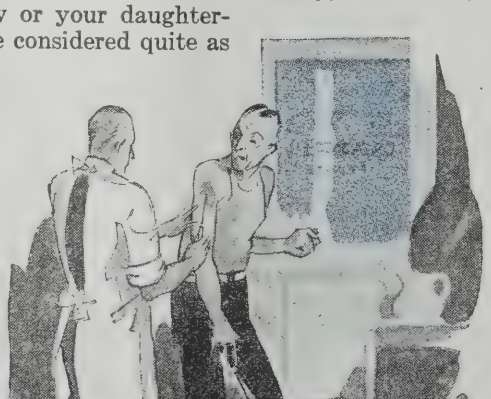
I WILL instruct my sorrow to be proud' is one of the staunchest lines in Shakespeare.

An admirable resolution, but some afflictions, thus unsweetened as they are by any redeeming dignity, refuse to be thus instructed. Among these trials ranks high that of being on bad terms with either your mother-in-law or your daughter-in-law: such a calamity seems to me not only disagreeable but also a disgrace. How could one bear a misfortune so humiliatingly commonplace—so actually proverbial? What a pathos thus to qualify as a music-hall jest! To become a butt for the most elementary humorists!

To suffer through your mother-in-law is a moral misfortune equivalent to such physical misfortunes as mumps, or slipping on orange peel.

I suppose the mother-in-law so dear to low comedy usually refers to the mother of a man's wife rather than to the mother of a woman's husband. It is the man's mother-in-law who wears impossible hats, comes to stay for six months, and by interfering, eavesdropping, and tale-telling perpetually puts the fat in the fire.

'While thy wife's mother lives expect no peace' grunts a pessimistic old proverb. But then there is an equally gloomy one which tells us that 'The husband's mother is the wife's devil.' So evidently humanity regards both these relations as natural enemies, and no doubt this form of facetious fatalism has been very harmful. These kinds of troubles are exceedingly infectious and in reality cases of ill-feeling should be isolated in the same way that cases of sickness are isolated. Quarrelers should be condemned to so many weeks of quarantine. And could not some form of inoculation be devised? As for being *seen* on obviously bad terms with your mother-in-law or your daughter-in-law, it should be considered quite as culpable as going about wearing the rash of an infectious illness.



Could not some form of inoculation be devised for cases of ill-feeling?

To expose anything so ugly as a family quarrel is an offense against the public. 'Assume a virtue if you have it not.'

Leaving aside the crude characteristics of the mother-in-law of low comedy, there are, of course, more subtle troubles which threaten the relationship between a man's mother and his wife. But a measure of good will, tact and forbearance should easily smooth the situation. There is no reason why a good (in the sense of a fond) mother should make a bad mother-in-law. I suppose her danger is a tendency to be either jealous or else contemptuous, presenting her daughter-in-law with the alternative of being disliked as a rival or despised as a nonentity.

Which is worse, I wonder, to be resented as an intruder or tolerated as a mere appendage? A certain type of mother seems to want her son's wife to be no better than a squaw. She never considers her as an independent entity, but merely in relation to the man she has married. Suitability to him is all that is demanded of her, and she is no more to be thought of independently than is his shoe, or his spectacles.

Memory, too, is often mischievously misleading. A mother is apt to idealize not only her son, but her own relationship with him. How easily she persuades herself that previous to his marriage all was perfect, that there was no fly in the family ointment until this ignorant young woman stole his heart and spirited him away from mother apron strings.

For her part the young wife is a[p] to accept her husband's good qualiti[es] as natural, and to consider his failin[gs] the result of bad training. 'I do thin[k] your mother might have brought y[ou] up to be punctual,' she complain[s] 'Fred never used to be depressed [or] miss his trains,' sniffs his sore mothe[r] shrouding the past in mists of sent[i]mentality.

It is obvious that children are ve[ry] likely to prove stumblingblocks b[e]tween a man's wife and his mothe[r] Fred's mother sees no reason wh[y] Fred's children should not be broug[ht] up in precisely the same way as he wa[s] Nursery methods change very rapid[ly] and it is as natural for the elderly [to] mistrust 'newfangled notions' as it [is] for the young to pin their faith in t[he] latest panaceas, and so ensuing d[is]agreements often lead to what an i[n]tolerant daughter-in-law considers u[n]warrantable interference.

But since all these and many mo[re] possible pitfalls are so obvious, sure[ly] there can be very little excuse f[or] plunging open-eyed into their squalo[r].

Sympathy and intelligence on t[he] part of all three, and kindliness, su[f]ficient to make each anxious to avo[id] saying or doing anything to impair t[he] mutual benefit and delight of the oth[er] two, is all that is required to keep th[e] family triangle in tune.

To excel first as a daughter-in-la[w] and then as a mother-in-law would [be] by no means a mean ambition for [a] woman to set herself in life.

MR. FORD'S PAGE

OF THE DEARBORN INDEPENDENT

THE only thing worth while in this world is to help one another. It is the only real incentive to action; the motive power that begets beneficial accomplishment. We are here to assist one another to overcome difficulties that are obstacles to the happiness of the whole.

There are always motives behind words as well as behind actions. If you tell a man what is on your mind—it may be merely a story, it may be an account of something that interests you and which you think might interest him—the underlying idea is generally that you want him to know as much as you do yourself, but sometimes it is egotism impelled by the idea of displaying how much one knows. But even egotism has its uses. A man unburdening his mind in this manner is nature's method of giving information, of advertising certain facts.

Nature itself abounds with such methods. The nectar-giving flowers and blossoms attract the bees by their bright colors. They flaunt their flags of pink and white and gold so that the treasure-seeking insects may know where to find them. Each has its particular odor fulfilling the same purpose. In the same way birds find their food and, as is well known, fishes will follow the most brightly tinted lures.

It may be that when one man unloads his mind to another he may be only telling how much he thinks he knows instead of revealing that which he actually knows, but even in this there may be helpful information. He may strike the keynote of an idea which can be developed to some useful purpose. By such intercourse, carried on in the right spirit, with an honest intention of rendering service or of giving pleasure, much good may be accomplished. An interchange of ideas is invariably beneficial. A blend of ideas, no matter how trivial each individual idea may be, often forms a serviceable whole, and leads to some result that otherwise might have been unattainable.

Once during a great flood a man was borne away by the swift current when he managed to cling to the branches of a tree. There was much confusion of advice as to how he might be rescued before the flood carried him off, and wise heads suggested this method and that; but it was the village simpleton who pointed out that a boat attached to a rope and allowed to drift with the current would follow the same course as the man had done, and a rescue was effected. So also with the steeplejack who, owing to the detachment of his scaling apparatus, was stranded on the summit of a very tall chimney. When all plans for his rescue had failed it was his wife who signaled to him to tie a piece of brick to the unravelings of his sock and thus provide the means of drawing up a string to which a rope was attached. So also nations have been saved and battles won by words let fall by someone who was not credited with knowing a remedy but whose words implied that they thought they knew.

WE are in this world to help one another. Nothing else is worth while. Most of us do help one another without being aware of it. There are motives in words as well as in actions, and when a man may appear to be egotistical he may merely want you to know as much as he does himself. It is nature's way of advertising some of the good things she has in store and wishes others to share. Generous impulses are frequently hidden in what appears to be a hard covering of selfishness. Big achievement often emerges from the most unlikely places, and benefits are imparted by the most trivial minds. Progress in real endeavor is thus assisted and the way opened for far-reaching service.

Sometimes when an idea is put forward or service is offered, the man who does so may think that there will be some reward, that he may make some money out of it; but subconsciously the main idea is to help someone, because human nature is good at bottom and the good will come out on top irrespective of material gain.

It is human nature to help, not to destroy or to gain advantage at the expense of a fellow man. This motive invariably lies within the shell of egotism, or self-glorification, or personal reward by which it is inclosed. The shell will be broken when the time comes for the use of the meat within. Men are in this world to help one another, and money is only an incident, not a governing motive.

A man may think he is only doing things for the dollar, but he is really doing it to help somebody. It may be to buy a winter coat for his wife or to send his son to college; but what supplies the motive power is the desire to help. He thus, consciously or unconsciously, fulfills one of the great laws of nature.

There may be times when selfishness gets uppermost, but this invariably brings its own disillusionment, for selfishness does not pay. Kings and politicians, financiers and profiteers have tried it, but in the end it is invariably found that their harvest of ambition has failed or that the fruit they have been storing has rotted in their hands.

In the course of real endeavor very little progress would be made if it were not for that which urges a man to make known to his neighbor what he thinks will add to his happiness.

Almost everyone is worth listening to if we only knew it. Pearls of great price lie concealed in unsightly shells in sand and silt, waiting for the light of day to show their beauty and value. So also nature impels a man to disclose his merits in a way that will give good service to his fellows.

Blundering Through

THE British coal strike is over; but it is not settled. It has been one of the most costly experiments at economic adjustment ever attempted and it has accomplished exactly nothing. The underlying causes which brought it about still exist. There is as much bitterness between the miners and mine-owners as ever. They have arrived at no common ground of understanding, no plane from which even a discussion of the grievances both undoubtedly have can start.

The sole concrete result which stands out sharply against the drab background of failure is the staggering cost—$1,250,000,000, according to the conservative estimate of the Board of Trade: *a sum nearly equal to one-third of the English war debt to the United States wasted in a few months of useless bickering!* And this sum must be paid not by the miners (although they have lost heavily in wages) nor by the mine-owners, but by the British public, that innocent bystander which had little to do with the brewing of the trouble and little enough with its ending.

The mine-owners have won, but theirs is a Pyrrhic victory. Men starved into defeat will not make good workmen. They will harbor resentment, and this resentment will inevitably seep into their work. And it does not take much of a prophet to predict that they will be ready for another strike when the next good opportunity offers.

All parties to the strike have blundered. The miners were unfortunate in their choice of leaders and policies; they erred fatally in accepting bolshevist gold for the continuance of the struggle, for in accepting the red aid they lost the sympathy of a large portion of the British people, and thus assured their eventual defeat. The mine-owners, through their stubborn refusal to reorganize and modernize the mines, displayed at the very least a lamentable lack of good judgment. Justified or not, a feeling grew up that they were trying to crush the miners into submission without providing any remedy for their real grievances. They allowed their actions to be dictated by the die-hards rather than the progressives within their ranks, and as a result reaped for themselves a rich harvest of distrust and condemnation. Nor was the government—representing that third party, the public—any more fortunate in its moves. To the outsider it seemed as though the government missed several opportunities for forcing a just and equitable settlement upon both miners and mine-owners, and left them to fight out their differences no matter who might be hurt.

The mining industry in Britain, like that in this country, is not on a basis of service. The minds of the mine-owners seem centered upon present profits rather than future development. Experts have testified that through the installation of modern machinery and the elimination of waste, through the abandonment of some mines and the intensive utilization of others, not only could higher wages be paid to the miners but coal could be supplied to other industries at less cost than at present. But this, protested the mine-owners, could be done only at great expense.

And so the war-torn nation has been put to the *unneeded* expense of a $1,250,000,000 strike; the mines are in poorer condition than ever; the price of coal is higher; and hundreds of thousands of miners are forced to accept lower wages and a correspondingly lower standard of living.

Un-glorifying the Murderer

THERE are times when it is difficult to repress a whoop of admiration for the way the English handle their yellow journals. Freedom of the press exists in the tight little isle, but it is freedom within the limits of common sense and common decency. Those American newspaper readers who are nauseated at the glorification of the American thug, nauseated at the intimate revelations of a sixteen-year-old moron, nauseated at the adulation accorded despicable and cowardly murderers will welcome the news from England that a prison head there has been remanded for trial for supplying the sensational press with details concerning the hanging of a slayer. The English attitude is that the warden violated his office by pandering to the sensation-mongers, and he is being prosecuted under the Official Secrets Act. The publicity broadcast at the time of the death of Gerald Chapman or the execution of Richard Reese Whittemore will stand as a perpetual monument to the shame of the American press.

Universities Take Notice

FOOTBALL, baseball, ping-pong and skiing are heralded in their season with great ballyhooing, but little has been said of the great American game of corn-husking that is being played throughout the country. Warriors of the baseball diamond and the gridiron are not the only ones who are in strenuous training. Country corn-husking contests last an hour and twenty minutes, and it takes a good husker to follow a wagon down the field without missing out. Judges trail along to pick up ears missed, while other judges weigh the husks left on the ears in the wagon. The contestants with the largest scores after deductions for these two items are the winners. It's a clean game and a hard game requiring stamina and alertness and is one of the few sports into which the amateur-professional controversy will not enter.

The Andrews Attitude?

IT IS impossible, of course, to know whether Mrs. Lincoln C. Andrews speaks officially for her husband. That is largely a matter for them to determine. When, however, Mrs. Andrews in a newspaper interview expresses certain views *as being those of her husband,* then the matter becomes one of public importance. Particularly is this so when the statements expressed are of so extraordinary a nature as those attributed to Mrs. Andrews by the Chicago *Tribune.* She is quoted by that newspaper as declaring:

> Neither Mr. Andrews nor myself was eager for prohibition. While in office he will enforce the law as long as it remains a law. When the people prove they no longer want it Mr. Andrews will gladly step down. His has been a thankless job from the first.
>
> Vicious rings of bootleggers are the staunchest supporters of prohibition and make repeal of the act ever more difficult. The richer and more powerful they grow, the harder it becomes to get rid of Volsteadism. Neither myself, my husband, nor our son has touched liquor since the law became effective, but that does not mean we would not welcome the day when actually non-intoxicating beverages could be brought into our own home without fear of breaking some law.

Prohibition enforcement from the very outset has been in unfriendly hands. Prohibition has been given no fair trial. If it has failed in any particular, it is because it has not had the sincere sympathy of those charged with its observance.

A Matter of Geography

THE villages and the farms of America have been the dominant influence for nearly a century and a half in shaping the course of American government. Most of the nation's great leaders, most of the great political reforms, have sprung not from the cities but from the country. Not until recent years, however, with the rise of political gangdom in the cities and the resultant schism between urban and rural communities has this influence been particularly noticeable.

The growing breach between city and country in political thought is a matter for grave consideration. Political machines in the larger cities are nothing new. Some of them date back for generations. But heretofore they have been largely content with manipulating municipal affairs. Now they are reaching out for state and even national power. The recent election furnishes excellent illustration of this trend. In virtually all of the large Eastern commonwealths city and country voted against each other, and in nearly every instance the city vote was victorious.

It was the massed vote of New York City, sweeping away the up-state Republican plurality, that carried Governor Smith and Senator Wagner into office. Likewise in Massachusetts Senator Butler journeyed to Boston with a plurality vote, but he was buried under the landslide of metropolitan ballots for his opponent. The same thing occurred in Pennsylvania, with party labels reversed. There the Democratic candidate had a plurality of 50,000 throughout the commonwealth (almost unprecedented in Republican Pennsylvania), but the machines in Pittsburgh and Philadelphia functioned smoothly enough to ease Vare into the saddle. In Illinois Chicago voted against the rest of the state and was beaten only by a narrow margin. Similar conditions existed in other states—in Missouri, where the St. Louis vote carried the day, in Maryland, where the potent Baltimore vote did the same.

The machine-made vote of the city is a grotesque anomaly in supposedly popular government. It is autocracy within democracy: the autocracy of political bossdom. All too often it mirrors the views of the bosses rather than the views of the public; and the views of the bosses are governed by circumstance and not by conviction. Tammany Hall in New York bears the label of the Democratic Party, and the Vare organization in Philadelphia rejoices in the title of Republican; but the two are as alike as though they bore the names of Tweedledum and Tweedledee. And we have this on no less an authority than that of Mayor 'Jimmy' Walker of New York City, shining light of the Tammany constellation. Said Mayor Walker on a recent visit to Philadelphia, where he was hailed by Vareites as the next President of the United States:

> Politics is all a matter of geography. If Bill Vare, Freel Kendrick and Charley Hall lived in New York, they'd be Tammany leaders; and if John McCooey, Judge Olvany and Jim Eagan lived in Philadelphia, they'd be making up the Republican slate . . . I don't believe in taking politics too seriously.

Canada's New Rôle

WITH the appointment of her own minister to the United States, Canada takes another step toward definite nationhood within the British Commonwealth of Nations without weakening in the slightest degree its position as an integral part of that great Commonwealth. Not only is the appointment important to Canada, but it is of prime importance to the rest of the British Empire, for Canada more and more is assuming the rôle of interpreter of American actions and American thought to England. Canada 'speaks our language,' she understands our problems and our ideals and our little idiosyncrasies, and she has a neighborly interest in our affairs which is impossible to a country some three thousand miles away, however friendly that country may be. The record of one hundred years and more of peace between Canada and the United States is a record to be proud of. The international boundary is one of the few in the world which does not bristle with forts and armed barricades. The two great North American countries are alike in many ways, and they have wrought their bond of friendship without harming in any way the tie that binds Canada to England. The establishment of a Canadian legation in Washington will do much to strengthen this understanding.

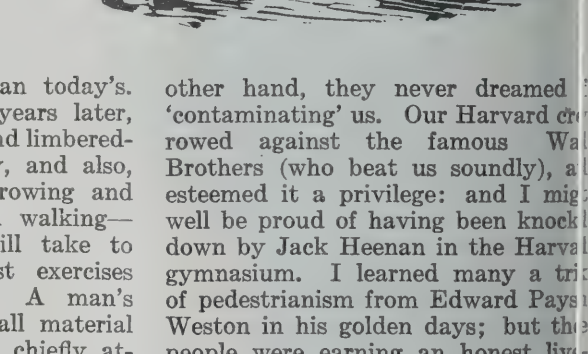
GRANDPA'S *Physical Culture*

By JULIAN HAWTHORNE

HOW do our bodily training and condition, a lifetime since, compare with what they are now?—a question hard to answer, just as it is hard to compare the performances of actors of a past generation with those of their successors of today. Yet these matters are not unimportant, because, as Einstein says, everything is relative, and if we don't know what we were, we can't be sure of what we are.

I am no expert on the stage, dramatic or operatic, though I saw my first pantomime at the old Drury Lane Theater in London in 1856, and from 1860 on I followed Edwin Booth, Ristori, Salvini, Forrest, Patti, Kellogg, and scores of their contemporaries, with joy and profit. But, as old country ladies say of art, 'I don't pretend to be a judge, but I know what I like!' On athletics and gymnastics, however, I may speak with some assurance, for I have been actively 'in' them for more than seventy years, and conversant with the various theories of physical exercise as they came to birth one after another.

I had the good fortune to live during my childhood in the country, with the fresh air and activities which that implies; and at the age of seven, in Liverpool, England, I made my first acquaintance with a regular gymnasium —Huguenin's—which was much the same sort of thing that one sees nowadays: wands, clubs, dumb-bells, rings, horizontal and parallel bars, trapezes, 'horses,' and so on. We have added rowing-machines and some other particulars, but the principle is the same. Huguenin himself was a vast, good-humored Swiss, who had been a Samson in his day, but who was then a smiling diplomatist, skilled in selling his condensed exerciser, one of which my father bought for my benefit, and when we returned to New England in 1860, it went with us, and functioned for several years in our barn in Concord. It did me good, no doubt, in the way of keeping me aware of my joints and muscles, chinning, swinging and pulling —till I went to Harvard in 1863, and became an addict of the old gymnasium there, which was by no means as sumptuous as that which succeeded it, but turned out athletes quite as efficient, if less scientific, than today's. I emerged from it, four years later, quite sufficiently muscled and limbered-out in the gymnastic way, and also, and better, practised in rowing and long-distance running and walking—which I still take to be the best exercises for youth. A man's body, and all material objects, are chiefly atmospheric, and the more fresh air we pump into ourselves the better.



But one must learn to take a live personal interest in these things. We, as a nation, are deeply interested in baseball, tennis, polo, and track athletics; but where one of us participates, ten thousand sit and look on, and go home afterward as pulpy and slack as we came, and with a cigaret-taste in our mouths into the bargain. But vicarious exercise—athletics by deputy—is no good. Greece and Rome fell fo that reason. The English do muc more wisely; they not only look o by millions, but they imitate as we as admire, and they pay much les attention than we do to the mone end of the games and competition A college man, in my time, woul have felt ashamed not to pay his ow way in baseball or rowing; a 'galler —paid admissions—never entered int his innocent calculations; the so profit in the matter, looked for obtained, was physical, not pecuniar

Professionalism was as far from u as Dan from Beersheba; so much s that we were not in the least afraid contact with professionals; and on th other hand, they never dreamed 'contaminating' us. Our Harvard cr rowed against the famous Wa Brothers (who beat us soundly), a esteemed it a privilege: and I mig well be proud of having been knock down by Jack Heenan in the Harva gymnasium. I learned many a tri of pedestrianism from Edward Pays Weston in his golden days; but th people were earning an honest liv hood by the sweat of their brows, wh we went into the thing for the pars crown—for fun and good health. anybody had suggested *paying* —Heaven help him!

It may or may not be due to mor considerations that we in America so eager, not to compete merely, t to win. That means that we care l for the game than for the champi ship—with the result that almost ev other athlete you meet is a champ of some sort, and the title inevita loses its value.

Seventy years ago Tom Sayers w the British champion of the ring a as such was bound to meet all com and he did so. Our Benicia B John C. Heenan, came over to fi him, and I, being in England at

—Brown Brothers Photo.

International contest between Heenan and Sayers at Farnborough, 1860.

ıne, was consumedly in-ıterested in the event; but ; was only thirteen years ıd, and parental orders ıevented me from getting ithin less than a hundred iles of the ring.

I knew how to read, owever, and the news-ıpers were not withheld om me; and one happy ıy I stood in front of a otel in Liverpool, in a owd that packed the reet, and saw two figures anding on a little bal-ny of the second story; ıe was tall, the other ıorter by six or eight ches, and each of them eld before his stomach a Diamond Belt' of victory; r though neither of the ıen had been victorious, ıey had fought for hours, ll one was blind and the ther had lost an arm, and ıe police had broken into the ring. nd since nobody could determine hether the blind or the cripple would ave lasted out, had they been al-owed to go to a finish, the twin belts ere the answer.

It is more pertinent to take a lance at the training methods of the eroes of those days. Heenan told me hat he used to run, during the months efore the fight, thirty cross-country iles every day, and that the staple of is nourishment consisted of beef early raw and stale bread, to wash own which voluptuous delicacies he as allowed a quart of water a day, ut most of that to rinse out his mouth —not to swallow. He came out of this rocess not so much a man as a column f tempered steel with arms and legs f the same.

HEENAN was a man 'naturally' trong, as were the other great 'bruisers' f his time; and he never dissipated etween fights. Even so, he didn't ive long. At the time of my brief cquaintance with him at Harvard, ıe was a fine, tall fellow, with a big lark moustache and splendid in his ttire; his manners were quiet and indly. That was the bare-knuckle era; ounds might last from a few seconds to hours, depending on when one or the other combatant was knocked down. Foot-work was unknown; you stood up and slugged.

Heenan impressed us college boys to the extent that we thought his training methods were correct, but we modified them somewhat; for our training was not for the ring, but for rowing. The training tables of the crews were spartan enough; stale bread, rare meat, a potato or two, and a couple glasses of water: morning and evening runs of four or five miles, and the rowing itself, which would be from five or six miles to an occasional twelve! In winter we would be faithful at the gymnasium, and a fourteen- or fifteen-inch biceps was not uncommon, with other muscles to match. For my part, being an enthusiast, I kept to the diet during all my four years at Harvard, and I thought nothing of running the fifteen miles from Concord to Cambridge upon occasion —sometimes before breakfast. All this was good, and to such practice I owe my present good condition at four-score. Not many of my college mates were so assiduous and persistent, and now all of them are gone. Big-muscled youths are prone to get fat, inside and out, as they grow older; they eat as much or more, and exercise less.

It will be more useful, however, to recount my mistakes than my successes. At Harvard, at the age of twenty-one, my weight, trained for a race, was 170 pounds. Five years later I weighed two hundred and ten pounds, with a chest girth, expanded, of more than forty-eight inches, and a waist, indrawn, of thirty-seven. I was spending an hour or two at Wood's gymnasium in New York every evening, where I worked on the parallel bars and the trapeze, and curled and put up the 200-pound dumb-bell, of which I had almost a monopoly. At the same time, five or six evenings a week, I would run a measured mile, covering the distance in not more than 4.40, and sometimes in a second or two less. I was eating plenty of whatever I wanted, and drank much water, a pint or two of beer, and sometimes a glass of wine. My health was excellent. My height was 5 feet 10½ inches.

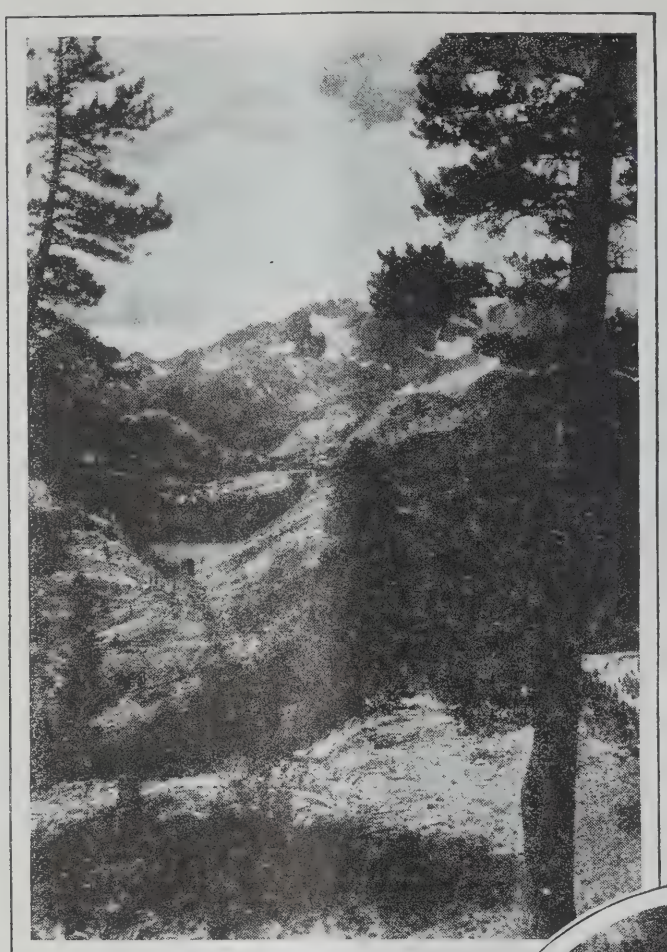
But one day I took account of stock and decided that I was going wrong. I was six and twenty years old now; what would I be like at forty or fifty, should I live so long? These big muscles were not only of no practical use in my daily life, but they were also so much extra weight to be carried about and fed: how long could my heart and lungs support such a burden?—or my stomach?

THE heavy-weight principle in exercise was prevalent in this country then (about 1870); indeed, there is a good deal of it still. It makes strong and large muscles, but it does not proportionately increase the strength of the heart, and little, if at all, the capacity of the lungs. Was there no better way?

Then I remembered my old friend, Dr. Dio Lewis, who had visited Concord in 1861 or 62, and sought to instill into the boys and girls his light-weight, or free-hand, principles. His apparatus consisted of little wooden dumb-bells and clubs, weighing three or four pounds at most, and of a great variety of 'free' movements, doubtless derived from the Swedish principle, but simpler. He himself was a sturdy man of medium height and weight, but very strong; I once saw him, on a wager, hold out at arm's length a five-pound dumb-bell, for thirty-five consecutive minutes —an astounding feat! I doubt if Jack Heenan could have done it. His muscles were not hard and knotty, but smooth and tough, and he was very flexible all over. He was very light and active in his feet, too.

He ascribed all this to faithful practice of his system, and he persuaded Emerson, and Frank Sanborn, the school-teacher, of its superiority, and in the end he had all the school and most of the rest of Concord doing his movements. Soon after, he bought a big empty hotel in

(Continued on page 22)



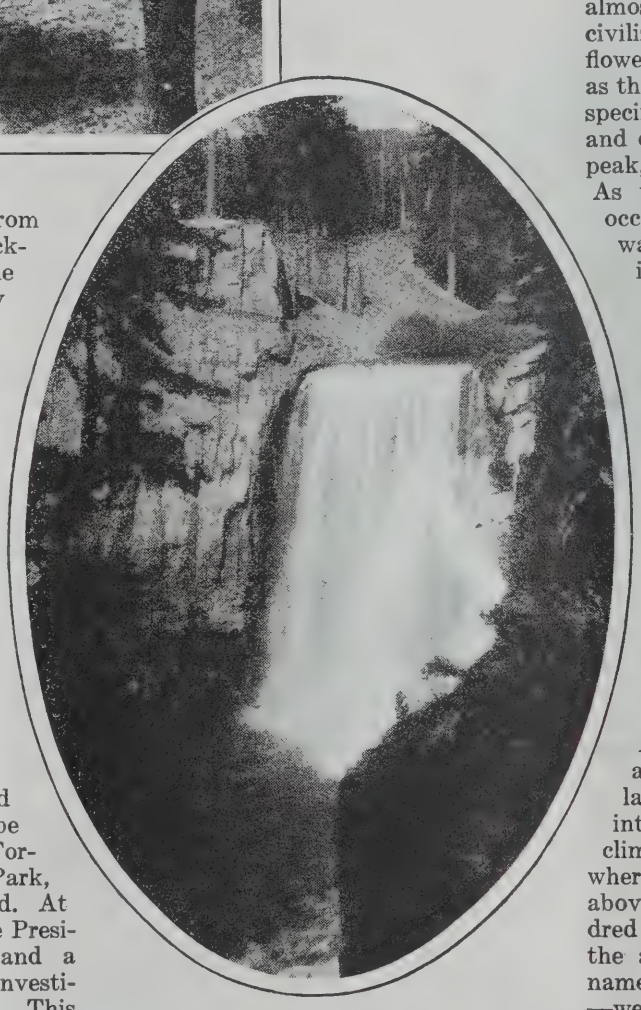
The LURE *of* Sky-Line TRAILS

Higher Altitudes Bring Higher Thoughts, Making Better Men

By HUSTON THOMPSON

'Those mountains, that seemed in the twilight so far off, now appear within a few minutes' walking distance.'

Oval—Rainbow Falls, part of a rushing mountain river of icy water.



IT WAS midsummer, and from the Atlantic Coast, the Rockies, and the Pacific, we came trekking across the country by ones and twos, to assemble on the lofty and inspiring eminence in Yosemite Park, called Glacier Point.

From the hotel veranda as the hub, our guides pointed out a fan-shaped tour within whose sides and curve was encompassed row upon row of giant granite mountains that rose in ascending tiers to a background of lofty peaks. The objective was thos peaks and the country behind them.

This objective had been selected for us by the Federal Government, which was about to determine whether that far country, including peaks and open space beyond, should be withdrawn from our National Forest and included in Yosemite Park, to which they had once belonged. At the instance of Congress and the President, a 'Committee of Six' and a secretary had been chosen to investigate the territory in question. This committee was headed by a Pennsylvania Congressman, of dignified mien, and intelligence, once an Eastern college professor, who taught his students American history by taking them right out on the early Indian and pioneer trails that once led from the Atlantic seacoast over the Western Pennsylvania mountains, and up through the Ohio Valley. The students aga traveled those trails, and in imagin tion lived the experiences of the ear days.

We left the hotel with a gre flourish, as our cavalcade took to t trail. Cameras clicked. Goodbys we shouted back and forth, as the hors began to jockey for position, to esca the dust. Soon we were strung c along the trail with the riders in fro and the pack train behind.

Many of the party were strange having met for the first time the nig before at the hotel. The strangen began to be removed by the mounta almost before we were out of sight f civilization. Those in love w flowers were soon calling to one anoth as they spied some unusual or beauti specimen. Others turned in their sadd and directed attention to some dist peak, or some unusual nearby tree.

As we descended into a valley, occasional mule, dissatisfied with way its pack was adjusted, registe irritation by trying to roll the pa off. Some of the horses that h been brought up from the ranch and were not altitude-brok were already heaving audib while others whinnied a frien call to a mate somewhere al on the trail.

It is almost miraculous way mountains move men sh ed the superfluous and rev their humanness. As we star to climb, a rider turning to neighbor soon forgot to add him as 'Mister.' The sec day out formal appellations w dropped as easily as the trees s their cones.

As we reached the higher altit and intimacies began to devel last names were frequently thro into the discard. When we climbed to the top of the divi where men saw each other face to above the mists of the valley, the dred spirits surrendered completely the appeal of comradeship and n names—man's password for friends —were coined.

On that first day, after about hours out, when the ranch horses w heaving and their cinches creaking, halted for a rest and to dip our cup in the cool stream. Those recently fr

te swivel chairs flung themselves for a ɔment on the welcome ground, stretch-ig their muscles in the joy of complete laxation, while the old-timers stand-ig by winked and slyly jested at the sfties' plight.

The trails were a series of ups and owns, with the riders climbing to the p of a ridge, descending sometimes cause of the lack of a trail over ulder fields, down into the canyons gulches, and up again over a still gher ridge, and again rising above e snow to the very top of the divides.

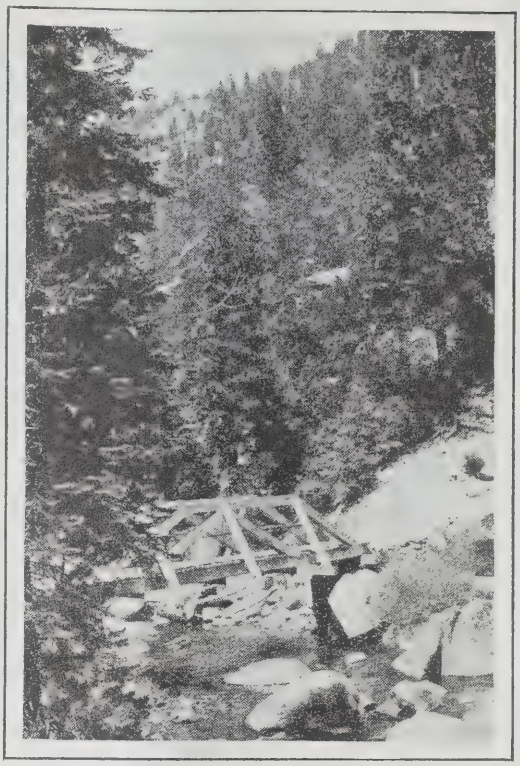
A curious accumulation of enormous pieces of stone, called 'The Devil's Postpile.'

At each vista there was a halt. Maps were consulted and field glasses brought into action. Then the committee huddled together, took observations and made suggestions and criticisms. The more meticulous would retreat to the cover of a bush and jot down hurried notes.

The supervisors stood by as an information bureau to be consulted with regard to the lay of the land, while the camp followers were an inarticulate jury listening to the debate over the feasibility of this or that mountain or lake or canyon as park or forestry land.

So it went day after day on the trail, with good-natured chaffing, growing comradery, and a complete oblivion of the irritations of civilization. Somehow, those mountains and their ranges and ridges and lakes and trees kept moving the men of the trail in such a way that even the twenty miles of cross-country riding brought them into the home stretch good-humored, keen in anticipation of a plunge in an icy stream, and with an appetite for supper sharpened to razor edge.

Selecting a camp for a pack train, with pasturage for our riding horses and mules, about thirty animals in all, in the high altitudes of the Sierra is no simple thing, particularly when the camp is above the mountains and close to where the peaks begin. Besides grass and water, one of the essentials is an open space of sufficient area for the mules to roll, after their packs have been removed. The men need shelter from the cold wind that steals down from the peaks at dawn and creeps close along the ground, attacking every opening in one's blankets and sleeping bag.



San Joaquin River.

Each day the master of the pack train was given a destination for the night's camp. When the committee had completed the day's work and reached the camp, it was already set up, the mules were rolling, and the hobbled animals were far away in pursuit of pasturage. It seemed just as necessary for us humans to have a plunge in the icy stream, or mountain lake, as it was for the mules to roll.

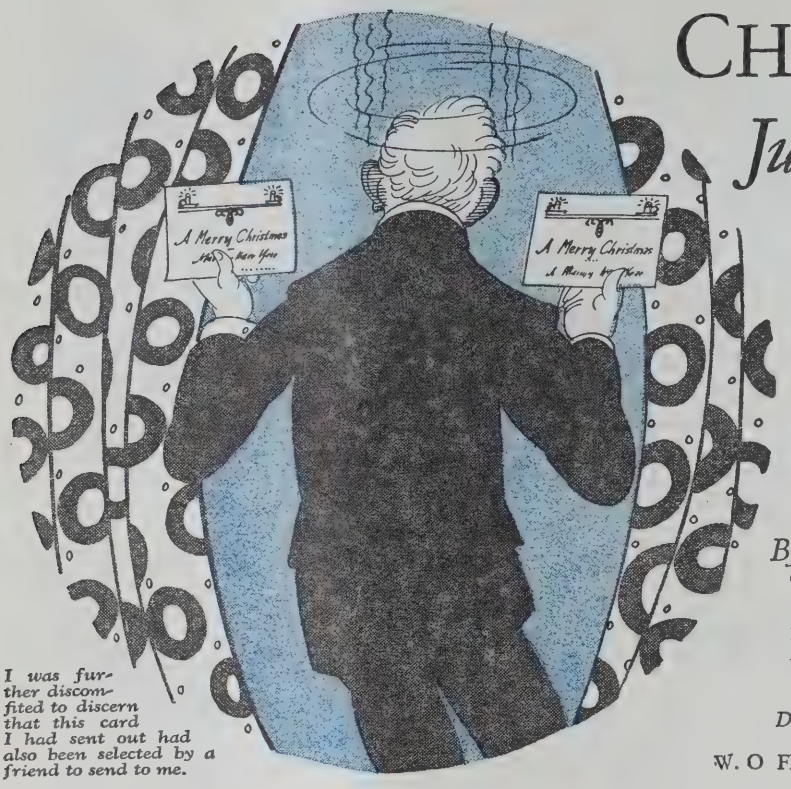
Into the water the men, ranging from the youngest at thirty-six to the oldest at sixty-eight, and averaging about fifty, plunged with greater eagerness, more shouts and unalloyed pleasure, than youths into the old swimming hole. Often, in the midst of a water fight, brought on from pure animal pleasure or desire to keep circulation going, the publisher would slip up slyly and snap pictures.

After the evening meal, while the cook is cleaning up, the supervisors and the rest of the party locate pine stumps and other easily ignited, fast-

(Continued on page 18)

'Breakfast is over, the riders are off for the day over the mountains and down into gulches and canyon.'

CHRISTMAS CARDS
Just WHAT *Do They Mean?*



I was further discomfited to discern that this card I had sent out had also been selected by a friend to send to me.

By THOMAS L. MASSON

Drawings by W. O FITZGERALD

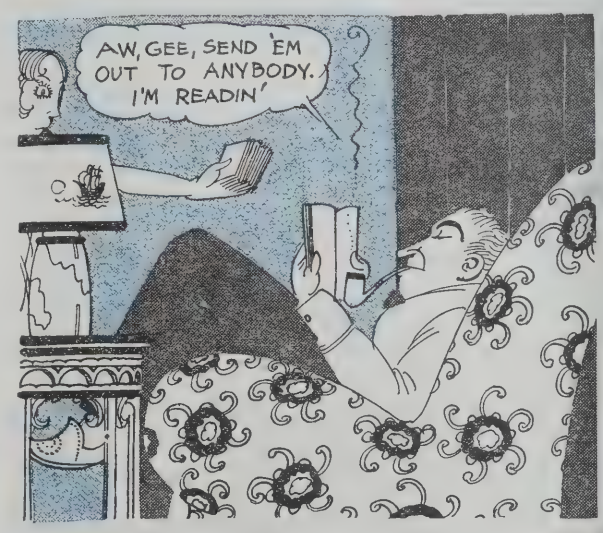
I HAVE here no intention of giving a detailed history of Christmas cards except to remind the reader that, as far as we know, they have been in use about eighty years, the first one having been designed in 1846 by J. C. Horsely, R. A. It was not, however, until after 1860 that they came into general use, John Leighton, in 1862, having made designs for Messrs. Goodall of London.

A few years later they were increased and doubtless beautified by German and French artists and printers, but they did not reach their mid-Victorian perfection until they were produced by Messrs. de la Rue and Marcus Ward. Some of these early cards were very beautiful; more beautiful, indeed, than so many of the designs of today. Others were stilted and conventionalized; but that is always true of every period of art.

While I am no applause-maker for the glories of past ages, I must say that we have not improved greatly in our Christmas cards, except in respect of smartness. Meanwhile we are deluged with them. The whole affair appears to have degenerated into a trade; and I am inclined to think it is one of those signs of the times of which we may be the least proud.

There are of course exceptions. Occasionally at Christmas one sees a card which reveals the real spirit of Christmas and true sentiment. But this iconoclastic age stops at nothing and in too many instances the holiday season is merely an opportunity for smart people to be vulgar and irreverent.

Two or three years ago one of our well-known writers sent out a card which read: 'Mr. ——— announces the birth of Christ.' This was received with unholy joy by a considerable circle of sophisticated admirers, mostly gentlemen who plume themselves upon their total ignorance of anything really permanent or worth while.



The Christmas card of today is too often a cheap subterfuge for evading even the thought of Christmas.

The Christmas card of today is too often a cheap subterfuge for evading even the thought of Christmas, which to people burdened with the onerous responsibility of not missing the next meretricious movie have no time fo what they regard as an annual annoy ance. After all, there is something t be said for old Scrooge, who at leas was downright honest in his meanness

But a Christmas card is too ofte a circular letter, either in standardize sentimentality, or in unstandardize glibness. I am glad to record that mos of my own friends are not guilty putting their souls more or less int their annual Christmas greetings. In deed I feel discouraged when I thin of how much time and thought the give to original sentiment, plus perer nial affection.

The Christmas card of today undoubtedly an outgrowth of the callin card, the origin of which is very ol It seems, however, to have become custom more or less familiar to th 18th Century. Printing came out Germany and as far back as 1770 w have elaborately designed calling card In this country the calling card, such, is distinctly passing. In busine it is used to some extent, bu like the bicycle only whe strictly useful.

As for the Christmas car it seems to have but two firs class functions: to overburde the postmen, and to relieve th sender from further respons bility. It is very much lik listening to a radio sermon Sunday and then believing tha one has discharged one's r ligious duty.

There was a time within th memory of some old inhabitan when people paid calls. Now t many of them don't even pa their bills. There was a tim when people met and co versed; now they signal hu riedly in passing. So at Chris mas time the neighbors 'droppe in.' Fancy doing this now!

I recall, however, surrept tiously (I mean without m wife's knowledge) making this mistak some years ago in a fatuous spirit old-time comradeship. In the afte noon of a Christmas day I decided 'drop in' on some friends I had know for about twenty years.

Their surprise and indignatio thinly concealed under an outwar show of enforced friendliness, linge with me unpleasantly yet. The arrangements had been made long b fore, according to a schedule drawn u

probably by a couple of secretaries—for they were moneyed folk—and I still believe they loved me, but on Christmas only at a distance, for their love was not scheduled for that afternoon. I withdrew in as good order as possible, only to be rebuked by my discomfited better three-quarters who remarked sadly: '*Now* they must have the idea that you had nothing better to do.'

Indeed, is there today anything more humiliating than to make an attempt to cultivate the society of one's friends?

This leads me to consider the difference between sentiment and sentimentality and to wonder if our Christmas cards by their increasing numbers do not show a lack of that something which is as necessary as anything is necessary.

It seems to be true that while people have no time to exchange true sentiments, they have, along with this, developed a kind of savagery in their indulgences. Instead of friendships, we have temporary attachments, depending upon mutual self-interest. Instead of love we have too many frank indecencies. Instead of Christmas, we have merely an annual opportunity for certain people to get the best of certain other people.

What is the difference between sentiment and sentimentality? Every year I hear the same things said, namely: 'If it weren't for the children, I wouldn't give a rap for Christmas.' 'Do your shopping early.' 'I wish it were over.' The admonition to do one's shopping early is certainly right, considering the vast numbers of overworked employes.

But is it not obvious that a widespread state of mind which has come to be impatient with the one period of the year which should induce love and tranquillity and peace must be a sign of widespread racial disharmony? And we know that this is true. For if we lack true sentiment, it cannot be said that we lack sentimentality.

Ye MERRY CHRISTMAS
A Merry Christmas and Happy New Year (Good Heavens! Again?)
A Merry Xmas to You (I'll bet we don't get a thing from them)
A Merry Christmas (This confounded annual nuisance)
Season's Greetings (With a Yawn)
I sincerely hope that you enjoy yourself
Merry Christmas Rubber Stamp Salutation

Meanwhile, we are deluged with Christmas cards. The whole affair seems to have degenerated into a trade.

And it is from this sentimentality that our crimes breed—so common among us as to excite the contempt and ridicule of our British cousins. I saw recently, from the chief proprietor of one of those confessional periodicals, a leading editorial which was a perfect example of the kind of pernicious philosophy which is leading astray so many of our young people. It dealt with *romance* and as an unblushing invitation to everyone within range to dream dreams, left nothing to be desired. Of course that was consistent, that was the basis upon which he had built up a large fortune and upon which he had induced millions of light-seeking young people to read his papers. The idea is simple: each one of us can be a *hero*—in his mind. We need do nothing—just sit and dream of ourselves.

The let-down from this glittering delusion is sudden and revolutionary. When you pass your time in dreaming you are a hero, and wake up to find that you don't know where the next meal is coming from—this is what makes gunmen.

Too much stress is laid on early environment and lack of education. The slums are bad enough, God knows, but the appeals to this hero stuff are much more dangerous. Indeed, if we do away with these things, the slums will go. The slums are the crop of these pernicious teachings. Strange that with so many deep thinkers, so few see this.

Thus on the same day this editorial appeared, one of our most notable intellectuals, present at the hanging of a notorious criminal whose 'adventures' had been played up in all the papers, remarked that there were few who could die like that. And the next day this remark was carried into the headlines. The glorified criminal, standardized model for all youth, and the glorified heroine who leaves her husband and children for an affinity are twin products of a process that begins with sentimentality and ends with murder. Sentimentality is merely a kind of sexualized selfishness.

Ah, but, you say, one must dream dreams. There must—you insist—be some outlet from the monotony of life. Now that things—you keep on—have become so settled (fancy that!) one must live through adventures in one's mind; otherwise we shall all go mad.

(Concluded on page 23)

The afternoon of a Christmas day I dropped in on some friends I had known for twenty years. Their indignation lingers with me yet.

The Lure of Sky-Line Trails

(Continued from page 15)

burning wood for the camp fire. The stumps are soon heaped in a pile and touched off with a match. The canvas that has covered the mule packs is spread out on the ground, and for a backing the bags of feed, the pack equipment and saddles are brought up and placed in a semicircle around the fire and canvas thrown over them. Then all hands, like the Indians who camped there ages before, make themselves comfortable, light their pipes, and as flames lick the turpentine and resin that flows from the stumps, the committee gathers for a powwow over the day's proceedings, checking each other's impressions and the facts, and writing up their diaries with care, since they will possibly have to appear before Congressional committees.

The powwow lasts for perhaps three-quarters of an hour, during which time the camp followers stretch out on the ground and gaze complacently into the flames and embers, watching fantastic figures come and go, thinking no thoughts, but yielding to the glow that comes over one after a day in the open, supper, and the heat from the camp fire. When the committee has talked itself out, the conversation becomes general. The discovery on the trail during the day of flint arrowheads, and the rock from which they came, brings the conversation to Indians.

Each man contributes what he knows about the red man. It soon develops, however, that the former university president is the real expert, having spent his youth among the Indians, picked up a speaking acquaintance with their language, and learned many of their dances. With joyous spontaneity he demonstrates the dance, and with the encouragement of the crowd strips himself to the buff, twists a few pieces of cloth around into a headdress, and throwing a blanket over one shoulder, calls on the others to join him in the dance. A can is used for the tom-tom, and as the rhythmic beats stir the air, man after man jumps to his feet, and with the former university head leading in song they dance around the fire.

The stunt so appeals to those having movie and still cameras that they insist that they be given a chance to record the dance. Although these men of fifty or more are somewhat winded by the high altitude, they again go creeping and leaping through the steps of the dance until out of breath, but laughing like children, they throw themselves upon the ground, wrap their bodies in blankets, and stretch out again in front of the fire to smoke a pipe or two before retiring.

Here and there one hears a rustling, restless sound among the sleeping bags, of men not recently accustomed to the narrow space, and the almost choking feeling that one has when he changes from the freedom of a bed to this method of repose. But even the restless are soon silenced by the cold night air, and pass off into sleep as the pine knots continue to crackle and flame into the night.

In time, the last dismal howl of the coyote has ceased to echo. The owl, obtaining his prey, has quit his mournful call and sought some dark recess in which to sleep and contemplate during the daylight. The stars are so low they seem almost to touch the top of the peak across the canyon when the morning bird begins to peep, and here and there a sleeper, partly awakened, rises half out of his bag and resting on his elbow beholds the first streak of dawn creeping above the peak just across the way.

Those mountains, that seemed in the twilight so far off, now appear within a few minutes' walking distance. The snow that blankets them seems revealed to the observer for the first time.

There is a rustling around the camp, and the figure of the cook is outlined as he stoops and picks up a few embers from the night's fire for his kitchen stove. The cold breezes that are now making flank attacks on the sleeping bags cause the occupants here and there to twist about, dig in and wrap themselves more tightly to keep out the enemy. Each twist awakens the sleeper a little more. Finally the noise of the packers chasing the hobbled horses and mules, the preparation of breakfast and the smell of the bacon make the call too strong for the sleepers to resist. One by one they pull themselves out of the bags and half dressed race in the cold morning air as quickly as possible to the kitchen fire. Then having warmed themselves they start for the nearest stream to perform their morning ablution.

By the time the cook's welcome call of 'Come and get it' is heard it is broad daylight. The warmth of the sun heats the campers and they start a cheerful chatter as each one lines and passes along by a piece of canvas. On this canvas are placed the knives, forks and dishes, cafeteria style. Instead of sitting down to eat, as one would expect, with backs to the fire they stand and eat, and talk and plan for the day's trip.

Breakfast over, the riders are off for the day over the mountains and down into gulches and canyon, leaving the pack train to make its way the best it can.

One of the most interesting studies about camp life is the pack train, composed mostly of mules. If mountains move men, they certainly move mules. Those quiet animals, that seem never to be hurried or worried or flurried, are in some respects as temperamental as a prima donna.

One mule in this pack train insisted always in following the horse ridden by the commander-in-chief of the pack train, who rode at the front. Wherever his horse went that mule was sure to follow, and no matter how one might try to ride in between the two, the mule would quietly watch its opportunity and at some turn or stop slyly slip back again into its self-assigned place next to its leader. Another mule was an Ishmaelite. It had a superiority complex. It would follow no leader. It was invariably breaking from the ranks and dodging and running along the line through the timber to get up ahead of the whole train. Every time it did so it caused a flow of language from the boss that could be heard a quarter of a mile away.

To be a successful boss of a pack train one must have a powerful voice, think aloud frequently, and use profanity with absolute freedom. The boss must be constantly inspecting, and every half-hour or so he stops the train, and either he or one of his men rides along looking at the packs, for it is not only a disgrace but sometimes very dangerous on a steep trail to have a pack come loose or fall off.

Somewhere along in the pack train the cook rides, generally with one leg thrown carelessly over the horn of the saddle, an incongruous straw hat crowning his head, and dressed in a way totally out of keeping and unfit for the rugged outdoor life. A

The Minarets, Banner Peak and Mount Ritter as viewed from the top of Agnew Meadows Trail.

cigaret dangles from the side of his mouth. Carefree, for the time being at least, he knows that his job will not begin until the order is given to halt for the night, and they begin to unlimber the packs from the backs of the mules.

With the pack train were two Indians, who had brought some of their own mules. Some distance down the line one of the Indians rode at the head of his animals, and his companion brought up the rear.

The contrast between the Indians and the two white men in the pack train was inescapable. The boss, as I have said, rode at the front and had the responsibility of guiding the pack train to its destination. He was constantly calling to his associates and he and the other white man blackguarded the animals when they broke from the ranks. Unlike their vociferous white brothers the Indians did not speak often to their mules, but when they did, it was with voices that seldom reached to the next rider. They moved about quietly, and yet they observed with the keenness of a hawk. They were short, stocky, and thick-necked, and called themselves 'Yosemites,' having been born and raised in that mountain country. The way they treated their horses and mules, one could see that they knew the characteristics of these animals. So unobtrusive were the Indians in camp that one almost forgot their presence.

PROBABLY the glories of the sunrise, or the beauty of the sunset, had no effect upon these red men, but undoubtedly in a subconscious way this kind of life answered the instinctive call within them.

We of the city could not but notice the way the mountains affected those who dwelt among them. The men of the Forestry Department, and the National Parks, had something that we lacked.

They knew the trees, and the ways of things outdoors, and never once showed any weariness at the endless questions of the inquisitive.

In a burst of confidence one of them said, 'I believe far more in a God since I have lived out here away from city life. Nature has taught me many lessons. See those clumps of trees over there?' pointing to some lodge pole pines that were dying. 'Some bug is killing those trees. No one has yet been able to locate the bug or find the way to kill it. Notice that young growth beside each dying lodge pole pine. The moment one of the pines is dead, another tree springs up near its trunk and takes its place. It will be of a different and better species.' Noting his auditor's continued interest he added, 'Man can't beat nature, and man can't beat God who is behind nature.'

As we reached the apex of our trip and started down the steep trails to the low country in the parks, we took a last wistful look at the great peaks, the glaciers and this yet almost virgin country. Men opened up their hearts to each other as men seldom do in the city, and grieved openly at the thought that the trip was over, and that they were compelled to return to civilization.

The publisher gave vent to his feelings in no uncertain terms. The thought that within a few hours we would be in reach of the nemesis of his happiness, the automobile, made him so peevish that his companions rallied and jollied him, though secretly sympathizing with him. There were the universal expressions of reconsecration to the conservation of our forests and parks from predatory human beings who think it foolish to preserve these breathing spots and places for restoring worn-out nerves, and reviving the soul. No one needed to tell his neighbor that the mountains had moved him. Each knew how the other had felt as he lay looking up at the stars . . . Or in the early morning hours when the pink dawn tipped the tops of the peaks how the minds of his companions, as well as his own, thought like the mountaineer Isaiah, who beholding the sunrise exclaimed, 'How beautiful upon the mountains are the feet of him that bringeth good tidings.'

California

in luxurious comfort via the

NEW ORIENTAL LIMITED

Four o'clock tea in Parlor Observation Car

Your trip to or from California through Historic Adventure Land is not only new and fascinating but it offers you the congenial environment of the New Oriental Limited —finest train to the Pacific Northwest—*no extra fare.* Longest uninterrupted automatic electric block signal system in the United States. Faults *of the* 'Little Red Schoolhouse'

Consolidation of Country Schools Is the Remedy for Existing Evil Conditions

By MYRA CARY

IT WAS with round-eyed, avid interest that the little teacher watched the skillful handling of classes by the rural supervisor. It seemed to her almost magical the way system and order were evolved under the management of one to whose visit she had looked forward with fear and trembling.

Even the children recognized the touch of a master hand, and were soon responding with enthusiasm to the guidance of one who had had years of successful experience in country school-teaching.

They too had at first been nervous and timid. But now the busy hum of work filled the room. Occasionally a happy laugh was heard as some point in a lesson was linked up with familiar daily living. With wisdom born of knowledge and experience the supervisor emphasized the important parts in the day's lessons. By her questions she showed acquaintance with country life, its problems and its interests. The children no longer felt her a foreigner but one of their own community with larger experience of the life they themselves were living.

In the conference after school between the teacher and the supervisor over results that should be brought about, over ways of combining classes, over methods of making instruction vital, there came into the mind of the teacher many specific questions to ask her mentor and guide.

'When you come again,' said the teacher, 'I am sure you will find I have made use of many of your suggestions.'

The problems of the teacher had been many, notwithstanding the fact that her training and experience had been unusual.

It was three months before the supervising teacher again found herself in the neighborhood. She began recalling the problems of the school. She remembered being told that the district was chiefly of a shifting, tenant group. 'Because we live near the city,' the teacher had explained, 'we have children who have been in town to school; children who have been in many different country schools and some from the city schools of Chicago.'

What would three months show? As she approached the red brick schoolhouse with its homelike lines and angles, she saw the flag fluttering from the flagstaff in a warm and lazy breeze. A spirit of serenity permeated her whole being as she entered the busy atmosphere of the schoolroom. No one saw or heard her, for everyone was occupied. Presently the teacher spied her and asked that she run through as many classes as she could to see if the required work was being accomplished.

Typical old country schoolhouse which housed eight pupils.

THE little red schoolhouse is no doubt excellent as sentiment and effective in rhetoric, but it lacks many advantages as an instrument for the instruction of our children.

Wisconsin, in an effort to lessen the deficiencies of the small, one-teacher rural schools, has instituted the practice of having supervising teachers, who are thoroughly familiar with the problems confronting the instructors, tour each district to aid where they can with counsel and recommendation.

At the end of the first few moments the supervisor was able to notice great improvement. The teacher had aroused in the pupils a sense of responsibility, and had stimulated their initiative—two of the greatest factors in teaching.

One of the very serious problems of rural education is a home for the teacher. For many teachers it is practically impossible to find a place to live. One young teacher was given for her sleeping quarters the family storeroom, unheated. Many a winter morning she came out of the room with fingers stiff and blue, with the temperature below zero. The only sitting-room was the kitchen, which was pretty well occupied, at least in the evenings, with the husband and wife, children and hired man. Washing was in progress every day so that clothing hanging about the stove to dry was an ever-present inconvenience.

For luncheon she was given a cold pancake (bread was never baked in this home) and a slice of boiled pickled pork. She was her own janitor at the schoolhouse three miles away. No home was open to her nearer the school. During a part of the year she rode on horseback in the dusk of early morning to build a fire that the room might be warm for the children. Sweeping and dusting her schoolroom at night, and preparing the lessons for the next day, brought her home long after dark.

It was truly a spirit such as martyrs and missionaries are endowed with that enabled her to endure the experience for the full school year without telling her family how nerve-racking and physically wearing it was. She was spirited and determined not to be a 'quitter.' Half of her salary of $50 a month was paid for board and room.

We blame young men and women for shunning teaching service in the country school; but the hardships are so great, the appreciation so slight, the tenure of position so uncertain, and the salary so small that as a rule only beginners or persons who are too inefficient to be sought after elsewhere furnish instruction in one-teacher schools.

It was with the hope of relieving conditions that the State of Wisconsin in 1915 enacted a forward-looking piece of legislation regarding rural education. This act provided that each county might have one or two rural supervisors according to the number of schools in the county.

Problems of administration, of hygiene, of social welfare are taken up by the supervisors. They are encouraged to present their specific problems for discussion at regular meetings, problems that have been revealed to them during their work in the field.

A supervisor in a county in which there is a large proportion of foreign element told how she found a little teacher who had decided that the most helpful thing she could do in her district would be to teach English to the adult foreigners. She hoped at the same time to instill American customs and ideals into her charges. She announced that every Saturday she would conduct free classes in English for adults. Her kindliness had won over the whole district. They were willing to follow her lead and suggestions to a degree that would never have been dreamed of before.

Consolidation of country schools is the greatest single remedy for the evil conditions that exist; but it will be generations before consolidation is brought about extensively except in a few states. Even in the most favored states in this respect there will be out-of-the-way districts with one-teacher schools that will continue to need the shepherding care of the supervising teacher.

The crux of the whole difficulty with our country schools is that too many patrons cry: 'It was good enough for our fathers and for us; it is good enough for our children.' It was good enough for the fathers only because it was the best they could get under the circumstances.

Have You Ever Seen a Ghost?

(*Concluded from page 5*)

coals only three times, when she swooned.

But how could an after-image of a stove-hole have the details of her mother's features, as the third appearance did?

This summer I was going through a small village north of Chicago when I happened to recall that a former student of mine lived there. I was thinking of him as we passed a young man sauntering along the sidewalk. In a flash I recognized his face as that of the former student. But as I turned to look at his departing figure I plainly saw that he was much too short and fat to be the student, and on this second glance the illusion of his features became apparent.

Everyone has had these experiences of mis-recognizing. When we have an appointment to meet someone on the corner of Eighth and Main and are impatiently waiting, every distant face looks for an instant like that of our expected friend.

This same mental mechanism made the after-image look to D. vaguely like her mother about whom she had been thinking.

All day long we are having these after-images, but habitually neglect them. Psychological students sometimes become distressingly handicapped after their first laboratory work with them because they spend the following week or two in seeing on every hand these after-images they had previously ignored from force of habit.

Under certain conditions, however, these phantoms become so vigorous that they force themselves upon our attention. That is what happened with Cousin D. That is what makes possible the motion picture, what causes apprehension among railroad engineers, and what made a parrot curse.

An engineer who takes the crack Overland Limited across the plains from Laramie to Rawlins told me that he dreads the winter runs because he 'sees things.' 'Each time after the fireman stokes the firebox,' he said, 'I always see freak signal lights ahead on the winter runs when darkness comes early. One time when we passed within sight of a familiar ranch house I thought it was on fire. I rubbed my eyes and looked ahead. There were those freak signal lights!'

Plainly 'he was seeing after-images of the open fire box.

The motion picture screen is in complete darkness sixteen times a second. A shutter passes in front of the lens each time a new picture is jerked down by the Maltese Cross mechanism to prevent a blurring of the screen. But nobody ever notices this complete darkness of the screen.

In the early days of the motion picture they were flickery partly because the projection lights were not strong enough to make a vigorous after-image, and partly because specially silvered screens were not available to catch all of the projected light. And even a parrot can see after-images, which are sometimes mistaken for ghosts. The parrot, however, does not call them ghosts!

In a mid-western psychological laboratory a cage was arranged so that the parrot would see an after-image of his perch, if it were possible for the parrot's eyes to act as ours do in this respect.

The parrot saw the after-images of his perch. Just as our phantom match went wherever our glance turned, so the parrot's perch wandered around his cage. After trying several times to step on this phantom perch he was rather plain spoken in his remarks about his experimenting friends.

Yellow Ink

(*Concluded from page 7*)

to the suggestion that, in cases of suicide by poisoning, no reference to the kind of poison would be made. It became apparent from study of hospital records that mention of the instrument used in some unusual poisoning case led to an epidemic of suicidal efforts with that poison.

What is news and what isn't news probably will remain a moot question for centuries, for even newspapermen disagree among themselves.

A survey taken some years ago in St. Louis revealed that the first department inspected in the Sunday newspapers was the comic section—the colored comic strips whose great-grandfather was the Yellow Kid from which yellow journalism derived its name. That survey, and others, have cemented one newspaper, at least, in the belief that the wants of the reading public rate in this order:

First—Love.
Second—Riches.
Third—Adventure.
Fourth—Humor.
Fifth—Information upon which one may act for pleasure or profit.
Sixth—The general knowledge of persons, their enterprises and ambitions.

There comes to my mind a newspaper whose editor was a brilliant character and an esteemed individualist. On the first page daily appeared a column under his signature. Surrounding it was 'clean' news. It was a pretty fair little paper, it pursued a wholesome life, but few read it and few advertised in it. Circulation never went above 25,000, and eventually it was sold.

'The good people cheered for my paper,' commented the editor without rancor, 'but they bought, and took their ads to the others.'

The Gift Everlasting for Christmas

$9.85 POSTPAID

German Field Glasses

8 POWER Complete With Straps and Lens Cover

UNLIMITED USES—ENDLESS PLEASURE
The ideal all 'round sports glass.
The best sold at this low price.

Finest day and night lenses---hand ground and polished---dust and moisture proof. Grandpa's Physical Culture

(*Continued from page 13*)

Lexington, six miles away, and turned it into an institution for the physical training of girls, who came there, in their youth and beauty, from all parts of the United States, hundreds of them, and kept their youth and improved their beauty until, a few years later, during a summer vacation, the building caught fire and burned to the ground, with nobody but the doctor himself, and one of my sisters, who happened to be on hand, to try to put it out. It was never revived; the doctor was a restless person, and spent the rest of his life (he died of blood-poisoning twenty years afterward) spreading his doctrines over the country.

I WOULD have done wisely to have remained a Lewisite; but the exercises seemed too easy, and the progress in muscular development too slow. The muscles, however, when developed, were of finer and more enduring quality than the heavy-weight product, and the general suppleness of the body much greater. The doctor, but for the poison, would have been alive and strenuous yet; he was right: but until Edward Checkley appeared, he had no noticeable successor: Checkley turned up about 1890, but he didn't know how to advertise. Meanwhile I return to 1870.

I left Wood's gymnasium and finally went to live in Sag Harbor, Long Island. There I walked, ran, rowed, swam, and made the Lewis movements every day, but never again touched a 200-pound dumb-bell or any other gymnasium implement. At forty, I was very fit, weighed 175, and my general health was perfect. At seventy I was still running three to four miles before breakfast, and did the 'movements' as before; today I walk instead of run, and see nothing to prevent the movements in the future. I am down to 160, but don't wish to be heavier, or lighter.

I think that my heavy-weight experience was an error, but I was fortunate in abandoning it betimes. And I think Lewis and Checkley were right, and that nobody is too young or too old to follow their regimen. Checkley, however, had ideas of his own. He published a little book, but he was not a good writer, and his success was with his personal pupils: he was something of a mystery in fact. I knew him well, and caught the spirit of his idea. It may be condensed into the reply he made to an aspirant who asked him how much one ought to exercise. 'All the time!' was Checkley's answer. That sounds foolish, but it was the truth when understood aright.

Nature's plan involves bodily symmetry, a matter of unsuspected importance. The ancient Greeks understood it, and the marble forms which they have left to us show their success. Symmetry is itself health and strength, for it implies all-round harmonious development. When an unskilled man strikes a blow he uses but two or three muscles; the trained boxer calls into action almost every muscle he has, together with his weight, and though his strength may be not half of the other's, the result is four times as effective, because the entire body, coöperating in any effort, must greatly outdo any effort not so supported.

We demand symmetry in our race horses and motor cars, but are content to be slab-sided ourselves; and we sacrifice grace and good carriage into the bargain. How few are the athletes, even, who know how to walk and stand right! They slouch and swing and shamble. They seem to be alive only in spots. The cadets from West Point and Annapolis are taught better, and you can pick them out in any company. They poise their shoulders, carry their heads and step out with self-respect and poise, and except for a little over-rigidity they are models worth studying.

We are more scientific in our exercise than we were seventy years ago. There were no organizations for athletics or gymnastics in schools and colleges, and no experts to take an average boy and develop him, point by point, into an athlete. There were no 'coaches,' nor regularly enlisted teams to be coached. Youths who were naturally strong and active, or who happened to have had opportunity for practice, or proclivity for it, would of their own motion tend toward taking up baseball or rowing in college, or they might devote themselves to cultivating powerful muscles in the gymnasium for their personal benefit or amusement.

SUCH youths would become as strong as the best of today, and they would generally have greater endurance. For persons naturally strong seem to possess an interior core of strength—an innate quality, not easily described or clearly understood—which makes them superior upon the whole and in the long run, to those not so endowed, and who have been built up (as we might say) scientifically or artificially. We may observe that athletes of today are handled with great caution by their coaches, and that they are easily injured, and begin to fall off early.

It was not so in the past. The good men were more robust, exertion long continued and often excessive didn't hurt them, they could stand almost anything with impunity. A man would be as good as ever at thirty, or sometimes even better, and at forty or fifty he was still in fine shape. If, in addition, he was moderate in diet and handled himself with intelligence, he was safe for a hearty old age. His vitality and virility were not sapped: like Moses in the Bible, his eyes were not dimmed, nor his natural force abated.

Our population, during the last seventy years, has doubled in quantity but not, physically speaking, in quality. Athletes are more numerous, but not better equipped. They are more prone to break, go stale, or dissipate. They know more and discuss more, but they don't do more, and it is doubtful if they *are* more than the men of their grandfathers' time. By 'they' I mean the average—not that giants are no longer born and bred, but that the proportion is less. And that is simply because we breed so many more artificial and transient giants than we used to do.

Athletics offers far greater temptations to fame and money now than formerly, and hundreds of youths are beguiled into making overdrafts on their proper resources because the premature development made possible by artificial means enables them, for the moment, to excel. They pay at their leisure!

It is futile to say that we have not too many athletes, for every man and woman ought to be athletic in a degree, but altogether too much competition in public, and too much craving to win in the competing individuals or team; and also, that these competitions begin too early, before the body has attained its stability. But the stars in their courses fight against us in these respects. The spirit of the age baffles common sense.

Schools turn out 'teams' of children, and colleges aim at the highest mature achievements in their 'stars,' who may be little over twenty years old, or less. From the outset begins the clamor about championships, and that siren call urges on its victims to the end. Here and there, from time to time, arises a physical prodigy, who sets a mark which the others exhaust themselves in rivaling. It is against nature, and the account must be settled. Now in addition come the newspapers and the spectators, with their headlines and their uproars. The boy is made to believe that his actual importance is to be measured by his notoriety. He will know better by and by. Nobody cares a finger-snap for *him*, but only for his record—till that be surpassed. And finally, we have various discoveries, improvements, devices, in the instruments and conditions of athletic performances, which render our records, as compared with those of the past, misleading.

The athletes of today are not better than those of seventy years ago; quite possibly they are not so good; but the timer's watch and the measurer's tape make them seem to be so.

YES: the 100-yards is but 98 or 99 now; the twenty-six-foot jump is not more than twenty-three or four; the high jump is barely six feet, the pole vault not more than eleven or twelve, and the rowing regattas are won in times that were equaled way back in the 1860's and 1870's. In other words, it is the conditions and the appliances that have improved, and the 'knack' of the performer, who, advantaging thereby, and not because he is a better man, nevertheless appears to be better on the testimony of the stop watch and the tape. If the man of today would run his century on the rough tracks of seventy years ago, and without the new science of getting away from the mark: if the leaper and vaulter had no better 'take-off' than formerly, and would forego his skill in throwing his body sidewise as he goes over: if the oarsman would row in the old boats without the clever mechanism of the sliding-seat: the results might surprise him. And yet, if our physique is not better than it used to be, of what avail is it to proclaim our better records? Machinery and knack cannot take the place of native brawn and sinew; but that is just what our records pretend.

Take, for example, the racing shell of the 1860's, in which I rowed. The crew numbered six; there was no coxswain: the bow-oar steered: no sliding-seats.

The course was on slack-water, and we had to turn a stake midway; the distance was three miles. And look at the times made, for three miles, by the Ward Brothers for instance. Remember that turn at the halfway post, and that races today are rowed downstream instead of on lake-water. After due consideration of these points, what would you wager that the best six oarsmen of today could defeat the Ward Brothers, or the best college crew of that epoch, under the same conditions?

My point is, of course, not to deny that we are vastly improved as to machinery, and even as to technic, over what we were; but to suggest that on the square physical basis, man for man, we are no better and perhaps not so good. And that, if it be a fact, is a good thing to think about: an unrecognized truth that it will do us no harm to recognize.

Christmas Cards

(*Concluded from page 17*)

Any man who has had only a meager acquaintance with the sterner side of life, such as holding down a job and trying to raise a family (even if it is just a little bit of a family), knows very well what will happen to him if he goes about with delusions of grandeur. He must hustle to keep up his end. The best compensation he gets in this hustling is the divine privilege of forgetting himself.

And right here is the great gulf between dreaming and idea-making; between impotence and power. The victim of sentimentality, which leads into hero-stuff forced upon either him or her through these lurid modern commercialized agencies, is doing it for himself alone—I repeat. The boy is always a Napoleon—for himself; the girl is always a star actress—for herself. Nobody else counts. To be a human juggernaut is the high ideal.

But when you make ideas—which certainly call into play all the powers of the imagination—you do this for the race, for country, for the world, for all time. There is more idiotic drivel written and published about adventure today than ever before in history. It is the most insidious character underminer there is, for it works while you sleep.

This is no disparagement of activity, of sport rightly accomplished, of outdoors, of hunting and fishing and natural exercise. But the true adventurer is the man who uses his mind to create accurate invisible realities first, which, having been thought out, will certainly be externalized for the permanent good of the greatest number. And this occupation is the most completely satisfying occupation in the world, proved so time and again by the world's greatest people. Also, it is open to all.

Some years ago, moved by that slavish spirit of imitation of appearances which all good Americans feel, I got out a Christmas card, or rather ordered one sent broadcast from my stationers. I sent it broadcast to friends, and even to relatives. After the horrid deed was done and I had to go out and meet those friends, for some time thereafter I could not fully understand the secret sense of shame I felt at these meetings.

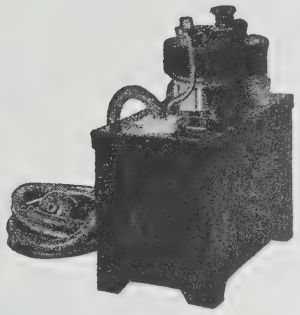
It then occurred to me that every time my card was admired by someone, this expressed admiration was only in response to something which was precisely like what I had sent out to others. For my card was merely one selected. Then again, I was further discomfited to discern by accident (for one is bound to overlook some cards until long after the event) that this same card I had sent out had also been selected by a friend to send to me, so that each one of us had bought the same stereotyped sentiment (written by a total stranger) for money and we had merely exchanged this bought-and-paid-for sentiment through the mails.

Prostrated with remorse, I resolved that the following year I would originate my own Christmas sentiment. Time flew, until I was told it was too late. Another year passed and this year I'm resolved to take time by the forelock.

Alas! I was told that to have the thing properly done, I ought to begin to think of some clever sentiment in summer. In the midst of the dog days, reeking with moisture, I had to conjure up affections frappéed with frost, with which to face my circle of friends for whom there would be no time to exchange the ordinary verbal courtesies of the season. I tried it but couldn't. So now I am entirely alone in the world, cowering behind my ramparts, the only man in the world who doesn't send out a Christmas card.

I want people to love me to a reasonable extent, but I cannot ask them to love me for the cards I might send but cannot. When this year my friends don't get any card from me they will understand that—at this writing—the weather is too warm, and that flesh and brain are—so to say—desentimentalized.

An Ideal Christmas Gift



USL Trickle Charger

Converts any "A" storage battery into a complete and continuous "A" power supply and keeps the "A" battery always at full charge. Price 60-cycle unit $10, 25-cycle unit $11.

PERHAPS you are wondering what to give Dad or Brother for Christmas. And probably they are wondering what to give you. Why not get together and select something the entire family will enjoy—something to improve your radio?

Maybe you need a new set of dry "B" batteries, an "A" battery or a set of "B" storage batteries, a battery charger, an "A" or "B" power supply which plugs into the light socket, or a trickle charger for your "A" battery.

Possibly you haven't a radio set and would like radio entertainment to fill your home with Christmas cheer.

Why not ask your local USL Battery Dealer to show you the USL Broadcast Receptor and the complete line of USL radio equipment.

USL RADIO, INC., NIAGARA FALLS, N. Y.

Jessie Bonstelle Chats on

Preserving *the* Ideals *of the* Stage

By GLADYS CALLAWAY

CHANGES in manners and morals of the drama have been so numerous and radical in the past few years that students of the theater are constantly wondering to what ultimate destination the devious trend will lead.

Many barriers of convention were let down during the war, and frank, open talk was substituted for polite reticence. An epidemic of sex struck the legitimate drama, and numerous editions of revues and musical shows were produced specializing solely in nudity and obscenity.

Now the hue and cry for stage reformation is so vociferous among the influential portion of the public that even censorship looms ominously near. Undoubtedly an extensive cleaning up is in immediate order.

Jessie Bonstelle.

Few persons alive today have been so close to and so much a part of the drama scene and for as long a time as Jessie Bonstelle, who since her eighteenth year has been player, director, manager and producer. She has watched every change and analyzed every new fad; she has seen constellations of stage stars rise to the heights and pass from view; a goodly number of today's eminent actors and actresses have been under her tutelage

Today she is at the head of a playhouse, bearing her name, holding fast to the ideals which the theater in general has lost.

'The era of salacious plays *must* be near ing an end,' she declared in her office, called the Green Room. 'The theater has passed through many phases—the idealistic, the realistic, the impressionistic, and now the expressionistic—if anyone can define that term. We have touched upon every delicate subject so that there doesn't seem to be anything left to try.

'The stage will free itself of its sex affliction,' she asserted confidently, 'but meanwhile we who love the theater—we who have devoted our entire lives to it—are frightened lest a strangling censorship should be imposed before it has had time to do its own repairing and mending.

'That would be very bad. It would heal the condition only on top, leaving it to break out in a different place. The disease must be treated from within.

'Those persons actively engaged in the theater can handle their own problems better than anybody else, if they will only permit themselves to see the need of doing this. Application of the remedy must begin with the revues and musical shows—they enjoy such a wide range of license that it is difficult —almost impossible—to clean up and sustain good legitimate drama.

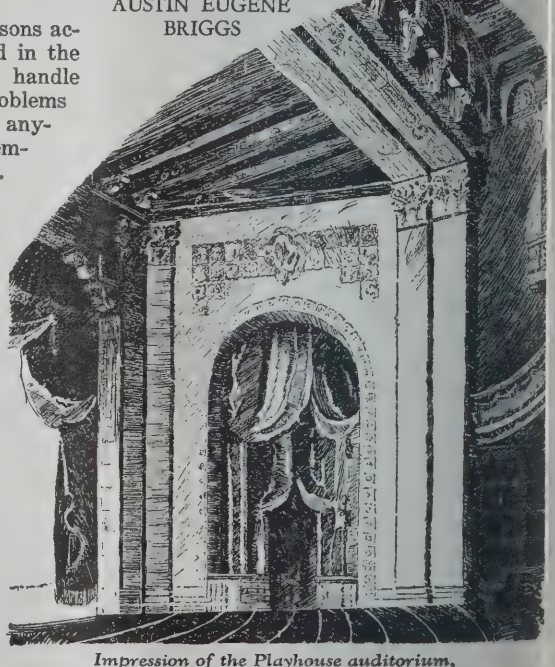
'The unhealthy indications which have appeared so startlingly were seething under the surface for years. They are now so much part and parcel of the spoken stage that rapid recovery may be out of the question. But correctional steps must be taken—from within. Else we'll have to suffer censorship.

'About eighteen years ago, New York City claimed George Bernard Shaw's *Mrs. Warren's Profession* to be highly immoral and stopped the producer from giving performances. Not more than five or six years ago *Our Betters*, by Somerset Maugham, was killed in the same city because one of the characters called a woman a vile name. The same expression was hailed later with great glee in *They Knew What They Wanted*, which, season before last, won the Pulitzer Prize for best expressing manners and morals. *What Price Glory* also made use of the expression which had been found so objectionable in the earlier play of Maugham.

'It is curious that a man who would instantly discharge his chauffeur for using profanity will pay a high price to take a woman to hear profanity from the stage. He will take her to see a joke enacted as a "skit" that no guest at his table would dare to relate. Furthermore, he will permit his daughter and his son to see this show.'

Miss Bonstelle was reminded of a story about Adge, the famous woman lion-tamer whose act required her to enter a cage in which her lion, 'Prince,' was confined. This goes back twenty years. The public of that period declared her act 'too tame,' and her manager asked her to create interest by disrobing while in the cage. This she did until she was revealed in only pink silk tights. 'Prince' was amazed and with a roar of disapproval tore the clothes she had re-

Drawings by AUSTIN EUGENE BRIGGS

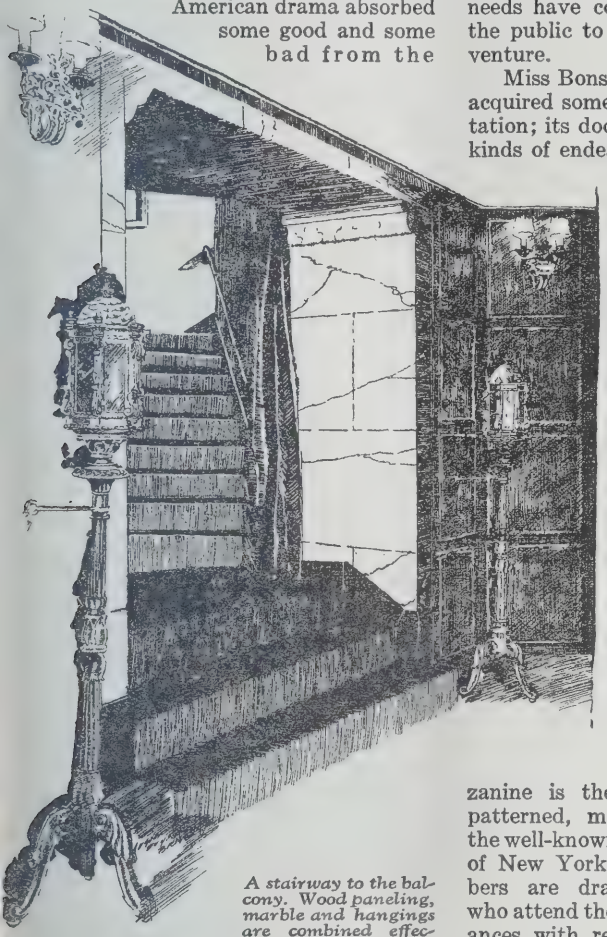


Impression of the Playhouse auditorium, which finds beauty in rich tones.

noved into shreds. Afterward Adge confessed, 'Oh, I cared little for the *audience*, but I was so mortified before that *lion!*'

We wonder what effect, if any, that lion would have on a modern girl-show?

Miss Bonstelle feels that foreign influence has left a heavy imprint on the American stage. She cites the modern morose and morbid Russian art as an example, with the opinion that she sees no reason why the positive, light, happy American spirit of play cannot be enacted just as artistically as murky sordidness and misery. She believes that the American drama absorbed some good and some bad from the



A stairway to the balcony. Wood paneling, marble and hangings are combined effectively.

French drama, and that it derived much that was good from the German and the English. The mixing of clean English drawing-room humor with the American rough-and-ready comedy was good,' she stated.

'And there is no reason why we cannot bring joy into our amusements. Everything that nature accomplishes, undisturbed by man, is joyous and beautiful.

'Love of romance isn't likely ever to die, and I feel that the future of art and of the church lies very largely in the hands of our young people.

'These young people are the ones I am striving hard to reach. For me, it is a very happy effort. They must be educated to appreciate and to prefer the truly fine old standards of the theater, just as they should be taught to recognize other values in life.

'Most patrons of the theater attend because they have an indefinable desire for something beyond themselves, and a wish to be entertained without being ashamed. These facts all place a tremendous responsibility on the producers. If they don't awaken to this responsibility they will be certain to find themselves losers. I would close my doors rather than produce one of those salacious, unwholesome plays.'

For nearly two years her theater has operated on this principle, and despite some contrary prophecies, has succeeded well in holding its own against the sharp competition of the flashy extravaganzas with their nude tableaux.

Operating a large house and presenting a large company in the current approved dramas is so enormously expensive that one needs have considerable faith in the public to undertake such a venture.

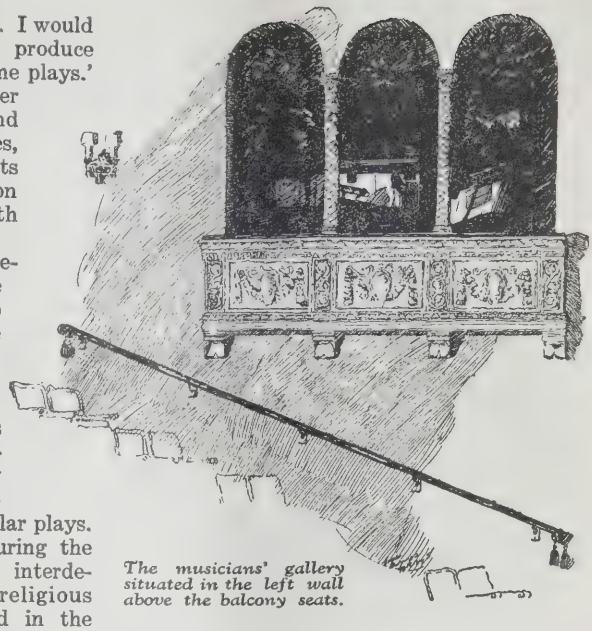
Miss Bonstelle's Playhouse has acquired something of a civic reputation; its doors are open to many kinds of endeavor besides the presentation of regular plays. For instance, during the Lenten season, interdenominational religious services are held in the auditorium. Business and social organizations make the Playhouse part of their program, utilizing it for banquets and meetings before and after the performances.

Playhouse attachés render assistance to non-professional ventures about the city, giving particular attention to the public schools.

Local artists exhibit their canvases in a gallery on the mezzanine. This room is cleverly built in right under the inclined balcony.

Among the groups which meet on the mezzanine is the Bonstelle Guild, which is patterned, more or less, after the well-known Theater Guild of New York. The members are drama lovers who attend the performances with regularity. These persons are consulted about the selection of regular plays to be produced. The main purpose is to stimulate public interest in worthy plays, as a step toward bringing the theater back to normalcy.

'I have always wanted to see the drama placed upon as firm and as fine a foundation as any of the other arts,' said Miss Bonstelle. 'The ideal theater, of course, would be a national institution owned and operated by the United States Government. Its logical location would be in Washington. Such an institution would function as a



The musicians' gallery situated in the left wall above the balcony seats.

clearing house, for there the unknown playwright might have his play produced and the unknown actor might find his opportunity. In this way real talent could be brought to light that under the present scheme of things may never be discovered. Next to my dream of a national theater, I should like to see every city of any size own a theater and maintain a resident company of professional players, with a dramatic school in direct connection with it.

'There should also be a school of playwriting, and a sort of laboratory-theater where students could design and make scenery, write and produce plays and act in them. If one such theater could be established in a city large enough so that it could be self-supporting, other cities would soon follow suit.

'I think the fact that amateur groups are springing up all over the country proves that there is a great desire for good drama. A few years ago the Little Theater project was a joke; now several of the big magazines have Little Theater departments.

'The dearth of traveling companies has caused a hunger to see good plays.

'Therefore, the advocates of the Little Theater and amateur theatrical ventures will find the public not only willing, but fairly anxious to coöperate. This is not meant to imply, however, that such enterprises will have an absolutely perfectly easy experience in achieving their goal.'

Studied pose in a stage presentation by two of the members of the Playhouse dancing school.

When you give

The DEARBORN INDEPENDENT

for Christmas,

You are remembered every week of the year.

What finer gift could there be than one that repeats itself every week?

And you may be assured that THE DEARBORN INDEPENDENT will be just as interesting, as informative, as well written and well balanced a magazine next year as it has been this year, or was last year.

When you give THE DEARBORN INDEPENDENT for Christmas you are giving a breadth of enjoyment that could scarcely be duplicated in any other holiday remembrance.

Send in the subscription form today so there will be ample time for mailing the Christmas number and the special Christmas card that will announce your gift.

Fill in this form and mail it with $1.50; we do the rest.

The DEARBORN INDEPENDENT

Chronicler of the Neglected Truth

Two Wise Men of the East

(*Concluded from page 4*)

He gave up his social position, his wealth, and lived among his people. He suffered for them and with them. He defended the cause of the Indian farmers and laborers until he was cast into prison for them.

Then came the World War. At first he placed his powers on the side of the Allies.

But in the midst of the war there came an awakening. One Sabbath morning, in the presence of Tagore, he said: 'The cry of the trenches changed the course of my life. I looked upon carnage and saw that it was bad. The murder and bloodshed sickened me. I was raised a Jain, the son of a Hindu mother and father who thought it an unforgivable sin to take any life, even that of a cow or a goat. We never ate flesh of any kind. Life was sacred to us—all life.'

Gandhi went back to India after the war and so identified himself with the life of the people that he decided to find out what the average wage of the Indian peasant was. Then he limited his own expenditures to that figure.

He said to me: 'My revolt against European industrialism came because of certain political and economic acts on the part of the British rulers.'

He launched the world-famous coöperative movement, pledging the people not to wear any British-made cloth; to weave their own cloth made with their own hands. The spinning wheel came back.

It is a new thing to find a man fasting, rather than fighting for a political and social cause; to find him nonresistant in an age when conflict has been made a virtue; and renouncing wealth and accepting poverty in an age when luxury and ease are more general than at any other time in the world's history. He is the Tolstoy of this generation—only a greater power.

Said Tagore that morning as we discussed this thought: 'The great seers have not been those who got joy out of life, but those who got sorrow and pain and suffering.'

Contrasted with Tagore, Gandhi is physically a sorry figure. He is frail and diminutive. He wears a little cotton cap and cheap cotton clothes.

TAGORE represents the heart of luxury with his cultured home and golden robes; Gandhi stands for poverty and simplicity.

I shall never forget them as they stood together that morning; the one tall, the other small; the one with flowing white hair, the other bald; the one strong and healthy looking, the other small and wizened from his terrible fasts.

They got to talking about India and her idols. Said Gandhi: 'Let them keep their idols. Do not take what little they have from them!'

Tagore thundered back his answer to Gandhi: 'I'm ashamed of you. You are an educated man. You ought to know better than that. If I had my way I would walk up and down India and sweep every crutch out from under the armpits of every Indian. I would destroy every one of their idols and props and stays. I would let them fall if need be and then I would pick them up gently and give them something in place of their idols and their crutches.'

The lightning of repartee flashed between these two great hearts of India. Reference was made to Gandhi's living so simply and he replied:

'The peasants live on eight cents a day. I live on that. When the peasants get ten cents a day I'll live on ten cents a day also, but not until then.'

I brought the conversation back to Tagore's poem and had the poet read it again so that Mr. Gandhi might hear it. He was evidently deeply impressed with it.

'Let's get joy! Soul be happy! Have JOY! JOY! JOY! That's the spirit of the age. But the coming of Christ into any nation, or any soul, or any industry, will mean pain and suffering!' added Gandhi.

The New Diplomacy

(*Concluded from page 2*)

Where in the Covenant is there any authority which allows a non-member of the League to step in and stay the procedure? The point is that the entire jurisdiction and procedure relative to advisory opinions are provided for wholly outside of the statute to which we would adhere.

It could well be contended that these advisory opinions are for the benefit of the League—and it is so contended now—that no one else is interested or affected by them and that the constitution of the League controls and not the statute to which the United States adheres. These suppositions are based upon contentions which have been made ever since the creation of the Court. They are in part already accepted and endorsed not only by leaders in the League, but in some respects by members of the Court. Under such a construction, Reservation Five would be absolutely worthless. This supposed situation only gives us a peep into the interminable turmoil and controversy into which we are to be led.

What, therefore, is the full purport of these reservations to the League and also to the Court? Their full purport is at best and at most to give the United States slightly more authority and more influence within the League or within the Court. If all the reservations to the League were accepted and we should thus join with these reservations, we would still be embroiled in every controversy or dispute arising anywhere in the Old World.

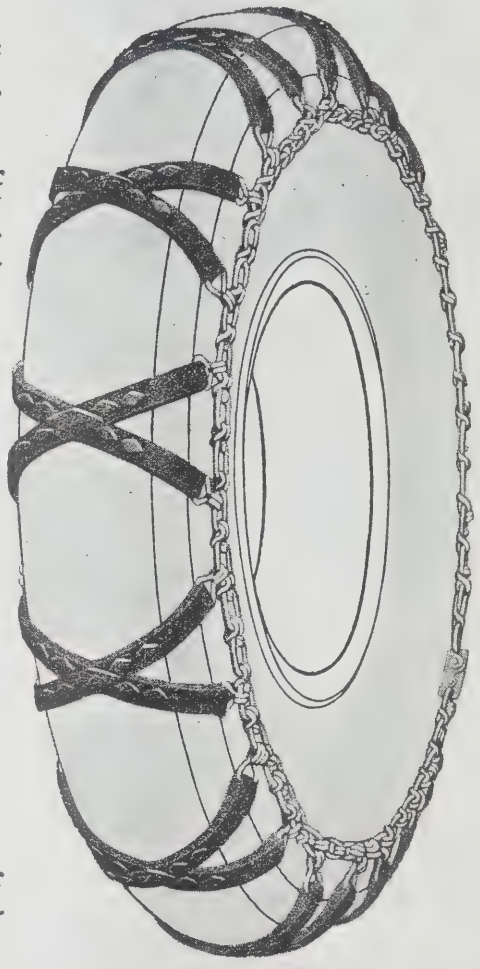
If all the reservations which we have suggested as conditions for adhering to the Court are accepted, we shall still be a member of a tribunal controlled by the League and which has jurisdiction when called upon to advise with reference to all the controversies arising in the Old World. Reservations do not preserve or conserve in any respect or to any degree whatever the foreign policy of this Government as it has been established and maintained for one hundred and fifty years. We surrender everything and we get in return for this policy a few reservations which will be construed by a foreign-controlled Council and a foreign-controlled Court.

A TIRE CHAIN *of* RUBBER

Long-Wearing—Quiet

GOODYEAR Rubber Tire Chains overcome the two chief objections to ordinary chains. They are *quiet,* and they *wear long.*

They are saving of tires. Under all conditions of road and load they offer car control and safety. Here is the whole story of the Goodyear Rubber Tire Chain:



Quietness: There's no clanging on the pavement or banging on the fenders with Goodyear Chains. *Rubber cross links take the place of steel.*

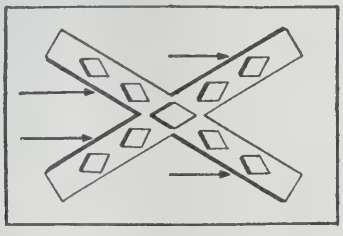
Long Wear: Mile for mile, one set of Goodyear Chains will, in most cases, outwear several sets of ordinary tire chains.

Tire-Saving: The broad rubber cross links guard against cutting or bruising of the tire tread, and especially in deep ruts give valuable protection to tire sidewalls.

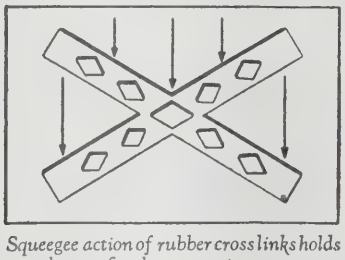
Ease of Application: Goodyear Chains are easy to apply. You put them on and leave them on—over mud, wet and dry pavements, or snow.

Security: Goodyear Chains employ the non-skid principle of the famous Goodyear All-Weather Tread magnified for maximum gripping action. Scientifically designed to *resist skidding in any direction.*

Convince yourself of these facts by having your car equipped with Goodyear Rubber Tire Chains at the nearest Goodyear Service Station.



Angularity of cross links sets up effective resistance to skidding sidewise



Squeegee action of rubber cross links holds the car firmly on wet pavement

CHATS WITH OFFICE CALLERS

The talk turned to politics and ***the Texas Politician*** was asked whether the 'Solid South' was really solid. As is always true of typical politicians, that reminded him of a story and he related the following:

'On the day after the election of 1908 a cowboy out in Western Nebraska mounted his powder-faced cayuse and rode sixty miles to Chadron after the election returns for the gang.

'While making a night ride on the return trip, the lone bearer of great tidings drowsed in his saddle, the result being that his malevolent broncho executed a coup long contemplated and often deferred by throwing the unsuspecting rider high and far.

'Two weeks later, the cowboy regained his faculties in a hospital with a white-clad nurse bending over him. Smiling up at her he said:

' "It shore do beat Hell how Missouri went!"

'The last conscious thought, etched deeply on his brain, had survived two weeks of coma, still standing out vividly.

'And small wonder, at that.

'Missouri had been a bulwark of the Democracy, and her apostasy came without warning, fairly taking the breath of a nation which had been wont to consider the border states as staunch as any south of the line.

'It also furnished the first proof that no state is fixed eternally in a political division.

'Since the advent of Missouri within the Republican camp the banners of the border states of Kentucky, Tennessee and Oklahoma have swayed precariously there, while Iowa, Michigan, Kansas, Nebraska and the Dakotas have shown a growing tendency to incline a kindly ear toward the Democratic orators.

'The political thought of the country, formerly fixed in two sharp divisions, with a border zone of doubtful states between, has softened to a flux within the last decade, but we have continued to refer to the "Solid South" as a known quantity.'

ɤ ɤ ɤ

'We're trying something new in the way of horse breeding,' said ***the Army Officer*** in the lobby.

'We are sending three thoroughbreds to Fort Robinson, Nebraska. We plan to breed them with wild horses on the Blackfeet Indian Reservation in Montana. The wild horses we will use are the remnants of herds that once roamed the Rockies and from which the mustang cow pony of early days sprang. These wild horses are the descendants of Arab horses brought over by the Spaniards 400 years ago.

'The present-day mustang is a wretched, spiritless animal. We believe that with the introduction of the thoroughbreds we can bring forth a new generation of riding horses that will be a credit to the army. In time of war you can speed up the manufacture of war necessities such as clothing and guns but you can't speed up nature in the matter of horse breeding.

'One good sign for the future is the return of the riding habit. In the East they are taking to the hunting field and bridle path.

'We may have something to offer the public in a few years if our plans with the Blackfeet horses materialize. We shall build up a new line of riding horses with a strain of mustang spirit and endurance crossed with the thoroughbred sires.'

ɤ ɤ ɤ

'The theater is more realistic than the novel,' declared ***the Youthful Dramatist,*** 'because there is no interposition of the author. Yet it is more artificial because things don't happen like that; because you explain things in drama that you don't explain, don't speak of, in life.

'So the theater might draw up a set of bargains: the Audience agrees to pretend that it is real; the Author, to make the audience forget that they're pretending. The theater program might well be written as such an agreement. In *Julius Caesar*, for instance, the audience must concede that Roman soldiers shall speak English blank verse. On the stage, we must pretend that the room showing three walls has four. But the audience should not be reminded after that of the pretense. And therein is developed what is termed technique, which one actress has aptly defined as "something you work all your life to get, and when you get it you don't recognize it."

'Modern drama has become more sophisticated. Soliloquy and asides have been banished. To Ibsen—Saint Henrik Ibsen—must be given the credit for the most striking revolution in the English drama.

'He recognized that life could beat him in melodrama, so in his plays the action, the plot, is over before the curtain goes up. His drama deals with the analysis of motives. Machinery, artificiality, of stage and play, he ruthlessly casts aside. The romantic conventions, the movie element, he discarded, for he reasoned that it was not the crises in life, but the everyday happenings, that develop character. He is said to have claimed: "I came not to save sinners, but the righteous." Hence he exposes the shams of modern morality and of the theater. Consequently, the average person has the "There but for the grace of God go I" feeling after one of his plays.

'Shaw followed Ibsen closely, but wrapped up his teaching and philosophy in a jam of farce or melodrama, and so ventured to attack institutions.

'Galsworthy is in the same group, and disinfects his plays with righteous indignation; and after all one can't write supremely well with one's fists clenched.

'So taking it all in all we find that there is the great play, the good play and the amusing play. The amusing play may be a bad play—neither good nor great. The good play satisfies; it contains good ideas, is genuine and sincere.

'The great play is rare. It has stood the test of time. Its ideas and characters are so true and permanent that they are accepted and appreciated by succeeding generations. The consolation of the struggling playwright is that he will not be here when his plays receive—or fail to receive—this stamp of "Great Plays."'

CAN YOU TELL ME?

QUESTION: When was the last enumeration for representatives or readjustment of the Congressional districts made?

ANSWER: The present representation in Congress is based on the census of 1910, and the bill authorizing same was passed in 1911.

ǂ ǂ ǂ

QUESTION: In what part of the country is the unsurveyed Government land and how it is situated?

ANSWER: There are unsurveyed Government lands in Arizona, California, Colorado, Florida, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. The Government Printing Office, Washington, D. C., will furnish, on request, a pamphlet showing the counties in which this land lies.

ǂ ǂ ǂ

QUESTION: What is the Esch-Cummings Act? How does it affect the public and the railroads? How many Democrats and how many Republicans voted for it in the House and Senate?

ANSWER: The Esch-Cummings Law, otherwise known as the Transportation Act of 1920, was passed by the House of Representatives in November, 1919, and by the Senate in December, 1919. It was signed by President Wilson in February, 1920. A detailed explanation of this law is given in the *Congressional Directory of the 69th Congress*, first session, page 395. It is somewhat too long to give in this column. A copy of this directory should be available at your public library. One hundred and seventy-five Republicans and 28 Democrats voted for it in the House. Thirty-three Republicans and 13 Democrats voted for it in the Senate.

ǂ ǂ ǂ

QUESTION: What amount of money as shown by the Senate Investigating Committee has the Anti-Saloon League collected from the public?

ANSWER: Wayne B. Wheeler, General Counsel and Legislative Superintendent of the Anti-Saloon League of America, in his testimony before the Senate Investigating Committee on June 23, 1926, stated that the total amount that had been put into the fight for educational and all purposes during the 30 years the Anti-Saloon League had been fighting this issue was approximately $35,000,000.

ǂ ǂ ǂ

QUESTION: What is the actual value of the silver dollar, and is it redeemable in gold?

ANSWER: The metal in the silver dollar, at the present price of silver, is worth approximately 41 cents. This varies from day to day, with the price of silver. The Constitution of the United States does not prescribe what metals shall be coined or say that their legal value, after being coined, shall correspond with their intrinsic value. A dollar, while intrinsically worth only about 41 cents at the present time, must be accepted at its face value of one dollar. Silver dollars are not redeemable in gold.

QUESTION: What was the average protection provided by the Wilson tariff and the Underwood tariff? Give percentage.

ANSWER: Under the Wilson Law, dutiable goods paid a tariff of 41.58 per cent. The percentage of protection for all goods, free and dutiable, was 21.02 per cent. Under the Underwood Law, dutiable goods paid a tariff of 25.37 per cent. The percentage of protection for all goods, free and dutiable, was 7.77 per cent.

In this department we shall do our best to answer questions concerning Government and kindred matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

QUESTION: Is there a limit to the restriction of the right of a citizen to vote for presidential electors and other federal officers? In a state where a poll tax is exacted, can a man vote for federal officers holding a current receipt, but is delinquent for three years?

ANSWER: Citizenship does not confer the right of suffrage, essential qualifications for which are still within the power of states, except that sex, race, color, or previous condition of servitude shall not be a bar to citizens otherwise qualified. Technically, there is no federal office for which the citizen can vote. Presidential electors are state officers, elected to represent the state in the electoral college. They do not meet with those of other states even, but at their own capitols, where they vote and appoint a messenger to carry a certificate of the result to Washington.

ǂ ǂ ǂ

QUESTION: At the breaking out of the Civil War in 1861, how many commissioned officers appeared on the Army register? How many remained loyal to the Union? What number resigned, deserted or dropped from the rolls, or were dismissed and had taken up arms against the Union?

ANSWER: There were 1,074 commissioned officers in the Army at the outbreak of the Civil War. There are no official figures as to the number joining the Confederate army, through desertion or otherwise, but reliable historians give the figure as 286.

ǂ ǂ ǂ

QUESTION: How can I arrange to spend a year in a foreign country and yet retain my citizenship in the United States?

ANSWER: A naturalized citizen of the United States may reside two years in the country of his birth, or five years in any other foreign country, before it is presumed that he has lost his American citizenship. A native-born American may remain abroad indefinitely without loss of citizenship.

REAL COFFEE
Lets you Sleep!

Nerves aren't affected by this kind of coffee! It's real coffee—not a substitute—but the caffeine has been taken out. The real coffee taste unaltered; the quick, bracing qualities still there; only the harmful effects removed.

Drink all you want of this good coffee. Even late at night. For it can't keep you awake. It can't affect heart or kidneys, either.

I READ IN THE PAPERS

Congress will have many knotty problems to face when it reconvenes within the next few days. The present body will hold over until March 4, when the 70th Congress, chosen at the recent election, will come into office. Because the present Congress is more strongly Republican than the new one will be, several Administration measures are expected to be taken up as early as possible From reliable sources it is reported that the President will include in his annual message the following subjects:

Many Problems Await Congress

Action on taxes.

Fixing of a merchant marine policy.

Railroad legislation as to rates, consolidations, and the Gooding Bill.

Coal legislation to meet or offset the prospect of another stringency.

Banking legislation.

Regulatory legislation for the control of radio broadcasting.

Legislation looking to regulation of highway transportation in interstate commerce.

Disarmament.

Pending treaties, and our relations with foreign governments, particularly Mexico.

Cotton and agricultural relief.

Alien property.

With a surplus of more than $250,000,000 in revenue returns, the first spirited fight in Congress will probably center about the Administration's plan to give taxpayers a ten or twelve per cent rebate on the income taxes payable in 1926. The Democratic leaders have already signified their intention of offering a plan of their own.

Further interesting information about snakes is found in *Nature Magazine* in an article by Doris M. Cochran:

More Snakes and Snake Tales

'When pursued by an enemy, which in the case of the glass-snake is usually a large king snake or a small mammal, the lizard (for the glass-snake is a lizard, rather than a true snake) tries to slip away among the grass and hide among the débris. But as his enemy can travel much faster than the lizard himself, he is in danger of being caught except for a wise provision of Nature. When cornered too closely, the lizard can with a sudden twist cause his tail to snap completely off. The tail thrashes about and wriggles and quivers for a while with nervous twitchings, so that the enemy falls upon the tail, while the lizard itself glides off inconspicuously, and very shortly a new tail grows where the old one came off. But it never has the same color or shape as the other one. The original tail was quite long, and became fine and tapering toward the tip, and was colored like the body, a sort of metallic olive green with a bronze stripe down each side. The new tail is always shorter and stubbier, while the color difference is often quite striking, the regenerated tail being cream-colored or light brown, in sharp distinction to the typical darker coloring. The scales are also not as even as those on the original tail. This queer structure does look very much like a horn on the end of the tail, and it is no wonder that the hasty and fearful glances given to this reptile by our credulous ancestors made them invest it with all sorts of imaginary baleful properties. But the reproduced tail is no harder than the rest of the animal's body and could not possibly penetrate the tough bark of a vigorous tree, as the lovers of the marvelous would have us believe.

'If the body of a lizard is accidentally broken in two, the animal will die. The loss of a tail is seldom fatal to any reptile, and many other lizards besides the glass-snake have the same power of regenerating the tail. In fact, a very slight injury to the tail is sometimes enough to stimulate the production of a new tail at the point of injury, so that the old one gets well and the new part continues to grow until the tail presents a perfectly forked appearance.'

In most cases Americans are 'calm, cool and collected,' but in the matter of foreign debts it would be just as well to omit the last adjective.—Seattle *Daily Times*.

ɤ ɤ ɤ

Mickiewicz, greatest of Polish poets, spoke interestingly after this fashion:

Idols, Ancient and Modern

'Then the kings, having denied Christ, made new gods and idols, and exposed them to the sight of nations, and ordered men to fall down and worship and fight for them.

'And they made for the French an idol and called it *Political Preponderance*, and it was the same idol that the Assyrians adored under the name of *Baal*, and the Philistines under the name of *Dagon*, and the Romans under that of *Jupiter*.

'And for the English their King made an idol and they called it *Sovereignty of the Seas*, and it was the same god that was formerly called *Mammon*.

'And for the Germans they made an idol which they called *Well-Being*, the same that formerly had the names of *Moloch* and *Comus*.

'And the people adored their idols.

'And the King said to the French: "Be up and fight for *Honor*."

'And the people arose and combated for 500 years.

'And the King said to the English: "Get up and fight for *Mammon*." And they arose and combated for 500 years.

'And so the other nations, each for his idol.

'And in Europe idolatry flourished—and as the pagans had first adored different virtues under the forms of idols and afterward so adored different vices, and then men, and beasts, and finally trees, and stones, and figures, and geometry, so also did it happen in Europe.

'For the Italians created for themselves an idol, which they named *Political Equilibrium*. Now this was an idol which the ancient Pagans had never known; and the Italians were the first to invent its worship, and in combating for it they became weak and stupid, and fell into the hands of petty tyrants.

'Then the kings of Europe, seeing that this idol had exhausted the Italian nation, caused it to be brought into their states and propagated its worship, and ordered men to combat for it.

'After this the King of Prussia traced a circle and said, "Behold a new God"; and the circle was adored, and the worship was henceforth called *Arrondissement*.

'Then came three kings whose names were Blasphemy, who, seeing that the people were not sufficiently corrupted, raised on high a new idol, the most terrible of all; and that idol was called *Interest*. That idol was not known to the pagans of antiquity.

'However, all the people adored *Interest*, and the king said: "If we propagate the worship of this idol, it will happen that, as there is to-day between nation and nation, so will there happen then war between town and town, between man and man."'

One good thing is that the Filipinos don't seem to have any Rudyard Kipling to write a poem about us.—*Ohio State Journal*.

ɤ ɤ ɤ

The large red six-seater car in which the Archduke Ferdinand of Austria and his wife were assassinated at Sarajevo in 1914, and which was regarded by the peasantry as bewitched, has been completely destroyed. It justified its evil reputation to the end, and in its final adventure four persons lost their lives.

Death Car Is at Last Destroyed

A Transylvanian garage proprietor who deals in used cars had recently bought it at a bargain price and was taking six friends to a wedding in it when it collided with another car which it was attempting to pass at top speed. The red car was smashed beyond redemption.

During the World War the ill-fated car was kept in a Vienna museum and it would have been well if it had been allowed to remain there. But when peace was declared it passed into the hands of the Jugo-Slav governor of Bosnia and Herzegovina. He had so many accidents with it that he sold it. Its next owner was found dead in a ditch with the car on top of him. It then came into the possession of the garage man who has now lost the car and his life at the same time. He was unable to find anyone ready to take the risk of owning it, so he had to use it himself.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses the axiom that the only real incentive to action is to help one another.

ɾ ɾ ɾ

William E. Borah has been called 'The Senator Nobody Knows.' He is the enigma of Washington, a politician who will not play politics. Yet in spite of the misunderstanding concerning him, he wields tremendous influence. He is better known in Europe, probably, than any other American except the President. His speeches are always given prominence in the European newspapers because the editors realize that they are not only the pronouncements of the powerful Chairman of the Senate Committee on Foreign Relations, but that they represent the views of a great body of American citizens.

In this issue Senator Borah writes forcefully about the dominant note of America's strange new diplomacy —*reservations*. He does not mince words, nor does he spare the feelings of his fellow Senators. He tells why the so-called reservations fail to protect the interests of the United States. He tells why he led the fight against American adherence to the World Court. With Congress about to reconvene and with the World Court one of the matters to come up for consideration, Senator Borah's article is of vital importance.

ɾ ɾ ɾ

Vigorous complaint comes from two DEARBORN INDEPENDENT readers who object to the magazine for various reasons. Incidentally, the story mentioned in the second letter ['Barefoot Dave'] has been reprinted in several publications:

Detroit, Michigan.

I do not care to have your magazine. Please discontinue sending them to us for they are absolutely worthless and unfair and show only narrow-mindedness behind it. I feel it is a disgrace to keep it in my office.

A. KOSOGLED.

Mentone, California.

Why use a couple of pages of your splendid magazine to tell us of some barefooted hermit, who never benefited humanity in the least, and neglect to tell us of some father or mother who has reared a family of a half-dozen or a dozen fine boys and girls. I fear you have the same old newspaper complex. Why, please?

S. M. LEWIS.

From Florida comes a latter-day critic to challenge an editorial on jazz:

Apalachicola, Florida.

What manner of logical reasoning do you use in your editorial on jazz when you say: 'The strangest of all arguments in favor of jazz is that of its widespread popularity.' Could one not say that the strangest of all arguments in favor of the Bible is its widespread popularity, if we are to believe the records of its publishers?

Compare the Bible and jazz. Both are necessary and vital components of a national life as it exists today, or as it has always existed. There has always been a Bible of some sort; there has always been jazz of some sort. Recognize the need of an outlet for the stored-up emotions of a people, emotions that Dr. Freud, of Vienna, could speak of with more authority if not actual knowledge than I, and you will see the function of jazz.

Jazz is excitement, it is true. So are most of the emotions, from religion on up the scale. And none of us desire the permanency of any kind of emotional excitement. Why say, then, 'the very mushroom growth of jazz is enough to predict its own ephemerality?' For certainly you are speaking of what jazz symbolizes and not the changing garment it wears at the present time. For only seven or eight years ago you heard the jazz-time rag called 'Alexander's Rag-Time Band,' and thought it the very latest of syncopations. But today you have Gershwin's 'Rhapsody in Blue,' a jazz work if ever there was one.

It has been but twenty-one years since I joined the insensate march of time, and only the last three or four short years have I been able to even dream of seeking some sort of explanation to life through music, although the only instrument I play at all is the humble harmonica. But your editorial on jazz leads me to believe that you are infinitely more able to write discerningly on the Dawes plan and the 'new diplomacy' than on the permanence or ephemerality of folk music.

Would you accuse me of new-fangled thought were I to say that it is my belief that jazz is the horns we toot around the Jericho-walls of smugosity and stupid seriousness?

J. S. DURHAM.
The Apalachicola *Times*.

Through inadvertence an injustice was done the great state of Missouri in a recent article. That injustice is herewith acknowledged and an apology entered:

Malden, Missouri.

In the article by Samuel Crowther, entitled 'Painless Taxation the Refuge of Quack Politicians,' occurs an inaccuracy which I am sure was inadvertent, but which does an injustice to Missouri. See page 20: 'Hundreds of farms in Missouri have been sold for tax liens—*the farms were confiscated to build roads.*'

On the contrary, not a single farm in Missouri has been confiscated to build roads. Conditions are bad enough with us, and it is true that hundreds of farms have been sold on account of default in payment of loans thereon, but the confiscatory process on account of building roads has been in our neighboring state of *A-r-k-a-n-s-a-s*. In that state road building has been more or less of a local process, financed by the issuance of county or community bonds, and, in many instances, farms were lost.

In Missouri we have constructed our highways under state supervision, from a state bond issue of $60,000,000, no part of which has been derived from taxation. The revenue from automobile license and gasoline tax has been amply sufficient to carry on the work, pay interest and provide sinking funds.

CASPER M. EDWARDS.

Bayside, L. I.

Let me thank you for your letter. I am sorry I made the slip and said Missouri when I meant Arkansas, and I am asking the editors to see what they can do about making a correction.

SAMUEL CROWTHER.

The Yule Fire of Christ

MARGUERITE WILKINSON.

This Fire is all the wonder of the sun
And the cool moon, the unbelievable glow
Of many a star my eyes can never know,
And every tissue of beauty fitly spun
To color of grass and flowers. This Fire has done
Dear marvelous miracles with light on snow
And in the eyes of friends. Where lovers go
Guarding one love, this Fire has made them one.

And even in me, in me this Fire must burn
Too warm for hiding and too bright for rest,
And tremulous with a longing hardly stilled.
O passionate wings of light, you lift and turn
And beat within the prison of the breast
Until with Heaven itself the heart is filled.

The AFFAIR at the INN

As Seen by Philo the Innkeeper, and by the Taxgatherer of Rome

By CHARLES J. FINGER

Illustrated by PAUL HONORE

PHILO the innkeeper was in an overwrought mood. He was worried, although his aspect was outwardly calm. He was snappish too. Yet he was a an worthy enough when things were ing well, and one not without light- ss and humor, and a measure of od nature was in his composition. ut the keeping of an inn is a trying siness at the best of times, the more when an unexpected press of people mes, and when demands are made thout thought and without courtesy, d when guests, because of the money ey pay, make of a host a safety valve r their own ill humors.

Not only the inn, but the town self was crowded; so much so that a laden camel, or an ass with its bales, or slaves with a palanquin could with difficulty pass down the narrow cobble-stone lanes which were streets. Even the wide place where the fountain was, where Philo loved to sit, half dreaming of an afternoon, while he dabbled his fingers in the water and watched the pigeons—even that place was noisy, what with Phoenicians and Syrians, with Arabs and Byzantines and Greeks, many of them with trade affairs to push.

So the innkeeper pondered on the folly of Quirinius, the Roman consul, and cursed his mad freak by which he sought to number the people, commanding that each should go to his own town where he had been born. For that folly had made for all the press of brown and hard-looking men from the desert; of whining beggars, often blind and diseased, who showed their sores for alms; of women famine-wasted because of Jewish usury; and other women with bold eyes and glossy hair hung with gold coins, who looked from court-yard windows. There were some who had opened packs and set things out for sale; others loud and fierce who bullied and threatened; others again who threw dice, playing for stakes. There were fellows with their ears

The rich man had ridden into the courtyard ahead of his train.

clipped and their noses slit, or with an eye thrust out, or with hands from which fingers had been lopped for thievery, Roman law being swift and sharp. Aged men and old crones, and shepherd lads with shapely limbs were there, also children who danced with joy because all was new, and because life was flowing full and free. And there were water carriers with their bulging goat-skins; and men from the mountains, from Carmel and Shechem and the hills of Gilboa, and from the high plains of Peraea; and from Tabor and Endor and Shunem. These made much of their shaggy horses, looking to their comfort as if they had been children. Sometimes slaves carrying a palanquin passed, when lesser folk, to avoid a beating for being in the way, squeezed themselves up steps, or into doorways, or under the arches of houses.

SO PHILO the innkeeper was in an overwrought mood, the more because his house and the courtyard were so crowded that what had commenced as triumph because of business was turned into something very much like colossal failure because of great revenues turned away. Therefore, in his dull way, he thought of the misery and futility of existence.

His inn had been filled before the rich man came; that rich man who was a dignified someone, who had something to do with Rome, and who talked so provokingly and masterfully and overbearingly. Philo knew, as soon as he clapped eyes on him, that there would be active collisions and unpleasant scenes. He knew him to be one who would regard other men as base vessels to be shattered, if he regarded them at all. For those who acted for Augustus were hard in their pride of place at all times and in all places, cutting across men's speech when they told of sickness or sorrow or age, taking for Rome the widow's goat and the herder's last penny, talking all the while of laws and activities and forces not understood by simpler men. And sometimes they hinted at terrifying things which might take place, of fierce and strong powers to be loosed among the people, of the slaying of infants, besides other fearful things which would affect the lives and the happiness of a thousand households. And when those who were the mouthpieces of Augustus spoke thus and so, threatening and browbeating, then the high priests took it upon themselves to become the mouthpieces of the mouthpieces, threatening still further those who were threatened.

THE rich man had ridden into the inn-yard ahead of his train, his steward with him, their horses fine with silk and silver. Then came camels, one especially bright dressed in barbaric and confused gorgeousness and led by a black glossy negro in a cloak of gaudy colors, for it carried the rich man's infant son.

WHEN Philo spoke of his crowded inn the lord seemed amused, and, with a couple of words and a lofty gesture, as though sweeping away difficulties, lightly turned the matter over to his hawk-eyed and hawk-nosed steward. Then he dismounted and walked to a stone seat in the narrow garden ground, for the day was warm although it was winter, and a pleasant breeze was in that place. Two women who had been seated there moved away. So the rich man was all dignity and preëminence, watching the people being ordered out of the inn to make room for him much as he might have watched the passing of a muddy stream.

For in the manner of those days, his steward was active and boisterously coarse, thundering and vituperating, ordering men and horses and asses away so that there might be ample space for the stalling of the camels and their unlading, his master being a taxgatherer with riches in his charge, to whom great wealth belonged because of his office. Therefore even the harried and robbed people spoke in hushed voices of his dignity and influence, saying that he stood for Rome and the rulers, doing what he did for Caesar in the interests of the empire. But none dared oppose, even with a word.

Now when some of the rich men's camels were unladen and while the most precious of the goods were being carried into the inn, some of those who were looking on crowded close, elbowing and pushing, finding it good to be there and to see the wonders and rare things, they being from the uplands and people whose affairs were simple. Whereupon the steward gave a word of command to some of the slaves, and they fell to laying about them with their whips, slashing those slow in moving. That was to clear a way for the passage of bearers with the cradle of gold and ivory in which slept the rich man's infant son.

ONE about whose shoulders the lash fell was a shepherd youth, brown-eyed and firm-lipped, straight and tall, Johannes by name. Swiftly he swung round, his nostrils dilated and his eyes ablaze like points of fire. But never a foot did he budge, not being in the path of the slaves who bore the cradle.

'Make way, beggar!' cried the steward. 'You stand there like a dreamer, or a fool, when you should be on your knees to your betters.' He lifted a hand to threaten or strike as he spoke.

Then Philo interfered, for he was close by, having been walking by the side of the cradle as testimony to the rich man's wealth and influence. 'Nay, nay,' he said to the steward. 'Strike him not. It is enough. There's no harm in Johannes.' He said the rest half whispering and with his curved hand at his mouth. 'The lad may be half mad, we think. He is one of those who takes the prophets seriously, babbling of the Messiah. Not more than two days ago he came from Jerusalem where he had been listening to Anna, the daughter of Phanuel, and she, it is said, is not in her right mind.'

'NO harm indeed,' said the steward with a furious visage, and loudly, with an eye on his master who sat as if seeing a dull show. He added, 'Get thee gone and dream of Messiahs out in the desert. Or be off and away with those we saw on the hills a little while ago, shepherding sheep. This is no place for dreamers and Messiahs are not likely to be here in a common inn.'

Suddenly the steward clipped his own speech, for the lad Johannes moved a step toward him instead of away as bidden, and the youth overtopped the man by many inches.

'It is no matter to me where I stand,' said the shepherd lad. 'But I dream no dreams. Or if you choose to hold me as a dreamer, then I tell you that this day may be the end of my dreaming, and from now on the world shall not be the same.'

AT THAT out shot Johannes' hand, taking the steward by the shoulder and gripping him like steel. And when the man tried to free himself and lifted his hand, the lad deftly caught him by the wrist and held him, bearded man and stout built though he was. Yet the youth spoke softly, saying: 'Lord indeed! One who sells honor for gold! One who grinds the faces of the poor because they are poor! Know that a man's greatness comes not from his possessions, but rather lies in how he sets his face against the wrongful doings of men. Know that a man is nothing except as he does and dares for the right. Also know that your law of mastery shall soon be set aside for the law of love. Know also that the master of your master, even the master of your master's master, and a king of kings, shall soon come. Know that long before the one that you serve pays his debts to Caesar, men wiser than the wisest you know shall stand before your master's master, shall do homage to the lowliest who shall yet be the greatest. Even Gaspar, and Melchior and Balthasar shall come bearing gifts not to your lord but to mine. Go, tell all that to your master! Say too that a new law, the law of the love of men, the law of good fellowship and of fair dealing, shall fill the minds of men.'

Johannes, having ended, stood with

rk eyes fixed on space, strangely stracted as though he saw a vision. nd the onlookers wondered at him cause of the splendor of courage. s for the steward, being loosed he oked at the youth a little while, ondering at his daring and the speech had made; then turned away, not oudly as was his habit, but somewhat the manner of one beaten, or sudnly grown old. For never before in s life had he been ordered, except by s master; while the laying of a master- hand upon him was a thing altother new. Yet that day he had been led and chidden by a nobody, while her nobodies looked on, and s authority in a moment had come like a hill of sliding nd. So the flame of pride in s heart went low because meone had stood out against s insolence.

Like a broken man he went to the house, following the aves who carried the cradle; ien fell to ordering the servits to make a large room ch and wonderful with carets and hangings and ornaents of gold and silver, but e commanded in a spiritless anner. And as he watched ie work going on, it came to m to wonder how a meek lad ad been suddenly exalted hile he was thrust down; also wonder at the daring of the outh, then at the narrowness life because this Johannes ight have killed him had he chosen. Then his mind ran n to dwell upon the short pace of time given to man, nd how a life was bounded by ystery and darkness. So he emembered his own loneliness, nd how he was friendless, none aving spoken a word in his efense. Fawners and flatterers e knew, but not friends; herefore he was sad at heart, nd ill-content with things, and ith the way his life had gone.

In the evening time, though ie wind had grown chill, the teward went outside, for he ould not rest within the house. Vrapped in his Persian cloak f silk he paced the courtyard. thers were there, a dozen or iore of men and women, some f those who had been turned ut of the inn to make room or the rich man's train, makng shift to pass the night as ell as they could. Some of iem sat silent about a little re. Some huddled on benches. nd as the steward walked up and down, a lonely man full of heavy thought and hungering for companionship, he heard the sound of hoofs in the street and at the noise a little warmth came into his heart. For, he thought, with the newcomer, whoever he might be, there was the shadow of companionship, if only for a moment. But that spark of hope died almost immediately, for the sound resolved itself into a dainty and rapid clattering which was not horse hoofs, whereas those of his own sort and rank rode horses.

The woman gave a lamentable cry, at which the man whipped round and ran to her.

Soon there appeared out of the light mist a man with a damsel, he leading, she riding an ass. The steward made out a tall man clad in a long, dark-brown robe; the woman white-skinned and dark-haired, neatly dressed in spun lamb's wool, but without adornment such as women love to wear. The man led the ass to the middle of the yard, then advanced to the house and struck his hand on the door post, calling softly.

At the alarm, an upper window was opened, and Philo thrust out his head crying: 'If ye seek lodging, ye must go elsewhere'; then fell to grumbling and calling upon the gods to witness how he was pestered.

The steward was not so far off but that he could see the woman weeping softly. And when the man started to lead the ass away out of the courtyard, suddenly there was a kind of anger in the steward's heart, an anger against Philo for his roughness, an anger against his master the tax-gatherer for his selfishness and greed, an anger against himself because he was what he was. Somehow he remembered his own youth when he was full of the joy of life, a boy eager for companionship, one offering and receiving friendship. Like fleeting ghosts, memories thronged on him, as how in time of need and stress such a one had done this and such another that. Old voices, looks and deeds, came back in sudden glimpses; a dash of sorrow dismissed by a good-natured parent; a shadow dispelled by a youthful friend; an indignity softened by a brother; some good-natured tolerance at a thoughtless deed. So he was angered that one should cast the shadow of grief upon others, the while he stood like an image, giving no light of fellowship. Also those words spoken by the lad Johannes rang strangely through his mind: 'Know that a man's greatness comes not from his possessions, but rather how he sets his face against the wrongful doings of men.' Yet all the while something whispered that the matter was none of his affair and that he would do well to let things go as they would without his meddling. So the steward stood, wishful to do, but not daring.

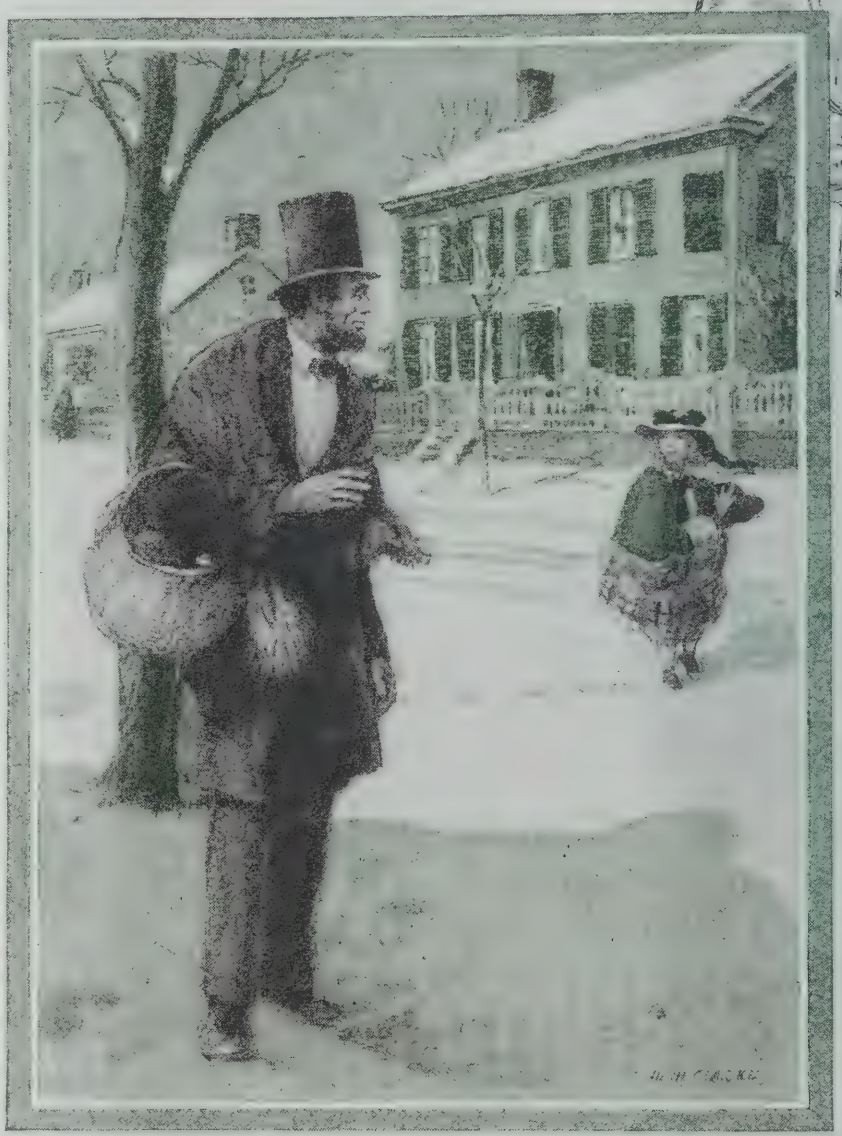
The Little LINCOLN GIRL *That Never Came*

A Christmas Story

By WILLIAM E. BARTON

Illustrated by W. W. CLARKE

Mr. Lincoln would toss Emily almost to the ceiling, with a great loud laugh, 'Up you go, Little Sister!'



Lincoln often passed boys without noticing. He did not often so pass a little girl.

I REGRET the necessity of saying I have no daughter. I have three sons, one seventeen, one nine, and one seven years of age. These, with their mother, constitute my whole family.'

So wrote Abraham Lincoln to a little girl. His regret that he had no daughter, expressed in such a letter, has not been regarded as a matter of large significance; but that regret was sincere, and Lincoln's feeling of deprivation was far greater than the little girl imagined.

The letter was dated Springfield, Illinois, October 19, 1860, and was a prompt reply to her letter under date of October 15.

She wrote to him from a little town in Western New York, telling him she had seen his portrait on a campaign broadside, and she thought he would look better if he wore whiskers. She added that, if he would wear a beard, she would endeavor to induce her two big brothers, who were Democrats, to vote for him. She also suggested that if he had not time to write to her in answer to her letter, he might ask his little girl to do it instead.

Abraham Lincoln was just then receiving large numbers of letters, and he had had to employ a secretary and an assistant secretary to take care of them, but he answered little Grace Bedell in his own handwriting. She has the letter still that President Lincoln sent to her telling her he was sorry he had no daughter.

Perhaps some Presidential candidates, responding to such a letter, would have forgotten all about it; but Abraham Lincoln did not.

First of all, he began to let his beard grow. Almost from the very day of her letter he decided that he would wear a beard. He would have done so if he had had a little daughter and she had asked him to do so; and he did it at this little girl's request. Perhaps that is as strange a story as can truthfully be related of any President or Presidential candidate in the history of the United States: that he consented to so radical a change in his personal appearance at the suggestion of a little girl.

Beards were not yet fashionable. The people of the United States were unfamiliar with the features of a bearded President. And the face of Abraham Lincoln had only just become familiar to them. All the portraits that he had had taken in Springfield and Chicago had been beardless; and the Brady photograph, made in New York when Lincoln had gone there to deliver his Cooper Union address, had come to be recognized throughout the country.

So far as is known, no senator or governor or prospective Cabinet member told Mr. Lincoln that he ought to wear a beard, but he gave the matter serious consideration when a little girl wrote and suggested it. Before he left Springfield he was twice photographed with a beard. In one of these pictures the black whiskers were just sprouting; the other, the McNulty photograph, is now one of the most highly prized and valuable, and is the one used for the engraving of

Mrs. Lincoln asked the little maiden to visit her often, because she was lonely, having no little girl of her own.

Lincoln's face on the ten-dollar bill.

That might have been the end of the matter, but it was not. When the Presidential train was on its way to Washington, it stopped at a small station in Western New York, and the President-elect made a short address. Then he said, 'I have a correspondent in this place, and if she is present, I would like to see her.' No one came forward in response to this invitation. People began to call back to him, 'Who is it? Give us her name.' He replied, 'Her name is Grace Bedell.'

Then they took the little girl to the platform, half leading her and half carrying her, until she stood beside the tall man. As she was coming, Mr. Lincoln said, 'She wrote me that she thought I would be better looking if I wore whiskers.'

As she reached the platform he looked down and said, 'You see, I let these whiskers grow for you, Grace.'

Then, in the presence of that great crowd, and with all the newspaper reporters looking on and telling about it over the wires, he kissed her.

Mr. Lincoln was not unhappy with his boys; quite the reverse. He loved them and was proud of them, and he indulged them in their pranks when perhaps he should have punished them.

Mr. and Mrs. Lincoln were glad their first child born August 1, 1843, was a boy, and Mrs. Lincoln named him Robert for her own father. They were not sorry that the second, born three years later, was a boy; and he was named for one of Mr. Lincoln's friends and rivals, Edward Baker.

A third boy was welcome, for Eddie died in February, 1850, and Willie arrived just before Christmas to take his place.

He inspected the dolls and tried to think of some excuse for buying one of them.

But Thomas, or 'Tad,' born April 4, 1853, would have been quite as welcome if he had been a girl.

There was that in Tad which called forth some of the affection that might have belonged to a daughter. He was not a rugged boy, and he had a serious impediment in his speech that made him seem more childish and less masculine than he might otherwise have appeared.

No other baby was born to the Lincolns. There were never more than three boys at any one time, for Eddie died before either Willie or Tad was born. The parents never recovered from the sorrow of his death nor that of Willie. They sorrowed that they had only three boys and not four. They sorrowed that Tad was not likely ever to be robust. And they sorrowed because they had no daughter. They did not say much about it. They were glad for the boys, and did not want to exchange them for any other children that they knew.

Lincoln was an absent-minded man, and he often passed boys without noticing them till they called, 'Good morning, Mr. Lincoln.' Then he always turned and spoke to them. He liked children; he noticed children. They liked him. But he sometimes walked to market, wearing his high hat and his gray shawl, having a market basket in the crook of his right arm, and holding Tad or Willie by the left hand, and walked along as though he had forgotten both the basket and the boy. He did not so often pass a little girl.

In those days they called little girls 'Sis.' Some little girls never outgrew it, and were called 'Sis' as long as they lived. Mr. Lincoln called them 'Little Sister.'

Mrs. Lincoln's mother died and her father married again, and had a large family by the second wife. Her younger half sisters were almost like daughters to her when she went, a young matron, to visit her old home in Lexington. Then Mr. Lincoln would catch up the youngest of the sisters, Emily, and toss her almost to the ceiling, which was not very far above his own head, and laugh, a great loud laugh, and say, 'Up you go, Little Sister!' It was terrifying, but enjoyable.

There were little girls in Springfield whose faces he knew, and whose parents he knew, but whose names he did not attempt to (Continued on page 30)

Would You Have It CHRISTMAS? *Or Just—*

The Twenty-Fifth *of* December?

Illustrated by L. PERN BIRD

By THE COUNTRY SQUIRE

For weeks before the day, my friend and his family prepare for it smoothly.

THE other day I met an eminent rationalist who carries his strange belief so far that he has abolished the word Christmas from his vocabulary. He said: 'Come and see us on the twenty-fifth. We have none of that pagan nonsense at our home. The minds of my children have been built on principles conducive and incentive to higher things.' He looked at me quizzically, his head on one side very knowingly, his eyes great and staring as an owl's because of his glasses, a striking figure of a man conscious of his own superiority and determined to impose his beliefs upon all the world.

Now it is not easy to reject a man's hospitality, but, happily, I suddenly recalled a sketchy sort of invitation, made on the spur of the moment and very casually, by a friend, on New Year's Day before last. So I became full of irrevocable decision.

The rationalist accepted my refusal with calmness—he is always cold and calm—then went on talking about the silliness of Christmas, assuring me that it was man's bounden duty to reject impossible fables; telling me that Shaw had said that the festival was invented by poultry dealers; advising me that Christmas was a feast growing out of sun worship; giving it as his opinion that men of proper understanding frowned upon the day, and all that kind of thing.

And when I asked him whether he proposed also to abolish Yom Kippur, and the Day of Ramadan, and St. Patrick's Day, and the feast of K'ung Fu-tze, he disregarded my question in his earnestness, and told me that there was a body of printed matter which he had read with profit, which went to show that Christmas was kept only by the superstitious and the unenlightened, or by the thoughtless and the ignorant; then added that no man of brain would render himself ridiculous by observing it.

* * *

Now my other friend, he who gave me the sketchy invitation to which I have referred, is no rationalist at all. I know that he reads fairy tales aloud to his children, never tries to crush or confound anyone who believes otherwise than he does, is always ready to be interested and amused, and would celebrate the accession of King Brian Boru as readily as he would celebrate Labor Day. And he knows all about the fashionable movements in art and literature and music. He can talk about the phenomena of sensation and thought, or about the lateral movement of an infinity of matter and the whirling of atoms as energetically as any rationalist on earth. He knows a great deal about the production of wealth and its regulation by society in the common interests of all of its members.

I have heard him argue about Nietzsche and the *Götterdämmerung* and the *Menschliches allzu Menschliches* whatever they are. And he knows all about the Malthusians, and Karl Marx, and Stirner, and the Iconoclasts. So you could hardly call him mentally stagnant. Yet with all that, and while he has as many absorbing businesses as other men, he makes it a point to celebrate Christmas in the old-fashioned way.

For weeks before the day, he and his family prepare for it smoothly, unfalteringly. There are coördinated efforts about things; the tree, the gifts, the visitors, the evening, the blazing plum-pudding, the decorations. There are subterfuges in getting gifts into the house and hiding them, until the home becomes a place of mystery. There are outbursts of indignation against hospitable acquaintances who send invitations to the family to dine out. Or if you choose to put it so, there is a monstrous sentimentality from father down to colored man. And so much do they enjoy it all, that instead of limiting their Christmas, they have extended it from the first day of December until the last day of the year, when it is merged in the festival of New Year's Day.

What they really do, though unconsciously and from habit, is to focus into a single glowing point all possible

joyfulness and energy and unselfishness and good humor. So, for a season, they forget the complexity and intricacy of life. Therefore their daily familiar life for at least one month in the year is not, nor could be, a labyrinth of separating walls.

To tell the whole truth, they are so far gone in old-fashionedness that they actually indulge in carol singing on Christmas Eve, and, while they did it alone at first, now neighbors join in, singing *Good King Wenceslas Looked Out*, and all that, very heartily, if sometimes not as tunefully as might be desired. And they drag in a Yule log. And they set up a giant tree which they load with glittering toys. And they usually invite more guests than their table will easily accommodate, full of an unerring confidence that all will go well as long as hospitality is the important spirit. For they are seriously determined to live life on their own terms; they are glad to be together; they are eager to play a high-hearted game.

So I went to them.

* * *

THEY gave me the guest room, in a stone-built house. It stands apart from the other house. There was a fireplace and a merry log fire, the walls were hung with holly and cedar and mistletoe, and it was as snug a place as man could desire. There were all the things a man wants: magazines, books, writing paper, pens and ink. A kitten was on the rug, blinking wise as kittens always are. And I did, actually, stay in the guest house on Christmas morning for one hour and a half. But no longer. For up came the girls, three of them, ruddy-cheeked and smiling like springtime, to take me to the house. 'No one should be alone on Christmas,' they said. 'It's silly. And everyone must be jolly!'

* * *

And the house! It was a radiant scheme of red and green. There were festoons and lanterns and garlands and bells. It was a house of mirth. It was a riot of things—of unheeded radio and victrola music, children's laughter, talking, the noise of toys; of ruddy firelight, a tree a-glitter with gold and blue and flashing scarlet, of heaped presents, of gorgeous books. There seemed to be people everywhere—guests, visitors and neighbors talking and exchanging salutations—young people in the passage, in the rooms, on the porch; children coming and going, very bright-eyed and eager.

A SMALL boy, still in his pajamas, went about perilously on new roller skates. Another described an erratic orbit about the tree, on a scooter. Two lads on the porch were boxing. Another lad switched on and off a group of little electric lights hidden in the tree, to a chorus of 'Ohs!' and 'Ahs!' A dog, keenly observant and sympathetically interested as only dogs can be, was enjoying it all tremendously. From another room came the crashing sound of piano music, as someone very unabashed tried a new piece of music, gallantly regardless of technique, and very fast and very loud.

I think my rationalist would have been severe, seeing all that disorder and expense and folly.

* * *

Nor would the evening have struck him as a step nearer to that cold wisdom he yearned to see in men. For there were foolish guessing games, and noisy laughter at nothings, and the bangings of paper crackers and the wearing of paper caps, and games of musical chairs, and singing. For frankly and unaffectedly they were having a good time, young and old. They were letting their light shine out. And not one was ill-at-ease or self-conscious. And there was natural talk and merriment a-plenty. Then, when they came to the fancy-dress dance, doing Sir Roger de Coverley in novel and unexpected costumes contrived from curtains and scarfs and paper, with gay brisk music, it was all mirth and movement and color. It was life flashing full and free. But it was very un-rational.

* * *

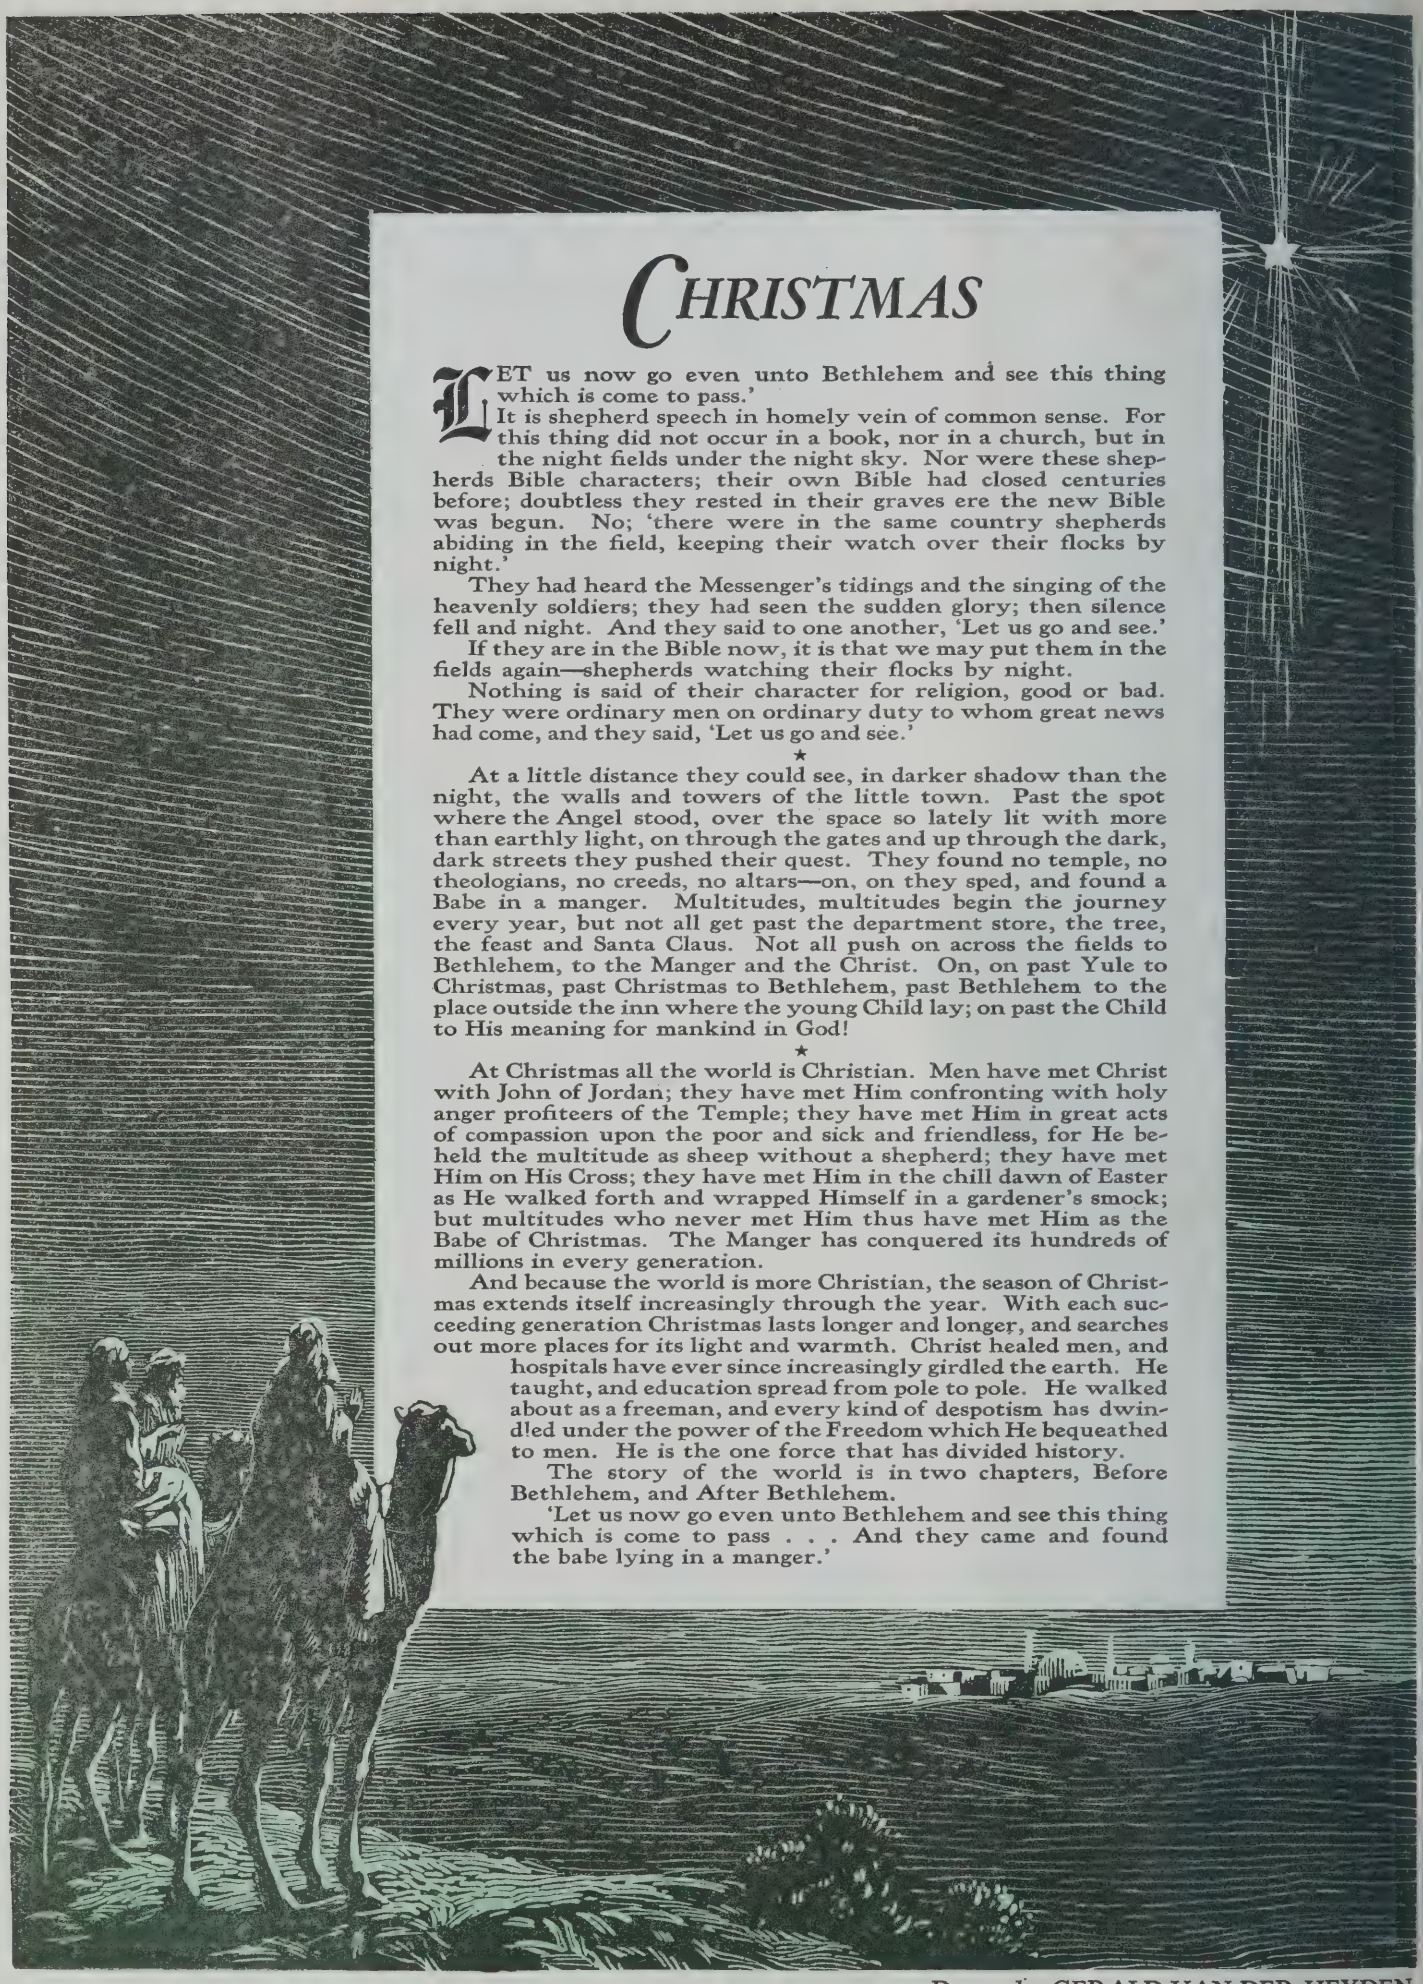
Mind you, all this is true.

I add a word or two by way of postscript. I met my rational friend a little later, and, knowing that the word Christmas annoyed him, asked him how he had spent the twenty-fifth. He made reply, saying: 'Quietly, very quietly, and sanely. None of your pagan nonsense for me. I cleaned up a little work in the morning, and in the evening we took in a picture show. But such days are interruptions to an orderly life.' Then he went on to tell what he had said before, how children should be trained in the understanding.

Somehow it struck me that without a Merry Christmas his children's chances for a Happy New Year were slim. Besides, I thought, why stun a child's brain with the club of disbelief?

Or a man's brain either, for that matter.

And the house! It was a radiant scheme of red and green. There were festoons and lanterns and garlands and bells. It was a house of mirth—a riot of things.



CHRISTMAS

LET us now go even unto Bethlehem and see this thing which is come to pass.'

It is shepherd speech in homely vein of common sense. For this thing did not occur in a book, nor in a church, but in the night fields under the night sky. Nor were these shepherds Bible characters; their own Bible had closed centuries before; doubtless they rested in their graves ere the new Bible was begun. No; 'there were in the same country shepherds abiding in the field, keeping their watch over their flocks by night.'

They had heard the Messenger's tidings and the singing of the heavenly soldiers; they had seen the sudden glory; then silence fell and night. And they said to one another, 'Let us go and see.'

If they are in the Bible now, it is that we may put them in the fields again—shepherds watching their flocks by night.

Nothing is said of their character for religion, good or bad. They were ordinary men on ordinary duty to whom great news had come, and they said, 'Let us go and see.'

★

At a little distance they could see, in darker shadow than the night, the walls and towers of the little town. Past the spot where the Angel stood, over the space so lately lit with more than earthly light, on through the gates and up through the dark, dark streets they pushed their quest. They found no temple, no theologians, no creeds, no altars—on, on they sped, and found a Babe in a manger. Multitudes, multitudes begin the journey every year, but not all get past the department store, the tree, the feast and Santa Claus. Not all push on across the fields to Bethlehem, to the Manger and the Christ. On, on past Yule to Christmas, past Christmas to Bethlehem, past Bethlehem to the place outside the inn where the young Child lay; on past the Child to His meaning for mankind in God!

★

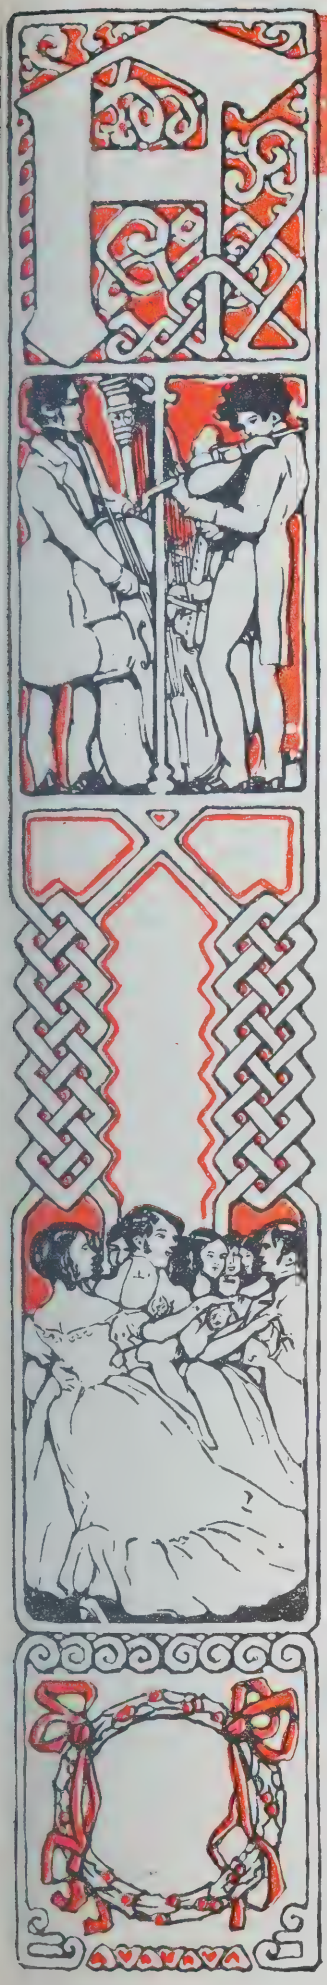
At Christmas all the world is Christian. Men have met Christ with John of Jordan; they have met Him confronting with holy anger profiteers of the Temple; they have met Him in great acts of compassion upon the poor and sick and friendless, for He beheld the multitude as sheep without a shepherd; they have met Him on His Cross; they have met Him in the chill dawn of Easter as He walked forth and wrapped Himself in a gardener's smock; but multitudes who never met Him thus have met Him as the Babe of Christmas. The Manger has conquered its hundreds of millions in every generation.

And because the world is more Christian, the season of Christmas extends itself increasingly through the year. With each succeeding generation Christmas lasts longer and longer, and searches out more places for its light and warmth. Christ healed men, and hospitals have ever since increasingly girdled the earth. He taught, and education spread from pole to pole. He walked about as a freeman, and every kind of despotism has dwindled under the power of the Freedom which He bequeathed to men. He is the one force that has divided history.

The story of the world is in two chapters, Before Bethlehem, and After Bethlehem.

'Let us now go even unto Bethlehem and see this thing which is come to pass . . . And they came and found the babe lying in a manger.'

Drawn by GERALD VAN DER HEYDEN



Mr. Ford's Page

SO MUCH has been said about good will that many honest minds have become suspicious of it. It serves very well as a Christmas sentiment, and it ornaments the oratory of statesmen who do not mean what they say. But what it is, and what its instruments are, is seldom asked.

To some minds, good will means a placid attitude which makes it easier to slip something over on you, as the saying goes. An ice-cream-social atmosphere, so to speak; an innocuous pink-tea flabbiness of fiber. It means being a good fellow and letting human parasites ride on your back, and human sponges live off your substance. Such good will means true goodness off its guard, to give shrewd evil a better chance.

Good will is nothing like that. It is to *will* the *good*, and there is nothing flabby about the exercise of *will* in any matter, there is nothing flabby about the *good*. If you think so, consider the endless centuries of struggle which have been necessary to gain the simplest of our common-sense positions of progress and justice.

At Christmas, good will is linked up with peace; 'Peace on Earth to Men of Good Will.' When this was first said, the earth was smaller than it is now, that is, less known; men were fewer; good will was a scarcer quantity, and peace was but a fitful dream between the horrors of recurrent wars. The earth is now larger, more widely known; mankind has increased in numbers and intelligence; good will, we may say, is more generally recognized as less a sentiment than a working law of life; and peace is the universal quest.

But good will has never operated without its instruments. These instruments are very seldom speeches, or councils, or conferences. The greatest instruments of good will are those which engage the energies of men in such a manner as to shut off the blood supply of ill-will.

And the greatest of these has been Work.

A nation at work is the last nation to strain for war. Europe today is in danger of war from no other cause than the scarcity of work. Unemployment fills armies. Unemployment welcomes any break in the monotony of unproductiveness. Unemployment provides empty-mindedness which in turn furnishes the soil for all those misunderstandings and hatreds which find their outlet in violence.

And yet—(for whatever is good, is good on every side)—the industrial nation is today the best defended nation. The might of the United States is not in its armies, but in its industries. The military powers of the earth would hesitate longer to engage our industries against them, than any army. The workers of the world's industries do not seek war, but they are more than a match for the war-makers when need requires.

So this is just a suggestion that we consider Industry—the opportunity and the habit of work—among the chief instruments of good will in the world. Busy hands are seldom quarrelsome. The best unity obtainable is fellowship in a commanding task. It is always idle hands that brew the world's mischief.

The League of constructive endeavor in supplying the needs of the multitudes of the earth, the League of Work and steady jobs, the League of decent incomes and modern homes and a mounting standard of life, this is the true League of Peace and Good Will. If the League of Nations would tackle the job of bringing industry into Europe, war problems could wait; under the spell of industry they would dry up and blow away.

Editorials

The Simplicity of Christ

THERE was no wild clamor of bells, no great gathering of great notables, no acclaim from vast multitudes that night two thousand years ago in the little hamlet of a Roman province. Instead, the simple shepherds came, called from their tasks on the hills roundabout by a Voice they had never before heard, or never were to hear again. Hills, bathed in the glorious starlight of the East—that is the scene which rises before our eyes at Christmastime—hills, and white flocks grazing on their slopes, and a soft, fragrant breeze, and here and there the tinkle of a bell. And then the manger, lowly and humble, the abode of beasts of burden.

He was not welcomed by the world, but He brought welcome into the world. He was attacked and persecuted and put unto death, but He brought a message of peace and good cheer and forgiveness. His very simplicity was used by His enemies to ridicule Him, but this simplicity became in time the foundation stone of Christianity. And in this simplicity of Christ, which comes so close to the heart of man at Christmastime, lies the solution of all the grievous problems which vex mankind.

Editorial Flubdub

CORNER the editor of an average metropolitan newspaper and ask him why he devotes so much space to sensational crime and outcroppings of degeneracy and the chances are nine out of ten that he will answer, 'We print only what the public wants. Our readers demand such stories.' And he will supplement this statement by citing figures to show how many thousands his paper leaped in circulation during the height of this unsavory case, or that one. But the chances are that he will neglect to explain that the circulation dropped back to normal, or below, at the conclusion of the case. Nor will he expound at length on the desirability of a class of readers attracted to his newspaper solely by morbid interest in unsavory happenings, and who cease to buy his product when it can no longer satisfy their abnormal palates.

In a Texas city lives a young newsboy who may some day be a leader in a new school of editorship. He has at least the makings of a remarkable psychologist. The other day he tried vainly to dispose of his wares. He shouted the lures of the latest scandal, he waxed eloquent on the latest murder, he painted a livid picture of the latest 'love' case. But no one bought. The public, apparently, had wearied of its daily diet of dirt. Suddenly the boy had a flash of inspiration. He scanned the paper for something he could consider worth-while. Then: *'All about the big bargain sale.'*

Five minutes later his supply of papers had been exhausted.

Mote and Beam

AMERICA, one gathers from Rabindranath Tagore, is crass and materialistic and selfish. Moreover, Americans are too occupied with business; they have no time to live or to think.

The error into which the distinguished Hindu poet and philosopher slips is one common to most old-world critics. They compare this nation, not with the other countries of the earth, but with some utopia of their own imagining, some impossible land of perfection where their own ideals flower into magnificent blooming with utter disregard for realities. Thus, when Tagore condemns all Americans with a grand and sweeping gesture, he is thinking of them probably in terms of this utopia; surely not in comparison with his own countrymen.

Judged by the standards of the rest of the world Americans are not so backward. Few would class them as more selfish than the ordinary European, or contend that their mode of living is lower than that of the average Asiatic. But this charge of *materialism* will not down. It is a fetish with old-world critics, the one thing upon which they all agree.

And why should America not plead guilty? America *is* materialistic. It is this very materialism which has brought the nation to a plane of prosperity never before equaled. It is a materialism of initiative and invention. It is a materialism that embraces science and the arts as well as the more prosaic things, a materialism that insists upon education not alone for the few but for the many. It is a materialism that promotes the welfare of the nation. Under it the value of leisure is, for the first time, becoming known. Not a leisure devoted to solitary meditation upon abstract matters, possibly, but a leisure that extends the needs and therefore the prosperity of the race. It would be nonsense to claim that this American materialism is perfect. It is not, far from it. But it has played an important part in bringing this country to the highest development ever attained; and that is a phase the old-world critics seem to have overlooked.

Government by Bomb

PARTISANS of Nicola Sacco and Bartolomeo Vanzetti, under sentence of death for murder, are attempting to persuade Governor Fuller of Massachusetts to pardon them by the classic argument of the bomb. The highest courts of Massachusetts have declared that they were granted a fair trial. The presiding judge has declared likewise, and has refused to reopen the case. The accused men have enjoyed a stay of execution for five years while eminent attorneys have argued the case on every conceivable technicality in the hope of finding a flaw in the verdict. The defendants have been afforded every opportunity before the law to prove their innocence. And the law has adjudged them guilty.

But because Sacco and Vanzetti happen to be members of a revolutionary party a great hue and cry is raised in their behalf. Charges of 'persecution' fill the air. Demands for their freedom are made by radical organizations and newspapers throughout the land. Nor is this all. Bombs are exploded in front of United States embassies the world over. American diplomats are menaced. The homes of witnesses who testified against Sacco and Vanzetti are blown to atoms. The judge and jury who tried them are victims of retaliatory acts. Governor Fuller, visiting in Paris, is threatened with death unless he accedes to the demands. Substitution of the bomb for ordered law is a dangerous experiment.

Straw-Balloting the Bible

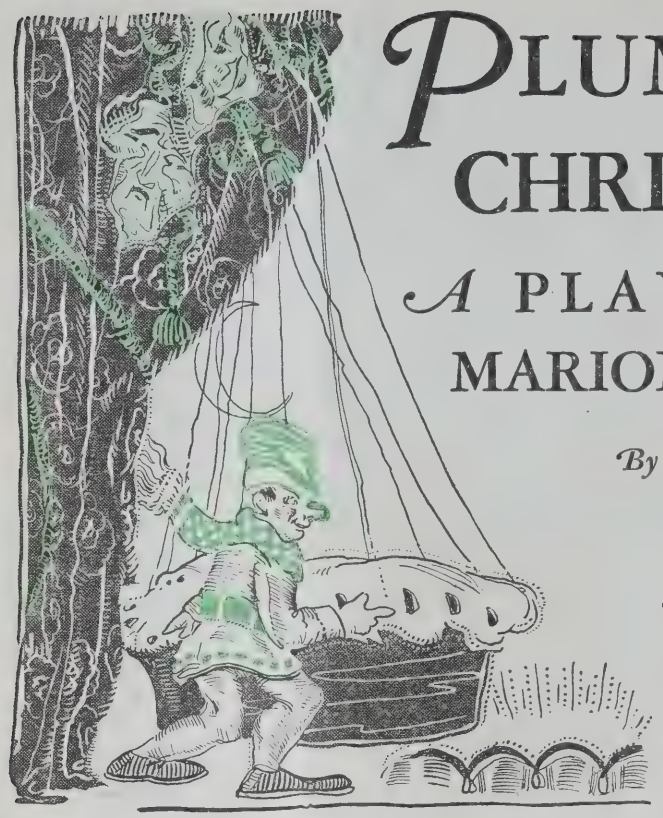
LITTLE purpose can be served by the proposed 'religious poll' to be taken through the newspapers of the country by the International Advertising Association, acting for the Federal Council of Churches. The proposal, even though made with the best of intentions, bears too much the appearance of a publicity stunt; it smacks not so much of the church as of the press-agent. According to its sponsors, the poll is designed to show the extent of religious sentiment in the nation, and thus furnish a basis for a vast advertising campaign to be undertaken later. But its benefits under this heading are at best doubtful, and its flaws are of such a nature as to make the plan seem highly ill-advised.

Newspaper straw-ballots—and essentially that is what the present scheme resolves itself into—have been notoriously futile and inaccurate. They cannot be said to measure, or even reflect, the true sentiment of the communities in which they are taken. Because of their very futility, the number of intelligent persons who participate is relatively small.

But there are many surprisingly active minority groups to whom the straw-ballot furnishes a grand opportunity. Through it they attempt to show a tremendous sentiment in favor of their own particular line. While the great majority of citizens remain passively positive in their opinions, aroused to action only by some great moral issue, these busy minorities welcome every straw-ballot with enthusiasm. It is to them that the present stunt will appeal most heartily, and not to the thinking people of the nation, whose opinions are of greatest value. Such a straw-ballot as that intended, instead of determining the status of religion in America, will serve largely as a medium for little bands of atheists and non-believers to magnify their own theories into matters of vast importance.

If the sole aim of the 'religious poll' were to stimulate discussion on religious matters, it might be justified. But rather than that, the intention is 'to find out how many persons in this country believe in God.' And the results are to be utilized as material for a general campaign of publicity and propaganda.

The combination of religion and modern advertising is one that must be effected skilfully if at all. Religion is personal, individualistic. Its spirit comes from within. It cannot be 'sold' to the people, as cans of beans or special brands of cigarets are sold.



PLUMS FROM A CHRISTMAS PUDDING

A PLAY FOR MARIONETTES

By BETTY JANE KIDD

Illustrated by the AUTHOR

Christmas Eve is sounding the bell!
'Tis the hour when toys can walk.
(But who believes in all that talk!)
Christmas Eve, all's well!

HEAVY velvet curtains shroud the miniature stage. A gaping mask or two, swinging from gilded cords, winks at the audience. Perhaps a sprightly overture is droned upon combs; or again an old-fashioned music box will tinkle out its roundelay in faintly measured rhythms for tiny feet. The play is about to commence.

Suddenly a boisterous voice is heard behind the curtains, upraised in rowdy song. A hand bearing a lantern appears, followed almost immediately by a comical head. Two round saucer eyes roll at the audience with a perpetual carved and painted twinkle, the while an astonishing nubbin of a nose plays the most breath-taking pranks, all of its own volition. The owner of the jolly pate loses little time in following his nose upon the stage. He is a round, loosely jointed little puppet, clothed in an exaggerated version of the habiliments of an old-time night watchman, with a long red tippet wound many times about his neck. JACK PUDDING himself is before you, come to direct the performance, as was once his wont in Merrie England.

He sings:

Hear ye, Neighbors, while I tell—

He cuts several capers, ogles the audience, and continues:

Hear ye, friends all, while I sing
Of the play, It is the thing!
For life is in a marionette
Only when the scenes are set.
Christmas Eve, all's well!

Continuing to play the buffoon, with more exaggerated antics:

Hear ye, gossips, while I call,
Those you'll see beyond this wall—

(*Pokes the curtains and winks at the audience, indicating that he is well aware of the joke of calling such flimsy drapery a wall.*)

Poet, lady, fool and kin—
Hark, the play will soon begin—

He goes on speaking:

And don't worry! As sure as my name's JACK PUDDING—or HANS WURST, if you'll have it Dutch—I'll see that there are some jokes in it. If we fools didn't make a little fun in this sorry world, you people with good sense might weep yourselves to death. There's PRINCESS ANGELICA inside there this minute fairly melting the glue from her eyelashes over such a Zanie as you'll never find short of World's End on All Fools' Day. But Pardauz! You'll be sniveling and sobbing along with her, I'll be bound, the minute my nose is out of sight.

At the mention of his nose, that curious organ gives a tremendous leap and attempts to lead him from the stage. He remains to say:

For—

'Whate'er men do or say or think or dream
Our motley gathering seizes for its theme.'

He disappears through the curtains which part almost immediately to show:

The Scene

The stage is in darkness at first but gradually grows lighter during the first part of the action. At first nothing is audible but the creaking of several puppet figures which are seen dimly suspended at the rear of the stage, hanging for all the world like kittens lifted by the neck. A smothered sobbing is heard. Somewhere a clock chimes twelve slowly. The

last stroke is punctuated by a tremendous sneeze.

A VOICE: (*querulously*) Ah-h-h! Shiver my timbers but it's cold in here. My sawdust is congealed in my veins. What ho, mates! No performance this evening? I've hung by my neck until I could almost think myself Jack Scratch, the hangman's apprentice!

A SECOND VOICE: Of course there's no performance tonight, Horribilicribrifax. Don't you remember—it's Christmas Eve. Our Manager was so excited last night that he could hardly hang us up after the show. And now he's gone to drink ale and sing carols by his own fireside with the arms of his four chubby youngsters about his neck and his toes toasting in company with those of his roistering cronies. A pretty kettle of fish he has left behind him, I must say!

CAPTAIN HORRIBILICRIBRIFAX: (*Jumping from his hook and coming toward the front of the stage with huge, swashbuckling strides.*) Who is calling me a kettle of fish? Who, I say! By bombs and cannons! By blood and sawdust! I'll carve him! I'll trounce him! I'll run him through! Just let him show himself, that's all! (*He strides to and fro, tossing an immense plume which insists in falling into his eyes. A military cloak falls around him in flapping folds and occasionally trips him up, as does his long sword.*)

PANTALOON: (*An elderly, slippered puppet, in dressing gown and large blue spectacles, who comes forward with a deprecating shuffle.*) My dear Captain! By all means don't take offense. That is to say—I only meant—

THE CAPTAIN: (*With arms akimbo on his splintery hips.*) Well, what did you mean? Come, be quick! This hero of a thousand battles waits for no man!

PANTALOON: (*snickering aside*) Hero of a thousand retreats, he would say. (*Aloud*) I was only going to say, Captain, that things here are simply at sixes and sevens.

(*The Captain attempts to count off the numbers upon his fingers.*)

Our Manager was in such a hurry to get to his Yule cheer, last night, that he simply cleared out with never a thought for us poor wooden folk to whom Christmas means only a cold and darkened stage. It's all a most distressing muddle. To begin with—

THE CAPTAIN: Muddle indeed! The minute I shut my eyes for forty winks of sleep, the rest of you proceed to get yourselves into all sorts of pickles. What's up now, eh? Whose strings are tangled? Whose joints are sticking? Whose head has fallen off? (*aside*) Splinter the man! His words stick in his throat like so many swollen pegs!

PANTALOON: Worse news than that! Right off, the Manager forgot to release the PRINCESS ANGELICA from the enchanted castle where she was imprisoned at the end of last night's performance. You can hear her up there now, weeping to melt her wig off.

(*The light grows brighter, showing a turreted castle at one side of the stage. Sure enough, a charming golden-haired princess is seen languishing from one of the upper windows. Various pieces of scenery are scattered about, as if left from the previous showing.*)

THE CAPTAIN: Well, that's easy! Why doesn't somebody let her out! Our lubberly Manager will never know the difference!

PANTALOON: But we can't let her out! The golden key is lost that her true love bears to unlock the gates and set her free. It's in THE LADY ERMINTRUDE, the play we do on Tuesday, Thursday, and holiday nights. No one has seen it. And we don't dare look. Just imagine. The Manager forgot to hang up THE DRAGON. The beast is wandering about declaring that he is going to devour someone soon. Harlequin thinks that he has eaten the key. But he denies it. However, he says that he will eat whoever looks for it, and unless he is slain at once—(*an idea strikes him*) Ah! Captain! You are the very man! You shall slay the Dragon and preserve us all from his jaws. With such bravery—with such a sword! It will be easy!

THE CAPTAIN: (*Shouting, visibly taken aback.*) What! I, Captain Horribilicribrifax, to stain my sword with the glue of that earthworm! Never! Ha! I carve men, not caterpillars; not green lizards; not glowworms! I terrify armies; not maggots. SAINT GEORGE is the chameleon butcher of this company. It's his business to kill it, not mine. That's clear. Where is he, anyway? (*calls*) Ho! ST. GEORGE! St.-George-the-dragon-nursemaid. Come here at once!

(*ST. GEORGE is still hanging from his strings at the back of the stage. He shakes himself, tries one leg, then the other, and comes sheepishly forward. He is clad in shining tinfoil armor. A large cross is painted upon his chest. From his helmet looks forth such a countenance of manly beauty as to stir the pulses of the entire feminine audience.*)

ST. GEORGE: (*feebly*) Well, then. I hear you. Don't be making so much noise about it all! What's wanted here anyway?

THE CAPTAIN: You are wanted, that's what! To kill the Dragon. He persists in forgetting that the play is over and is determined to eat some-

one. It's very awkward! Nobody can rescue the PRINCESS ANGELICA, who is still imprisoned in the magic castle, with that beast around.

SAINT GEORGE: (*Stifling a yawn and glancing in a bored manner at the languishing princess. She holds out her arms to him beseechingly.*) Well, I can't do anything about it. I killed him once last night and that should be enough. Besides, I bent my sword on his fifth vertebra and you know I can't do anything without my sword. It's not my princess, anyway. I'm keen on that Moorish princess who is out for repairs. At least I like her as well as any. I'm a bit off princesses of late. (*The Princess in the castle breaks into sobs.*) They have such ticklish hair. And they giggle so—or weep! Really, this should be HARLEQUIN'S affair. *He's* been in love with this PRINCESS ANGELICA all through the last four performances. If anyone's to rescue her, it should be he. Here he comes now.

(*A sound of music. Enter Harlequin, hand in hand with Columbine, they are much enamoured of each other. They dance. He kneels to kiss her hand.*)

PANTALOON: (*scoldingly*) Here, you scamp, let my daughter alone. You're advertised to be in love with the PRINCESS ANGELICA. Look lively, my lad, and set about rescuing her from the enchanted castle. And mind the Dragon, while you're about it! He's in a most consuming humor!

HARLEQUIN: (*Looks up at the Princess Angelica, feels his heart anxiously, shakes his head and bursts into tears!*) I knew it! It's the fault of my patches! Not a single heart-throb! My constancy is gone again. Oh, dear! My constancy! My patches! My patches! My constancy!

PANTALOON: Explain yourself, ninny. Stop talking riddles!

HARLEQUIN: (*pointing to himself*) Don't you see, I've lost my brown patches!

(*The audience becomes aware that in his traditional suit of diamond-shaped blocks, the brown are missing. Only red, yellow, and blue patches remain.*)

I lost them last night. You all know what my patches stand for. Red (*he points*) for temper. Gr-r-r-r! What a rage I can fly into! Yellow, for jealousy. Watch yourself there! (*He makes a leap for THE CAPTAIN who is edging nearer to COLUMBINE. THE CAPTAIN moves away, twirling his moustache.*) Blue—love! (*He throws a kiss to COLUMBINE, who returns it.*) But I have lost my brown patches which stood for constancy. So now I love—but another. I cannot be faithful to yonder PRINCESS. I cannot feel a single pang of love when I behold her. My constancy is gone. What shall I do?

ALL: What shall he do?

ST. GEORGE: And what shall *I* do, with my faithful sword deserting me, and the Dragon menacing our life and sawdust. That Zanie will do nothing for us, that's clear!

THE PRINCESS ANGELICA: (*Leans forward and speaks in a thin, throaty treble from her window.*) And what shall I do? (*sobs*) Oh, dear, does no one love me? Will no one rescue me?

(*All look at her uncomfortably. A great noise is heard without. JACK PUDDING enters. He has left his lantern and is now engaged in pulling and tugging and hauling onto the stage a great pudding dish, covered with a scalloped, lollopped, hummocky crust, neath which might repose the whole plum harvest of the world.*)

JACK PUDDING: (*to the audience*) Didn't I tell you? I leave them to attend to my baking, and presto! some sorry brew is bubbling e'er you could say Jack Robinson. What's it all about? HARLEQUIN in tears? PRINCESS ANGELICA half out of the window? ST. GEORGE with a face to frighten cats—as if his ordinary face wouldn't do the deed soon enough! What's up?

THE CAPTAIN: Ah! You blustering braggart! You driveling loon! I suppose you can mend matters, eh? Bones and guide-strings!

JACK PUDDING: (*mimicking him*) Blood and sawdust! Bombs and cannons! Least said's soonest mended. And that's why you'll never be whole, old windbag! But as to these other matters—show me the pieces and I'll out with my glue. A most superior brand, I assure you. My pudding, there, is basted with it.

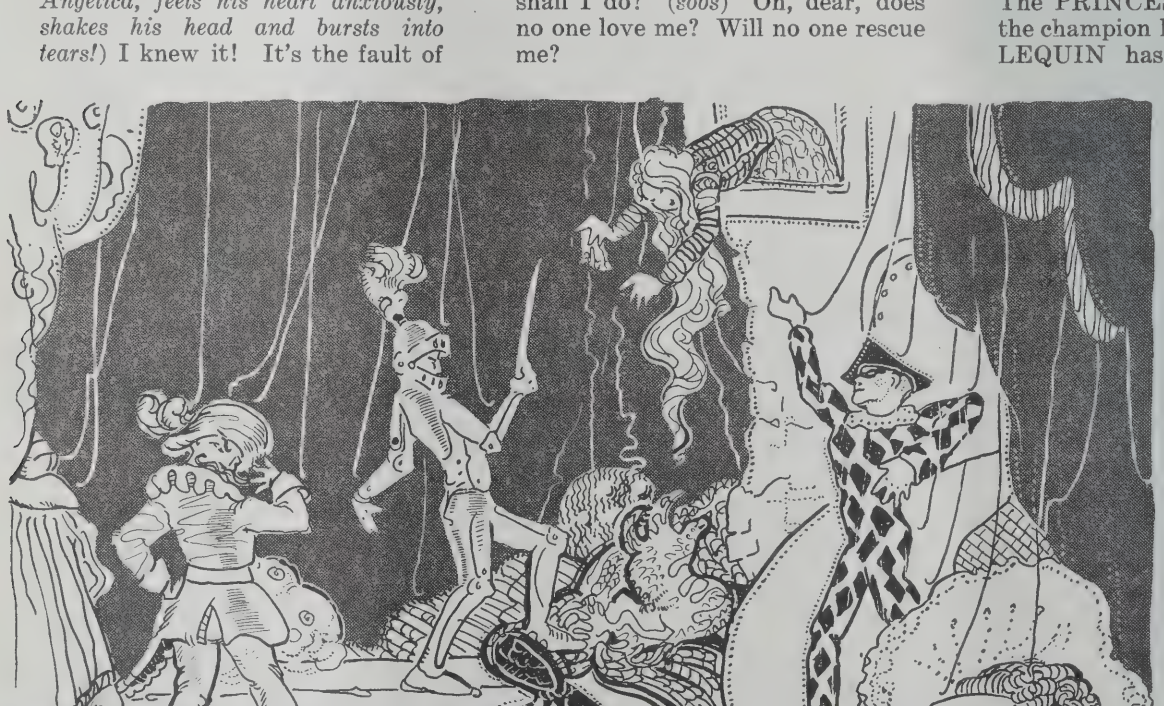
PANTALOON: Pieces enough! And all missing! That's the trouble. The golden key to set the PRINCESS free lost; ST. GEORGE'S sword to slay the Dragon bent into a veritable cocked hat; HARLEQUIN'S spots of constancy changed! The PRINCESS has no champion; the champion has no sword; HARLEQUIN has no patches—

JACK PUDDING: And I have no patience! Your mouthings and mutterings would try the temper of a mud-turtle. Don't you know what night it is? (*sings*—)

Hark ye, Puppets, while I tell
Christmas Eve is sounding the bell—

And that, of course, solves everything!

THE CAPTAIN: Everything; something; nothing! It's all the same to him. But meanwhile the PRINCESS weeps—



(Concluded on page 27)

It was still dark when I got up to the Peacock and I discovered that I was the only passenger.

The HOLLY-TREE

From 'CHRISTMAS STORIES'

By CHARLES DICKENS

Illustrated by
GEORGE HARPER

I HAVE kept one secret in the course of my life. I am a bashful man. Nobody would suppose it, nobody ever does suppose it, nobody ever did suppose it, but I am naturally a bashful man. This is the secret which I have never breathed until now.

I might greatly move the reader by some account of the innumerable places I have not been to, the innumerable people I have not called upon or received, the innumerable social evasions I have been guilty of, solely because I am by original constitution and character a bashful man. But I will leave the reader unmoved, and proceed with the object before me.

That object is to give a plain account of my travels and discoveries in the Holly-Tree Inn; in which place of good entertainment for man and beast I was once snowed up.

It happened in the memorable year when I parted for ever from Angela Leath, whom I was shortly to have married, on making the discovery that she preferred my bosom friend. From our school days I had freely admitted Edwin, in my own mind, to be far superior to myself; and, though I was grievously wounded at heart, I felt the preference to be natural, and tried to forgive them both. It was under these circumstances that I resolved to go to America—on my way to the Devil.

Communicating my discovery neither to Angela nor to Edwin, but resolving to write each of them an affecting letter conveying my blessing and forgiveness, which the steam-tender for shore should carry to the post when I myself should be bound for the New World, far beyond recall—I say, locking up my grief in my own breast, and consoling myself as I could with the prospect of being generous, I quietly left all I held dear, and started on the desolate journey I have mentioned.

The dead winter-time was in full dreariness when I left my chambers for ever, at five o'clock in the morning. I had shaved by candle-light, of course, and was miserably cold, and experienced that general all-pervading sensation of getting up to be hanged which I have usually found inseparable from untimely rising under such circumstances.

How well I remember the forlorn aspect of Fleet Street when I came out of the Temple! The street-lamps flickering in the gusty northeast wind, as if the very gas were contorted with cold; the white-topped houses; the bleak, star-lighted sky; the market people and other early stragglers, trotting to circulate their almost frozen blood; the hospitable light and warmth of the few coffee-shops and public-houses that were open for such customers; the hard, dry, frosty rime with which the air was charged (the wind had already beaten it into every crevice), and which lashed my face like a steel whip.

It wanted nine days to the end of the month, and end of the year. The post-office packet for the United States was to depart from Liverpool, weather permitting, on the first of the ensuing month, and I had the intervening time on my hands. I had taken this into consideration, and had resolved to make a visit to a certain spot (which I need not name) on the farther borders of Yorkshire. It was endeared to me by my having first seen Angela at a farm-house in that place, and my melancholy was gratified by the idea of taking a wintry leave of it before my expatriation. I ought to explain, that, to avoid being sought out before my resolution should have been rendered irrevocable by being carried into full effect, I had written to Angela overnight, in my usual manner, lamenting that urgent business, of which she should know all particulars by-and-by, took me unexpectedly away from her for a week or ten days.

There was no Northern Railway at that time, and in its place there were stagecoaches; which I occasionally find myself, in common with some other people, affecting to lament now, but which everybody dreaded as a very serious penance then. I had secured the box-seat on the

While we changed horses, the gua[rd] a[nd] the road, printing o[n]

astest of these, and my business in Fleet Street was to get into a cab with my portmanteau, so to make the best of my way to the Peacock at Islington, where I was to join this coach. But when one of our Temple watchmen, who carried my portmanteau into Fleet Street for me, told me about the huge blocks of ice that had for some days past been floating in the river, having closed up in the night, and made a walk from the Temple Gardens over to the Surrey shore, I began to ask myself the question, whether the box-seat would not be likely to put a sudden and frosty end to my unhappiness. I was heartbroken, and yet I was not quite so far gone as to wish to be frozen.

When I got up to the Peacock—where I found everybody drinking hot purl, in self-preservation—I asked if there were an inside seat to spare. I then discovered that, inside or out, I was the only passenger. This gave me a still livelier idea of the great inclemency of the weather, since that coach always loaded particularly well. However, I took a little purl (which I found uncommonly good), and got into the coach. When I was seated, they built me up with straw to the waist, and, conscious of making a rather ridiculous appearance, I began my journey.

It was still dark when we left the Peacock. For a little while, pale, uncertain ghosts of houses and trees appeared and vanished, and then it was hard, black frozen day. People were lighting their fires; smoke was mounting straight up high into the rarefied air; and we were rattling for Highgate Archway over the hardest ground I have ever heard the ring of iron shoes on. As we got into the country, everything seemed to have grown old and gray. The roads, the tre[es] thatched roofs of cottages and hom[e]steads, the ricks in the farmers' yar[ds]. Outdoor work was abandoned, hors[es] troughs at roadside inns were froz[en] hard, no stragglers lounged about, doo[rs] were close shut, little turnpike houses h[ad] blazing fires inside, and children (ev[en] turnpike people have children, and see[m] to like them) rubbed the frost from t[he] little panes of glass with their chub[by] arms, that their bright eyes might cat[ch] a glimpse of the solitary coach going b[y]. I don't know when the snow began to [fall] in; but I know that we were changi[ng] horses somewhere when I heard the gua[rd] remark, 'That the old lady up in the sk[y] was picking her geese pretty hard to-da[y].' Then, indeed, I found the white do[wn] falling fast and thick.

hman went stumping up and down shoes in the snow.

The lonely day wore on, and I dozed it ut, as a lonely traveler does. I was warm nd valiant after eating and drinking—articularly after dinner; cold and de-ressed at all other times. I was always ewildered as to time and place, and lways more or less out of my senses. The coach and horses seemed to execute n chorus Auld Lang Syne, without a noment's intermission. They kept the ime and tune with the greatest regularity, nd rose into the swell at the beginning of he refrain, with a precision that worried ne to death. While we changed horses, he guard and coachman went stumping p and down the road, printing off their hoes in the snow, and poured so much iquid consolation into themselves with-ut being any worse for it, that I began to confound them, as it darkened again, with two great white casks standing on end. Our horses tumbled down in solitary places and we got them up—which was the pleasantest variety *I* had, for it warmed me. And it snowed and snowed, and still it snowed, and never left off snowing. All night long we went on in this manner. Thus we came round the clock upon the Great North Road, to the performance of Auld Lang Syne all day again. And it snowed and snowed.

I forgot now where we were at noon on the second day, and where we ought to have been; but I know that we were scores of miles behindhand, and that our case was growing worse every hour. The drift was becoming prodigiously deep; landmarks were getting snowed out; the road and the fields were all one; instead of having fences and hedgerows to guide us, we went crunching on over an unbroken surface of ghastly white that might sin beneath us at any moment and drop u down a whole hillside. Still the coac man and guard—who kept together o the box, always in council, and lookin well about them—made out the trac with astonishing sagacity.

When we came in sight of a town, looked, to my fancy, like a large drawin on a slate, with abundance of slat pencil expended on the churches an houses where the snow lay thickes When we came within a town, and foun the church clocks all stopped, the dia faces choked with snow, and the in signs blotted out, it seemed as if the whc place were overgrown with whi moss.

As to the coach, it was a mere snowba similarly, the men and boys who ra along beside us to the town's end, turnin

our clogged wheels and encouraging our horses, were men and boys of snow; and the bleak wild solitude to which they at last dismissed us was a snowy Sahara. One would have thought this enough: notwithstanding which, I pledge my word that it snowed and snowed, and still it snowed, and never left off snowing.

We performed Auld Lang Syne the whole day; seeing nothing, out of towns and villages, but the track of stoats, hares, and foxes, and sometimes of birds. At nine o'clock at night, on a Yorkshire moor, a cheerful burst from our horn, and a welcome sound of talking, with a glimmering and moving about of lanterns, roused me from my drowsy state. I found that we were going to change.

They helped me out, and I said to a waiter, whose bare head became as white as King Lear's in a single minute, 'What inn is this?'

'The Holly-Tree, Sir,' said he.

'Upon my word, I believe,' said I, apologetically, to the guard and coachman, 'that I must stop here.'

Now the landlord, and the landlady, and the ostler, and the postboy, and all the stable authorities, had already asked the coachman, to the wide-eyed interest of all the rest of the establishment, if he meant to go on. The coachman had already replied, 'Yes, he'd take her through it'—meaning by Her the coach—'if so be as George would stand by him.' George was the guard, and he had already sworn that he *would* stand by him. So the helpers were already getting the horses out.

I thought I had never seen such a large room as that into which they showed me.

My declaring myself beaten, after this parley, was not an announcement without preparation. Indeed, but for the way to the announcement being smoothed by the parley, I more than doubt whether, as an innately bashful man, I should have had the confidence to make it. As it was, it received the approval even of the guard and coachman. Therefore, with many confirmations of my inclining, and many remarks from one bystander to another, that the gentleman could go for'ard by the mail to-morrow, whereas to-night he would only be froze, and where was the good of a gentleman being froze—ah, let alone buried alive (which latter clause was added by a humorous helper as a joke at my expense, and was extremely well received), I saw my portmanteau got out stiff, like a frozen body; did the handsome thing by the guard and coachman; wished them goodnight and a prosperous journey; and, a little ashamed of myself, after all, for leaving them to fight it out alone, followed the landlord, landlady, and waiter of the Holly-Tree upstairs.

I thought I had never seen such a large room as that into which they showed me. It had five windows, with dark red curtains, that would have absorbed the light of a general illumination; and there were complications of drapery at the top of the curtains, that went wandering about the wall in a most extraordinary manner. I asked for a smaller room, and they told me there was no smaller room. They could screen me in, however, the landlord said. They brought a great old japanned screen, with natives (Japanese, I suppose) engaged in a variety of idiotic pursuits all over it; and left me roasting whole before an immense fire.

My bedroom was some quarter of a mile off, up a great staircase at the end of a long gallery; and nobody knows what a misery this is to a bashful man who would rather not meet people on the stairs. It was the grimmest room I have ever had the nightmare in; and all the furniture, from the four posts of the bed to the two old silver candlesticks, was tall, high-shouldered, and spindle-waisted. Below, in my sitting-room, if I looked round my screen, the wind rushed at me like a mad bull; if I stuck to my arm-chair, the fire scorched me to the color of a new brick. The chimney-piece was very high, and there was a bad glass—what I may call a wavy glass—above it, which, when I stood up, just showed me my anterior phrenological developments—and these never look well, in any subject cut short off at the eyebrow. If I stood with my back to the fire, a gloomy vault of darkness above and beyond the screen insisted on being looked at; and, in its dim remoteness, the drapery of the ten curtains of the five windows went twisting and creeping about, like a nest of gigantic worms.

I suppose that what I observe in myself must be observed by some other men of similar character in *themselves;* therefore I am emboldened to mention, that, when I travel, I never arrive at a place but I immediately want to go away from it. Before I had finished my supper of broiled fowl and mulled port, I had impressed upon the waiter in detail my arrangements for departure in the morning. Breakfast and bill at eight. Fly at nine. Two horses, or, if needful, even four.

Tired though I was, the night appeared about a week long. In oases of nightmare, I thought of Angela, and felt more depressed than ever by the reflection that I was on the shortest road to Gretna Green. What had *I* to do with Gretna Green? I was not going *that* way to the Devil, but by the American route, I remarked in my bitterness.

In the morning I found that it was snowing still, that it had snowed all night, and that I was snowed up. Nothing could get out of that spot on the moor, or could come at it, until the road had been cut out by laborers from the market-town. When they might cut their way to the Holly-Tree nobody could tell me.

It was now Christmas Eve. I should have had a dismal Christmas-time of it anywhere, and consequently that did not so much matter; still, being snowed up was like dying of frost, a thing I had not bargained for. I felt very lonely. Yet I could no more have proposed to the landlord and landlady to admit me to their society (though I should have liked it very much) than I could have asked them to present me with a piece of plate. Here my great secret, the real bashfulness of my character, is to be observed. Like most bashful men, I judge of other people as if they were bashful too. Besides being far too shamefaced to make the proposal myself, I really had a delicate misgiving that it would be disconcerting to them.

Trying to settle down, therefore, in my solitude, I first of all asked what books there were in the house. The waiter brought me a *Book of Roads*, two or three old newspapers, a little song book, terminating in a collection of toasts and sentiments, a little jest book, an odd volume of *Peregrine Pickle*, and the *Sentimental Journey*. I knew every word of the two last already, but I read them through again, then tried to hum all the songs (Auld Lang Syne was among them); went entirely through the jokes—in which I found a fund of melancholy adapted to my state of mind; proposed all the toasts, enunciated all the sentiments, and mastered the papers. The latter had nothing in them but stock advertisements, a meeting about a county rate, and a highway robbery. As I am a greedy reader, I could not make this supply hold out until night; it was exhausted by tea-time. Being then entirely cast upon my own resources, I got through an hour in considering what to do next. Ultimately, it came into my head (from which I was anxious by any means to exclude Angela and Edwin), that I would endeavour to recall my experience of inns, and would try how long it lasted me. I stirred the fire, moved my chair a little to one side of the screen—not daring to go far, for I knew the wind was waiting to make a rush at me, I could hear it growling . . .

I HAD been going on lately at a quick pace to keep my solitude out of my mind; but I broke down for good, and gave up the subject. What was I to do? What was to become of me? Into what extremity was I submissively to sink? Supposing that, like Baron Trenck, I looked out for a mouse or spider, and found one, and beguiled my imprisonment by training it? Even that might be dangerous with a view to the future. I might be so far gone when the road did come to be cut through the snow, that, on my way forth, I might burst into tears, and beseech, like the prisoner who was released in his old age from the Bastille, to be taken back again to the five windows, the ten curtains, and the sinuous drapery . . .

I had been snowed up a whole week. The time had hung so lightly on my hands, that I should have been in great doubt of the fact but for a piece of documentary evidence that lay upon my table.

The road had been dug out of the snow on the previous day, and the document in question was my bill. It testified emphatically to my having eaten and drunk, and warmed myself, and slept among the sheltering branches of the Holly-Tree, seven days and nights.

I had yesterday allowed the road twenty-four hours to improve itself, finding that I required that additional margin of

Tired though I was, the night appeared about a week long. 'In oases of nightmare, I thought of Angela.'

ime for the completion of my task. I had rdered my bill to be upon the table, and a haise to be at the door, 'at eight o'clock o-morrow evening.' It was eight o'clock o-morrow evening when I buckled up my raveling writing-desk in its leather case, aid my bill, and got on my warm coats nd wrappers. Of course, no time now re- nained for my traveling on to add a frozen ear to the icicles which were doubtless anging plentifully about the farmhouse here I had first seen Angela. What I ad to do was to get across to Liverpool y the shortest open road, there to meet my eavy baggage and embark. It was quite nough to do.

I had taken leave of all my Holly-Tree riends—almost, for the time being, of my ashfulness too—and was standing for half minute at the inn door watching the ostler s he took another turn at the cord which ied my portmanteau on the chaise, when saw lamps coming down toward the Holly- Tree. The road was so padded with snow hat no wheels were audible; but all of us who were standing at the inn door saw amps coming on, and at a lively rate too, etween the walls of snow that had been eaped up on either side of the track. The chambermaid instantly divined how the ase stood, and called to the ostler, 'Tom, his is a Gretna job!' The ostler, knowing hat her sex instinctively scented a marriage, r anything in that direction, rushed up the ard bawling, 'Next four out!' and in a moment the whole establishment was thrown into commotion.

I had a melancholy interest in seeing the happy man who loved and was beloved; and therefore, instead of driving off at once, I remained at the inn door when the fugitives drove up. A bright-eyed fellow, muffled in a mantle, jumped out so briskly that he almost overthrew me. He turned to apologize, and, by heaven, it was Edwin!

'Charley!' said he, recoiling. 'Gracious powers, what do you do here?'

'Edwin,' said I, recoiling, 'gracious powers, what do *you* do here?' I struck my forehead as I said it, and an insupportable blaze of light seemed to shoot before my eyes.

He hurried me into the little parlor (always kept with a low fire in it and no poker), where posting company waited while their horses were putting to, and, shutting the door, said:

'Charley, forgive me!'

'Edwin!' I returned. 'Was this well? When I loved her so dearly! When I had garnered up my heart so long!' I could say no more.

He was shocked when he saw how moved I was, and made the cruel observation, that he had not thought I should have taken it so much to heart.

I looked at him. I reproached him no more. But I looked at him.

'My dear, dear Charley,' said he, 'don't think ill of me, I beseech you! I know you have a right to my utmost confidence, and, believe me, you have ever had it until now. I abhor secrecy. Its meanness is intolerable to me. But I and my dear girl have observed it for your sake.'

'You have observed it for my sake, Sir?' said I, wondering how his frank face could face it out so.

'Yes!—and Angela's,' said he.

I found the room reeling round in an uncertain way, like a laboring humming-top. 'Explain yourself,' said I, holding on by one hand to an armchair.

'Dear old darling Charley!' returned Edwin, in his cordial manner, 'consider! When you were going on so happily with Angela, why should I compromise you with the old gentleman by making you a party to our engagement, and (after he had declined my proposals) to our secret intention? Surely it was better that you should be able honorably to say, "He never took counsel with me, never told me, never breathed a word of it." If Angela suspected it, and showed me all the favor and support she could—God bless her for a precious creature and a priceless wife!—I couldn't help that. Neither I nor Emmeline ever told her, any more than we told you. And for the same good reason, Charley; trust me, for the same good reason, and no other upon earth!'

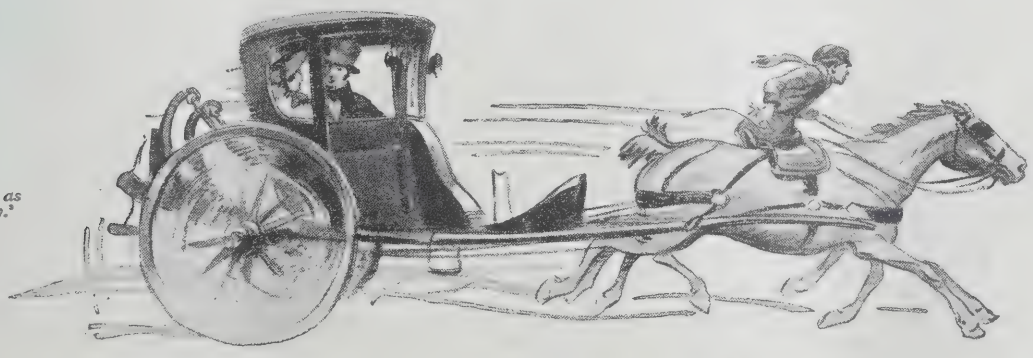
Emmeline was Angela's cousin. Lived with her. Had been brought up with her. Was her father's ward. Had property.

'Emmeline is in the chaise, my dear Edwin!' said I, embracing him with the greatest affection.

'My good fellow!' said he, 'do you suppose I should be going to Gretna Green without her?'

I ran out with Edwin, I opened the chaise door, I took Emmeline in my arms, I folded her to my heart. She was wrapped in soft white fur, like the snowy landscape: but was warm, and young, and lovely. I put their leaders to with my own hands, I gave the boys a five-pound note apiece, I cheered them as they drove away, I drove the other way myself as hard as I could pelt.

I never went to Liverpool, I never went to America, I went straight back to London, and I married Angela. I have never until this time, even to her, disclosed the secret of my character, and the mistrust and the mistaken journey into which it led me. When she, and they, and our eight children and their seven—I mean Edwin's and Emmeline's, whose eldest girl is old enough now to wear white for herself, and to look very like her mother in it—come to read these pages, as of course they will, I shall hardly fail to be found out at last. Never mind! I can bear it. I began at the Holly-Tree, by idle accident, to associate the Christmas-time of the year with human interest, and with some inquiry into, and some care for, the lives of those by whom I find myself surrounded.



I cheered them, as they drove away.'

The BOY Who Didn't Like CHRISTMAS

A Story for Those Who Do

By ELIZABETH COLT

Illustrated by BETTY JANE KIDD

'Now let's see,' said Santa. 'There's a puppy for Susy Reed, who is sick in bed, and one for little Tommy Dubblin.'

ONCE there was a boy who didn't like Christmas. (*I'd never have believed it if he hadn't said so himself. But he did. Right out loud.*) His name was R. Pindleton Pinkle. (*Can you imagine!*) And he said so in a most unpleasant tone of voice at two o'clock in the afternoon of December twenty-fourth to his second cousin, Genevieve Elizabeth, who had come to see him.

'I don't like Christmas!' Just like that.

Then, to make things worse, he added in a growly-scowly fashion:

'And I think Santa Claus is a booby!'

Oh my! Wouldn't you have thought his Mother-Dear or his Daddy-Person would have *told* him not to use a word like that?

But you see, it was this way. His Daddy-Person had a great many important things to do downtown behind a big door marked *Private. Directors' Room.* So *he* didn't know what kind of language his little boy used. As for his Mother-Dear, who had shining silken hair and a soft silken voice which made all words sound perfectly lovely, she was One-of-the-Most-Popular-of-Our-Younger-Matrons. So for her part, she only saw him once a day at bread-and-butter-tea-time. Nobody can use very objectionable words with his mouth full of bread-and-butter-tea, you know.

R. Pindleton Pinkle's Mother-Dear and his Daddy-Person knew that Someone had to teach their little boy the proper way to talk. They had brought a man for that very purpose from a stuffy gray building called a university. Luthur Follinsbee Flup, *his* name was, and he knew exactly the way. He talked to R. Pindleton Pinkle five hours daily as an example. As a matter of fact, Mr. Luthur Follinsbee Flup talked in such very large, very long, very extraordinary words that R. Pindleton Pinkle was unable to understand one of them, but spent the entire time making cats'-cradles and planning some day to tie the apron strings of Mrs. Weatherby-Dan, the housekeeper, to the flapping coattails of J. Jujubee Jukes, who brought in the bread-and-butter-tea.

It was really Mrs. Weatherby-Dan whom he had heard use that terrible word 'booby.' She had said it to Jujubee Jukes the day he had spilled the milk for bread-and-butter-tea upon the hearth-rug. And truly, R. Pindleton Pinkle hadn't the slightest idea what it meant. (*As no more have I!*)

But Genevieve Elizabeth couldn't know that. She burst into tears!

Who could blame her! Santa Claus was one of her particular friends. He had brought her a 'normous dolls' house and a pinkly-wrinkly baby brother on the very same Christmas one time. And if that doesn't make you somebody's particular friend, what does? And if you don't burst into tears when you hear your particular friend called such a thing as that, when will you? So she did!

'Why in the world are you crying?' asked Pindleton Pinkle, feeling a bit uncomfortable and very much surprised. Genevieve Elizabeth didn't visit him very often. She couldn't get away because she lived on another street in a little house with many shining-scrubbed windows. At the windows were always a great many faces of brothers and sisters looking out, so Genevieve Elizabeth was needed to see that the smaller ones didn't make smudgy finger prints upon the glass.

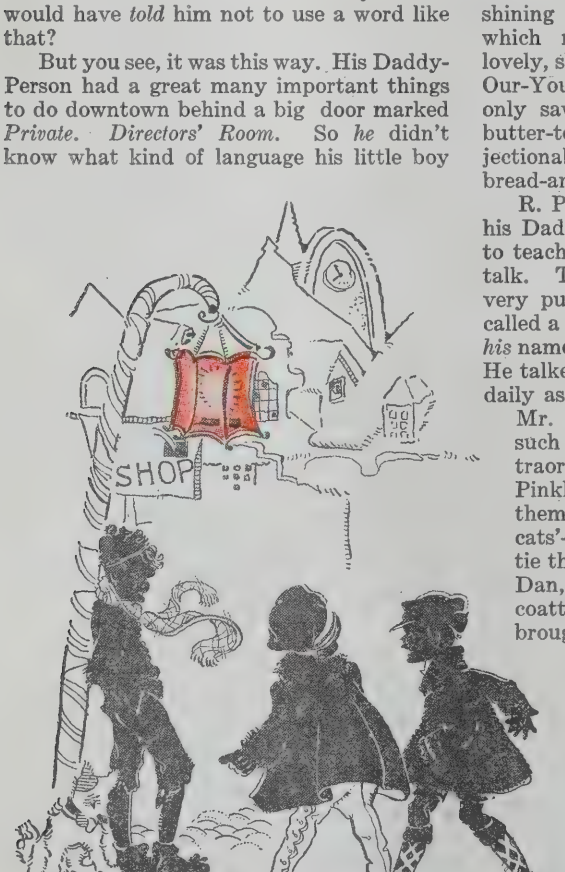
In all the times she had come to Pindleton Pinkle's big house, she had hardly cried at all, not even when her finger was pinched in the door, or when they had cut off her hair to see if it looked well and it didn't. (So now Pindleton Pinkle was most surprised to see the little girl weeping so bitterly that two tears at a time sprang from each blue eye and ran a race over her round pink cheeks.)

'Oh, oh, oh!' cried Genevieve Elizabeth. 'How can you say such things, Pinkie Pinkle! Didn't Santa Claus bring you a train-on-a-track only last year, with real whistles and tunnels and smoke coming out of the smokestack?'

'Yes—' admitted the little boy gruffly.

'And an automobile with tires and a horn the year before that and a rocking horse with a switchy tail?'

'Ye-e-e-s!'



'We're on our way to see Santa Claus.'

'And a magic lantern and a whole Book-of-Blunders and a chauffeur to take you for rides in the park and—'

'Yes, yes, yes,' shouted the little boy with his face very red and blinking his eyes very hard. 'But he's never brought me a real-live-puppy-dog with a black patch over one eye and a curly tail and I've asked him every year, Genevieve Elizabeth, so there!'

Do you know, I think if he hadn't been a boy he might have cried too. For it was in the most curiously strangled voice that he went on:

'So why isn't he a booby then, when he brings me all those old things I don't want at all and never brings me a puppy dog? That was what I wanted most of all!'

Genevieve Elizabeth stopped crying and looked at him.

'But there must be some mistake, Pinkie,' she said, 'Santa Claus always brings you what you want and ask for.'

'No there isn't. How can there be? Every year I've written him a letter and mailed it in the downstairs fireplace when nobody was around. And he's never brought it, Genevieve Elizabeth, not once.' R. Pindleton Pinkle shoved his hands into his pockets and turned his back on the little girl.

'So this year I didn't write him at all. And I don't like Christmas and I wish it wasn't coming tomorrow!'

'Oh, Pinkie,' said Genevieve Elizabeth, firmly, 'Santa Claus must have some reason, if he hasn't brought your puppy. I'm sure he could explain it if we could see him and ask.'

'Could we see him?'

PINDLETON Pinkle pricked up his ears. I myself think he secretly felt a little sorry that he hadn't written to Santa Claus. 'Couldn't we go to his house and tell him that I'd rather have a dog than all these other things, a dog for company 'cause there's never anyone to play with up here? Let's! Today! Right away, before Mrs. Weatherby-Dan and Jukes bring the bread-and-butter-tea!'

'Well, I've never been, Pinkie,' Genevieve Elizabeth wrinkled up her forehead. 'And I don't know exactly the way to his house.

'But we might take a bus,' she added hopefully. 'My mother always takes a bus when she wants to go somewhere. I know the corner where it stops.'

'Then come on!' Pindleton Pinkle was already climbing upon a chair to get his coat out of the closet where Mrs. Weatherby-Dan hung it every day when he returned from his ride in the park.

Together, the two children stole down the big stairs and out of the great door of Pindleton Pinkle's house. There was a big black snow cloud over the roofs across the way, and the rose-glowing globe of the street light at the corner was already lighted and tugging at its post like a huge balloon. Under it was the ruddiest, blusteringest, brass-buttonedest traffic policeman it has ever been my good fortune to see, with a face that glowed like a twin to the light above his head.

'Hallo, here, where are you going?' he shouted in a big voice when he spied the two. 'To visit Santa Claus, eh? Well, tell him for me that I'll not take it amiss to be finding a sergeantcy in my stocking Christmas morning.' And he held up a whole line of shiny two-eyed autos to let them pass.

'What does he mean, a *sargency?*' asked Pindleton Pinkle in a puzzled tone. But Genevieve Elizabeth was smiling back at a pink-cheeked old lady who nodded from the door of her Bun-shop.

'You're going to visit Santa, I'll be thinking,' called the old lady in a cracked, quavering voice. 'And it's myself would be wishing he'd remember an old lady once in a while and drop a ton of coal or so down the chimney. But a merry Christmas to you both, my dears, and many of them as well!'

AND she nodded her head until all her little gray curls danced above the old shawl which was pulled about her thin shoulders.

Pindleton Pinkle began to feel better. He thought he had never met such charming people as these who so obviously liked Santa Claus in spite of the fact that he didn't call on them.

'Here is the bus corner,' said Genevieve Elizabeth. And there it was. And sitting upon it, at the tipmost end of the curb-stone, was the merriest, roguishest, curliest-haired boy Pindleton Pinkle had ever seen, whistling a tune over the top of his thread-bare red muffler, and wiggling two bare toes which were peeping out of one of his shoes in a most impudent fashion. And there beside him, waggling his curly tail, and cocking one ear over the black-patched eye, winking toward the children, was R. Pindleton Pinkle's puppy. There could be no doubt of it. R. Pindleton Pinkle had described him to Genevieve Elizabeth not a half-hour before.

'Hullo,' said the boy. 'I'm Jerry. And that,' pointing to the dog, 'is Jack.'

'We're on our way to see Santa Claus. And my name is Genevieve Elizabeth. And this is R. Pindleton Pinkle.'

'Whew! They don't *call* you that, do they—all that, I mean, Pindle—whatever it is. Haven't you a name to be *called* by, like Jerry? What do the fellows call you?'

'Well, I don't know any fellows,' replied R. Pindleton Pinkle doubtfully. 'But Jukes calls me Master Pinkle. And Genevieve Elizabeth calls me Pinkie.'

'That's better!' grinned Jerry. 'I'll call you Pinkie too. And I'm going to see Santa Claus myself.'

'Pinkie wants a dog like Jack,' explained Genevieve Elizabeth. 'He wants one to live with him for company.'

'And I'm going,' said Jerry, 'to ask him to bring me something to earn my living with, so I can make a lot of money for my little sister. And then she won't have to live at the Widow Elkins and lug her cross baby around all day. It's awfully heavy, that baby, and howls if you put it down.'

'Let's go together,' they all said at once. And Jack wagged his tail until it almost flew off. At that very moment—would you believe it?—along came a bus I am sure never ran down that street before. All jolly and jingling, it was, and smelling of plum pudding instead of gasoline, with *Santa Clause Land* in sparkling frosted letters across its red front, and a driver who must have taken lessons in reindeer driving, so sharply did he draw up with a 'Whoa, there, Blitzen!' and so speedily whish off with the

'I don't like Christmas,' said Pinkie, 'and I wish it wasn't coming tomorrow!'

children packed snugly inside and his cheeks puffed out and his coattails streaming behind.

I could never describe that ride, nor the length of time it took the driver to bundle them out and through a bit of snow all set with Christmas trees, into a great room with a fire roaring merrily in the fireplace.

FOUR and twenty jolly individuals were clacking away in a corner of that room at a long bench all dripping with glue pots and paint pots, and ink pots, and heaped with Noah's arks and woolly lambs and ever-so-many-more-things. In front of the fire sat a silver-haired lady with a gleaming needle which fairly flew in and out of a pink and white piece of gingham. (It looked like a doll's petticoat to Genevieve Elizabeth.) And there, almost hidden behind a great desk stacked with account books and penholders and reindeer harness, sat—well, a round old gentleman with a bit of white fur and a bit of red coat and a bit of fluffy whisker and of chuckle and of sheer good will. 'And if I'm not Santa Claus,' said he when they asked him, 'who is, pray? Just answer me that!' And he burst into such a hearty laugh that all of the ink pots danced a merry little caper for pure joy.

It was but a jiffy until Mrs. Santa had all of their coats off, and their toes toasting before the fire, while Claus himself, for all he was so busy, produced from somewhere three cups of steaming hot cocoa, nor would he let them say a word until he had stuffed their mouths with crisp, crinkle-edged cookies. And Santa grasped the story, as they told it to him between sips of cocoa.

And then, when they had finished, and he had heard it all—how Pinkie had wanted a dog like Jack, and Jerry would like something to earn his living with, and how Pinkie had said he didn't like Christmas and thought Santa was a . . . (*'Tut! Tut!' cried Mrs. Santa*). And how the policeman would like a *sargency*, and the Bun-shop lady a ton of coal, and this and that, why he sat right down in his big armchair in front of the fire, with Pinkie on one round knee, and Genevieve Elizabeth on the other, and Jerry half over the chair arm.

And 'Um!' said Santa. And 'Ah!' said Santa. And he proceeded to explain the whole matter, just as Genevieve Elizabeth had said he would. It seems that Santa Claus' dog, Lady—there she was over in the chimney corner surrounded by nine puppies of all colors, all with red ribbons around their necks and already tagged with children's names—had so *few* puppies with black patches to go to all the little boys who wanted them. And Pinkie's Daddy-Person had sent in such a big order of expensive toys every year for Pinkie, that Santa just couldn't include one of the puppies with so many little poor boys like Jerry here, who had nothing else in Santa's pack needing them. And if Santa had only known how much Pinkie had wanted one he might have managed, but . . .

'Now let's see! This year,' said Santa putting on his spectacles going over to the writhing basket of puppies, 'there's one for Susy Reed who is sick in bed, and one for little Tommy Dubbin who has one leg shorter than the other and isn't going to have any Christmas dinner and one for . . . '

He went on, naming them over, the while Pinkie's face got longer and longer, and Pinkie's eyes filled with tears. And even when Santa Claus showed him the big camera on a stand which he had wanted so much, and the black cloth to go over his head while he took pictures, that his Daddy-Person had remembered to order for him, he couldn't be consoled.

Then Jerry, who had been looking at the fire with his face all knotted up, turned around and spoke very quickly in a queer, choky voice.

'I'll tell you what, Pinkie,' he said. 'I know Santa Claus can't manage expensive things for me. And he brought me Jack last year. (*Did I tell you that Jack had been left in the old barrel where Jerry lived just a year before on Christmas morning?*) So if you will let me have your camera to take pictures to earn money, why I'll let you have Jack. How's that?'

How was it? Pinkie smiled such a smile as you never saw. He ran to Jack, who had been making friends with the puppies, and squeezed him until his little red tongue hung way down on his white bibber. Then Santa Claus patted Jerry on the back very hard, and Mrs. Santa put Genevieve Elizabeth back into her chinchilla overcoat, and one of the Jolly Individuals fastened up the camera in a black box and put it into Jerry's rough little hand.

And then there were goodbys, and merry Christmases all around, and almost without knowing how, the children found themselves outdoors again, speeding back to the bus corner.

Jerry didn't wait to say goodby when the waggish busman bundled them off at that very corner. He put his head down and ran off very fast in the darkness that had fallen. Genevieve Elizabeth and Pinkie tried to call to him, but he was around a corner before one word could pop from their open mouths. So they trudged off in the dusk toward Pinkie's house.

'Here they are,' called Somebody. The door to Pinkie's house was thrown open and his very own Mother-Dear came dashing down the steps and gathered him in her arms, dog Jack and all, without once worrying about finger-marks from bread-and-butter-tea as she usually did. There was Pinkie's Daddy-Person, too, very tall and clearing his throat, 'Er-hem!' And there were Genevieve Elizabeth's father and mother, smiling all crooked, and the policeman, and the Bun-shop lady, and Mrs. Weatherby-Dan, and Mr. Luthur Follinsbee Flup, and Jukes himself, all talking at once. Pinkie's father cleared his throat a great many times while they were telling the story of their adventures.

Then, when they were all inquiring, 'But where *is* Jerry, and why didn't you bring him here for pity's sakes?' right in the middle of all the riot came a tiny, timid little tingle at the bell to the great door.

Jukes swung the door open. And there stood Jerry himself—both fists in his eyes, with the black camera box on the step beside him, and dog Jack dancing in a circle.

'Please, Pinkie,' he said in a most muffled voice, 'here is your camera. And I want Jack back. I can't go to sleep without him. And my little sister wants him too. She says the Widow Elkins' baby isn't really so bad, except when he's teething. And—'

BUT Pinkie's Mother-Dear had brought Jerry right into the house too, with her arm around him. And then there *were* plans. How Jerry was going to stay with Pinkie, and keep him company when Mr. Luthur Follinsbee Flup taught him how to speak (*'Can you make cats'-cradles?' asked Pinkie eagerly, and Jerry said he could*). How Jack was to belong to both of them, and live in the nursery with a silver plate of his own. And how Genevieve Elizabeth's mother 'guessed she'd have room for another little girl' in the little house with all the windows. And how Jerry's little sister could come there to live and not lug the cross baby ever again. And how the policeman would get his *sargency*. 'I'll attend to *that*,' said Pinkie's Daddy-Person. And how the Bun-shop lady would get her coal. 'I'll see to *that!* said Genevieve Elizabeth's father. And how . . .

But just then Pinkie's Mother-Dear—who had quite forgotten for the moment that she was One-of-the-Most-Popular-of-Our-Younger-Matrons—held up her hand and everybody grew quiet. Somewhere over the snow-capped roofs a clock began to strike twelve very slowly. It was Christmas. And Pinkie liked it after all!

'My dear,' said Pinkie's mother, 'and why didn't you bring Jerry here?'

Chats with Office Callers

Said ***the Engineer:*** 'Too many young men decide on engineering as a vocation without finding out whether they are adapted for the profession or not. In addition, they leave college possessed of a theoretical knowledge for very little of which they will ever find practical application, and consequently they soon forget it.

'By way of suggestion I would let the useless higher mathematics be stricken from the curriculum; eliminate all unnecessary theoretical study, and particularly that which relates to the development and verification of the recognized engineering formulae which have become so well established and universally accepted as to render superfluous their repeated deduction by each individual student.

'Exclude all so-called advanced engineering design, and admit of only sufficient drafting exercises to familiarize the student with the use of the tools employed, and the mechanical processes of the work.

'Avoid the inculcation of ideals and theories which cannot possibly be reconciled with or found to be of application in the everyday practice of engineering, and do not admit as students in any engineering school those who cannot present a credit of at least two years as an apprentice in practical shop or field work, and a certification as to his proficiency and inherent adaptability for a mechanical trade.'

'With two such lusty sons as Ireland and Canada,' said ***the Englishman,*** 'Mother England needs lots of tact to keep the boys in the family and keep them happy. They are not what you might call "bad boys," but they are no longer children and they just have to know "why." They have had an example of an older brother who ran away from home and prospered, once he got on his feet; and while they love their mother, they realize that they, also, have a name to carve in the world.

'Ireland, being younger, and also being Irish, seems to get into more mischief than the Dominion. When his mother wasn't looking the other day, Pat slipped over to Geneva and did something his mother had told him specifically not to do—filed some eight treaties which included agreements between Ireland and other dominions. Now, Mother England claims that the League of Nations has no interest in family matters of this sort. These household disputes cannot be decided by the neighbors, she holds, and certainly should not be aired in public.

'If Ireland were smaller or less independent, he might be due for a spanking. But Ireland has grown past the spanking age. And that's where the trouble is.'

'Folks are already beginning,' said ***the Merchant,*** 'to look forward to the coming of the New Year. You hear it said that it will be a relief from every standpoint when Nineteen Twenty-Seven is ushered in. I often wonder what is there about the old that leads us to desire a change, no matter how good to us the old has been? We seem to feel that once the New Year is started, we will be on a happier path—with a new opportunity for improvement. This must be some sort of psychological complex, because the passing days know neither year nor century, but follow each other according to a well-ordered plan.

'If folks can begin building upward January first, surely they can begin now—so far as the calendar is concerned. Certainly today is better than any other day—except that it happens not to be January first.'

ɣ ɣ ɣ

The Play Reviewer was speaking: 'Every dramatist must dispose of his characters either to his own satisfaction or to that of his audience. If he writes the scenario for a movie he commonly leaves the villain biting his nails in the background, and the lovers united in a clinging kiss which lasts through sunset or moonrise. And we like it. If he is a tragedian he gets his Hamlet or Macbeth in a situation from

Drawing by GERALD VAN DER HEYDEN.

which only death can deliver him, and lets his curtain fall upon a corpse-strewn stage. And we like that too—at rare intervals—though one may feel, when one comes to think it all over, that sudden death in a tragedy is only a device to save the tragedian himself from a situation he cannot resolve in terms of life. And we have somewhere within us a sound instinct which protests that any situation involving life should finally be resolved in terms of life.

'That is why Dante peopled hell and heaven with the shades of his friends and foes, and most of us are privately quite ready to do the same thing with ours, though we have no mind to allow anybody else so to dispose of us.'

ɣ ɣ ɣ

'A man in my position is bound to make enemies,' said ***the Game Warden,*** as he threw a bunch of confiscated muskrat traps in the back of his car.

'Now the fellows who set out these traps knew it was closed season, and also that the fur would not be prime; yet they persist in violating the laws that are passed for their own protection. I've known one of those chaps for the better part of my lifetime and a finer fellow never lived. But he will violate and I've asked him to appear before the justice tomorrow to answer the charge I have against him. He will go his way with bitterness in his heart and probably hatred for me. Then there is the fellow in town who went spearing last spring. It is unlawful to spear bass at any time, but he could not resist and I caught him with two others spearing with a jack light on the head of his boat shortly after the ice went out. Now he's trying to get me fired. But there are enough good, true sportsmen in the country to offset the minority who will violate and get caught. And it is on the support of such people that I have to depend for my reappointment. They realize that a warden service, to be efficient, must have the support of the sportsmen. They know that a man who patrols his territory daily will keep it pretty clear of violators and that means lawful sport in season for the ones who adhere to the rules of sport.'

ɣ ɣ ɣ

An Office Man had much to say about his radio and a concert he had heard, and how lively Scottish music was, and how he had enjoyed 'The Blue Bells of Scotland,' and Burns' 'Annie Laurie.' Whereupon one of those men who clips things out of newspapers and carries them in his vest pocket, and can tell you offhand what distance Sirius is from the earth, and how many married milkmen there are in Memphis, and how many tons of rust are scraped annually from the Eiffel Tower, informed us, saying that 'The Blue Bells of Scotland' was written by an English actress, a Mrs. Jordan, who lived in London at the turn of the 18th Century: that Burns did not write 'Annie Laurie,' but either a Lady John Scott, who died in 1900, or else, according to President Irving of the Burns Society, a certain Mr. Douglas who lived in Fingham, in Scotland. He further said that neither tune would sound well on the bagpipes, and was very emphatic about it all.

The old face beamed. 'Why, you are Santa Claus,' exclaimed Grandma Boblitt.

The Girl Who Saw SANTA CLAUS

By HOMER CROY

Illustrated by AUSTIN EUGENE BRIGGS

DEENIE sat at her window over Feingelt's Grocery Store and watched her little world getting ready for Christmas. The splendid preparations had been going on for days. The first was when Feingelt's delivery wagon went by bearing a flaring picture of Santa Claus. Deenie pressed her nose against the window and followed it as far as she could.

'I do wish I could see Santa Claus,' she murmured wistfully.

Deenie was six years old—'Kelly's little lame girl,' as she was known. One leg was shorter than the other and in winter she could not go out, so mostly she was by herself.

The hard, bright, worldly-wise children of the streets knew all about Santa Claus—such things got around—but Deenie, forced to stay in the flat with the woman hired by the day to take care of her, knew only what her elders had chosen to tell her.

Deenie's mother was a 'demonstrator' in a drug store and stood all day behind a counter and showed people how to make furniture look like new. Or sometimes she sat in the window and held up little signs and told people how to get rid of corns. It was not pleasant work.

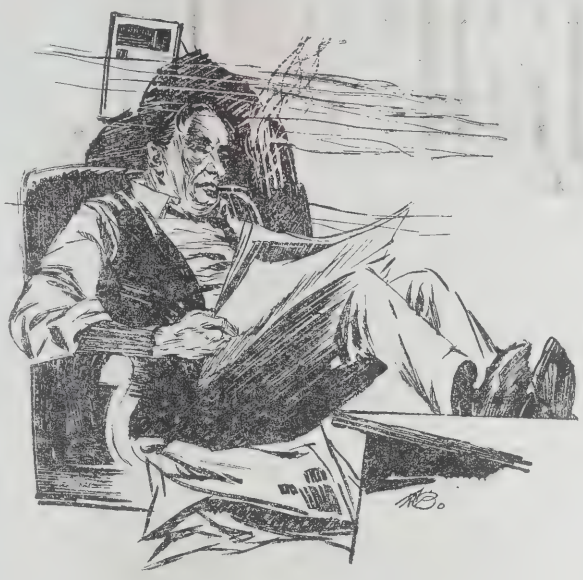
Her father—'Swearing John' Kelly—was not so regular. Sometimes he worked, and sometimes he didn't. 'The world is against me,' he would say when he came home, let out of another job. And then he would loaf around home resting up before he started out to look for more work. Sometimes he was a night watchman and sometimes he checked snow shovelers and sometimes he sat about a dusty, smelly 'social club' and read the sports sections of the newspapers.

The woman who was hired to come and stay with Deenie during the day was old and sat for hours knitting or sewing and never spoke a word. Sometimes she fell across the bed half asleep, heavy with beer.

Deenie's best friend was Grandma Boblitt who lived next door over a tinner's shop, with only a wall between them. Grandma Boblitt was lame, too, and sat at her window sewing and working, stopping now and then to look out at the world. They were great friends, and in summer, when the windows were open, the two put cushions on the sills and leaned out and talked about everything. And they had a little string telephone, which Grandma Boblitt made, and they would talk over it—long, wonderful conversations, sometimes from China and sometimes from heaven, for Deenie was an imaginative creature living in a world of her own making.

It seemed a long, long time since the windows had gone down and winter had begun, and day after day she had looked out at the enchanting street and made it her little fairyland and pictured wonderful things which she wouldn't tell anyone else in the world because they would think them so foolish But recently a change had come over the streets. 'The Christmas rush,' people called it. More people hustled and bustled by. In a drug store across the street appeared a picture of Santa Claus shaving himself with a new safety razor blade—how jolly he looked! Oh, what a wonderful man Santa Claus was!

Maybe she would see Santa Claus, if she watched carefully. He must come down this street since everybody knew him and since her mother had promised that he would come to their house. What if mother should forget to tell him? Deenie plastered her nose to the window and watched, hours at a time, but all she could see were more signs of Christmas, never Santa Claus. A big truck stopped out in front of the grocery store and unloaded Christmas trees. Pretty soon the trees looked like a little forest and Deenie imagined Santa Claus coming right out of the green trees and marching up the creaking wooden steps and ringing the bell at her door. Then she could talk to Santa Claus himself.



Another Santa Claus appeared in the drug store across the street. This time he was cut out of pasteboard and rocked back and forth wearing a huge pair of horn-rim glasses. But of course he was just a make-believe Santa Claus. And more eagerly than ever she wanted to see the *real* Santa Claus. She would tell him what to bring mamma, and about the present she wanted for herself—a pair of roller skates like the other children had. Of course, she couldn't use them, but she could put them before her on the window sill and *imagine* the fine times she was having. It would sound so foolish to tell anyone that . . . . . there were so many things that you could tell only yourself.

A Santa Claus appeared in the plumbing shop across the street. This one moved his hand up and down—he was turning a new kind of faucet for the bathroom. Another play Santa Claus, that's all it was. And more eagerly, more earnestly than ever she wanted to see the real Santa Claus.

The long, lonesome, yearning days continued to go by and she saw more and more Santa Clauses—all *play* Santa Clauses. One day a house went by on a truck with Santa Claus going down the chimney, but it was only a stuffed Santa Claus advertising a motion picture theater. Abruptly, with a bravery she had never known before, she got up. The woman who was supposed to watch over her was sprawled across the bed, her mouth open, her yellow teeth showing, breathing heavily.

'I'm going to see Santa Claus,' Deenie whispered to herself as she opened the door and crept out.

The street looked so simple from her window, but now as she limped hurriedly along it was confusing and whirled so. And at the corners there were terrible trucks and men who leaned out and swore. And then they would see her dangling leg and stop.

Sometimes Deenie was glad she had it; it made people nice.

On and on—how far it was—and how tired she felt. At last she came to a big store where people were coming and going, the revolving door whirling and whirling. She could never go through that. Finding a side door she crept into the great, confusing, pushing place. What a palace it was—even more wonderful than any she herself had built.

She came to toys, millions of them, it seemed—big elephants swinging their trunks and bears nodding their heads—and then suddenly she saw Santa Claus. Children were crowding about him and he was shaking their hands and talking to them. He was like she expected—the big white whiskers, and the fat tummy and the high black boots. Her heart fluttered—at last, she had found Santa Claus. Getting in line she moved toward him. Some of the children in line looked idly at the toys and at the clowns and at the little trains whirling

'I do wish I could see Santa Claus,' Deenie murmured wistfully.

'Peace on Earth to Men of Good Will'

THIS fundamental Christmas wish, the spirit of yuletide and the hope of modern civilization, may be repeated every week of the year when you make subscriptions your gifts

For $1.50 you can present a gift of lasting enjoyment and practical value, a gift that will arrive at Christmas time and keep on arriving throughout the year, bringing with it each week a thought of the giver.

Fill in the subscription blank now so there may be ample time for mailing the Christmas number and the special Christmas Card that will announce your gift.

Chronicler of the Neglected Truth

endlessly through their tunnels, but Deenie didn't.

'It's a real Santa Claus,' she whispered ecstatically.

As she came closer she heard Santa Claus speaking to the other children as they passed. 'Have you been a good little boy?' or, 'Have you been a good little girl? Then I will bring you a nice present for Christmas.' It was the same to all.

A man wearing a uniform came up. Deenie understood that he was one of the owners of the store or something; maybe he was just a floor janitor—such things were hard to tell. Santa Claus lifted his whiskers and began to talk to him and Deenie's heart sank. Never had she known such a terrible, such a crushed, stifled feeling, for the Santa Claus was her father.

SHE CREPT away without being seen by him. The toys which had seemed so wonderful when she had come in were now hideous; any moment they might turn out to be something else.

She went bobbing down the street, suddenly tired. How far from home she seemed. But there were no tears; she would never tell anybody that she had found out about Santa Claus; she would keep it to herself and when people told about Santa Claus she would know them for what they were.

She paused to rest in front of a florist shop and pressed her nose against the glass, for Deenie was always attracted by the beautiful. Here, anyway, was something nice; flowers wouldn't deceive.

A woman came out carrying a bouquet of flowers in her hand, wrapped in paper, and started to her automobile; then she saw the small, pinched face with its heavy, disillusioned eyes—the eyes which usually were so bright and cheerful.

The woman turned back and a moment later Deenie was limping down the street with the bouquet in her hands.

'I had a little girl like you once,' was all the woman said, and wondering what that had to do with it, Deenie seized the flowers and hurried away.

At last she saw the little forest of Christmas trees in front of Feingelt's grocery—now she knew what they were for. Just for people to put presents on, that was all—not for Santa Claus. That was all a fake.

SHE SAW Grandma Boblitt at her window with her iron specs down on her nose. Deenie hobbled up the steps to Grandma's door and rang the bell. Grandma Boblitt stared in surprise.

'Here's something for you, Grandma Boblitt,' said Deenie, and thrust the bouquet into the gray, gnarled hands.

The old face beamed.

'Why, you are Santa Claus,' she exclaimed.

It was pleasant to visit with Grandma Boblitt and how differently Deenie felt when again she went up her own creaking stairs and let herself in. How good it had been to give poor, lonesome Grandma Boblitt the flowers.

'I know who Santa Claus is,' she whispered to herself as she opened the door. *'Santa Claus is anybody who does something nice for somebody else.'*

She sank down by the window again; the mechanical Santa Claus was still shaving himself, but Deenie only smiled. She knew who the real Santa Claus is

Plums From a Christmas Pudding

(*Concluded from page 14*)

ST. GEORGE: And my sword lies yonder bent like a dead tree—

HARLEQUIN: And my patches have flown to the four winds—

PANTALOON: And the dragon remains unconvinced and hungry—

THE DRAGON: (*Suddenly appearing around the rocks at the foot of the castle. He is a magnificently terrifying beast all cased in green and gold scales. The remains of last night's steam issues rather tamely from his cavernous red mouth.*)
That I am. And you had better do something about it quickly or I'll come over there and help you! My paunch yawns for good fresh sawdust.
(*All quickly edge to the farthest corner of the stage. The Dragon gapes once or twice, experimentally exhales a flicker of flame and retires.*)

JACK PUDDING: What a stupid beast! Always hissing like my grandmother's teakettle! He'll be retired soon, and used to decorate the castle lawn for the jousting scene. But come—don't you believe that Christmas solves your difficulties? Just look! Such ungrateful creatures. Here I've spent half the night baking them a Christmas pie, and they'll not have the grace to say a word of thankees. What with their bellowings, and their howlings, and their belchings, and their goings on—

PANTALOON: A Christmas pie for us, JACK PUDDING? (*touched*) Now that's right good of you. In all the years I've been playing on the puppet stage—and I'm older than most of you; I've got scars and cracks from one end of me to the other, and I've had new spectacles at least six times—I can't remember once when the puppets kept Christmas. The flesh-and-blood folk out beyond the curtain make a deal of it I know. But for the marionettes, with wooden knots for hearts and strings for consciences, Christmas has been naught but a darkening of the footlights. Bring forth your pie, boy, though we can't eat it, and dear knows how it can solve our problems.

JACK PUDDING: How? Easy enough! Plums, plums from the Christmas pudding! (*He drags it forth.*) See! (*Plunging his arm into the crust.*) I baked them in myself, and now I pull them forth. (*He pulls forth a gleaming sword.*) A new sword for our tin knight who has been making such a fuss. Forged in Vulcan's own armory and tested on a Harpy's hair. Sent by special messenger for ST. GEORGE'S Christmas. Take this, Dragon-eater, and find your vanished courage! (*ST. GEORGE eagerly snatches at the sword.*)
And next—whoa! What's this! (*A number of brown patches fly from the pie and flutter about the stage.*) Harlequin's lost constancy, in small pieces as usual! (*Harlequin runs about gathering them up and plastering them onto his person. During the ensuing action he is busy securing those that drop off and replacing them!*)

ST. GEORGE: (*who has become very martial*) Ho! St. George is himself again. Bring on the Dragon! I'll fight him. I'll fight six dragons. Eight! Bring on the Dragon! Ho! Hello! Dragon!

THE DRAGON: (*Emerging from the rocks lazily with his eyes half closed.*)
Rumpus! Rumpus! Always in a rumpus. Who is spoiling my night's rest now? Can't you be quiet even if you won't be eaten, you silly puppets? (*Sees ST. GEORGE advancing with lifted sword.*) What do you want? A fight at this time of night? And with no audience, too? Oh, well, we dragons aim to be obliging! (*He swells up to enormous size. Flames shoot from his mouth. Steam hisses from his nostrils.*)
(*ST. GEORGE, advancing, cries* 'GOD and ENGLAND!' *A terrible fight ensues, during which the audience is permitted to cheer as much as it likes. At last, however, the DRAGON is vanquished. With one masterly stroke of his sword, ST. GEORGE cuts off his head, which rolls away. Quantities of red yarn pour from the headless trunk, which falls over, all its strings relaxed. ST. GEORGE places his foot on it, raises his sword, bows to the Princess who waves her handkerchief wildly.*)

HARLEQUIN: (*Who has succeeded in pinning on all his patches.*) My constancy! I've regained it. Ah! How I adore that fair creature imprisoned in yon castle. If I only had the key! I'd scale the wall and rescue her in no time.
(*COLUMBINE, unnoticed, at these words has sunk to the ground with her face in her hands.*)

JACK PUDDING: (*Producing a large gold key from his pie.*) Here it is, then, a plum from the Christmas pie for the LADY ANGELICA.
(*Harlequin seizes the key and climbs the castle walls. He does it very easily, being a puppet, in great leaps and bounds. He hands the key to the Princess who immediately throws open the door and descends. She spurns Harlequin, who attempts to stay her, and glides to the feet of ST. GEORGE.*)

PRINCESS ANGELICA: A thousand thanks, oh gallant knight! My lifelong adoration is the slightest recompense I can offer for your bravery. Ah, haven't you guessed that it was you I've adored all the time, and not that silly puppet Harlequin? Do give me some hope of requited affection!

ST. GEORGE: Lady, 'tis true that my heart of purest wood goes out to any damsel who has the good fortune to be rescued by my prowess. And also that you are very good to look upon! Please accept my hand and sword. (*They embrace in the stiff fashion of puppets.*)

HARLEQUIN: (*At first has stood ludicrously agape. Now regains his composure and rushes toward COLUMBINE.*) I knew it! My constancy has not played me false. COLUMBINE is my first and only love. And her I will always love until—

PANTALOON: (*Pursuing him.*) Until you lose your constancy again, which will be soon once I catch you. (*He gives up the chase, shaking his head!*)

JACK PUDDING: (*Producing a large red heart which he gives to COLUMBINE.*) The heart of your capricious lover, my child! And guard it close lest your tears water the paper flowers! To you, PANTALOON, more blue paint for your spectacles, that you may be at once the blindest and the farthest-sighted player of them all. As for you, Captain, a medal for conducting the performance so nobly. (*He produces a large orange on a string, which the Captain proudly pins upon his chest.*) And now a merry Christmas to you all! (*The lovers embrace. The other puppets bow low, from the waist, to each other. The curtain falls. Through it, a moment later, slips JACK PUDDING, doubled up with silent laughter. He nods and winks toward the stage. To the audience:*)
Didn't I tell you there'd be a joke in it? What? You don't see it? HO! ho! ho! Plums from the Christmas pudding indeed. Here they've accomplished wonders with those plums—and what were they? Guess! ST. GEORGE'S own sword, bent and hackled all the time! The brown paper from my packet of sausages, cut up small for Harlequin's patches. The key? A gilded pretzel. It wouldn't open a gauze curtain. Don't they say love laughs at locksmiths? PRINCESS ANGELICA could have opened that door all the time, if she had tried. ST. GEORGE could have slain the Dragon in the first place. HARLEQUIN is constant when his own heart bids him! THE HEART I gave to COLUMBINE? A stuffed pincushion. Yet 'twill please her, poor child, when HARLEQUIN is fickle. No amount of blue ink will make dear PANTALOON the blinder—or the more omniscient. Nor will a hundred oranges improve the opinion of himself held by our friend, the CAPTAIN.

A pure hoax you say? A fool must have his joke? And yet who says he's not a wise man with the best of you in the final reckoning. They're happy now, inside.

And if mortals might but receive such gifts as those—courage, fidelity, love, self-esteem—if a mirror might be held to the whole world's face wherein each one might see his hopes and dreams reflected, then says JACK PUDDING, there would be such a Christmas as would make the Angels weep for joy. And so, good night!
(*He bows and slips through the curtains.*)

The Affair at the Inn

(Continued from page 3)

Then, like leaping lightning, the questioning thought came: 'Am I then an imitation of the man I serve, and no master of myself?' At once, half-ashamed yet defiant, he went across the inn-yard to the two. Even while he told himself that what he did was whimsical and childish, he took the rich cloak from his own shoulders and gave it to the man, bidding him wrap the woman in it, strangely excusing himself to himself by the lie that he was too warm and had no need for the garment. Yet he wondered in his heart, now and then, finding himself doing humble things in a courteous manner. And he was amazed to see the man accept the gift, not humbly or deferentially, but as a friend accepts from a friend and an equal from an equal. Also the light in the woman's face warmed him.

'Ye shall do ill to go further, friend,' said the steward, and, as he spoke the words, he felt as if he had tasted a new pleasure, or had known a fresh strength and sweetness.

'But how shall I stay here when there is no room?' asked the man. 'Yet any corner would serve, could we but pass the night in peace.'

'Now neither frightened, wearied nor anxious shall the woman be,' answered the steward. 'Wait but a short while, for I go to make a place for you.'

So, much wondering at himself, yet radiant in service, he ran into the stable and took his own and his master's horses from the place where they were stalled; then led them outside. After that, with his own hands he did things which at other times he might have thought petty and unworthy and which at a word would have been done by slaves, such as cleaning the place where the horses had stood, dragging new hay from the loft and spreading it upon the floor, filling a large earthen pot with water and making the stable everywhere sweet and clean. Then, being satisfied with the seemliness of the place, he went out, and led the ass into the stable and helped the man, doing what he could for the woman's comfort. Nor when he heard those outside saying hurtful things, was he either ashamed or insulted. Indeed he was happy and singing softly, feeling the rightness and justice of what he did. And when he again stood in the inn-yard, the world seemed to be a kinder and easier place, as if the placid peace of the silver-sprinkled velvet sky had entered his soul.

He was not aware that he slept, sitting on the stone bench in the inn-yard, but when he awoke, in a dawn of opal beauty, he seemed to remember visions, and music like a concert of sweet stringed instruments, and voices and answering voices, and a coming and going of persons, and a great star that hung effulgent. If it was a dream, he told himself, then it was one to be laid away in memory. But it did not seem to be of the nature of a dream. It was more as though he had learned some bewildering and gracious secret. It was as if he had been lifted into some glowing and shining realm, and from a hilltop had seen far horizons. Further, some new thing to awaken interest and energies seemed to be in him, so that he was anxious for the day and its activities, eager to grapple with things in a new way and to do what his hand found to do. And the secret hope was in his heart that he would find, in some way, rich and true fellowship in manhood, even as he had known it in his childhood.

And in the manger he saw the newborn Child.

And there were the wise men, Gaspar, and Melchior, and Balthasar. Johannes, too, was there with his brother shepherds. So they talked, all of them, the steward too without disdain, not hiding themselves behind a screen of words, but freely and frankly, so that the man's heart was delivered from the depths of his loneliness. Nor was their talk of mystical things, but of everyday matters; of the mightiness of true fellowship and how one may so love another that he will lay down his life for his friend; of how a strange pride prevents the unacted good within men; of how mercy is given to the merciful; of how men hunger and thirst for that bread and wine of life which is friendship; of how none are pure and undefiled, wherefore none may judge another; of a world exquisite and fine with men striving for well doing; of high and heavenly things about which men long to talk but rarely dare.

So when the steward left that place he was full of happiness and hope, for a secret seemed to have been made plain, though he could find no words to tell what was in his heart.

In the manger he saw the Newborn and there were the wise men.

The next morning as they rode toward Jerusalem, both the rich man and his steward were silent, not sulkily, nor in any unfriendly way, but with that shyness which often keeps two sympathetic men from talking of their feelings and experiences. Yet there were glimpses and hints of what was passing in their minds, as when, noting the barbaric splendor of the trappings on the camel which carried his son's litter, the rich man said something about the costliness of it, almost as if he had seen it for the first time, or as if he had experienced a new sensation in seeing it. After that they went on mile after mile, and it was not until they passed through the gap between the mountains of Shunem and Tabor, which broadened into the valley of the Jordan and the plain of Peraea, that anything further was said.

Then the rich man spoke, thoughtfully and with something like hesitation. He said: 'A miserable piece of business, that at the inn last night. Things ought not to be so; a world with no place for a newborn child. I heard all through the open window and could not sleep for thinking of it. And I, with all that space and room, no whit better than other men when stripped, when you come to consider. Yet I and mine had place for a score or more.' He mused for awhile, then added, 'But I suppose things must be so. I suppose some are born into the world to be as weeds and rejected things. Outcasts there must be. And slaves too. And those born to rule, as is my son. Thus it is willed. But it is strange, nevertheless, and I wondered last night, though I had not thought of it in that way before.'

When the steward spoke, after a time of thought, weighing matters, it was with a curious zeal. Said he: 'Now as to your son, tell me this. Suppose you could have a wish gratified. Or suppose you could ask the giver of gifts to give him a gift. What is it that you would ask?' The rich man pondered long. Then he said:

'Money he will have. But what is money? It brings no joy, and, as the sage said, "Whoso seeks wealth is like a child who eats honey with a knife, for scarcely has he tasted the sweetness, when he finds he has cut his tongue." A true man's wealth is the good he does in the world. So I would not ask for riches. Then there is power. But last night as I lay sleepless, I remembered how, for a man in high place, there is little but vexation, a hundred hands being stretched forth to drag him down, another hundred digging pitfalls. So rather than have him rule, I would have him know that men are born for the sake of men, perhaps that they might benefit one another. Nor would I have him a conquering captain, for such a one must needs wade through innocent blood, fighting those with whom they have no quarrel. You see, there are princes of war, but never yet has the world seen a prince of peace. As for a life of ease, I would not ask that for him. For a man softens to his fall in luxury, and it is not idleness but work which ennobles a man. But I think that I would have my son faithful in all things. I would have him speak the truth with his fellow, not being a lying tongue as so many of us are who seek our gain and that only. And I would have him brave and steadfast. And I would that he had a friend, also that he was a friend, each true to the other in adversity as in prosperity.'

The steward answered: 'Something of that hope has been in the hearts of many. Yet no philosopher or priest yet has held forth such a vision. I thought, last night, that perchance some day there would be in the world one who taught that the joy of life lay in love and friendship. And it was a pleasing fancy that the child born last night was a kind of peace-bringer and a welder of the hearts of men. Certainly the soul of man does cry out for the companionship of one with understanding. In this world, all moil and toil, all of us need to commence again, to be reborn, as it might be, shaking off these ancient creeds and dogmas, and all these sorceries of custom. So strong was my dream that the whole world seemed clothed with light and strange beauty, the very stars singing as they swam about the world.'

He passed his hand across his forehead as he ended, like a man very anxious about a great business.

'If such a one came, I would be his follower, giving up all this,' indicating his caravan. 'And when my son came to years of understanding I would send him to such a teacher, to the end that he might be saved from himself and his cares. Indeed, it would seem that the whole world would leap with gladness to follow such a peacebringer, one who carried a message of good will to men. Does it not?'

'Indeed it does,' replied the steward. 'And, after all, the purpose would be the making of oneself a man. It is common sense. For there is no good but good will. Then this life, which all of us hold to be a useless burden, would have a meaning and an end.'

The steward's eyes were bright as he talked, and his voice had a new quality, as if he felt the onrush of something within him.

'A fair picture,' said the rich man. 'A wonderful one, too, though simple. Think of it! That a child rejected and born in a stable should be a bringer of tidings of great joy to the world. A fountainhead of truth and love. A something to turn earth's roughness smooth; the One whose coming was foretold by the Hebrew prophet many centuries before, to regenerate the world.'

'Indeed,' agreed the steward, 'it would be a fair dream, that of a world with good will between man and man.'

LEARN
to
DANCE
and Keep Young

The Old American dances as revived by Mr. and Mrs. Henry Ford have created widespread interest

To render it possible for everyone to enjoy these beautiful dances there has been compiled and published, under Mr. Ford's direction, complete information and instructions on each of the dances as taught in the Ford School of Dancing at Dearborn, together with calls, music and pictures visualizing different steps.

'Good Morning'

is the title of this interesting book. It contains 169 pages, carefully printed in clear type, and durably bound in attractive paper covers

It also expains the origin and etiquette of the dances; style and deportment, and how to arrange and conduct a successful dance

Readers of THE DEARBORN INDEPENDENT are now given an opportunity to obtain a copy of this popular book free. It regularly sells for 75c a copy, but for a limited time we are offering a copy of *'Good Morning'* in return for obtaining a new subscriber for THE DEARBORN INDEPENDENT.

Thousands of men and women are just waiting to be asked to subscribe to this great publication. Many of them are your own friends and neighbors. All you have to do is to secure one new subscription and forward it on the coupon below. We will immediately send you a copy of *'Good Morning'* with our compliments.

The Little Lincoln Girl That Never Came

(*Continued from page 5*)

remember, but he always greeted them with, 'Good morning, Little Sister!' One of these was the little daughter of Mrs. Helmle, who made Mrs. Lincoln's bonnets. He sometimes called there on his way home from the office, to take home Mrs. Lincoln's millinery. Always he said, 'Good morning, Little Sister.' She met him one day shortly before he left Springfield for Washington, and he passed her without speaking. They passed each other on one of Springfield's precarious crossings, where no one could fail to see a person coming from the other way, but he had his head down, in deep and she thought sorrowful meditation, and he did not speak. She got to the other side, and stopped and looked back. She said to herself, 'He is a great man now. He has forgotten me. He used to speak to me, but since he was elected President, he is too great a man to notice a little girl like me.'

Mr. Lincoln also stopped, as though he had received a telepathic message. He turned around and saw the little girl on the other side. 'Good-bye, Little Sister,' he called. And she never saw him again.

The last Christmas in Springfield the Lincoln boys were to give a farewell party, and it was thought best not to have it on Christmas Day, as that would interfere with festivities in the homes of the other boys. I have seen one of the invitations, issued to little Isaac Diller. It was in Mrs. Lincoln's clear hand, and said:

Willie Lincoln
will be pleased to see you
Wednesday afternoon
at 3 o'clock.
Tuesday, Dec. 22nd.

The Springfield boys thought it was a great success. They asked Willie and Tad what they intended to do in Washington, and promised to come and visit them. That party was about all the Christmas the Lincolns could have that year.

South Carolina seceded on December 20, and the news that this had been done, and that other states were certain to follow, cast their heavy gloom over the Lincoln home. Not even Christmas could keep the office-seekers away, or free Mr. Lincoln from the pressure of heavy responsibilities. He learned that there was a crisis in President Buchanan's Cabinet; virtually President Buchanan abdicated on Sunday, December 30. It was a solemn Christmas.

Neither Mr. nor Mrs. Lincoln failed to notice little girls as they met them in the succeeding days. At their great reception at the Tremont House in Chicago, the one time they went there after the election, when Vice-President Hannibal Hamlin came on to meet them and receive with them, the whole procession had to halt while Lincoln wrote in eight autograph albums presented by eight little girls. Whatever other people asked and failed to get, little girls were rarely disappointed when they made requests of Lincoln

When the family was at the Willard Hotel in Washington, and Mrs. Lincoln met a little girl named Julia Taft, she asked the little maiden to visit her often at the White House, because she was lonely, having no little girl of her own. Mr. Lincoln also welcomed her, called her 'Joolie' and tossed her to the ceiling. When Congressman Dawes, of Massachusetts, who was later to succeed Charles Sumner as senator, called at the Willard and brought his little daughter Anna, the dignified statesman received somewhat less attention than the little girl of nine. Mr. Lincoln kissed her, and said he was very fond of little girls, and was very sorry that he had none of his own.

Neither Mr. nor Mrs. Lincoln spoke of the absence of daughters from the family group by way of complaint. Both of them had joy in their children. She was an indulgent mother, somewhat irregular and erratic in her control of the boys, but she loved them, and her husband restrained them less than would have been for their good.

Four Christmas seasons the Lincolns spent in the White House. No one of them can be recalled as a period of marked festivity. In 1861, the city of Washington seemed almost to empty out. Everyone who had a home elsewhere went home for Christmas. Nothing was happening in the Army. The Battle of Bull Run had brought its terrible disillusionment. There was a kind of truce in political affairs. The President had little opportunity to breathe.

But he came to meals only when called, and not always at the first call, and he ate his frugal portions of food with little notice of what he was eating. Robert was home for the holidays, but there was not much that seemed like home. Mrs. Lincoln was fretting about the shabby condition of the White House furniture, and her husband was not paying very close attention; he had not noticed it. But it was not home to any of them.

Early in the new year, Willie was taken sick and died, and that plunged the place into gloom, a gloom which never after wholly lifted.

Tad was then the only boy in the White House, and his father and mother lavished on him all the love that belonged to all the children they ever had had, and all that belonged to the little daughter that never had been. No White House child has ever occupied the position of Tad. Most Presidents have come to the White House after their children, if they had them, were grown. Mr. Buchanan had been a bachelor; Mr. Pierce was childless when he took up his Presidential duties. No one in Washington had recently seen children in the White House.

One incident that occurred on the day before Christmas in 1863 gave Mr. and Mrs. Lincoln great joy. Among Lincoln's personal friends and political opponents in Illinois was U. F. Linder, who had known Lincoln's people in Kentucky, and also had known Lincoln since he began his practice of law. Mr. Linder had a son who gave him much sorrow. This son was indicted for murder before Lincoln was elected President. The boy was to be tried in a part of the state where a majority of the people were opposed to Mr. Linder politically, and he heard that Lincoln had been retained to assist the prosecution.

He wrote to Mr. Lincoln the agonized letter of a father in grief. He said Mrs. Linder's heart was broken, and he besought Mr. Lincoln not to assist in driving his boy to the gallows, for he knew that where the young man was to be tried, Lincoln's plea would have more weight than the instruction of the court. He further said that if Mr. Lincoln was not employed against him, he would be glad to retain him as associate counsel for the defense and would pay him any fee that Lincoln might ask.

Mr. Lincoln wrote back saying that on no account would he prosecute the son of

A Christmas Thought
For a Little Boy.

PERHAPS, perhaps the radiant star
Which led the Wise Men from afar
Knew Nothing of their holy Quest—
Perhaps it only did its best.
And when its beam so clear and mild
Showed where there slept a little Child,
How could it know how many men
Would sorrow if it failed just then—
Or dream that it would ever be
So loved by little boys like me?

And maybe, if I truly try,
As I grow up and time goes by,
I'll learn like that bright star to do
The thing I know is brave and true.
And if my task is hard and long,
I know the Star will make me strong;
And if my will grows weak and frail,
The Star will teach me not to fail.
O Christmas Star, lead even me,—
Like the Wise Men, I too shall see!

—*Wihla Hutson.*

an old friend; and asking what he had ever done that would induce Mr. Linder to think he would accept a fee in such a case? He said he would surely attend the trial and do his best to secure the acquittal of the young man. He did so and was successful.

But the young man did not reform, and when the war broke out, he went South and enlisted in the Confederate army. He was captured. Again Mr. Linder appealed to Mr. Lincoln. The time was late in December, 1863. Lincoln secured the papers in the case, and on the day before Christmas he went over to the War Department, and had the boy brought in. He talked with the lad, reminded him of his friendship for the boy's father, and of the honor which the son owed to him, and he issued an order to the Secretary of War to administer the oath of allegiance to young Linder and send him back to Illinois. Then he wired to the young man's father, and the message reached Mr. and Mrs. Linder on Christmas Eve in 1863:

'Your son has just left me, with my order to the Secretary of War to administer the oath of allegiance. I send him home to you and his mother.'

CHRISTMAS in 1864 was a less gloomy Christmas than that of any preceding year since the Lincoln's arrival in Washington. The President knew what kind of toys to get for Tad. Tad told him what he wanted. Soldiers, and cannon, and plenty of them. The President went to a little toy shop kept by Joseph Schots. He was from the Austrian Tyrol, and had fought under Napoleon, and carried the marks of his experience. He and his wife sold imported German toys, and some of the toys they sold Joseph made.

Lincoln walked over to the toy shop and selected soldiers. Tad had to have them, and so did Tad's father. It was no time to be economical in the matter of soldiers and cannon. He bought a lot of them.

But while he was there, he inspected the dolls, and asked where they were made, and how much they cost, and he tried to think of some excuse for buying one of them. Christmas is hardly Christmas where there is no little girl, and no doll. But he did not buy a doll. He bought the soldiers, and went home, and that night Tad had the soldiers in his stocking. Other people could buy dolls, but there never had been any dolls in the Lincoln home.

Christmas morning, 1864, the last Christmas of the war, the last for the Lincolns in the White House, Tad slept with his father, and was up early. Mr. Lincoln, too, was an early riser. Tad called him with a glad and grateful shout. Santa Claus had been good to him. He had soldiers, many soldiers, and cannon, enough to finish the war! It could not last much longer!

Mr. Lincoln was dressed, or partly so, when Tad came running to him with the soldiers, and with assurance that he now had all the troops he needed. Just then old Edward, the White House door man, met the President. He handed Mr. Lincoln a telegram just received from General Sherman. He had finished his march to the sea, and captured Savannah, which he presented to the nation as a Christmas present.

Yes, the war was nearly over. The Lincolns could afford one happy Christmas.

The Focus of Pan-American Commerce

Central and South America are glad to deal with New Orleans bankers. They have found them responsible as well as friendly, and intimately allied in sympathy.

The CANAL BANK'S Foreign Trade Department is rendering invaluable service to many Northern manufacturers by arranging their foreign shipments through America's Second Port—completing the shipment documents and making sure they accompany the same steamer carrying the goods.

These services, together with every other form of complete banking accommodations, are available also to you and your business.

"Through Ninety-Five Years," an interesting booklet on the South's industrial development, will gladly be mailed executives on request.

Capital, Surplus and Undivided Profits Over $8,000,000.00

Notes and Comments and Criticisms

MR. FORD'S PAGE this week discusses good will.

Christmas can't begin too early. It isn't merely a day, or a season, or a title. It doesn't begin at six o'clock some morning and end at six o'clock the same evening. Rather, it is a culmination of all good things. It is a symbol, an inspiration. It is a beacon that flashes, throughout the year, the light of truth and good cheer and spirituality reborn. And being all these things, Christmas can't begin too early or end too late.

So we are publishing our Christmas issue early. Those who don't believe in Christmas, who consider it childish or term it 'pagan nonsense,' need read no further than this, for they will find little to interest them. Those others, however, who understand its true spirit, who cherish the festival and all that it stands for, should read the issue from cover to cover. They will find many things to their hearts' liking.

They will find—for instance—an exquisite poem by Marguerite Wilkinson, than whom there are few greater poets in this country. And that poem, 'The Yule Fire of Christ,' should be read not once but many times. Its power and its beauty and depth of feeling grow upon one with repetition.

And they will find a story on the first Christmas, a story that will carry them back two thousand years to a crowded little village in a Roman province, and to the things that transpired there one starlit night.

Nor have the children been forgotten. There's a delightful story *for* children (and the chances are it will appeal to *you* too) about a boy who didn't like Christmas and who thought Santa Claus was a booby because he didn't know what a booby was . . . and a poignant little tale about a girl who *did* like Santa Claus and who set out to find him. And did—albeit he wasn't quite the person she had imagined.

There's a puppet play, too; telling how *Captain Horribilicribrifax* and *Pantaloon* and *Harlequin* and *Princess Angelica* and all the rest of the marionettes passed Christmas Eve. And a fine tangle they got into; until *Jack Pudding* came along to straighten them out.

No Christmas is quite complete without a Dickens story. Better than any other, he knew how to weave the mystical spell of Yuletide. With the touch of a connoisseur he dropped dashes of flavor into his tales as a chef drops spice into turkey dressing. And so as a matter of course we have included a Dickens story—'The Holly-Tree,' a tale of a youth who was snowed in at an old English tavern.

Christmas away from home! Not a pleasant prospect, if you have to pass it with a man who considers the day as merely the Twenty-fifth of December, and as ordinary as any day in the year. But if you spend it with a family that really *knows* Christmas, then it's a far happier matter, as the Country Squire explains.

The war years were grim years for President Lincoln, but into them crept a little light at Christmas time. He never forgot his youthful friends on that day, particularly if those friends were of the gentler sex, for the Lincolns never gave up longing for 'the little girl who never came.' And his tall lanky figure, draped in its homely shawl, was a familiar sight in the toy shops on the days preceding Yuletide.

The Girl Who Saw Santa Claus—*Homer Croy* 24

GERALD VAN DER HEYDEN, whose cover design mirrors the spirit of Christmas Day at Wayside Inn three-quarters of a century ago, is rated as one of the most talented of the younger artists. A native of Holland, he has had extensive training both in Europe and America.

MARGUERITE WILKINSON, author of *The Dingbat of Arcady*, *New Voices*, *Yule Fire*, *The Way of the Makers*, and many other works, is one of the best-known poets in the country. Her verse has a lyrical quality of strong appeal.

CHARLES J. FINGER, holder of the Newberry prize for the most distinguished contribution to juvenile literature, author of *Romantic Rascals*, *The Voyage of the Victoria*, *Tales From Silver Lands*, and so forth, needs no introduction to DEARBORN INDEPENDENT readers. (p. 1)

WILLIAM E. BARTON is probably the outstanding biographer of Lincoln of the day, his *Life of Lincoln* being regarded as standard. He is the author of numerous other books and theological studies. (p. 4)

'THE COUNTRY SQUIRE' is the *nom de plume* for one of the best-known writers in America. (p. 6)

BETTY JANE KIDD is a Philadelphian who has been known to the magazine heretofore solely as an artist. In this issue she proves herself equally facile as a writer, with a puppet play that is thoroughly delightful. (p. 12)

ELIZABETH COLT has written extensively for children's magazines. She is connected with one of the larger national publications. (p. 20)

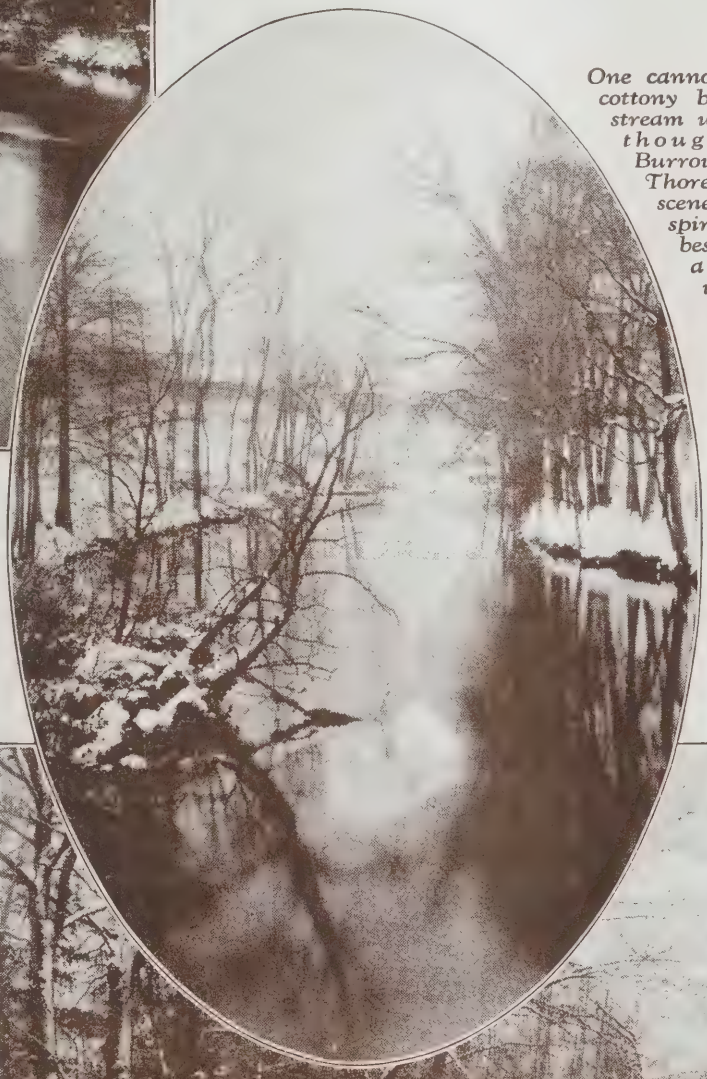
HOMER CROY gained fame a few years ago with his book, *West of the Water Tower*. This was followed by other successful stories, *There Had to See Paris* being the latest. (p. 24)

A Forest Christmas

Wander Along the Brookside and Listen to the Peaceful Voices of the Winter's Day. There is the Spirit of Christmas in Everything Around Us—a Calm and Holy Religion in the Unbreathing Things of Nature.

Thomas Marlatt.

Every pine and fir and hemlock
Wore ermine too dear for an earl,
And the poorest twig on the elm-tree
Was ridged inch-deep with pearl.
—Lowell.



One cannot walk along the cottony banks of a winter stream without having his thoughts revert to Burroughs, Audubon and Thoreau. It was such scenes as this that inspired them to do their best work. After such a walk Addison wrote:

'There is something unspeakably cheerful in a spot of ground which is covered with trees, that smiles amidst all the rigors of winter, and gives us a view of the most gay season in the midst of that which is the most dead and melancholy.'

Lower Right—

The Water! the Water!
The joyous brook for me,
That tuneth through the quiet night
Its ever-living glee.
The Water! the Water!
That sleepless, merry heart,
Which gurgles on unstintedly,
And loveth to impart,
To all around it, some small measure
Of its own most perfect pleasure.
—Motherwell.

Thomas Marlatt.

Make we here our camp of winter;
And, through sleet and snow,
Pitchy knot and beechen splinter
On our hearth shall glow.
—Whittier.

THE LIBRARY OF THE
UNIV OF ILLINOIS
URBANA ILL

Christmas marks the coming into the world of a new force whose beneficence has never ceased; a force so human and compassionate that little children sing of it with joy, and yet a force so godlike that angels sounded its marching music to this world. The fires that burn on happy hearthstones are its altar-fires the cherishing of children's joys its alms, the loyalties of friendship its shining ritual, and its sacraments are Christmas cheer, Christmas charity, Christmas hope

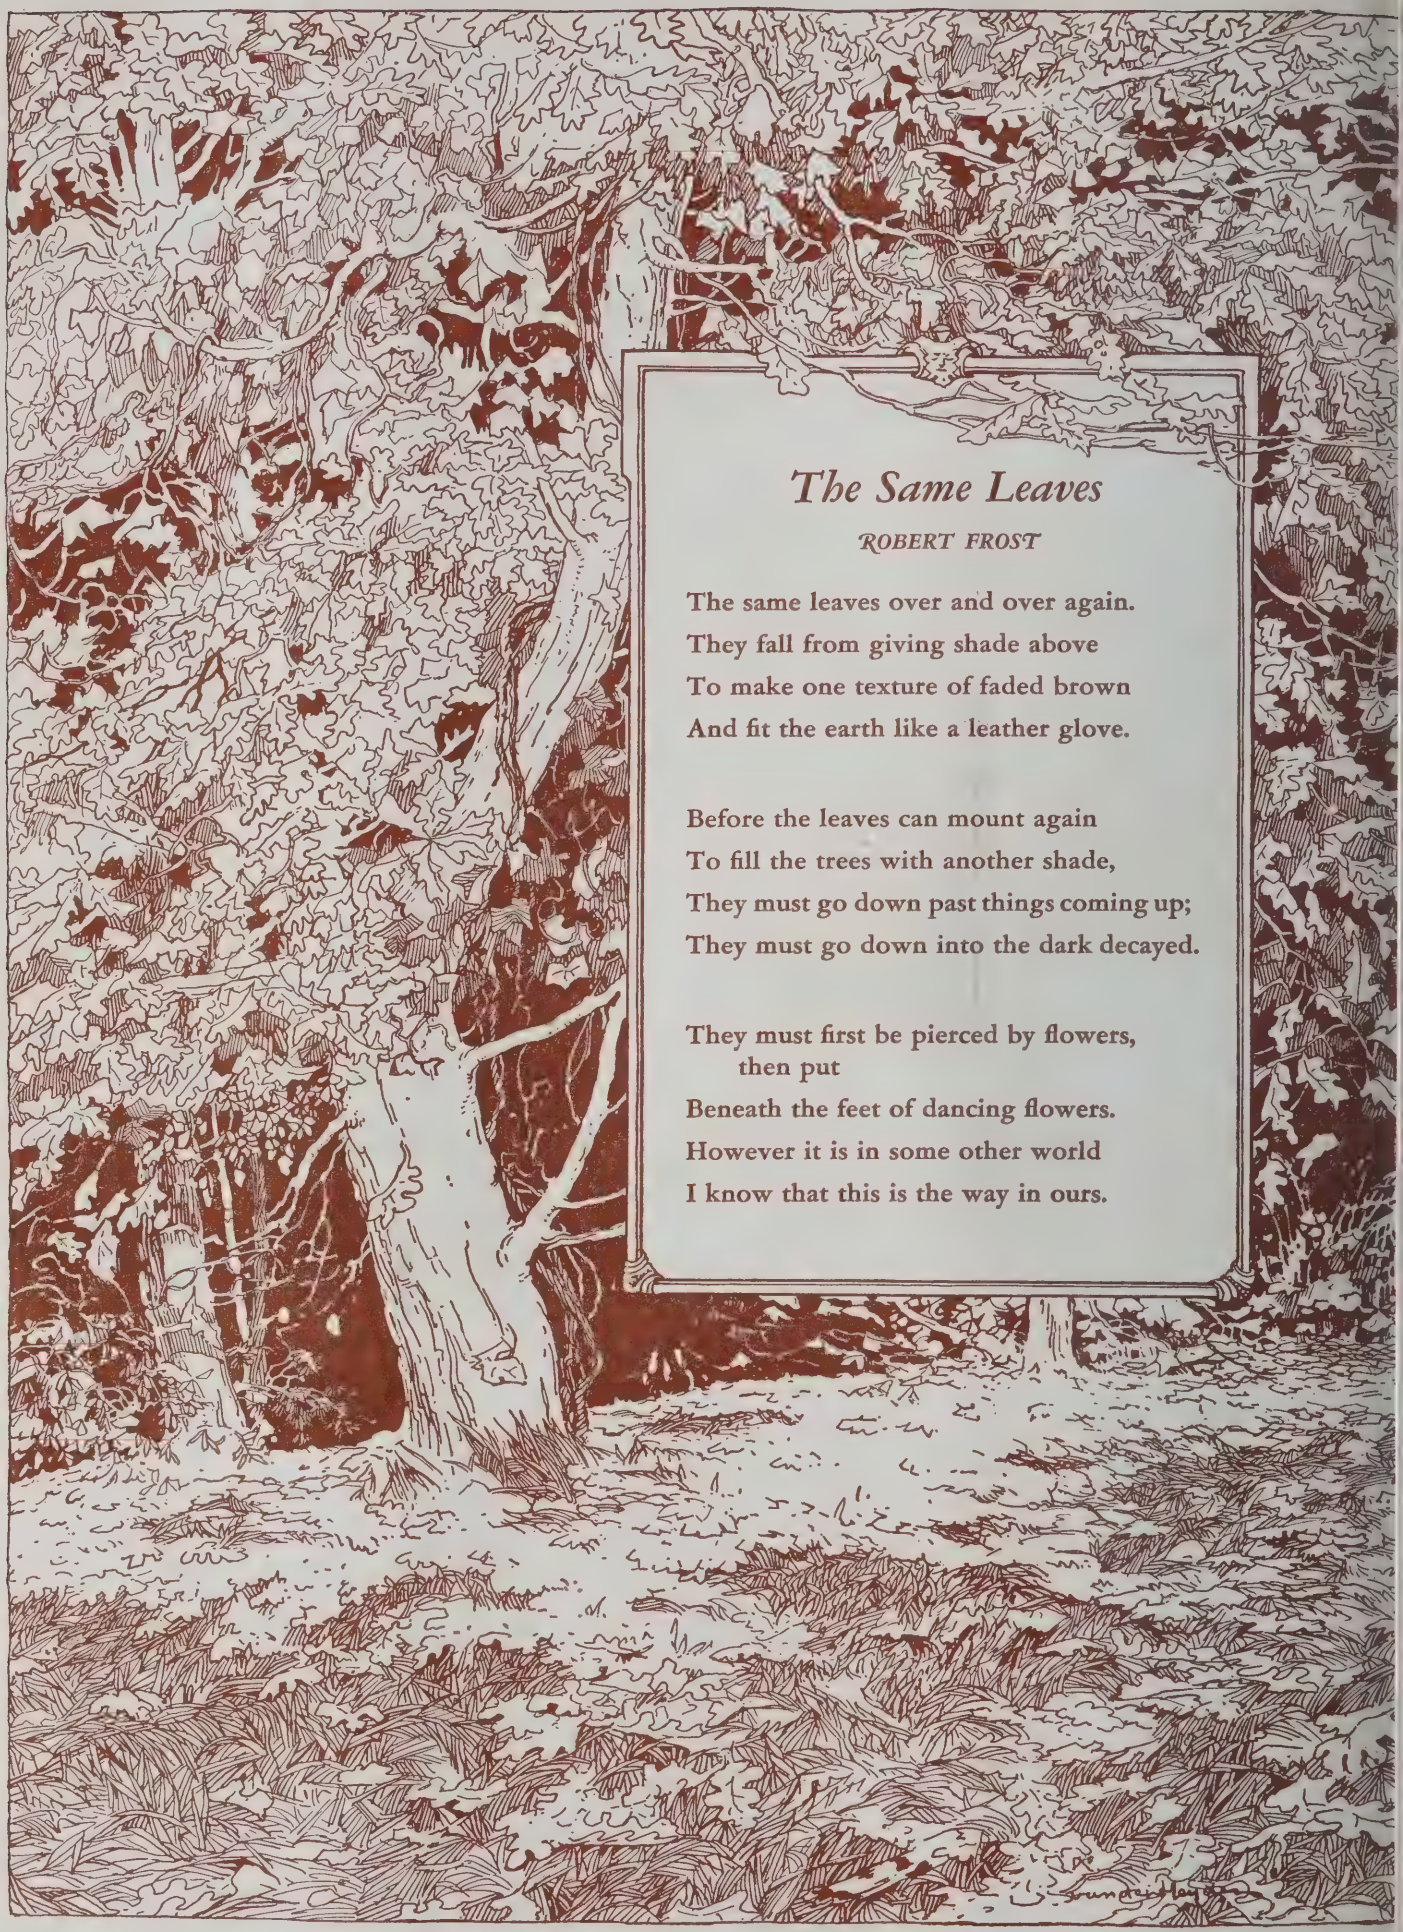
The real mountain climber is not a being who has lost his wings. He possesses a definite technique. Only the mountaineer knows how strangely lucky the foolhardy beginner is.—DOROTHY E. PILLEY (Article, page 14)



The Same Leaves

ROBERT FROST

The same leaves over and over again.
They fall from giving shade above
To make one texture of faded brown
And fit the earth like a leather glove.

Before the leaves can mount again
To fill the trees with another shade,
They must go down past things coming up;
They must go down into the dark decayed.

They must first be pierced by flowers,
then put
Beneath the feet of dancing flowers.
However it is in some other world
I know that this is the way in ours.

Politics *and the* New Woman

A Study *of* Suffrage *by a* Writer Who Believes *It Has* Failed

Women cannot lead one another. They must be led by someone they regard as their own equal, or one more able than themselves. And few militant women admit that of other women—particularly in politics.

By MARIAN BRUCE CLARK

Illustrated by HAROLD FLUKE

SIX years have passed since the enactment of the 19th Amendment to the Constitution, granting the enfranchisement of women; yet today, in spite of the predictions of the 'purifying' effects of the coming of women into political activities it is open to a group of critics to say that as much graft, as much corruption, as much malfeasance in office exists as at any time during the present century!

Women have held many public offices, state, national and municipal, but they have not materially changed the course of government. They have become closely associated with party activities, but they have not materially altered those parties. They have advocated men and measures, but their advocacy has been badly split and has meant little or nothing. And, most discouraging of all, they have developed few real leaders.

They do not lead; they are led. And they are led along the paths of political expediency worn smooth by the tread of men for generations. Sad as it may seem, the greatest aptitude women have thus far shown is for practical politics. Clinton W. Gilbert, famous Washington correspondent, epitomizes the situation in epigrammatic fashion.

'The practical politicians who sit around party headquarters in Washington complain,' he writes, 'that women voters regard politics as a sort of slot machine. You put in your vote and get out a job.'

Sad to relate, that is the attitude of many of the new voters. 'I voted for Senator Brown or Congressman Smith or Mayor Simpkins,' they will say expectantly, and not the slightest doubt in the world enters their minds but that they are entitled to a nice ripe plum from the political tree for so voting.

'But these women,' many will protest, 'are not typical of the vast majority of those newly enfranchised.' Possibly not. *The bald truth is that the*

vast majority of women are not interested in the ballot now that they have it, and that they are not even taking the trouble to use it. True, the same charge can be made against men, but men have made no grandiloquent promises about 'cleaning up politics,' men have been smug and complacent in the face of corruption because that was expected of them. But no one, surely not the ardent suffrage advocates, thought that women would likewise be smug and complacent.

Women in the past six years have blazed no new trails of their own. Instead they have allowed themselves to be led down the dubious paths trod by the politicians. Many of the so-called feminist leaders have slipped into the ways of practical politics as a duck slips into the nearest puddle. They have become adroit in the use of the lobby, they have become cogs in political machines, but they have not honestly faced the vital problems that confront government today.

It is not in any derogatory sense that the statement is made that women as a whole have little interest in politics. The reason is fundamental. Woman may obtain the franchise, she may by some trick of fate be destined to govern, she may perform feats of daring and courage, she may at rare intervals rival man in art, music and letters, but where she accomplishes these things she does so by such superlative effort or such intensive training that in the equilibrium which nature inexorably establishes, her accomplishment is in no wise representative of the average woman, nor of those capabilities with which her sex may be accredited.

OPINIONS differ as to the use women have made of the ballot. Some critics contend that they have failed to keep the promises made before universal suffrage was granted. Believing the subject to be worthy of thoroughgoing discussion, THE DEARBORN INDEPENDENT *presents herewith an article by a woman who believes that the venture of women into politics has been disastrous. The writer has served in a prominent capacity on various official commissions, and is conversant with the political atmosphere of Washington. The article should not be construed as expressing the attitude of this magazine in any way. In a subsequent issue we will present the views of those who believe that woman suffrage has been a success.*

Any man is at a disadvantage in attempting to analyze the mental processes of any woman, for the simple reason that they do not think alike. Women do not approach the solution of a problem from the same angle as a man, and therefore do not anaylze it from the same perspective. Man proceeds according to code; woman has no code. Man progresses according to logic, woman according to intuition.

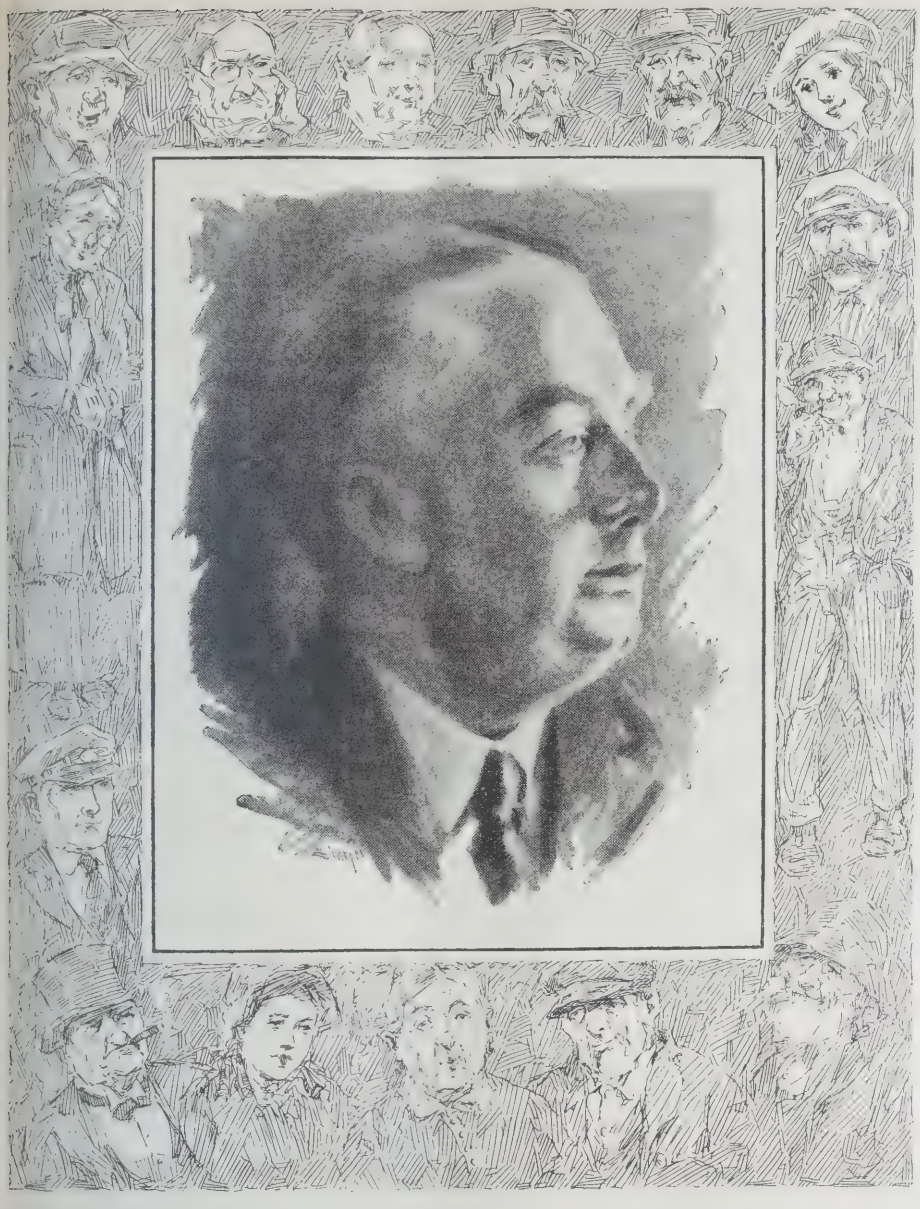
The Kansas woman who, having reared seven sons successfully, wrote a book on 'How to Bring Up a Daughter' is wholly typical of the idiosyncrasies of her sex.

A difficulty which has been met in expressing opinions on the subject of woman, and one which completely baffles the male analyst, is the fact that women are unwilling to admit the truth about themselves. They continue to batter at the barriers of sex limitations through the medium of legislation, and ever and always refuse to analyze the basic reasons for their continual defeat. Sex decides the psychology of the individual, and that is an insurmountable fact to start with. Woman is forever debarred from entering into successful competition with man upon his own plane, and man is forever debarred from infringing on the ample, and maybe greater and finer, sphere of woman.

But let us consider specific cases. There are several ways in which women can play at politics. There are the two major women's political organizations, hangovers from the pre-suffrage days—the League of Women Voters and the National Woman's Party—both of which profess to be nonpartisan in the sense of the older political

(Concluded on page 19)

But how much time have women left for the upbringing of children, when their days are filled with electioneering and lobbying and attending the meetings of politicians?



Joseph C. Lincoln *Tells of His* Cape Cod Years

By MAY B. WHITING

Drawings by DWIGHT C. STURGES

IT IS easy to fancy that Joseph Lincoln stepped out of one of his own stories. It is no trouble at all to imagine him clad in oilskins and sou'wester treading the quarter-deck and in resounding tones shouting, 'Shiver my timbers,' 'hell's bells,' and even more dreadful things.

Of course to get the picture you have to look away from facts entirely. Instead of an elegant residence in Chatham on his own Cape Cod, you must imagine a bark plowing through seething waves, and instead of an entourage of charming friends and selfless servants, you must fancy brawny, rough-neck sailors, axes in hand, standing around the mainmast, awaiting the order to 'cut away.' And you must take only the most fleeting glance at Mr. Lincoln himself. For if you really look at him you will see a kindly, unassuming gentleman, rather short and stocky and ruddy, with sandy hair and honest blue eyes inclined to be serious in expression. But the mouth is the telltale. It has a habit of turning upward at the corners unexpectedly in the merriest smile, the eyes answer with a twinkle, and there is a glimpse of the bluff and hearty buccaneer.

It is a fascinating glimpse, but it is gone in an instant. I wanted to call it back so I said something about adventures; probably he had had many adventures, doubtless he doted on adventures, especially adventures at sea.

'No,' a calm, even voice responded in a tone gently surprised and a bit reproachful. 'Life is pretty humdrum and there's lots of work in it. I don't know of any way to get ahead but to work methodically. Every morning I'm at my desk with fifteen pencils sharpened—'

Think of it! The figure in oilskins, legs braced, shouting against the gale and the crackling sails, with fifteen pencils sharpened. I tried to save him from them and hurried on.

'But your father, your grandfather—'

'Oh, yes,' and there was a keener note in the pleasant voice. 'Their life was different. They were both sea captains. And my mother sailed with my father for thirteen years. She visited almost every port in the world. She liked it, too, especially in pleasant weather, and in the harbors. I've often heard her tell what good times they had visiting back and forth with other ships in port. On one voyage they were gone for three years. And I had two uncles who were captains. I can remember as a boy going down Boston Harbor in my uncle's ship on a farewell party and coming back in the tug.'

THAT was a little better. I felt that the shadowy figure with the rolling gait was somewhere in the offing, listening wistfully. I began to feel a bit sorry for him. He seemed to have rather a raw deal of it, never allowed to poke his nose out unless it was in company with a sharpened pencil. I thought I'd do what I could for him, and so continued:

'And doubtless in your boyhood you knew many other captains and talked with them and listened to their yarns.'

'Probably I did. In Brewster, where I spent a good deal of my boyhood, almost every house, except the doctor's and the minister's, belonged to a captain, active or retired. But I took it all as a matter of course and thought nothing of it. I wish I could talk with some of them now.'

'You didn't think, then, that they would play so large a part in your life?'

'I certainly did not. I thought I wanted to draw (save the mark!) and I used to put verses under my drawings to help sell them. They helped a lot; in fact the verses sometimes sold without the drawings. My wife and I were just married then and we took a long chance. We moved to New York and lived for a year in one room in a lodging house. I now get letters, I might say hundreds of them, asking what trick one must learn to become successful. The only trick I (Concluded on page 22)

The WHITE WEASEL

By HAMLIN GARLAND

A True Indian *Story*

In the camp the women were roasting meat, but the men smoked impassively on.

IN ALL the Blackfoot land there was no chief so elegant and so obviously useless as White Weasel. The agent and his clerks cursed him liberally and yet were careful of him, for with all his fripperies he was an orator and a man of influence.

His dress was rarely beautiful and his hair (cared for with devotion) was blue-black in color and as shining as the wing of a crow. Each braid was bound at the end with strips of white weasel fur. His leggings of fringed buckskin glowed with green and red paint and his small feet were shod in moccasins gayly colored and exquisitely beaded.

In summer his robe was merely a thin white cloth, simple and cheap, but he wore it as if it were embroidered with gold. Every detail of his dress was carefully considered and when he rode into the agency yard in the vivid sunlight, the sympathetic observer exclaimed, 'Here comes a prince of the line!'

The agency officials, however, called him a 'lazy loafing hound,' and as (with cigaret daintily caught between the first two fingers of his light and beautiful hand) he sat watching the white men work, his way of life made civilization a contemptible thing.

He was always gentlemanly, always suave. He had the manner of the high-born Oriental who scorns to show deep emotion of any kind, and on warm days he sometimes took from the folds of his robe a turkey-tail fan and used it with the grace of a prima donna. At such times the disgust of the moiling Government clerks passed all bounds. They called one another to the window to point out the stately and composed young chief to reënforce their hatred of him and to add greater volume to their opprobrious howling.

Now it happened that the department had authorized a requisition for a new building for which a big cellar was to be dug, and as labor was not plentiful in that lone country (gold mines enticed the white men away), the contractor in despair said, 'I wonder if these Injuns would work.'

The agent who thought he knew all about Blackfoot Indians laughed. 'Work? No, they'll starve first.'

'Well, I'm going to try 'em,' replied the contractor. 'Send me down an interpreter, I want to talk with 'em.'

Now the Blackfeet were very poor, and often when White Weasel sat rolling his cigaret, his stomach was empty; nevertheless his smile was unfailing. The women of the tribe also showed their lack of food, only the children remained plump and shining.

The contractor, a rough old fellow, was not unreasonable. Calling a group of the red people round him he conveyed to them this message: 'You say you are hungry. Very well, I'll tell you how to earn food. You see here a heap of shovels and wheelbarrows? Well, now, I want that cellar dug. I'll pay you a dollar a day. Grab a root!'

His speech was received in silence, and little by little the crowd of men melted away until at last only the two white men were left with the shovels.

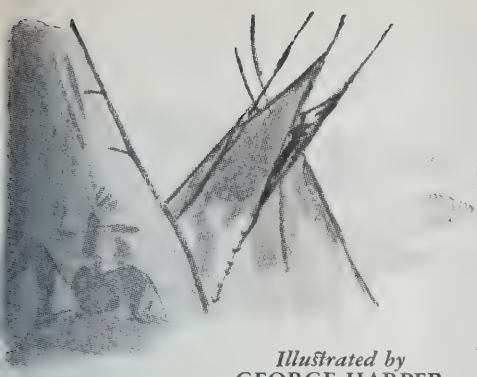
'I reckon that ends it,' said the contractor sighfully. 'The agent was right, they'd rather starve.'

'No,' said the Scotch half-breed interpreter. 'They go talk. Wait, mebbe so tomorrow they come and work.'

What took place in the camps that night the contractor did not know, but early next day eight squaws came, took up the spades and shovels, and with low words and a ripple of laughter, set to work in the pit, digging and wheeling the dirt.

All the whites about the agency cried out in disgust. 'Well there it is! Of all the cursed laziness and selfishness! Them fat greasy bucks are going to lay round the camp and let their women do all the work. They ought to be shot, every one of them.'

No one, not even the agent, knew that the men went hungry that day in order that the women should eat and be strong, and when White Weasel, elegant, nonchalant, untroubled, took a seat upon a wheelbarrow and looked



Illustrated by
GEORGE HARPER

down upon the toiling squaws the contractor was powerfully moved to thrust him through with a chisel. For the most part the warriors did not appear to notice the toilers. They dozed in the sun, or sat in little circles in the grass telling stories (with the accompaniment of wonderful gestures) concerning the old times, calmly ignoring the comments of the agency employes.

The women worked hard and merrily, deft, strong and patient, and on the third day White Weasel went to the contractor and said: 'Our women have worked three days. Our meat is gone. The women need strong food when they work. If you will give us the dollars they have earned we will be all strong for work.'

The contractor had a mind to refuse but concluded it wiser to humor them. He paid them all their money and they at once bought meat and flour and coffee, and set to work cooking it for their evening meal.

'There they go,' said one of the clerks. 'They'll cook and eat the whole supply and tomorrow they won't do a thing but sleep it off like a lot of boa constrictors.'

The contractor walked out into the camp that night to see what they were doing. It was sundown of a warm afternoon and the lodge fires were minute little piles of coals in deep pits. Everywhere the women were roasting meat and frying a crullery while the hungry children sat patiently expectant. White Weasel, calmly waiting also, greeted the contractor pleasantly but the other men smoked impassively on, continuing their endless conversations concerning the good days of old. Even when they came to eat, they betrayed little hunger and the children assembled without clamor. The meal proceeded ceremoniously.

The contractor's heart softened as he looked around upon the pleasant scene. On the tepees the setting sun's light fell. The blue smoke of the fires, lightly rising, possessed a wondrous charm, and the soft murmur of voices made him question if he had fully understood these people after all.

'I'd like to go camping a while myself,' he said. 'I wouldn't work if I didn't have to. Why should any man work if he don't have to.'

That night he was awakened from deep sleep by the sound of suppressed laughter outside his chamber whose window overlooked the pit. Wondering thereat, he slipped to the window and was amazed and enlightened. In the brilliant moonlight, in the half-excavated cellar a dozen red men were busily at work, digging and wheeling dirt, intent and furtive.

White Weasel, with his slender fingers gripping the handles of a big wheelbarrow, was trying to run a load of dirt up a slippery plank. He could not safely guide his load and each time as he reached the middle of the bellying board, his machine broke from his hold and tumbled back into the cellar.

Each time this happened the others laughed softly and muttered jokes, but sat to work at once to fill his barrow again. The fourth time he succeeded in getting safely out and all applauded him.

For a long time the contractor sat there watching these strange beings at their toil, trying to understand them. He saw them turn their blistered hands to the light of the moon, and when they stopped to rest and smoke they compared their aches and pains like a group of boys. What was the meaning of all this? Why did they coldly ignore their toiling women in the daytime and come, themselves, to work in the night?

The contractor was not a dull man, and something in the tones of the toilers and in the stillness and beauty of the night enlightened him. He acknowledged certain misgivings. Perhaps he had done these red men an injustice. He knew little of their inner thought, nothing of their tribal laws, but he began to understand something of the mighty chasm which separated them from the white man's world. He went back to bed with a determination to acquire an understanding of the rigid customs which governed these people.

The next morning the women returned to work as usual, stronger and more cheerful than ever, but not a single red man came by.

The contractor mused on the business of the night, which seemed more and more like a dream, and when later in the day White Weasel came sauntering by, stately as ever, immaculate, nonchalant, the bluff white man held out his hand. 'Hello, White Weasel. How are you feeling this fine morning?'

The chief gave his hand reluctantly and as the white man gripped it, he winced with pain. The contractor laughed. 'Hand sick, eh!—You're all right, my boy. I'll see you get paid for last night's work. I don't know what your idea is but so long as you work I don't care *when* you do it.'

White Weasel could not understand a word the contractor said, but he understood his smile. He walked away wondering what had made the white man so friendly.

Calling Hugh McDonald, the half-breed interpreter, Smith said, 'See here, Mac, I want you to explain something. Will you tell me why those idiot redskins won't work with people lookin' at 'em?'

'It is because they are afraid of being laughed at,' replied the interpreter. 'You see, Injuns can't do squaw work. Squaws wouldn't let 'em. Man have his work, women have her work. White Weasel is a chief. In the old time

(Concluded on page 27)

In the brilliant moonlight a dozen red men were at work.

'Wayside,' home of Hawthorne, Concord.

SHAPES That Come And Go

By JULIAN HAWTHORNE

A CHARMING little poem by Longfellow written in his later years has the somewhat intimidating title of *Palingenesis*. In English it would be Rebirth, or Reborning, if we had such a word. The poet is sitting meditatively on the cliffs at Nahant (a patrician seaside place near Boston), when, all at once,

> The islands and the capes
> Seemed peopled with the shapes
> Of those whom I had known in
> days departed

Such visions often pass before me; but I can also, in a degree, mark the succession of the generations. To a contemporary observer, the perspective of time seems to bring the period of Emerson, Hawthorne and Longfellow into proximity with that of Melville, Howells and James, so close as to be barely distinguishable. But to me they appear far asunder; for I have seen the young, unfledged birds approach the old eagles, asking them the secret of their flight. Then these in turn are old, and a later brood seek wisdom from them. And today, the writers of even 1900 seem out of date to the enterprising juveniles who ornament the pages of last month's magazines. But the latter, I also observe, appear less concerned to take counsel with their elders than to intimate, explicitly or by covert smiles and eyebrow-liftings, how much better we of today understand art and all that sort of thing than the thick darkness of the past enabled them to do.

The Scarlet Letter, published in 1850, opened the way for actual or prospective men and women of letters to Hawthorne's study door. Others came, too, in quest of moral edification or support; and still others, impelled by curiosity more or less intelligent. He received them as best he could, and some of them, no doubt, went away enlightened or comforted. But the pose of moral and art professor didn't suit him; his personal estimate of his genius was a good deal less exalted than that of some of his admirers; besides, he could not help seeing that the glorification was occasionally inept. He must have known, I suppose, that he did, once in a while, achieve a 'stroke of genius'; but he was not inclined to agree that he, in his proper

The Sage of Concord, Emerson.

person, uninspired by the divine afflatus, whose visitations are so impermanent even to the Shakespeares and Homers, should be expected to command it for chance colloquies with acolytes. And if inspiration did happen to be present, that would be precisely the moment when mortal visitors

would be least convenient. He was a writer, not a ready speaker; what wisdom he could grasp, he put into his books; why wouldn't these good folk consent to look for it there?

Probably the famous sibyls of ancient times were, in their private capacities, simply nice, everyday girls. When people went to consult them, there was often a long period of cooling heels in the antechamber. This was not because the sibyls were uncivil, but because the Jove of Athene on whom they relied was elsewhere occupied. By and by the pythoness would feel in her bones that the Source of Wisdom had arrived, and they would thereupon scramble on to their tripods and mouth forth what came to them.

Hawthorne, however, was uniformly polite under inquisition; he might kick out a foot or twitch an eyebrow, but he toed the scratch. It is known that he was averse to making after-dinner speeches. But, living in England, and more or less in the predicament of representing his country in an official capacity—and being not always able to avoid the dinner altogether—there would be nothing for it but to get on his legs and speak. We have no record of these utterances, the newspaper reporter not having achieved his present ubiquity at that period; and Hawthorne, in his family circle afterward, was not addicted to saying them over again. On the testimony of some friend or another who might chance to have been present, they were sometimes not so bad; but it was hard sledding.

The inward rage of a man at being required to speak when he had nothing to speak about may once in a while avail to torture felicities out of him; but Hawthorne never acquired the art either of being reminded of amusing anecdotes, or of filling the waistcoat of emptiness with the bombast of buncombe. Wit and humor were far from lacking in him when, like Sairy Gamp, he was 'so disposed'; but the disposition commonly came in inadvertent moments of privacy and serenity. His family circle was favored with a great deal of it.

On the other hand, James Russell Lowell was a man of letters par excellence; and when he was American minister in London he made capital after-dinner speeches almost every other night, besides digesting the dinners. But he said once that his happiest inspirations were usually spoken to the back of the head of the cabbie who was driving him home after the banquet. He also remarked that the good results of 'the spur of the moment' often depended upon the nature of the animal into whose side it was driven.

Emerson too spoke well at such emergencies; but he had been a pulpit preacher in his youth, and afterward became a lecturer, and many of his essays are his lectures in print; he had the art and the skill, and I remember the tale out of school that Lowell, who was sitting next him at a great British banquet, told on him. The speech, he said, was excruciatingly good, while having every earmark of an extempore effort; but Lowell had an eye on the secret scrap of paper partly concealed by the wineglass, on which the sage had jotted down the points of his discourse, and from which, at each pause for British cheers, he would refresh himself for the next round. But Hawthorne didn't like either speaking or being cheered, and he eschewed the tripod whenever possible. Moreover his ability to eschew it was remarkable; as he himself remarked with a quiet chuckle, 'Providence itself has often been worsted in an attempt to get me out to dinner!'

Be that as it may, from the year 1850 until his death in 1859, he was frequently 'called upon,' privately or in public. Thackeray used to say that testimonies to his genius had the effect of stimulating him to write better; Tennyson, who had a native liking for amorous verse, was driven back by the admonitions of Queen Victoria; and Kipling, when Tennyson praised one of his lyrics, said, 'When a private receives commendation from the field marshal, he says nothing, but fights harder the next day.' But I think that Hawthorne, when he sat down to write, forgot as much as possible the existence of outside praise or blame, and simply opened his heart and mind to whatever might be drawn in his direction.

Much may be ascribed, too, to his early self-discipline and conditions. He never knew his father, who died away from home when his son was four years old. He was a handsome and delightful child, and adored by his mother and his two sisters. He was the titular head of the house from the nursery up, and did about as he pleased. The three women lived in seclusion, partly because the mother was to make widowhood the end and aim of her existence, and her reserve was communicated to the daughters; and though Louisa, the youngest, might have liked society had she been in it, Elizabeth was a self-centered, taciturn and witty person, who read a great deal, and was apt to look down upon people who lacked her brains and precocious worldly wisdom.

Nathaniel 'played' with the neighborhood boys, but he had a dominant way with him, and took a humorous view of things even in his childhood; he was strong and active, and after thrashing one of his companions, explained, when questioned by his solicitous family, that his antagonist was a 'very quarrelsome boy.' When an accident lamed his foot, he would lie all day on the floor and read books, of which he had a good supply, and of all sorts, from the Bible and *Pilgrim's Progress*, to Sir Philip Sidney's *Arcadia* and *God's Revenge Against the Crying and Execrable Sin of Murder;* tempered by Smollets's and Fielding's novels, and Cotton Mather's religious and witch-baiting essays, Marco Polo's voyages, and all the historical volumes, local and general, that he could get hold of. He made an early acquaintance with Latin, so (Concluded on page 24)

MIDDLE AGE *Has* Vanished

Says LADY CYNTHIA ASQUITH

Drawings by RICHARD BROECKER

MANY measures have lately been passed for the welfare of women; measures often toughly disputed and reluctantly conceded.

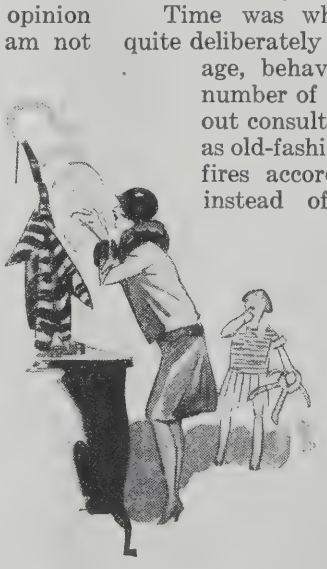
'Woman Suffrage,' 'Woman's Property Act,' 'Woman's Institute'; these and many other familiar phrases testify to the recent enlargement of feminine scope.

But there is another boon women are now enjoying—a boon for the furtherance of which no Act of Parliament was drafted, no windows broken, no policemen nor Cabinet Ministers molested, no single meeting held. I refer to the result of a bloodless revolution; the indefinite extension of Youth. The extension of Youth! Is not that more valuable to you than the extension of the Franchise?

As citizens of humanity we congratulate ourselves on the abolition of slavery, the abolition of child labor, the abolition of the treadmill. What about the abolition of middle age?

We are told that old age is threatened. Science is challenging the doom of mortality, claiming perpetually to repair and rejuvenate the most time-honored bodies and minds.

I remain skeptical as to the validity of these claims, but at any rate women may now remain young until they are really old. For though we are still subject to decay, we no longer submit to a convention which compelled our great-grandmothers to, so to say, haul down their flags and hang up their weapons, not because of any failure of vitality, but because popular opinion decreed that it was time. I am not praising the power of the 'beauty parlor,' nor congratulating the creators of cosmetics. The change I refer to is not skin deep. It is a spiritual and mental change of attitude. We are now allowed to enjoy the pursuits of youth as long as we are physically able for them, remaining young almost till we are decrepit. To put it shortly: so long as we can walk, there is no reason why we should not dance.



We may, alas, have to yield to paralysis; but we no longer yield to precedent. For nowadays we do not automatically retire from the arena, like a civil servant, because of our actual age. We have abolished the time-limit. So long as we remain potentially eligible we are actually eligible.

Time was when wretched women quite deliberately stepped into middle age, behaving according to the number of their birthdays without consulting their feelings, just as old-fashioned households start fires according to the calendar instead of according to the thermometer.

'A woman is as old as she looks' is a familiar saying, but the fact was then the reverse: a woman had to look as old as she was. Now she is as old as she feels.

The change which has taken place is clearly mirrored in fiction. What disconcerting passages you continually come across in the pages of old-fashioned novels! Think of the dismay with which a contemporary woman of say twenty-five must have read such dismal descriptions as: 'Though turned twenty-seven, her face still showed traces of her former beauty'—'Though the mother of a child of two, with her back to the light she could still have passed for quite a young woman.' When the heroine of a Jane Austen novel strikes twenty-one, it is time for her to hold serious consultation with her bosom friend as to whether she may still wear white. At the age of thirty it behooved a self-respecting woman to take to a cap: and the cap was not the kind she could, what is called, 'set.'

It was symptomatic that Balzac should have called one of his stories, 'The Woman of Thirty,' thereby consciously making a sensation. Was it not a bold paradox that a woman so advanced in age could be worth writing or reading about—could possibly prove dangerous?

The idea was that masked batteries may be more perilous (Concluded on page 20)

MR. FORD'S PAGE

OF THE DEARBORN INDEPENDENT

NO GENERATION can live another generation's life for it. Each generation arrives upon the field of life with sealed orders to fulfill its own destiny. The best service which can be rendered to the oncoming generation by the protective anxiety and concern of the precedent generation is that the latter shall not impose upon the former, during the period of its minority, conditions which will hinder it finding its place and work in the world.

There is dawning upon us a suspicion that perhaps our educational preparation of the younger generation is really less a preparation than a hindrance. We have built up our educational system with the very best intentions but we have never even pretended that we have obtained the very best results. To go the whole length of our failure, the most optimistic educators feel that they cannot honestly say that we have obtained even fairly good results.

It is by no means questioned that the schools succeed in having their pupils learn what is taught; it is only questioned whether the things taught constitute an education, and whether it is the kind of education that connects with life. It is increasingly doubted that a young man can be prepared for life by withdrawing him from life until he is twenty-two years old or more. Of course, if the schoolmen were our wise men, and if the secret of life were in printed books, and if the actual conditions of life were academic in their nature, this devotion of a quarter of a century to attending school might be justified. But such is not the case; education has been so all but completely divorced from life that the once noble, dignified and honored position of teacher has fallen greatly in the scale of values. And the reason can only be that somewhere the vital connection between education and life has been broken.

Now the revolt against our educational system began with the pupil and communicated itself to the teacher. That is to say, the new generation has failed to acclaim our educational system as natural or necessary. The revolt is active in those who prefer work to school, and passive in those who accept higher education as a fashionable lark. The percentage of educated men among college graduates is probably no higher than among those who made an intelligent preference of work rather than school. An education is the most universally obtainable, the least monopolized benefit in the world. It has never been 'cornered,' although it has been at times infected with elements of propaganda. The very things about which the younger generation ought to know, the debatable things upon which their judgments will be required, are the very things they are not permitted to meet in school, unless it be with the veil of misleading propaganda around them. It is all part of the system of segregating the school from life.

> *A COMPLETE education is practically a prohibition against entering life until one is twenty or twenty-five years old. Worse than that, when permitted to enter, one's equipment is all theory and no experience. Now, as experience is the necessary antecedent of theory, why is this not the order of education? Sailors learn by sailing, painters by painting, but how is life learned? If life consisted in book study, then to learn how to study books is to learn life. But books are the residue, the litter of life, intelligible only as experience equals the state that produced them. Education is Work and it is solely by Work, Labor, Travail that anyone learns.*

The chief contact we have with the life of our generation is through the work that we do. Work determines and justifies a man's place in the world; work indicates the caliber of his mind and character; work expresses the measure of his usefulness to his fellowmen. Now the only justification of education is that it fits a man for work, if not directly for the special work which he plans to do, then indirectly by tempering and edging the tools which comprise his intellectual equipment. And it is today a very big question whether this can be done except with the assistance of some form of work itself.

The separation of education from work is now recognized as a false step. The white collar is ceasing to be the symbol of intelligence. The theory that education exists for the purpose of providing a detour around work is an exploded theory. Granted that the world needs leaders, the first qualification of a leader is the ability himself to do whatever he may require to be done under his command. The world has a surfeit of clerks who keep record of other men's work; its need is for workers, not only to work at the job to which they are set, but to work at work itself, and all its branching elements, such as methods, wages, finance, distribution, and the rest of the great problem. The *theory* of business or industry is not the first thing to be taught; every active man makes his own theory, but he does it after a long experience. Yet we stuff young students with the theory first—admittedly an incomplete and necessarily a wrong theory because based on the faulty past—and leave them to learn the thing itself as best they can.

Experience comes first, not theory. And not another's experience so much as one's own. We have failed insofar as we have insisted that our successors accept our theory, rather than our task.

Ontario's Vote

THE defection of Ontario from the partially dry ranks to the practically wet has been forecast by a progress in that direction for some time. The first step was the introduction of 4.4 beer, which proved less satisfactory as an intoxicant than as a political expedient. At least it served as the stepping-stone to the more daring suggestion that beers, wines and hard liquor be sold by package under government control. The premier, who has succeeded in leading Ontario this far back toward pre-war wetness, wished to go somewhat further; he suggested that beer be sold by the glass; but this proposal brought such a storm of protest that he speedily dropped it out of his program. The point is that the saloon and all that resembles it has passed beyond the possibility of recall.

When the reason for Ontario's action is sought, due weight must be given to the presence of Old-Country people in the Province. They have not experienced the ravages which the commercialized liquor traffic wrought upon America. Their background consists of the more sensible drinking customs of the Old Country and the higher character of the Old-Country inns. They do not see why any 'good creature of God' should not be used in moderation. Not having observed the extremes to which drinking can go in this new country, with its bracing air and its lesser degree of outdoor exercise, they naturally judge the matter from an angle of their own.

Besides that, the people of Canada are not prevented by constitutional amendment from making experiments as to the best way of handling the liquor question. They operate under Provincial Acts which may be changed by any change of government. It would be a misreading of the situation to suppose that any new development in Ontario is final. If the system just approved should turn out to be harmful, if it should be subject to abuse and exploitation, the people of Ontario may change it. There is nothing to prevent them from making as many changes as may be necessary to discover the best system. The end of it all may be that Ontario may go finally dry.

The problem of the United States is quite different. Our attitude toward liquor is now a part of the Constitution of the United States, and our problem is to interpret and establish the provisions of the Constitution in the daily practice of the nation.

The Pritchett Report

THERE is nothing new for readers of THE DEARBORN INDEPENDENT in the report on Zionism made by Dr. Henry S. Pritchett, of the Carnegie Endowment, but it is significant that a group which could not possibly be labeled 'Anti-Semitic' has reached the same conclusion expressed in this magazine years ago. The project of settling Jews in Palestine is fated to failure; Zionism itself was but a diversion of public attention from a general Jewish world program; honest Jews visiting Palestine to see where all the contributed millions have gone have returned home frankly puzzled; the nations which were first inveigled by Jewish war support into approval of the Zionist scheme have long since discovered their error, and inevitable failure appears.

Dr. Pritchett's report squares with the facts as observed by every unbiased student of affairs in Palestine. The ousting of the inhabitants of the land in favor of a people who never owned it and never will own it constitutes one of the dangerous situations in the world today. Humanly, it is unjust. Economically, it is impossible. Politically, it is dangerous. And if the inquiry were pushed into that special field of Biblical reference where so many Christians think they find prophecies to the effect that the Jews will return to Palestine, it could be added that the whole expectation is un-Biblical. Prophetically, the race that controls Palestine is stated to be the race that will control the world, and that is never said to be the Jews. Dr. Pritchett barely touches this matter of the 'Chosen People,' but it would be a service to clearer national thinking if Christian clergymen would abolish the confusion existing in the Christian mind.

Of course, the Carnegie Foundation and Dr. Pritchett will now be assailed by all the well-known methods at the disposal of the American Jewish Committee, but the facts are piling up in such array that even the potent gentlemen of District XII are becoming increasingly powerless against them.

Not Here

THE Japanese are a peculiar people. A young man in Tokio approached the Prince Regent with a petition to remedy local political conditions. He was seized by the police before he could approach the royal presence. In his sleeves were found the instruments for hara-kiri. Dragged to prison, he explained that had he been successful in his mission, he would immediately have killed himself in atonement for causing a moment's annoyance to the Prince Regent. His own life, he said, was worthless, and he would gladly have served his country by sacrificing it in calling the Prince's attention to a political scandal of which he should be informed. A strange people, to be sure, these Japanese—hard for the Occidental mind to fathom. For their own sake it is to be hoped that not many of them live in Pennsylvania or Indiana.

Killing Time

DEEP in the heart of the Brazilian jungle an exploring party fights with a band of natives and flashes the news to the outside world by radio. As travel goes, the party is weeks from the nearest fringe of civilization; through the air it is but split seconds. A few years ago Roosevelt was in the same territory. Months passed without definite word from him, and when he finally emerged from the wilderness his story of lands and people never before seen by white men seemed so extraordinary that one of his discoveries was banteringly called the River of Doubt. Now another party penetrates the same dark region—and keeps in daily communication with those safe at home.

Time is one of the most valuable of all human assets. Nearly every progressive human energy is directed toward reducing the time required to do the work of the world. In England two giant air liners, each capable of carrying scores of passengers, are under construction. Completed, they will make the trip from London to India in days where weeks are now required. In this country the time from Coast to Coast, from Lakes to Gulf, is being clipped in half by the great air lines.

But transportation and communication are not the only elements affected by the change. The processes of manufacturing are constantly being speeded up. Trade methods are being improved. Waste time is being eliminated from agriculture. The time needed to earn a living is but a fraction of what it was a century ago; and the time remaining is being utilized to advance living standards. Biologists are trying to lengthen the life of man by physical means. But the life of man has already been lengthened—through the intensive utilization of time.

Philadelphia Learns

WITH the closing of the year, one of the most pitiful failures in the history of the country will pass into the limbo of regretted memory. The Sesqui-Centennial celebration should have been the most solemn and impressive observance the nation has ever known. Instead, it was a colossal and dismal flop. Its cost to Philadelphia in loss of prestige has been enormous, its actual monetary cost staggering. Payments from the municipal treasury are placed at $18,000,000; additional expenditures made by various city departments add considerably to the total; 'participation certificates,' sold to the public to the amount of $3,000,000, appear worthless; and the exposition still faces a deficit of $5,200,000!

The failure is due largely to the submersion of the patriotic motif to the commercial. An attempt was made to cash in on the nation's reverence for its past, and the attempt collapsed. A truly patriotic celebration would have had the wholehearted support of the entire country; this one did not. Amazing mismanagement marked the exposition almost from its inception, mismanagement which reached its peak in antagonizing the church people of Philadelphia in the attempt to exploit the Sabbath. The failure of the exposition could have been predicted even before it opened; was predicted, in fact, by those familiar with the situation. Unpleasant rumors of *sub rosa* real-estate transactions filled the air when a mosquito-infested swamp miles from the center of the city's activities was chosen as the site. With the fair still in embryo, a scandal broke around the head of the concessions' committee chairman, a scandal which resulted in the withdrawal of many exhibitors. Officials blundered again in opening the exposition before the grounds were ready, the exhibits installed. Subservience to the concessions holders served only to increase the general suspicion. By the end of the summer the exposition had taken on a more mature tone; there were many things well worth seeing. But the people by this time were distrustful. Less than 5,000,000 of the predicted 50,000,000 patrons passed through the exposition gates! And now the exposition is ending in a grand explosion of graft charges.

For Philadelphians the nation can feel truly sorry. Without question the majority of citizens wanted a commemoration worthy of those momentous events which transpired in Independence Hall a century and a half ago. But Philadelphians failed because they allowed a certain class of men to attempt to turn patriotism into profit. It has been a costly lesson. But if through it the citizens of Philadelphia learn that these men cannot be trusted with civic leadership, it may in the end prove profitable.

Censorship by Bullets

A NEW form of censorship is rising up to control the press—the pistol. The nation was shocked a few months ago at the death of Don R. Mellett, fearless Ohio editor, who was murdered for exposing rotten conditions in his city. The attacks made on Carl C. Magee, fighting New Mexico newspaperman, are well known. Magee has faced his enemies in the open and beaten them, but his life is still held to be in danger. Now the name of George R. Dale, Indiana crusader, is added to the list of those whose editorial crusades are answered by guns. A few nights ago his home was spattered with bullets. The warning was sufficient. 'I am willing to risk my own life and liberty fighting for any cause I deem just,' he said, 'but the sacrifice is too great now that the vengeance of the gangsters is directed at my family as well as myself.' No one can blame Dale for surrendering to protect his family. The regret is that in America in this enlightened 20th Century such a condition should come to pass.

Can EDITORS *Be* Bought *or* Influenced?

By WILLIAM C. RICHARDS

Illustrated by W. W. CLARKE

IF YOU believe newspaper editors can be bought, call on one of them some day and suggest that you would like to trade some money for his integrity. Tell him you want something suppressed in the next day's issue and offer $10 or $10,000 for suppressing it. You will discover the editor will go out of his way to print slightly more about what you wanted held out than if you had not tried to influence him.

I am taking for granted, of course, that you do not know the publisher, editor or business manager personally. If you do know any one of them intimately, you may get further and it may be—mind you, I do not say it is certain—that the newspaper will not print the news in which you are vitally interested or it may bury it, condensed, in an obscure spot. No one is entirely unresponsive to friendships. Our lives are interlocked with other lives. None of us can be a complete isolationist. It isn't necessary, in fact, that one know publisher, editor, or business manager personally. Many an unimportant individual has gone smiling away with the promise of the paper not to use some item which might inflict pain.

When I was very young, I first met the man who 'knew the publisher' and was 'a big advertiser' and who said sometimes that he would telephone Mr. Jones, the publisher, and that good old Jones would be the last person in the world to print anything that he, the heavy advertiser, didn't want published. I was young then. Being callow, I was credulous. I returned to my office and with some hesitation wrote what it was I had to write. In time I came to know there was a lot of bluff in the world. I found that ninety per cent of this type had little if any weight with the Boss if the boss even knew them, and that where he did know them he had a remarkably deaf ear to such phone calls.

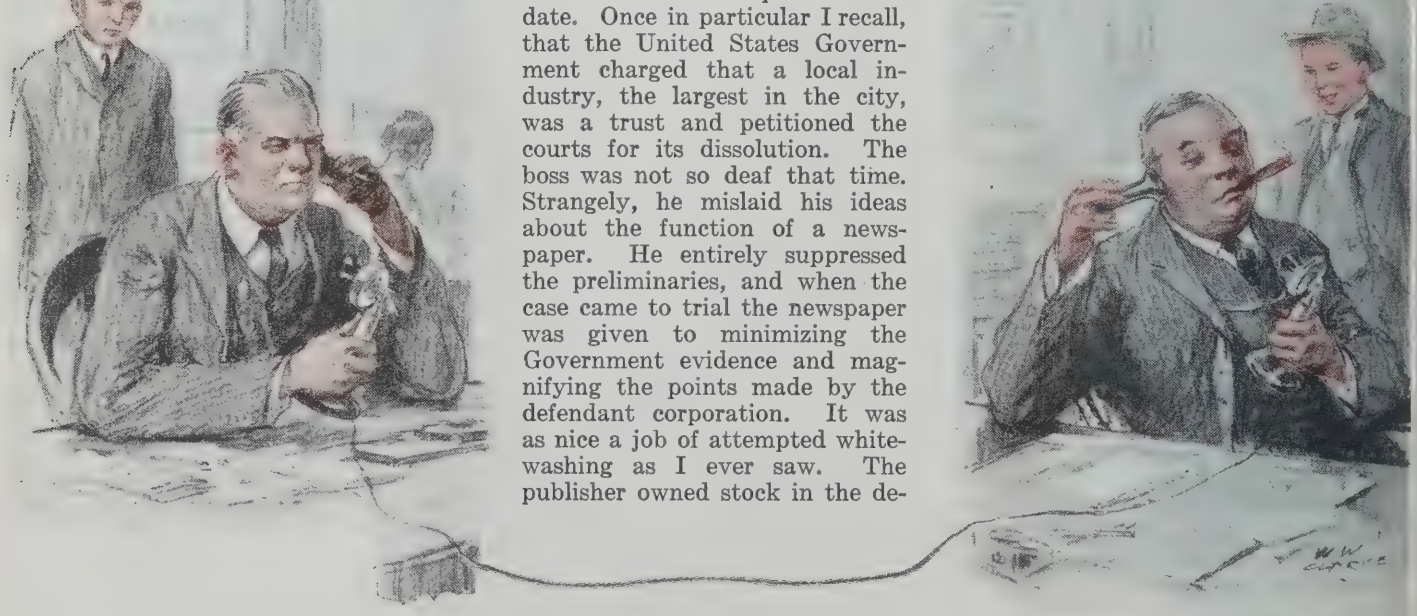
He wasn't deaf to everybody, of course, but I came to know that deep in his head was the absurd idea that a newspaper was designed to print the news. I don't mean that news wasn't suppressed occasionally. It was. Occasionally I found an advertiser's word a potent mandate. Once in particular I recall, that the United States Government charged that a local industry, the largest in the city, was a trust and petitioned the courts for its dissolution. The boss was not so deaf that time. Strangely, he mislaid his ideas about the function of a newspaper. He entirely suppressed the preliminaries, and when the case came to trial the newspaper was given to minimizing the Government evidence and magnifying the points made by the defendant corporation. It was as nice a job of attempted whitewashing as I ever saw. The publisher owned stock in the defendant corporation. Scattered throughout the country are many papers which are hand in glove with certain interests.

There exists in many cases a peculiar knuckling to advertisers which is hardly understandable. Just why a prosperous paper feels an obligation to suppress certain facts to protect advertisers is beyond me, for a prosperous paper, with many names on its subscription books, is in position to print news without favor. It isn't as though the advertiser tried to influence the paper on important national or international policies. It seldom does. It tries to wield influence in petit larceny matters. It asks that emphasis be laid on the sentencing of shoplifters. If there is an accident in the store, it wants the thing minimized.

It wants no tale of trade depression. It cries for Pollyannish reports of perpetual prosperity. A hotel, confronted by a suicide within its walls or a robbery, tries to keep the matter secret.

There is a craving for personal publicity in the minds of many persons, but not in these cases.

Newspaper inefficiency reveals itself in garbled stories, misquotation of public speakers and general slipshod reporting. The publisher's preferences are often transparent in his attitude toward society and the news. A man is influenced by the class in which he finds himself. This is not a positive rule, but it applies generally. Most men think like men of their everyday acquaintance. Poor men cannot own newspapers. Rich men own most of them, and it naturally follows that editorial opinion usually is the opinion of rich men.



He would telephone Mr. Jones, the publisher. Good old Jones wouldn't print anything that he, the heavy advertiser, didn't want published.

The involved and circuitous transmission of facts is partly responsible for increasing errors.

Now, contrary to popular view, all rich men are not bad fellows. A lot of them are just folks. They have, on the average, as much decency and as many ideals and as much purpose to their living as you and I. Some of them have more decency than others. Those that have less publish a type of newspaper which is untruthful—and often exceedingly profitable.

In some towns there are outstanding examples of bad journalism particularly in political campaigns. The newspapers assign reporters to both mayoralty candidates, for instance, but one gathers from the resulting stories that our candidate was greeted with tremendous applause from an overflow audience, while the fellow who is not our candidate spoke to empty seats—and the four people who were there hissed. Take up the opposition paper and it says its candidate received a tremendous ovation and creates the impression that our candidate talked in a deserted hall.

WHEN one newspaper was advocating municipal ownership of street car lines it sent men every which way throughout the United States to find everything favorable about municipal ownership. When any one talked against municipal ownership, no matter how authoritative his proofs seemed, his utterances were not printed.

But there are other causes of mediocrity and unreliability. One is the broadening field which a newspaper is expected to cover. In early days the field was provincial. What happened across the sea or a thousand miles away might not appear in type until three weeks and more after it happened; not until the packet-ship or a lumbering coach delivered a sack of mail. Let something of importance happen in San Francisco today, and fifteen minutes later it will be on the editor's desk in Boston. Speed means inaccuracy.

The number of young men who go into the newspaper business because it is a happy, semi-Bohemian field and not because of any pronounced fitness is on the increase. Old-timers have been and are withdrawing because there has been a low economic ceiling against which one is bound ultimately to crack one's head. That is: a certain newspaper job pays so much and no more, and when a man reaches that maximum he must rest content there with whatever the pay may be. Many capable workmen have bumped their heads and got out. They have become magazine writers, scenario writers, press-agents, bond salesmen at double the pay.

What remain are a few veterans, some wedded to the job because they are too old to go elsewhere, and others for sheer love of the shop. These are the nucleus of the staff, the stabilizing units. Around them are colts fresh out of school, immature young men, hack writers and promising talent. The newspaper reporter who used to dig up a story, hurry back to the office and write it, is fading from the picture. City distances are too long. The telephone is handy. The trail of the story may carry the reporter miles from the office, so he steps to a phone nowadays and tells his story to a rewrite man. Hence, you see an accident through a series of eyes. The rewrite man who writes the story doesn't see the accident. Neither, probably, does the reporter who telephones the facts. The policeman who tells the reporter what he knows didn't see the mishap; he didn't arrive until it was over. That's why I say this involved and circuitous transmission of facts is partly responsible for increasing error, for no one can take the same set of facts and tell the same story.

IF I were asked to put my finger on the chief sin of newspapers, I should lay it on misrepresentation. A newspaper story can be more damning in what it omits than in what it says, and much of the coloring of news is done deliberately in this fashion. It can be done so artfully, moreover, that a majority of people are fooled. Some man makes a startling statement. In connection with it he may make explanatory statements. But some reporters are content to use the startling statement alone, and usually the startling statement without the correlated clauses makes the man quoted look like a fool.

A number of men, however, who say they are misrepresented, are not misrepresented at all. An extemporaneous speaker often is given to silly utterances. He does not know how silly some statement is until he sees it in cold type. Then he seeks a loophole, and the loophole he usually seizes is the charge he has been misquoted.

Press-agents are a dubious adjunct of the present-day press. I have before me a bundle of letters. It is part of the day's grist of mail sent in by various publicity departments.

One letter says 'it is understood an offering of $6,000,000 bonds will be made shortly' by So-and-So. The second announces there is an impending offer of gold notes for a laundry company. Another says the shipment of a certain make of automobile in one month 'shattered all records.' Another quotes the (*Concluded on page 23*)

The mountaineers' triumph—the summit!

Dorothy E. Pilley Describes

The Hectic Sport of Mountain Climbing

MOUNTAINEERING is a subject on which opinion is divided into two schools: the school of those who think that climbing is just like going hour after hour upstairs, the school of those with too little imagination; and the school of those with too much, who believe that the climber is a super-hero, one who risks his life at every step, tweaks the nose of death every hour and returns, bones unshattered and nerves unshaken, after impossible prowess and by a kind of miracle, to his family and friends.

The exact truth about the matter is not easy for the layman to discover.

A slight inspection of a few climbers should be enough to dispose of the super-hero theory. The living specimen, except for a slight peculiarity in his gait, is exactly like his neighbors, no more reckless than they are. He is quite likely to be a devoted father who shows in every other regard a watchful care that the neck of the head of the family stays unbroken. He often takes his wife with him on his expeditions, while seeming at the same time genuinely attached to her.

The other theory, that climbers are abnormal people who like dreary toil, or that they are too stupid to discern how dull and exhausting their chosen sport is, has a better basis in fact. This view is held by those who have hiked up one or two hills by the spasmodic method, for this is their experience.

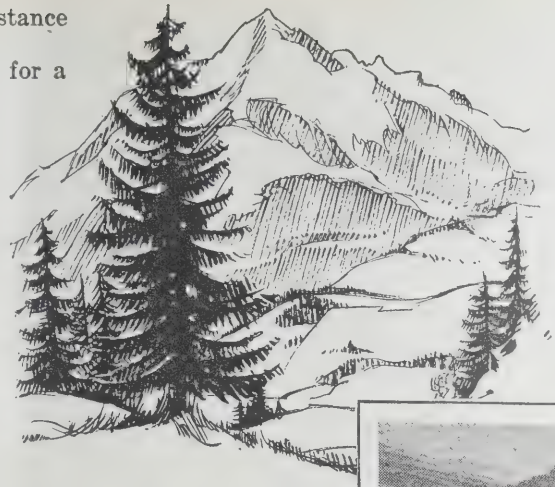
By the spasmodic method you go as fast as you can and halt to regain breath when you need it. This sounds reasonable enough, but before long the supplies of available breath seem to give out; your heart, unless you are a trained long-distance runner, refuses to second you in your folly and you cease to be able to take in anything except the the fact of your distress, and perhaps a little lunch. A moment only on the summit, for you are late; a bewildered look round, and then down hill again, which quite likely proves an even worse bore than going up.

Sperry Chalet in Glacier National Park is a good place from which to study the spasmodic method. About two miles of trail are spread out on the opposite slope below you, and you can sit at your ease on a balcony hung over the valley and watch humanity ascending and descending. A single glance is enough to distinguish a genuine mountaineer from a beginner, or an outsider.

Round the corner will come a tiny ant-like group, three or four microscopic animalcula, all treading on one another's heels and traveling up the trail at a great rate. You have just time to admire their vigorous strides and the determined swinging of their arms when most disappointingly they suddenly all sit down by the side of the trail. While they are resting there may come round the corner some more little black dots, hardly active at all in comparison, no stride, no swinging arms, instead a slow heavy looking roll, which at this distance scarcely shows. They seem to move as though drawn slowly by a thread, they are in single file and the distance between them does not vary. Up jump

the resting party and easily outdistance these crawlers—for awhile.

But suddenly again the need for a halt seems to overwhelm the rushers. This time it is longer, indeed it goes on lengthening, and the active spasms dwindle until sometimes, looking up from your book, you can hardly believe that the same party are still there on the slope, still engaged in the attempt to climb it. Meanwhile the other, the crawling party of real mountaineers, have long ago vanished upward. Doubtless they are on the glacier by now.



Actually the climber's day splits into two parts, which the non-climber only with difficulty distinguishes: a hiking part and a climbing part. The hiking part needs no description. The climber gets it over as easily as he can, taking care that it does not tire him, for he may need his strength later. Hence the slow unpassing gait which I have described. The climbing part begins as soon as special knowledge is needed for crossing ground safely.

The real climber takes no risk which he has not measured and which he is not perfectly able to master. Contrary to the general opinion, he is not a being who has lost his wings and who is trying in vain to get back to his home. Indeed most that is written about him is sheer nonsense. He is a practical man grappling with a practical problem. He possesses, or ought to possess, a definite technique that has been worked out slowly through the experience of several generations of climbers, mostly in the Alps. Without this technique the risks that he runs may be considerable. With it, just as Stefansson has said of Arctic explorers, everything that you add on to his heroism you can subtract from his intelligence.

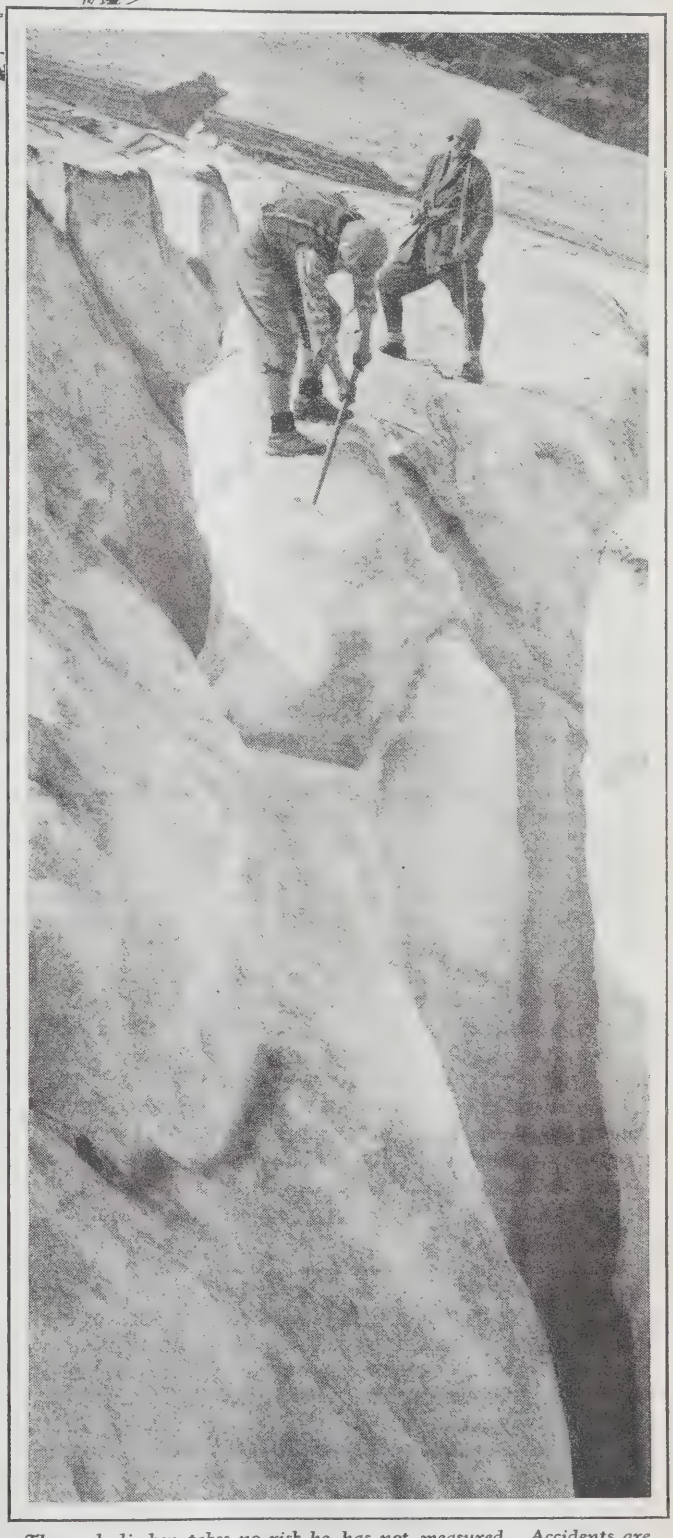
The commonest causes of accidents while climbing are ignorance and physical unfitness. It is a sport for hale people. No one who is sound in wind, heart and limb need hesitate to take it up. They will never suffer from giddiness.

The knowledge, the special technique required, is not quite such a simple matter. There are books and good ones which can supply the theory. For example, Geoffrey Winthrop Young's *Mountain Craft* will tell any would-be climber all that can be told about rock climbing, climbing down, step-cutting in ice and snow, glissading, glacier travel, weather conditions, route finding, the management of the rope, and so on. Each of these topics requires a whole chapter. A few trips with an expert will teach any sensible, prudent person how to put this theory into practice.

As a practical man with a practical problem he will begin with reasonably easy and short expeditions. At the same time, even for these, he will start early, realizing that many hours may be wasted through unexpected difficulties arising, and that oncoming darkness is one of the climber's chief enemies. On Stark Peak, for example, the pinnacle that so grandly dominates Lake Josephine and the Many Glacier region, an ill-chosen line may easily involve a night out, without shelter or fire, and even on a summer night this experience is not enjoyable.

In bad weather it may be appalling, as the two French climbers who were caught last winter in the Meije in Dauphine must have found out. They had to stand on an ice-covered ledge (there was no room to sit) for eighteen hours 'watching the procession of the constellations,' as they put it. Over and over again this question of lack of time arises, and the decision of when to abandon the expedition and turn back is often the test of the sound mountaineer. It is much easier to go on forcing a climb until the hour is too late and the whole party is in danger than to turn back against everybody's inclination when the summit is no more perhaps than five hundred feet distant.

It was the last day of the vacation and Wilbur, the most interesting peak in Glacier National Park, was to have been the climax of a *(Concluded on page 21)*



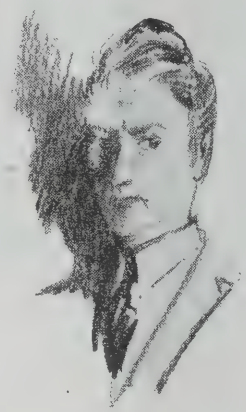
The real climber takes no risk he has not measured. Accidents are commonly caused by ignorance and physical unfitness.

The Adventure of Mrs. Farbman

By HUGH WALPOLE

Copyright, by HUGH WALPOLE

IT WOULD be quite impossible at this later date to say with any accuracy as to whose idea it really was. I suspect, of course, that the credit is Chippet's, he being the romantic one of the three and the man of ideas. *I* (the professional writer) ought to have been the man of ideas, but I was suffering just at that time I remember from a surfeit of realism; romance seemed to me something dead-gone and long abandoned. Chippet, of course, maintained exactly the opposite of this. I can see him now with his blue eyes, his fair hair, his trustful, pleading expression, urging upon us that the London of these up-and-down after-the-war years was the most romantic place in the world. 'Stevenson's London,' he said, 'was nothing to it, and you remember how, when he brought out the *New Arabian Nights*, everyone was amazed that he could find so much color and excitement in this drab, dull, smoke-haunted underground-driven town.'



Mrs. Farbman.

'I don't remember,' I answered rather stiffly. 'I don't know what age you take me for, Bubbles, but I may remark that I was in my cradle when the *New Arabian Nights* was published.'

'Well, anyway,' said Chippet, 'never mind that. The point is that London has never been so romantic, so absurd, and so full of excitement as it is at this particular moment.'

It was, I believe, this very conversation that gave Chippet his idea.

We were having lunch in Borden's rooms, and we were all rather alarmed—alarmed because we were running very low in funds and saw no means of increasing them. Chippet had just retired from the diplomatic service, Borden was supposed to be a sporting journalist, but the sporting paper which had been his principal ally had just died from want of encouragement; I was a serious realistic novelist—I need, therefore, say no more as to the reasons of my penury.

Something must be done and that soon. Chippet thought it would be very jolly if we could only all go into something together. We were great friends, understood one another thoroughly, and the gifts that we enjoyed were opposite enough to make us very useful allies. It was just then, I believe, that Chippet had his great idea.

'Why shouldn't we . . . '

We all laughed.

'Oh, but that . . . ' we cried.

'No, but really . . . ' he answered.

'I don't see . . . '

'Come, now,' we answered, 'they won't . . . '

'I believe that they will . . . ' he replied.

The idea seemed certainly less fantastic when we examined it more closely. It was also a New Idea. It had most certainly never been tried before.

'The first thing to do,' said Chippet, now immensely excited, 'is to circularize the right people. Very careful we have to be. Let's draw up a list of names.'

In this matter of circularizing we were certainly fortunate, because between us we covered a lot of ground. Chippet was aristocratic, being a cousin of the Beauminsters. Borden's uncle had one of the best stables in Great Britain, and had won the Grand National. Borden's younger brother was stand-off half for Cambridge, and had every chance of gaining his International cap next season, now that Kershaw and Davies were confessing themselves too old for the game. And I? Well, I was a friend of Hallard's, and had contributed on two occasions to his high-brow 'monthly.' I was a member of the Garrick and Beefsteak Clubs, and Peter Westcott, who is now, since the publication of *The Fiery Tree* generally recognized to be about the most promising novelist we have, is quite a friend of mine. I stood, in fact, for Upper Bohemia. There were, indeed, very few sides of London life that the one or other of us did not touch. Our circular letter had every chance of making a true sensation. This letter was our joint effort. To this very day I pride myself on its admirable strategy and aplomb.

'The first thing to do,' said Chippet, now immensely excited, 'is to circularize the right people.'

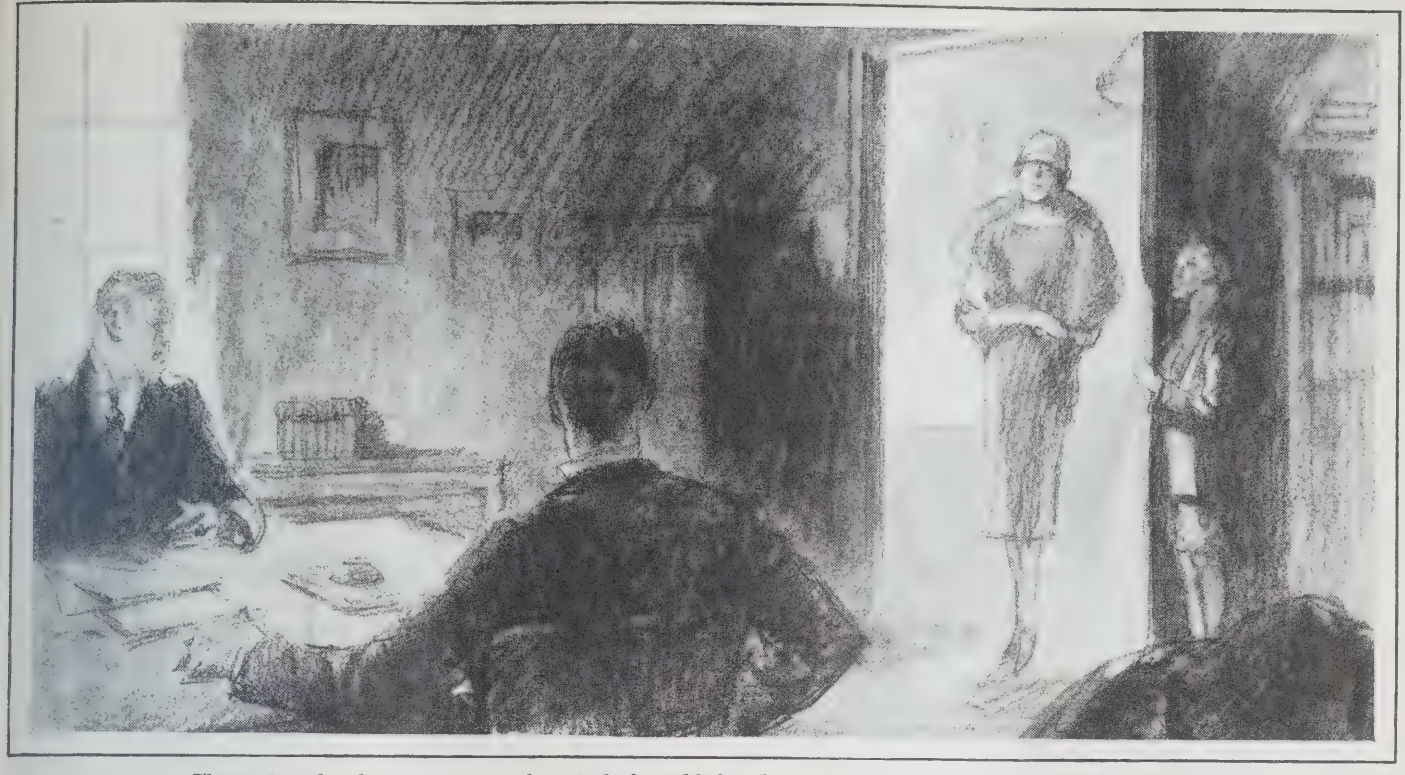
Illustrated by HAROLD WETTERSTEN

It ran as follows:

Private and Personal.

DEAR SIR (OR MADAM),

We must apologize for disturbing you and for taking up your valuable time in this very unwarranted manner. You may be assured that we would not do so were it not for the fact that we believe that we have a suggestion of real interest to make to you. It is admittedly difficult, in these times of progress and over-sophistication, to discover some need of human beings hitherto unsatisfied. From coconuts to boot-trees everything can today, when transit is so rapid and trade so often dishonest, be supplied. We flatter ourselves, however, that we have discovered one almost universal need that has hitherto most curiously escaped the attention of the benefactors of the human race. Sir (or Madam), have you not in your immediate household or in your surrounding circle of friends and acquaintances a Bore? . . . We admit that the question is abrupt and startling, and that is why we have placed after it in the most modern and realistic manner those suspensive dots. It is, however, meant to startle; it is intended to shake you abruptly from the lethargy of habit and the indifference of custom. We will not define to you more nearly what precisely is intended by the term 'bore.' We do not do so because in the first place time is precious, and in these days paper expensive, and for the second more excellent reason that what is a Bore to One is not a Bore to Another. We are in this case addressing you personally and individually. We ask you to look round and, considering your household, decide whether there is not



Thomas introduced into our room a charmingly dressed lady. I saw at once she was foolish, helpless and pretty.

one person, man, woman, or child, whom you would like to see removed from your immediate vicinity. Perhaps there is no one; in which case we offer you our most hearty congratulations, and beg you to read no further in this letter, which is not for you. If, on the other hand, and human nature being what it is, in the more likely case there is such a one, we do beg you to apply to us and to see whether we cannot do something for you whether in improvement or modification or even in the total disappearance of your personal and individual Bore.

We need not say that all transactions with our firm will be dealt with in the most private and confidential manner, that in our manner of procedure we work by tact, kindness, and diplomacy, and, of course, in no case whatever offer personal violence, and that we are in every instance on the side of the law of our country. Will you not give us a trial? All that is needed on your side is a visit to our office between the hours of ten and five. All consultations are free of charge. May not this suggestion be the very thing for which through many months you have wearily been searching? Why not give us a trial? At least pay us a visit and see whether you like us.

We are,
Yours obediently,
BONIFACE AND CO.

I NEED not say that we were none of us busy men, and that we had never before written a letter of this kind. That, I think, was all to the good; the letter had undoubtedly a freshness and originality that business letters for the most part lack.

There was much discussion among us before the documents were finally dispatched. For one thing, it needed much argument and some sharp raising of voices before we finally decided on the name of our firm. 'Boniface' was my suggestion, and I flatter myself that it was a good one.

Borden, although a thoroughly fine fellow, was always a trouble in argument; he had all the Englishman's total lack of imagination, and was inclined to repeat any idea that he had over and over again, refusing obstinately to see any point of view but his own.

We had, too, a very warm time over the question of the 'suspensive dots.' Borden contended that that was a ridiculous sentence to insert in a business letter, that such a thing had never been in a business letter before, and that it would put any reasonable fellow 'right off us.' I on my side maintained that it was precisely because it had never been in a business letter before that I had inserted it, that what we wanted was to be unusual and original, and to make people realize that we *were* different.

'They'll realize that soon enough,' said Borden, grinning.

Very painful are those first weeks after your business is started, when you sit in your office waiting, waiting, waiting, and nobody comes.

We had two rooms in Conduit Street for our offices, and very effective they were, with gray wallpapers and a dark red carpet, but a gray paper and a Japanese print are small consolations for an overdrawn banking account and two shabby suits of clothes.

It was, I think, on the fourth or fifth day, when Chippet and I were sitting opposite one another in a very gloomy state of mind indeed, that the bell rang and the diminutive boy, by name Thomas, whom we had engaged at a high salary, introduced into our room a lady.

TRAINED as I was in human psychology, I saw at once that she was foolish, helpless, and pretty. Here she was well over thirty, and there she was considerably under it, but she was dressed charmingly, and had an appealing, nervous smile that went, as I could see, straight to Chippet's uncritical heart. We begged her to sit down, both smiled at her, and then asked her if we could do anything for her. She hesitated a little, and then said: 'I received two days ago your letter, and I have come here to see whether you could possibly help me in my great trouble.'

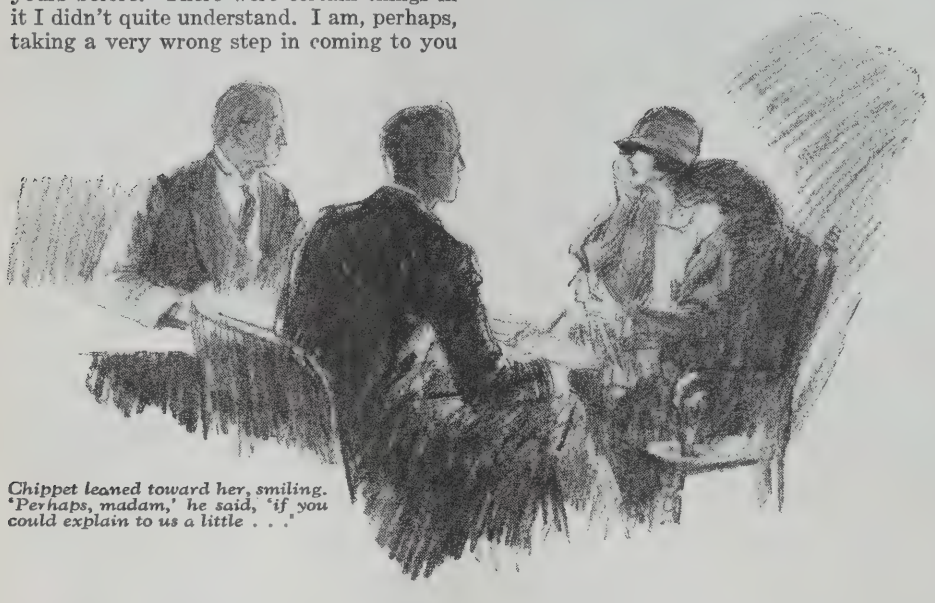
Chippet was so deeply excited at the actual occurrence of a real live client that I could see he was ready to promise anything, so I, being older and more experienced, looking at her gravely and before Chippet could speak, made her a little speech.

'Madam,' I said, 'If you will let us know the nature of your trouble, we will do our best to serve you. Experience has taught us that it is wiser to make no promises until we know exactly what we are asked to perform;

you can be sure of two things—first, that we will do our best for you, and, secondly, that anything you say to us will be treated in the very strictest confidence.'

I was myself considerably impressed by this speech. I was disappointed to observe that she looked, nevertheless, at Chippet, and it was to him that she made her appeal.

'I've never had,' she said, 'a letter like yours before. There were certain things in it I didn't quite understand. I am, perhaps, taking a very wrong step in coming to you



Chippet leaned toward her, smiling. 'Perhaps, madam,' he said, 'if you could explain to us a little . . .'

without my husband's knowledge, but what am I to do? I am desperate—really desperate. Two whole years of torture have brought me to this, or, rather, I should say "to you."

Chippet leaned toward her, smiling. 'Perhaps, madam,' he said, 'if you could explain to us a little . . . '

'I will explain,' she said, nervously rubbing her hands together. 'What I am going to tell you I have never uttered to any human being before, and I do hope, gentlemen, that you will understand that I love my husband, and am only acting for his benefit, and am, indeed, thinking only of him.'

I could see, of course, that this was untrue, but it apparently impressed Chippet very deeply. The lady had the face of a pretty little pig, a very tiny nose, plump cheeks, large blue eyes, and an indeterminate chin. 'My name,' she said, 'is Mrs. Fleming—Mrs. Lestock Fleming. Perhaps you have heard of my husband?'

I saw that Chippet was about to say that he had, but, as our policy was to be from the first an honest and open one, I interrupted him again and said: 'I'm afraid we haven't heard of your husband. Would you kindly tell us anything you can that will help us to understand your position?'

She opened her large blue eyes with an air of pretty surprise, and said: 'Why, I thought everybody had heard of my husband. He is one of the greatest living authorities on pond life, and has written several books which have been very much praised. He gives lectures on pond life up and down the country, and it is really because of the lectures that my troubles began.'

'Because you mean,' said Chippet, 'that you were not always able to accompany him on his lecture tours?'

'Why, no,' said Mrs. Fleming. 'We have two children, and my place, of course, is in my home. Devoted though we are, we have spent a considerable amount of time away from one another, and that I am sorry to say has afforded an opportunity for someone else to gain a control over my husband that he deplores just as deeply as I do myself.'

'Please explain,' said Chippet. 'If he deplores it, I should have thought it the easiest thing in the world——'

'Oh, you don't know my husband!' Mrs. Fleming broke in. 'He is one of the kindest men in the whole world, as she very well knows.' She uttered the pronoun 'she' with such vehemence that I jumped in my chair; her eyes flashed, her little hands were clenched together, and I could not help wondering how it was that, with such an energy of detestation ruling her breast, she had needed to come to us for any assistance.

'Tell us,' said Chippet gently, 'who "she" is.'

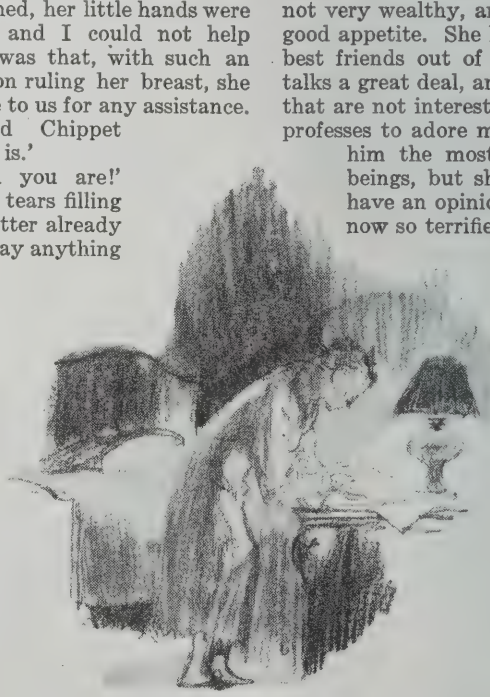
'Oh, how kind you are!' said Mrs. Fleming, tears filling her eyes. 'I feel better already —I feel that I can say anything to you.'

'You can,' said Chippet, 'you can indeed.'

'About two years ago,' continued Mrs. Fleming, 'in Newcastle, after a lecture that my husband had given on "Newts and their Home Life," a lady came up and spoke to him and showed such evident interest in all that he said that he could not but be pleased and flattered. He wrote to me about her, and I, too, was delighted that he should have found some real appreciation. I assure you, gentlemen, that I have not a spark of jealousy in my nature, and when he returned home, and showed me her photograph, I saw indeed that I had no reason for jealousy. At first I was immensely pleased at this new friendship. My husband showed me all the letters from this lady—whose name was Mrs. Farbman—and they were letters entirely concerned with natural history and kindred subjects. The trouble really began just a year and a half ago, when Mrs. Farbman came to live in London. We were living then at Golders Green, and very soon she also came to live there. I won't disguise from you that the first time I met her I disliked her intensely, and I could not help feeling that even at that time my husband was beginning to find her rather tiresome; but he is so gentle a man, so kindly and considerate, that she soon exercised over him a most terrible control. To cut a long story short, for the last year it was almost literally true that, except for the night time, she has not been out of our house. He has been engaged during the last eight months on a very important work on tadpoles and their development, and unfortunately my occupation in my household affairs and the children, and Mrs. Farbman's knowledge of shorthand, have given her an opportunity for being continually in his company.'

'Is she in love with him?' Chippet interrupted. 'Would you mind describing her to us?'

'She is a tall woman,' said Mrs. Fleming, 'rather like a man in woman's clothes. She must be well over forty, although she told us the other day that she had just celebrated her thirty-first birthday, and looked as though she expected us to give her a present, which I believe my husband would have done if I had not been there to stop it. She is a very dominating person, and, to speak quite frankly, our whole house is in terror of her. She comes to almost all our meals, and, of course, we are not very wealthy, and she eats with a very good appetite. She has driven many of our best friends out of the house because she talks a great deal, and generally on subjects that are not interesting to our friends. She professes to adore my husband, and thinks him the most marvelous of human beings, but she never allows him to have an opinion of his own, and he is now so terrified of her that last week he took to his bed for three days to escape her; but that was of no use, because she sat in the little dressing-room adjoining with the door open, and shouted to him the whole of the morning.'



'She has insisted on our spare room, in case she should have ideas for my husband's book in the middle of the night.'

Tears filled Mrs. Fleming's eyes as she got deeper into her story; one tear even rolled down her cheek, and I could see Chippet was very deeply touched.

'Well, Mrs. Fleming,' I said, 'you surely don't mean to tell us that you and your husband together are unable to get rid of this woman?'

'I do indeed,' she answered, 'and not only I, but my sister, who lives with us, a cousin of my husband's who lives close to

s, and two or three of our best friends have one all that we can, and have had no ffect at all. The trouble is, you see, that ıy husband has not himself courage to get id of her. She has a temper, and at the ame time has made him feel as though he adn't now an opinion of his own. He hinks that if she left him, all his work ould stop, and that he gets a great deal of is inspiration from her. That is, of course, uite untrue. He wrote and worked much etter before he knew her. He is simply ypnotized, gentlemen, and it is this ypnotism which I have come to you to eg you to remove.'

'Hypnotism!' said Chippet. 'Do you ıean literally? Does she really hypnotize im?'

'No, of course I don't mean,' she said, iterally that she hypnotizes him, although am sure that she does a lot of queer things hat I don't understand, but he is a man ery easily impressed. He is so modest, nd he always believes that everybody nows better than himself, and Mrs. 'arbman is clever. However much one letests her, one can't deny that.'

'In short,' said Chippet, wearing a look f grave importance, 'what you want us o do is to remove Mrs. Farbman with the reatest kindness, but in such a way that he will never return again.'

'I don't mind about the kindness,' said Mrs. Fleming, looking at us very innocently, I won't hide from you that a little suffering, physical or otherwise, would do her no ort of harm, but of course,' she hurriedly ıdded, 'there must be no question of our involving ourselves with the law in any way.'

I SAW very clearly that now that Mrs. Fleming had surmounted the initial difficulty of speaking to complete strangers on his rather piratical subject, she was enjoying herself immensely, and was looking forward to seeing Mrs. Farbman tortured with red pincers by several long-tailed devils in a miniature Hades. Of such are even the mildest and most gentle women when another woman has interfered with their personal liberty.

'Of course,' she went on, 'I would hate to be cruel to anyone—I even step over a beetle if I see one on the floor—but I suffered from Mrs. Farbman for a very long time now, and if you gentlemen can really succeed in helping her to new interests in life, I shall be grateful to you all my days.'

Inexperienced though we were in business, we were both of us already aware that when a client begins to talk fluently of gratitude, it means that there will be less fluency when the hour for the commercial side of the bargain arrives, so I said very gravely: 'We will do our very best for you, Mrs. Fleming, but you must understand that we cannot absolutely pledge ourselves to success. Our terms are that you pay us one hundred pounds if our endeavors succeed, and fifty pounds in any case, succeed or fail. We cannot, of course, pledge our word that Mrs. Farbman will never return to you again. We can only promise you that we will not claim success until she has been removed from you for three months. An occasional visit during those three months does not count against us. The way we would put it would be that, after watching the case for three months, we are all definitely of the opinion that Mrs. Farbman's attentions have been removed elsewhere, and we shall settle this question by asking Mrs. Farbman herself as to whether this is so. Are these terms satisfactory to you?'

'One hundred pounds is a great deal of money,' said Mrs. Fleming, her beautiful eyes filling with tears.

I saw that Chippet would probably be touched if I left them alone. It is both fortunate and unfortunate to have in such a firm as ours a prominent official dangerously susceptible to feminine charm, so I said very sternly indeed: 'Those are our terms, Mrs. Fleming. Take them or leave them, as you please.' But, as I had foreseen, once the picture of Mrs. Farbman, unhappy and isolated, had penetrated Mrs. Fleming's imagination, she was caught and held.

'I agree,' she said. 'But please, gentlemen, be as quick as you can in helping us. I feel that if I have to suffer as I have done during these last months, I shall poison Mrs. Farbman with powdered glass or hyoscin or strangle her in her sleep.'

'WHAT!' interrupted Chippet, greatly interested. 'Does she actually sleep in your house?'

'On several occasions,' said Mrs. Fleming, her little cheeks flushed with anger, 'she has insisted on sleeping in our spare room, in case she should have some ideas for my husband's book in the middle of the night.'

'I don't see,' said Chippet, 'why she shouldn't have those ideas in her own house as well as yours.'

'She says,' said Mrs. Fleming, 'that it's all a matter of atmosphere. Everything is atmosphere, according to her. There is, for instance, all the difference in the world between the thoughts that you have in a hot bath and in a cold one, and what you feel like after breakfast and what you feel like before tea.'

'There's nothing very original about that,' said Chippet.

'In my opinion,' said Mrs. Fleming, 'there's nothing very original about Mrs. Farbman anywhere, but you shall see for yourself.'

(To be concluded in an early issue.)

The New Woman

(Concluded from page 3)

parties, and both of which indulge quite freely in open lobbying. A politically inclined woman may belong to one of these. Or she may join one of the clubs of the older parties; or, if she lives in a large city, become identified with one of the political machines. Or—and most of the women belong in this class—she may simply cast her vote when the spirit moves her, and the moving spirit in this instance is quite apt to be the male member of her family.

The two major women's political organizations are distinguished, not for the harmony of their relations, but for the lack of harmony. They did not work together before suffrage, nor do they now.

The League of Women Voters, which stresses its nonpartisanship, is advocating a policy of distinctly socialistic trend: disarmament, a maternity and infancy act, easier Constitutional amendment, and the like. The National Woman's Party, on the other hand, is concentrating its ammunition on the chimera of an 'equality'—so its leaders assert—which will 'sweep away every remaining vestige of subordinate conditions for women that the law can touch,' economic, industrial, political.

One of the peculiar results of universal suffrage has been the election of a number of women to office under the so-called 'dower right'—the custom by which widows are elected to fill the positions formerly held by their deceased husbands. Surely this form of entail is one scarcely compatible with the best American traditions. A woman, if she is fit to hold office (and no doubt many are) should be elected because of her own outstanding abilities, and certainly not for reasons of sympathy for her bereavement.

This does not mean, of course, that the women so elected have not been capable officials; they have, many of them, and their public records for the most part have been good; but even this cannot justify the policy of 'dower right.'

Serious charge has been made that the entrance of women into politics has been one of the chief causes in the disintegration of the home. Whatever the truth of the charge, it cannot be denied that the advent of the two happenings has been almost simultaneous. At the recent clinical congress of the American College of Surgeons, Dr. W. Blair Bell, noted English surgeon, declared that degeneration of the male is indicated by the rise of woman in political spheres. He pointed out that when women have been in the ascendant, civilization has disintegrated and given way to more virile systems. Feminism, he said, bodes ill for both women and society, for feminine psychology is ill adapted for administration of the world's affairs.

'If women are going to change the world, and we hope they will, and are going to get the peace that we all pray for and the coöperation and good will,' declares Lady Nancy Astor, one of the foremost of the newer order, 'we have got to begin with the children.'

BUT how much time have women left for the upbringing of children? Those women who have been drawn into the maelstrom of 'practical politics' are the greatest sufferers, for they have had to sacrifice, for their atom of political power, something of the finer attributes of womanhood. Many brilliant women who entered politics with high ideals are now mourning the shattered remains; many have acknowledged bitter failure. Beyond question, the atmosphere of a local political machine can be only degrading to a woman. Those who enter into the petty intrigues of the local bosses bring themselves down to the level of those bosses. *Ability is not such a requisite to these women as is docility; their chief function is to take orders, not give them.*

Politicians have at last awakened to the fact that the 'woman vote' is largely a myth; they now realize that nominating a woman on a party ticket will not insure a tidal wave of feminine ballots toward that ticket. The differences between the two major women's political organizations are carried on through the whole gamut of women in politics. Individually women are no more harmonious than collectively.

Women cannot lead one another. They must be led by someone they regard as their own equal, or one more able than themselves. And few militant women admit that of other women—particularly in politics.

Middle Age Has Vanished

(*Concluded from page 8*)

than those which are obvious, but that at such an age the batteries must be masked, the danger insidious; this was considered incontestable.

I wonder what a story with the same gist would now be called? 'A Woman of Sixty,' I suppose.

Though the change has much deeper roots, clothes do play an important part in the merging of ages.

There is now no longer any recognized livery for the different stages in a woman's life. Time was when at a glance you could have told whether she was single or married, mother or grandmother. The materials, color and style worn by the young, the middle-aged and the old were quite distinct. Now it would require an inspired Sherlock Holmes to distinguish a maid from a matron, a 'has-been' from a 'may-be.'

Whether she has a past, a present or a future, she dresses in the fashion. Formerly anyone could have recognized a middle-aged woman not only by her dress, but also by her movements, her manners and her conversation. It is not that we now ape youth; that we fight a stubborn rearguard action; but that there is now no longer any arbitrary time curfew to curtail the activities and energies enjoyed in youth. If we are wise, we do not attempt to conceal our age. It is more that we do not consider it. We may be covered with crow's-feet and thatched with gray hairs. What matter? Wrinkles (the right kind) do not disqualify and the vogue for *poudre* heads witnesses that gray hairs are becoming.

Yes, we now reject what used to be considered a necessary evil, the dark ages of a woman's history. Transitional periods—as in architecture—are so unsatisfactory. For goodness' sake, let us be one thing or another. Our middle-aged ancestresses fell so heavily between two stools, becoming too old to be courted so many years before they were old enough to inspire respect.

Let us pray that we may undergo a magic transformation and, when the time comes, be young on one day and venerable the next.

IF YOU have enjoyed THE DEARBORN INDEPENDENT this year, the many unusual features prepared for 1927 will afford the utmost in reading pleasure.

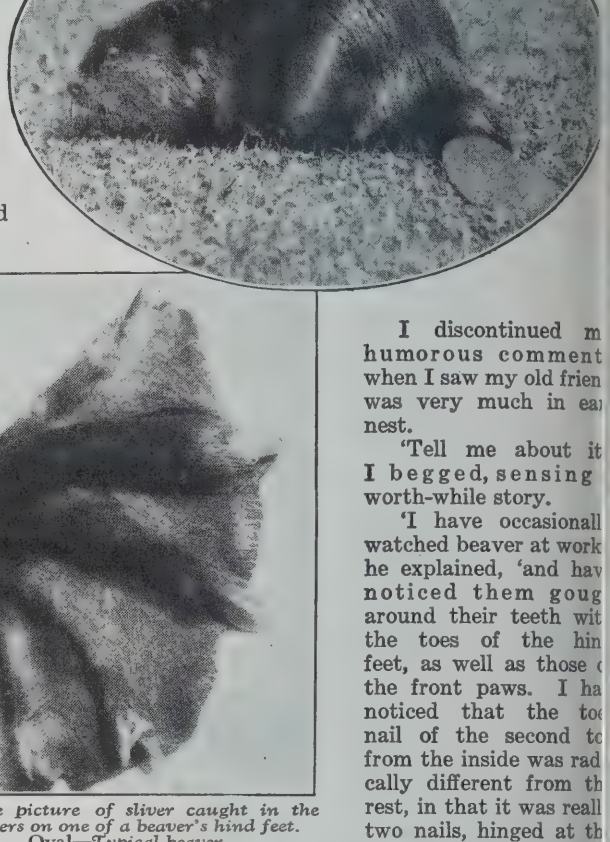
You will not want to miss an issue, and we suggest you check the expiration date on your subscription and forward your renewal in good time.

Or, perhaps, you have a friend who would enjoy THE DEARBORN INDEPENDENT. A subscription always makes a most acceptable gift. Send complete name and address together with remittance of $1.50 and we will do the rest.

The Beaver *Carries* Pincers

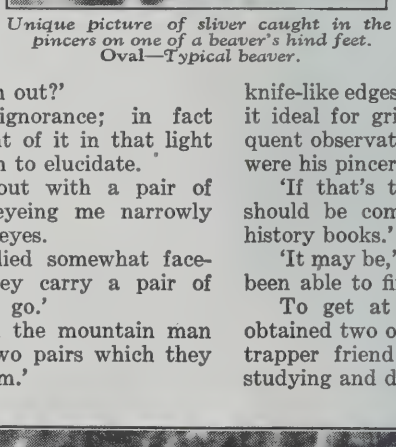
So *He Can* Pull Slivers *From His* Teeth *and* Gums

By F. J. CLIFFORD



IT SEEMS to me,' said the old fur-trapper whose snow-blinded eyes had forced him down to the haunts of civilization, 'that with all the writing about wild life, some of the writers might have said a few words about the extraordinary feet of the beaver.

'You know that beaver are consistent wood-workers—that in felling trees and cutting logs for dam construction they do it all with a set of self-sharpening chisels, their teeth. Now, it is only natural that they should get slivers stuck in their gums or wedged between their teeth—sometimes very tightly. How can they get them out?'



Unique picture of sliver caught in the pincers on one of a beaver's hind feet. Oval—Typical beaver.

I confessed my ignorance; in fact that I had not thought of it in that light before. So I asked him to elucidate.

'They pull them out with a pair of pincers,' he replied, eyeing me narrowly with almost sightless eyes.

'Well, well,' I replied somewhat facetiously. 'I expect they carry a pair of nippers wherever they go.'

'Exactly,' answered the mountain man evenly. 'They have two pairs which they always have with them.'

I discontinued m humorous comment when I saw my old frien was very much in ea nest.

'Tell me about it I begged, sensing worth-while story.

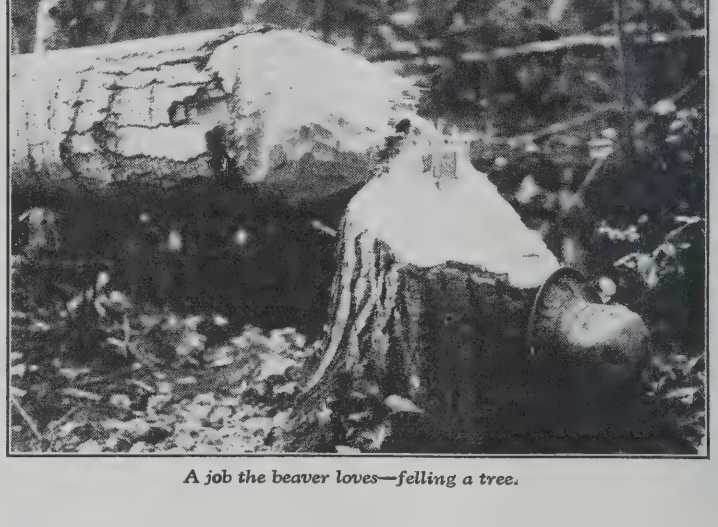
'I have occasionall watched beaver at work he explained, 'and hav noticed them goug around their teeth wit the toes of the hin feet, as well as those the front paws. I ha noticed that the to nail of the second t from the inside was rad cally different from th rest, in that it was reall two nails, hinged at th base, and two of th knife-like edges coming together would mak it ideal for gripping small objects. Subse quent observations convinced me that the were his pincers—a pair on each hind foot

'If that's the case,' I replied, 'then should be commented on in our natura history books.'

'It may be,' he replied, 'but I have neve been able to find it mentioned.'

To get at the thing first-handed, obtained two of the feet in question. M trapper friend and I spent several hou studying and discussing them.

'One very wis act on the part nature,' he com mented, runnin his fingers over th velvety webbe foot, 'is the wisdo of placing the pin cers just wher they are. Had the been placed on th outside toe, the would have bee subjected to muc more danger Neither would i have been wise t put them on th large center toes since they some times have th nails torn off.'



A job the beaver loves—felling a tree.

Hectic Sport of Mountain Climbing

(*Concluded from page 15*)

whole series of ascents in the district. It has only once been climbed—by Norman Clyde in 1924—but we had little doubt with reasonable luck we should be successful.

We started at dawn and made excellent progress right up to the base of the final cliff that frowns so majestically down the Swift Current valley. Only a faint stuffiness in the air and some lurid-looking clouds at dawn had foreshadowed evil. High on the far shoulder that juts out on the left hand sky line as seen from the hotel, a trickle of stones slipping down the cliff made us look up. We saw what we expected. Three little white dots were picking their way carefully across the precipices—Rocky Mountain sheep! As we mounted we spied no less than twenty-one of these fine creatures, all, had we realized it, making their way toward shelter, having already sensed the coming storm.

Under a rock at the point where the cliff rears itself upward we halted, three and a half hours out, for a munch. The wind had risen and now begun to howl dismally about the crags above us. Before long a wide belt of storm cloud swept up from the southwest and great raindrops splashed and drove in spray across the rocks. There was a hint of clear sky beyond the storm wrack, and we lay wondering whether we might not still be able to seize a short spell of clear weather and gain our peak after all. In time the drops lessened and we sallied out. A wide gully rifts the north face of the mountain and by ledges we came to its edge. Overhanging walls tower on either side, and its bed, though extremely steep, offers the only probable line of ascent on this face of the mountain.

THE wind was cold and rough but not so powerful as to make climbing impossible. Water from the rainstorm was flowing into and down the gully and dripping from the cliffs above, which jutted out so that the drops fell far outside us. All below was swathed in cloud. We halted at a point where we could survey the great cliff, a special doubt being in our minds. In a few moments the doubt was justified. With first a click and a hop, then a bound and a shattering crash, a large stone came hurtling down, the rain (the first that had fallen for many days) was dislodging the loose débris that lies out on every big mountain. This projectile was followed by others. It became clear that in such weather the gully was no place for human beings. So we beat a disappointed retreat and set out to look for another line of ascent not exposed to this danger. For against falling stones the climber who is penned in on difficult rocks in a gully can do nothing.

The skill of a rock-climber is shown by his choice of handhold, and his adhesion to those he has chosen. Much depends on the correct estimate of the firmness of the rock where weight is to be thrown upon it. Many loose rocks are quite firm enough to bear a man's weight, but experience is needed to know which can be trusted, and skill is required in transferring the weight to them without jerking. On all difficult rocks the rope is the greatest safeguard for all except the first man in the ascent, the last in the descent. In very difficult places help may be obtained by throwing a loose rope round a projection above and pulling on it.

After much searching we found a possible line on the south face of the mountain and made progress up steep rock faces. But the wind was rising. The clear sky to the southwest had vanished. The whole heavens were now leaden and from time to time the mountain would be wrapped in whirling clouds. Gust after gust buffeted us, almost wrenching us from our hold. It became a matter of listening for the scream of the oncoming whirlwind and clinging with all our strength until it had passed. We were moving one at a time and anchoring by passing the rope round firm spikes of rock whenever this was possible. So we approached the climax.

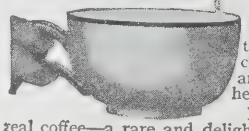
THE summit was not more than 300 feet above us, when the thing that we had been dreading happened. Through the howl of the gale broke the muffled, distant, drumlike roll of thunder. It seemed to encircle us and to creep in upon us from all sides. At the same time, with incredible rapidity, the peculiar tension which tells of a near electrical disturbance was upon us. Our finger tips tingled, our hair stood on end and brush discharges from the neighboring rocks contributed their queer hissing and crackling to the pandemonium of the gale. Sounds as of a gigantic whip sweeping through the heavens seemed to foretell the imminent oncoming of the deluge. The rain when it came would be our greatest danger. Wet, cold rocks would be doubly difficult to descend.

Without losing a moment, though full of bitter regret that the summit must be abandoned, we began to descend. A race against time began in which five minutes lost now might later mean a difference of hours spent in staggering and crawling down the lower slopes through the darkness, or even a night spent drenched to the skin shivering on some lofty ledge in that howling circle of infuriated elements.

To combine safety with speed under such conditions tests the climber to the utmost. We were fortunate in being able to reach easy ground, when the rope could be taken off, just before the full fury of the storm struck us. The sky seemed to split open with a deafening crack and to discharge a flood. It was impossible to look upward. As we huddled against a rock we counted ourselves indeed lucky to have escaped this pitiless pelting while we were maneuvering upon the well-nigh vertical walls above.

Such are some of the real thrills and dangers of mountaineering. True, we were defeated, but days like this can be ranked in memory far above many a triumph. They bring into play the whole range of the mountaineer's skill, judgment and experience. Without these they would be merely so many gambles with destiny, with the odds heavily against one. Only the mountaineer knows what these odds are and how strangely lucky the foolhardy beginner is, especially when he suspects no danger. One may sum up by saying that the experienced climber is more of a sage than a hero.

FOR COFFEE LOVERS
Who Fear Caffeine



There is a coffee with the caffeine taken out. A coffee all may drink at any hour and to their hearts' content.

Not mock coffee, but real coffee—a rare and delightful blend. We simply open the pores and remove the caffeine. That is the source of all coffee's harm.

Caffeine is tasteless and odorless. Its removal does not affect the flavor or aroma in the least.

This coffee is called Kaffee Hag. The finest hotels now serve it. In countless homes it is the favorite brand.

Learn what it means to you and yours. A coffee you need never fear or stint. A coffee you can drink at night and sleep. Children can enjoy it.

This coupon with a dime will bring a 10-cup package to you. Get it for some coffee lover who cannot drink caffeine. Clip coupon now.

KAFFEE HAG 10¢

1442 Davenport Ave., Cleveland

Send me postpaid, enough Kaffee Hag to make ten cups of real coffee; I enclose 10 cents (coin or stamps).

Joseph Lincoln Tells of His Cape Cod Years

(*Concluded from page 3*)

know is work and perseverance and some ability.'

I could see that the rover was fading quite away and I sent out a last faint call for him.

'Are Cape Cod scenes and memories of old-time houses with you when you write, wherever you are?'

'Not consciously. But I've seen a good many Cape Cod homes, and boyhood impressions are lasting. I remember in my grandfather's house how dark and gloomy the front hall was. No one ever used it except on Sundays. There was just enough light to make out a half model of grandfather's ship. I used to love that ship. There were sailors in the rigging and sailors in a little boat alongside. I liked it a good deal better than I did the crayon portraits of grandmother's four brothers all in a row on the parlor wall, looking as if they were frozen there.

'Cape Cod parlors were seldom opened except for weddings and funerals. The family used the "setting room." How those parlors smelled! There was nothing very cheerful suggested by the odor. But I did like the collection of curios from abroad that were usually on the whatnot. In our own parlor there was a fascinating collection of shells from tropical beaches and an alabaster Tower of Pisa. You see, it's natural enough for me to write about Cape Cod.'

I asked Mr. Lincoln his opinion of modern tendencies in literature.

'Well, I have my aversions,' he admitted. 'Not all of them will bear telling. Some present-day drama bothers me. I can't see the use of a thing like *What Price Glory?* And much of modern biography had better never been written. We all know that Byron was no Sunday school scholar, as for Shelley, my sympathies are with Mrs. Shelley, and it really isn't any of my business how Stevenson kept his finger nails. But I have an idea that the influence of those things isn't so great as we imagine when we let them irritate us. For myself, I enjoy reading Locke, Sabatini, and Tarkington. It may be childish, but I take pleasure in a good story.'

Most people have a hobby and I wondered what Mr. Lincoln's would be.

'I'm afraid I must confess to one,' he said. 'I don't say that I've been collecting, but I've been buying things I like for a good many years. These half models of ships and ship pictures, for instance. I am especially fond of this of my father's ship, *The Mist*. And here are night lamps of rare color. And these peach-bloom lily vases have a story. The man who secured this color by heat would never divulge his secret. He died at ninety and the process died with him. And I like this Bennington speckled cow. If you will step out on the porch I'll show you my latest purchase. I just bought it today.'

We had been moving about the room, admiring the really beautiful pieces, and on the porch there was an equally alluring collection of lacy Sandwich glass and Staffordshire china and some excellent old furniture. In the center, on a table, stood an enormous bottle of pale green glass, at least three feet tall and of generous girth. Doubtless it was a treasure, but both Mr. and Mrs. Lincoln stood somewhat aghast before its size.

'I really don't know what I wanted of it,' reflected Mr. Lincoln in the plaintive litany of collectors the world over, 'and I ought not to have bought it, but I did.' Then he brightened up. 'Antiques don't fit this house so well as they did our place in Hackensack. Now we've taken an apartment in Merion, just out of Philadelphia. It's pleasant to be near our son Freeman, who is on the staff of the *Ladies' Home Journal*. And I like to be fairly handy to New York. I should hate to miss the luncheons of the Dutch Treat Club. In the future I think that Mrs. Lincoln and I will travel more and make our stays here longer, too.'

I asked Mr. Lincoln about his philosophy of life.

'Well,' he replied slowly, 'I think that the ordinary person is a pretty decent sort. I think that the average man, considering his inheritance, his disappointments, his knocks in life, puts up a pretty plucky fight of it.'

At that moment the haunting figure with the salt gale rustling his oilskins stepped out of the shadows. I had forgotten him, but he looked me straight in the eye until I had the two confused. He followed us out on the lawn and stood near as we watched the long white line of surf gleaming in the darkness as it broke on Chatham bars.

'This is a wicked shore,' remarked Mr. Lincoln, 'although it looks so peaceful. There have been more wrecks in this vicinity than in any other spot in New England. They used to call it the "graveyard of ships." There are three coast guard stations in the neighborhood, Old Harbor that you see across the bay, Chatham and Monomoy Point.'

'That is the jumping-off place of the world, isn't it?' I asked.

'It's pretty dreary,' admitted Mr. Lincoln. 'I used to walk out there sometimes. I knew Old Nat who lived as a hermit more than halfway there. When I was a boy he was town fiddler and in all the merrymakings. Then for some reason he withdrew to that forsaken place to live. One evening I met him going home with his wheelbarrow and we stopped to chat and got to talking about the high cost of living.

'"Cost me nearly thirty-five dollars so far this year to live," complained Nat, "but I made some easy money. I got out two gallons of scallops, swelled 'em in water (which is against the law) and at Chatham Station I got seven dollars and a half for them."

'He hadn't minded pushing a wheelbarrow fourteen miles through the sand for his easy money! Cape Cod was his home and he loved it as I do. And I love the old folks on it.'

Mr. Lincoln returned to the library and I went out to the boulevard. Pausing after a moment and looking back, I could see him take up a book from the table. But the Other One, the vague form in shimmering oilskins, was still on the lawn, looking out to where the combers were hissing over Chatham bars.

Home of Joseph Lincoln at Chatham, Massachusetts.

'I know there are people who can turn out a short story in two or three hours and it will be good enough to sell,' Mr. Lincoln once said, 'but I cannot help feeling that it would have been much better if the writer had devoted more time to it. In my case, doing work that is satisfactory to me in any degree means that I must fairly sweat it out, if I may use the expression.'

Again, he said, 'A man writes what he knows. If he tries anything else it must fall—show hollow. And I find that it is necessary to write to your audience.'

Mr. Lincoln knows his audience, but, better still, he knows the people about whom writes.

Can Editors Be Bought or Influenced?

— (*Concluded from page 13*) —

ead of a Cincinnati company as saying the se of vegetable fats is increasing. The ext letter, carefully couched in established ewspaper form under a Washington date-ne, relates that the director of a speed-meter company safety council says 33 er cent of drunken automobile drivers o unpunished. The letter, of course, specif-ally names the speedometer company.

We learn from other envelopes that the National Probation Association had a wonderful meeting in Cleveland May 24, hat officers for the ensuing year to three f West Point's most important activities were announced today; that Moscow, nder Soviet régime, is enjoying excellent ealth, that the annual May-Day festivi-ies of Mount Union College 'held the center f attention in Alliance, Ohio, today,' hat 'Earl Carroll is beginning to receive etters from all over the country against vithdrawing his annual revue from the oad, which he did in Philadelphia and Boston because of prudish censorship.'

When you invest in real estate, the Realtor does not present you with a watch. Yet when some people buy advertising space n a newspaper, they expect the newspaper o throw in a watch, painting or suit of clothes in the shape of free space in the news columns—and many newspapers do. Now these sections of a newspaper are business office adjuncts and almost first to last are advertising on a majority of papers, although a majority of papers carry on the pretense that they are news sections.

As evidence of the lengths to which some advertisers go, I cite in conclusion one story received recently from a real-estate firm. The advertiser wrote it himself. The article was headed 'AS A MAN THINKETH!' Here it is:

In conversation with James P. Price, of the firm of James P. Price Real Estate company, as he sat at his desk in his well appointed offices, the writer was impressed with the intense earnestness and keen business foresight of this young aggressive addition to the live real estate brokers of this city.

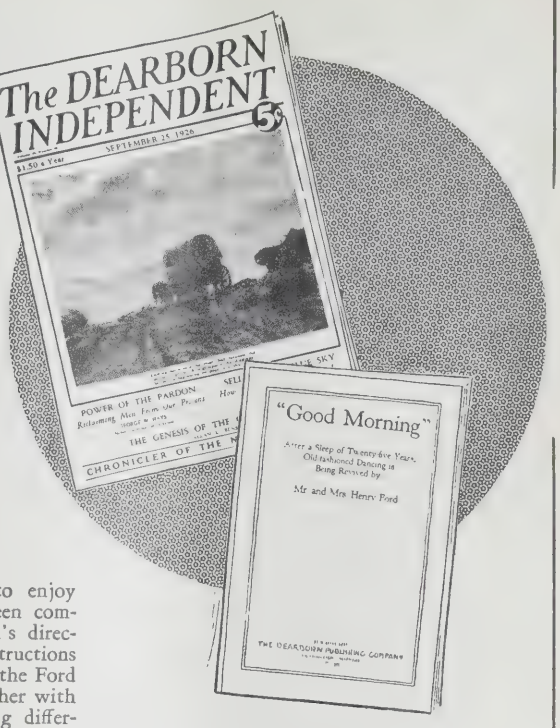
Seven years ago Mr. Price left the employ of one of the larger manufacturers of the city to enter the field of real estate selling with one of the largest and most successful organizations then operating. He started as a salesman in a profession that was new to him and backed only by an ambition and determination to leave forever behind the hated 'time clock' and all that a mere number implies in our modern industrial institutions . . .

It is not hard to fathom the secret of this man's well earned success. His oft-repeated phrase, 'he who thinks he can, can,' is his daily mental attitude and he lives by that simple psychic truth.

An oft-repeated truism of the late Elbert Hubbard is: 'A business is merely the lengthened shadow of a man.' So in the next 10 years when another million human souls constitute the city to the west and south, the shadow of James P. Price will be permanently identified with this great center in acts of solid and substantial achievement.

Mr. Price (Price of course isn't the man's real name) had every expectation that his story would be printed. It wasn't.

LEARN *to* DANCE *and Keep Young*



The Old American dances as revived by Mr. and Mrs. Henry Ford have created widespread interest.

To render it possible for everyone to enjoy these beautiful dances there has been compiled and published, under Mr. Ford's direction, complete information and instructions on each of the dances as taught in the Ford School of Dancing at Dearborn, together with calls, music and pictures visualizing different steps.

'Good Morning'

is the title of this interesting book. It contains 169 pages, carefully printed in clear type, and durably bound in attractive paper covers.

It also explains the origin and etiquette of the dances; style and deportment, and how to arrange and conduct a successful dance.

Readers of THE DEARBORN INDEPENDENT are now given an opportunity to obtain a copy of this popular book free. It regularly sells for 75c a copy, but for a limited time we are offering a copy of *'Good Morning'* in return for obtaining a new subscriber for THE DEARBORN INDEPENDENT.

Thousands of men and women are just waiting to be asked to subscribe to this great publication. Many of them are your own friends and neighbors. All you have to do is to secure one new subscription and forward it on the coupon below. We will immediately send you a copy of *'Good Morning'* with our compliments.

Shapes That Come and Go

(*Concluded from page 7*)

that when he went to Bowdoin at seventeen he already knew it better than the seniors, and could talk and write it freely.

He read the Elizabethan and Queen Ann dramatists, and was on cordial terms with Dr. Samuel Johnson. He cared nothing for mathematics; but he perused endless volumes of Voltaire in an old French paper-covered edition, duodecimo, small and execrable print—but Voltaire!

Franklin Pierce, the future general and President, thought 'Hath' was the greatest man in the world, and was saved from many a folly by his resolute and irrefutable counsel; Horatio Bridge, a harum-scarum youth, consulted, obeyed and loved him to the end of his life; and the studious and cool Longfellow recognized his eminence and foresaw his fame. Had Hawthorne had Longfellow's financial advantages, he would not have grown up the almost invisible hermit that he became for twelve years after graduating from college.

His first assiduous visitor was Herman Melville. After Hawthorne had settled in The Wayside at Concord, a modest young man knocked at the door and shyly asked admittance. He was of middle height, strongly built, with a short black beard, and thick hair falling athwart a broad forehead; his black eyes sparkling with soft light. His name was Richard Henry Stoddard; and shy though he was, he had the courage to say that he was a poet.

Hawthorne took to him from the first, and though their actual association was short and seldom, the friendship went on to the end of Hawthorne's life, and the younger man kept on loving him and his memory till his own death in 1903. Perhaps Hawthorne was attracted to him by the fact that, although he talked of literature and even of Hawthorne's books with sense and acumen, he also came to ask him a favor: Hawthorne had been a customhouse official, Stoddard felt the need of similar help from the Government, how should he set about it? It pleased the author, perhaps, to be consulted on a matter of business instead of the destiny of mankind, the nature of morals, and the conscience of the individual, and he entered heartily into Stoddard's problems. Pierce was of the past, Buchanan was just disappearing behind the scenes, and Lincoln was an untried man; Hawthorne had no political pull, therefore, but his experience of the ways and byways of Government service was at his young friend's disposal, and very welcome. His advice, by word of mouth and afterward by correspondence, was very keen and canny, with a satirical touch to it at the Government's expense.

Stoddard, when he was in the way of advising Hawthorne's son, many years afterward, often spoke of it with emotion. He himself had never been able to drag himself out of poverty, and he had had misfortunes. His wife was a really great woman and of extraordinary character. They had two sons, one of whom died in childhood, of the other I will not speak. Stoddard said to me, in reference to him, 'I went down to my office in the morning, and he was well and happy; when I came back in the evening, he was dead! Julian, I've never been worth anything since!' He was a true poet, but his poetry never caught the popular fancy.

In the latter years of his life he gave me the volume of his collected poems, which had been out a twelvemonth or so: 'How many copies do you think they sold of it?—Three!' One of the longer poems, 'The King's Bell,' he had long before sent to my father: the Bell was to be rung only when the King could declare himself perfectly happy; and it was never rung at all.

My father wrote to him, 'I should wish it could have been sounded once at least; and yet, looking back over my own life, though I have been a happy man, I can't say that there have ever been conspiring circumstances so happy that I could have rung a joy-bell!' In one of Stoddard's last poems, he addresses the great poets of past times, their vision and their triumphs, and adds:

I was not of them: life, to me,
Has been a strange, bewildered dream,
Wherein I knew not things that be
From things that seem!

Howells believed that 'realism' was the right thing: he could appreciate Hawthorne's style, but must dissent from his attitude toward the portrayal of human life. He was afterward to deliver that famous criticism on the two great English novelists: 'Ours is a finer art than that of Thackeray and Dickens.' He gave the impression of associating Henry James in this view, and perhaps justly, though James, who never met my father, didn't openly subscribe to it. I don't think Howells ever directly expressed an opinion on the art of Hawthorne whereas James once intimated that beautiful in their way though Hawthorne's romances are, 'We *must* not write like that!' Neither he nor Howells ever disobeyed this injunction; and, perhaps, nobody since.

I undertook the translation into legibility of the manuscript of one of Hawthorne's posthumous books which had no title, but which I called *Dr. Grimshawe's Secret.* My mother, before her death, had attempted it, but it had successfully resisted her. The thing was written on large octavo letter paper, and in a handwriting so minute, and the lines so close together, that many pages would contain as much as fifteen hundred words each. A good magnifying-glass could overcome this; but that was not the only or the chief difficulty. For one thing, Hawthorne, when he wanted to change a written word, wouldn't cross it out, but 'smooched' it with his finger, while the ink was still wet, and rewrote over the 'smooch.' Again, in the hurry of composition, he would often sketch a word rather than define the separate letters; the word would be there, but as with its articulations swathed in a veil. At a first glance, it might look like one or another of a dozen words of the like length, and one had to begin guessing, first by the context, then by the extensions above or below the line of certain letters, such as 'g,' 'h,' 'y,' or 'l'; then by choosing the word most fitting the sense, which was always the one Hawthorne had chosen.

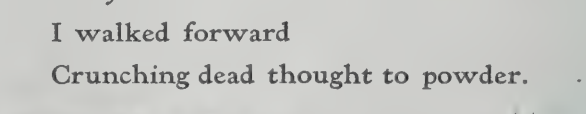
All these surmises had to be written out on the margin of the copyist's page, for mature consideration; and they were often not solved till after hours or days of study. At last, perhaps, light would be shed upon it by the same word in another part of the manuscript, written comparatively legibly. Be that as it may, when the true word emerged, it was unmistakable.

There are passages in it equal to some of Hawthorne's best; the story as story is absorbing; but as a whole it is unsatisfactory, as Hawthorne himself, indeed, had determined.

Late Autumn

Donald Slesinger.

I WALKED through woods,
Crunching dead leaves beneath a lazy step.
The trees about me, bare of their late beauty, waited;
With here an evergreen
Waving black stately limbs in scorn,
And there, in the midst of nakedness,
A tree heavy with splendor,
The old-gold splendor of the dying year.
I walked forward
Crunching dead thought to powder.



JOHN SOBIESKI—

Gallant Soldier of Fortune and American Citizen

By JOHN ANSON FORD

Lineal descendant of King John III of Poland, he saw his father condemned to death by the Czar of all the Russias, and his mother die of grief soon after; he knew the bitterness of exile and poverty; he fought the Indians on the Western Plains of America, and he fought for the Union during the Civil War and for freedom under Juarez in Mexico, and his pistol ended the life of Emperor Maximilian; for nearly half a century he was a dauntless reformer in American public life; and now at the age of fourscore and more he is still the same brave gentleman of his youth.

Colonel Sobieski has never lost his boyishness. Here he is with an old friend, George M. Bassett (front).

SIXTH lineal descendant of King John III of Poland. An exile with his widowed mother at six years of age. A stowaway bound for America at twelve, a fighter against the Indians at sixteen, a bugler 'mortally' wounded at Gettysburg at twenty-two, and at twenty-four a colonel in the Mexican Army and condemned to death. At twenty-six a Minnesota legislator; subsequently for more than fifty years a dauntless reformer. Such is the amazing record of John Sobieski—above all a courageous and gentle democrat.

To hear this man's story is to have intimate glimpses of many of the outstanding events in history for the last three-quarters of a century. To know the man himself is to receive both a benediction and an inspiration. More than fourscore years of age, he yet retains a buoyant, almost youthful spirit which seems only to have been mellowed by all the fierce strife through which he has passed. His is an uncompromising optimism which gives one new faith in the cause of democracy and the upward march of the human race.

Above all else, this man is a rare exemplification of living patriotism. Having freely offered his life on many battlefields, he turned in time of peace to other battles for the right and gave himself with equal abandon to every cause which he espoused. Though gravely wounded in the Civil War, he never consented so much as to ask for a pension until so persuaded just a few months ago. At the close of his brilliant services for Mexico, that republic sought to reward him with rich lands, but these he declined. His has been the life of a modern knight errant, who, gathering consecration but not bitterness from the suffering of his noble forebears, and his own tragic boyhood, has spent his years, his substance and his strength as nobly as any emissary of chivalry.

It was something more than two years ago, at a dinner of the Los Angeles Adventurers Club, that I first saw Colonel Sobieski—the hero of whom I had read since boyhood. He was a guest of honor and before I learned his name one glance at his massive head and powerful frame told me that he was a man of distinction.

In the course of the evening he was called on for a few words of personal reminiscence. He rose deliberately and paused a moment as he straightened himself up, his dark eyes sweeping the company before him. Instantly the subdued noises in the room ceased. At first his voice was low and deliberate, but presently the tone took on greater resonance and his words came swiftly, sketching briefly the outstanding adventures of his life. It was difficult to believe that he was eighty-five. The speech was short and possessed a simplicity and frankness which removed it far from boasting or self-praise. In fact, when Sobieski sat down it was evident that only a very small part of his story had been told.

In 1846 his father, Count Sobieski, fifth lineal descendant of King John III of Poland, shared in an insurrection against Russia, was captured and imprisoned for eighteen long months. Vividly the colonel pictured the events transpiring at the close of those eighteen months of suffering.

'From the day of my father's capture, my mother had not heard a word from him,' he explained. 'Then unexpectedly we were visited by a detachment of Cossacks who commanded my mother to follow them to Warsaw. Though I was but six years old, that two days' journey, in our own carriage escorted by those fearsome Cossacks, is stamped indelibly on my mind. Even more poignant are the memories of days that followed.

'The viceroy, the Czar's brother, into whose presence we were led, lost no time in imparting his tragic message. My father was still living but was to be executed the next morning and my mother's own father and two brothers were in the same prison and were to die at the same time! By authority of the Czar the viceroy proposed that my mother consent to have me, her only child, educated as a Russian by the Greek Church and that she herself take the oath of fidelity to the Russian Czar.

'No, do not suppose that in return for this the lives of any of our kin were to be spared. The utter cruelty of the Russian régime knew not even that much of mercy. In return for her sacrificing her son to the Russian hierarchy she was to earn the privilege of continuing to live in her own estate! The penalty for refusing this offer was to be immediate exile and confiscation of all our estates and belongings!'

With what fervor Colonel Sobieski repeated the reply of his mother: 'Sire, you may tell the Emperor that he can take from us all that we possess and banish me and my child from our native land. I may be compelled to beg for food, but I will forever teach my boy that he is a Pole and to love liberty, despise tyranny and revere and cherish the cause for which his father died; to hate with an undying hatred that nation and sovereign who murdered his father and kin, despoiled us of our lands and country and sent us to exile!'

But evidently the crafty henchman of the Czar hoped that the proud mother would relent her high determination. As a means

to that end they led her and her small son to the horrible dungeon where the husband and father was confined—revoltingly filthy, with a few straggling rays of daylight filtering in. For six agonizing hours these three wept, counseled and prayed together, and then mother and child parted from the father forever. What a picture to hang on memory's wall! Little wonder that after six years of wandering in strange lands, haunted by fears, the spirit of the brave mother broke under the strain and she died in England, leaving her only son an orphan and an exile at twelve.

We sat on the broad veranda of the Los Angeles home of Colonel Sobieski's daughter as he told us this part of his life story and so vivid had his voice and gestures made the events of those far-off years that the quiet palm-shaded street almost faded from view and in its stead I saw a waif, too young for complete despair, turning his face toward America. To his boyish mind, as it had been to his mother's, America was a magic land where equality and freedom and opportunity reigned supreme.

Being without money the little fellow succeeded in stowing away on the warship *Constellation*, and arrived in New York February 22, 1855. This date he calls his 'new birthday,' as well as Washington's, for it marked the beginning of a new life. Stirring events were to be crowded into the coming year.

I marveled at the absence of bitterness as this patriarch talked of his childhood. Instead there was an ever-recurring sense of humor, which lighted up somber scenes and made one understand how his spirit had conquered such a multitude of difficulties. Likewise hearing him tell of famous American people and events gave one a better understanding of our own history.

'I enlisted as a bugler soon after reaching the United States,' the colonel explained, 'and saw several years of service against the Indians of the Southwest and West. Then the Civil War came on. There was no reason to doubt or hesitate. I threw my whole life into the Union cause and finally, on the field of Gettysburg, received an abdominal wound which the surgeons pronounced "mortal." They carried me to an emergency hospital marked, "Mortally Wounded."

'It was a dreary prospect. Just outside they were digging our graves and all about me was terrible suffering. A surgeon examined my wound hurriedly and with a very solemn face said to me, "Young man, do you realize the seriousness of this wound? You have but a few hours to live. I urge you to make your peace with your Maker." '

Unexpectedly a twinkle came into the old man's eye as he reached this point in his story.

'At that time I was still more or less ignorant of many common phrases in the English language,' he went on, 'and I did not altogether understand what the surgeon meant. "But sir," I said to the surgeon, "why should I make peace with my Maker? *I've never had any trouble with him!*" '

The kindly laugh that accompanied the anecdote revealed a rare geniality which has smoothed many rough places through three-quarters of a century of battling for the right. And this battling has been literal as well as figurative. While under the Stars and Stripes Sobieski participated in forty-two engagements and was under fire 426 times.

Would that every American could obtain his or her picture of historic events and persons from the lips of men like this. For example, he is one of the few still living who came into close contact with Lincoln.

It was toward the close of the war that he met the Great Emancipator. To Sobieski Lincoln assigned the perilous task of going to Richmond as a spy and appraising the strength of the Confederate capital's fortifications. He easily assumed the rôle of a Polish nobleman, and under the pretense of being a refugee, passed through the enemy's lines and into Richmond, where he remained three weeks.

He interviewed the leaders of the Rebellion, including President Jefferson Davis and members of his cabinet, and Robert Lee. Eventually he reported to Lincoln that Richmond, in his judgment, was impregnable. The colonel believes that if Grant had heeded his advice the North might have been saved great numbers of lives that were sacrificed in the struggle to reach Richmond.

Later Sobieski was dispatched as a spy to Mobile. Arriving there in safety, he presented letters of introduction to various prominent Confederates, including a Dr. Downey. The latter dropped a remark which makes the old veteran chuckle even to this day.

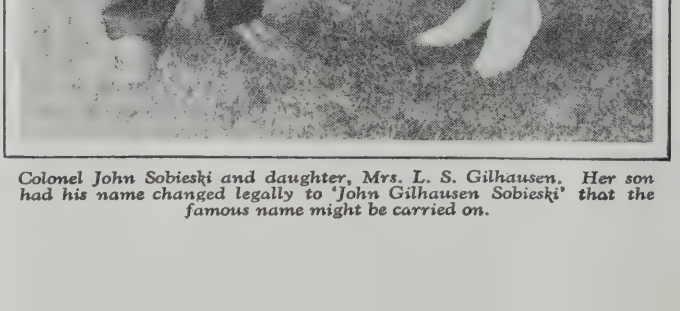
'The enemy has been trying to get into Mobile ever since the war began,' Dr Downey boasted, 'but not a d—— Yankee has succeeded in getting in yet, except prisoners of war!'

Sobieski's outlook on life is the result of a broad experience. Intense in his love for America, he possesses nevertheless an international sympathy not found in those of more limited vision. He has a peculiar affection for the great Mexican leader, Juarez, whom he places beside Washington and King John III, as a great patriot.

When the zealous young Pole was mustered out of the United States Army in June, 1865, he at once determined to enlist in the cause of Mexico's republic, then in dire straits by reason of the French invasion and Maximilian's determination to set up a monarchy. After a futile attempt to take a company of American comrades with him into Mexico by way of New Orleans, where he had been discharged, Sobieski and three faithful companions turned north and then westward, making their way as best they could across country until they penetrated Mexico. There the Americans were received by a remnant of an army at whose head was a general with a frank and emphatic hatred for everything north of the international boundary. The young American's diplomacy and obvious sincerity finally won the general over and so began eighteen months of service in the cause of another oppressed people.

Just sixteen days before Sobieski enlisted under the Mexican flag Maximilian had decreed that any man found fighting for the republic should be shot! The young Pole had a good cause to remember Maximilian. But as a volunteer who soon became a colonel he little dreamed how fate was to turn the tables which had been so against him and his mother eighteen years before.

But to return to the story of Maximilian. It was the Maximilian who banished Sobieski and his mother, together with a number of other political exiles, from Milan, Italy, for engaging in a popular demonstration in that city. Eighteen years later the tables were turned, for Maximilian after a few months' bold showing on Mexican soil was captured by the republican forces and condemned to death. It so happened that Sobieski was placed in charge of the would-be emperor of



Colonel John Sobieski and daughter, Mrs. L. S. Gilhausen. Her son had his name changed legally to 'John Gilhausen Sobieski' that the famous name might be carried on.

Mexico the second day after his capture. The young crusader could not refrain from going personally to Maximilian and reminding the prisoner of the decree which had banished him, Sobieski, and his mother from Italy.

'Maximilian could scarce comprehend all that I told him,' the colonel remarked. He seemed partly dazed by the swift progress of events which had brought him to such a sad state. But at length the significance of the situation crept over him and he uttered this brief but significant comment: 'Well, time rounds up all things!"

'I was in command of the reserve firing party at Maximilian's execution,' Sobieski continued. 'When the order to fire was given he fell mortally wounded. I then ordered one of the men from my party to advance and, handing him my revolver, ordered him to place it to the ear of the suffering man and fire. Thus ended his career.

'Perhaps my reason for this act calls for an explanation. In no sense was it personal revenge that prompted me. Rather, I wanted to be sure that the dying man's sufferings would not be prolonged. I had my own weapon used because I was sure it was loaded, whereas there was the possibility that any gun which could be selected from those held by the firing squad might be loaded with a blank cartridge.'

Colonel Sobieski was sentenced to death, on one occasion, for refusing to execute more prisoners of war. Various sad experiences had convinced him that it was not only futile but morally wrong to take human life. The incident in question, which came so near having a tragic end, occurred at Sonora when Sobieski declined to execute twenty-two French boys who had been taken prisoner.

'I was tried and sentenced to be shot for my refusal to obey orders, the sentence being subject to the approval of General Escobeo, who at that time was 500 miles away. After waiting in suspense for a month, one morning I saw General Casteno in whose command I was, hurrying toward me, waving a paper in his hand. Embracing me and kissing me in Mexican fashion he exclaimed, "You are pardoned. You are pardoned!" '

SOBIESKI learned afterward that General Casteno's beautiful daughter had ridden a thousand miles to secure that pardon and speed with it back to the camp. When the republic was reëstablished this son of Poland and adopted son of America was hailed as one of Mexico's saviors, and showered with honors. He was also offered 10,000 acres of Mexican land but declined the gift.

Followed peaceful but strenuous years in the United States. While still a young man he was elected to the Minnesota legislature as an avowed advocate of temperance —a striking tribute to the power of his eloquence. Another cause which he espoused in that early day, when its advocates were considered cranks, was woman's suffrage. Abolition of the death penalty also has received his ardent support for half a century and more.

The colonel says frankly that he was not a politician and furthermore he did not propose to become one.

'But I have never regretted the "indiscreet" things which I said in my brief political career,' he added smiling, 'and I have lived to see the various causes which I championed enjoy far greater success than I hoped for in my lifetime.'

Until five or six years ago Colonel Sobieski lectured constantly, chiefly in America, on various great reforms and historical figures. His lectures were made doubly brilliant by the introduction of personal anecdotes concerning these individuals.

WHEN the lad's soul was still plastic and memories of earlier years were still vivid as yesterday, his dying mother, crowned with snow-white hair, though only twenty-nine, exacted from the boy this pledge: Never to drink intoxicating liquors or gamble; ever to cherish the cause of freedom and fight for any land or race that is struggling for liberty. Those vows and the dying mother's blessing have lived with Sobieski from that day forward. They have been guiding stars that led that lad along the path of a master adventurer. But Sobieski poses as neither a hero nor a knight errant, and his ready wit is quick to bring admiring friends down to earth. The other day, for example, I was helping him from an automobile and remarked that his rheumatism was evidently troubling him.

'Yes,' he replied with a twinkle in his eyes. 'Not so long ago I went to a doctor to get some medicine for this rheumatism and he put up a prescription for me and handed it over with elaborate directions. "By the way," said the doctor, as I was leaving, "after you have tried that medicine, if it does you any good I wish you would let me know. I've got a devil of a bad case of rheumatism myself." '

Colonel Sobieski's friends find it hard to be conventional hero-worshipers in the presence of such ready wit, but they are very sure that few have ever surpassed him as a comrade, counselor and friend in time of need.

The White Weasel

(*Concluded from page 5*)

Chief had plenty meat, plenty ponies. He go hunt, take care ponies, go in battle. Women work round tepee. Now no hunt, no war, White Weasel nothing to do. If he dig dirt like squaw, people laugh. White man point his finger at him, red man no like that so he come in night and dig, mebbe so no one see. Help women earn money, buy flour coffee. So it is.'

'I see, I see,' mused the contractor. 'Well, you tell him that I will pay him for his work last night and night before, although I don't know how long he worked. If he wants to come and dig at night I'm agreeable and I won't say anything about it if he'd rather I wouldn't. You get the names of all the men who worked and the number of hours and I'll see they're paid hereafter—just the same as if they worked with the squaws in the daytime.'

Thereafter till the cellar was complete White Weasel appeared at the agency only late in the day and the hand in which he held his cigaret trembled a little at times, and the slow grace of his step had a perceptible halt, but his face was as calm and his dress and manner as patrician as ever.

The white man's road was long and dark and painful but White Weasel had entered upon it. He was already the leader of his people.

Hamlin Garland's

New Book

TRAIL MAKERS

of the

MIDDLE BORDER

A MEMORY picture of traditional America for those who have a pride in the country's past and in the heroic men and women who conquered the continent and made the nation.

* * *

"Mr. Garland's authentic and moving tale should stand in the vanguard of American historical novels."
—*N. Y. Times*

"So sympathetic a rendering of the Western spirit and mind, that it may be called indispensible to a comprehension of the period."
—*Saturday Review*

"A chronicle of the fireside... A picture of an epoch and a civilization."
—*N. Y. Evening Post*

"Over the whole narrative there is the mellow glow of fireside reminiscence."
—*N. Y. Sun*

CHATS WITH OFFICE CALLERS

'How about the possibility of prohibition in Europe?' was the question thrust at the ***Man Just Home from Europe.***

'It is not only a possibility,' he replied, 'it is in some degree a reality. The sale of drink is prohibited during certain hours in England, Scotland, Ireland and the Free State. Saloons do not open until 10 in the morning, they close part of the afternoon, and early in the evening. The law is strictly enforced, too. In the Free State a research commission is cutting down the number of saloons by half. In every city in Scotland you will find a hot prohibition campaign in progress. It gave one an uncanny feeling to hear on the streets of Scottish cities the same arguments, the same line of attack, which was familiar to the United States fifteen years ago. A number of Scots of the upper classes laughed to me about it, and I said to them, "Look out, now; that's exactly what we did in the United States, and we didn't have your peculiar Scotch conscience to deal with, either. Some day Scotland is going to take a little too much and wake up in the morning and vote itself dry. I can see history repeating itself all over your land." As a matter of fact, Scotland is the only country in Europe that I should expect to go dry. England, never. France, Belgium, Germany, Italy—no. These are already temperance countries. Belgium already has prohibition to the extent that hard liquor is prohibited. In France it is almost impossible to procure. The people don't drink to excess. It is worse than a sin, it is a social offense, to drink to intoxication. We never had temperance in America. Our temperament is not temperate in anything. We go sled length in whatever we do. We are not "sippers," as the Latins are; we are gulpers. Of course, it is the gulpers that rule the world today and the sippers have lost it; but whether there is an alcoholic element in history, I don't know. I can only record my impression that John Barleycorn is as much under scrutiny among his European friends as he is here in America. Everywhere in England and Scotland you see signs in the hotels announcing that the liquor served there is cut 20 per cent below proof. And as far as the European despising us for our prohibition, let me tell you that he secretly admires us. At any rate, no intelligent European ever expects the United States to go wet again. They know us too well for that.'

* * *

'How does it feel to be catapulted in an airplane from the deck of a battleship?' we asked ***the Naval Aviator.*** 'Why, it's nothing,' he replied. 'You see, a battleship does not have enough deck space to allow a seaplane to get up speed, so the catapult is used. It acts on the same principle as a boy's slingshot and accelerates speed rapidly. Usually compressed air is used for the power behind the discharge, but experiments with a charge of powder have proved so successful that a number of ships use it today. The catapult is on a turntable and it discharges the airplane into the teeth of the wind where it is lifted aloft by the force of the charge behind it plus the lifting resistance of the oncoming wind. The aviator experiences no discomfort. It's just like going up in a very fast elevator, only of course you go more or less parallel with the surface of the sea.'

The Financial Writer from New York told of the 'Haven of Wrecked Hopes.'

'There was until late years,' he said, 'an old broker in Wall Street who was noted as a collector of "Cats and Dogs"; in other words, of obsolete securities, stocks and bonds of dubious value, or of no worth whatever. He paid next to nothing for his collection, but made money out of it in the peculiar ways known to men of his vocation, such as, for instance, selling securities to corporations in receiverships, who needed the old stock to effect reorganizations.

'In William Street, the financial district of New York conducts an auction salesroom which is a clearing house of stocks, bonds, notes and other forms of securities in which no other market is any longer to be found. The great banking houses of Wall Street have made loans on this type of paper; the corporations which issued them have in many instances showed declining earnings, defaulted on interest coupons or passed their dividends. Such securities, as a rule, are not listed on any Exchange; they have no known market value, they are worth only as much as they may bring.

'This form of paper has reached the bank vaults through customers who made loans upon them; when the loan clerk decides that the security has become of doubtful value, the loan is called, and if the customer fails to make good, the security is sent to the auction salesroom on William Street to be disposed of, its value defined, and the loss charged to the bank's customer. Although the place is called an auction salesroom, one may find there neither buyers nor sellers. The banks, as a rule, bid in the securities at prices they deem satisfactory, in order to establish an official quotation.

'Lists from this salesroom are published weekly. The securities quoted represent enterprises that have gone glimmering; corporations grown embarrassed; companies that have lost hope of rehabilitating themselves. The quotations make instructive reading to investors. Some of the lists published within the last few weeks are interesting. For instance, 6,680 shares of four different photoplay concerns brought $25 for the lot; 100 shares of a foreign trade company sold for $1 the lot; 500 shares of a silver mining concern brought $1; 500 shares of another mine's company brought $6; $30 bid in for a broken lot of collateral, consisted of a variegated assortment of securities, including 100 shares of a gas company, 100 shares of an oil company, 100 shares of a terminal transfer railroad, 1,700 shares of a copper mine, 200 shares of a tobacco concern and 12,917 shares of a taxicab company's preferred stock. The banks lose money on such loans, of course, if they are unable to make their customers pay up, and the latter are left with the small consolation that risky ventures in uncertain paper are sorry steps on which to mount the ladder of fortune.'

'I suppose, really, that dress is not modest or immodest—it is the people who have these qualities,' said ***the Missionary on furlough.*** Undoubtedly his mind was full of contrasts and comparisons, for most of his calls for the past ten years had been made on Polynesian natives in their palm-tree huts. He had heard new discussions of the theme of dress, and this also stirred him to compare his home land with his mission field.

'In my station,' he said, 'the old customs call for scanty clothing. There are only a few articles, but these must be worn. They are worn, so to speak, as vestments of respectability. To appear without them is regarded as rude and insulting to others. You may thus find a native of the old school in an attire extremely reduced, but as modest in spirit as if clothed in flowing robes. Sometimes scantily clad barbarians will seem more reserved than fully dressed civilized persons when these become hilarious or bold.

'I have been away, so I have had nothing to do with the dress question in America, and have made no comments on it. And now I find I have no comment to make. People ask me whether I think the girls are immodestly dressed. I am more concerned with the question whether they are modest at heart, and I naturally believe they are, with exceptions. As a missionary among one-time cannibals, I am more interested in souls than in skirts—I have been taught that there is more in the inward grace of modesty than in the outward show of it.'

* * *

The Retired Farmer from New England, a man of substantial property, seemed strangely unhappy. 'You know, he said, 'when Mother and I were struggling along on the old forty down by the river we were happier than we are today with everything to complete our comfort. Then we had a mortgage on the home and the children were growing up hungry and not any too well clothed. We worked hard, both of us, to make ends meet and pay the interest on the debts. Finally land values went up and the debt was cleared. By working hard we created a surplus and on the advice of my banker I invested it at different times. Eventually these investments turned out well and now I have more than I need. We left the old homestead down by the branch and moved to a new home in the city.

'I found my time taken up with reinvesting my money and seeing that every dollar earned its keep and brought more to the fold. My wife acquired social ambitions. When the time came we sent the children to seminaries and colleges and now they come home only occasionally. They do not sit about the home fire as they used to, and the money they spend would lift many a mortgage the size of the one we struggled under in the early days. Do you know, I consider myself a failure? Others say I have succeeded. Perhaps I have, but in the back of my head there is a voice saying I have not.'

CAN YOU TELL ME?

QUESTION: Something over a year or two ago a charge was made by some farm papers and magazines that the tariff on incoming Canadian wheat was practically harmless to the Canadian exporters to this country shipping to our mills, because they claimed that after this incoming wheat was mixed and ground up with a certain percentage of our wheat the tariff was refunded all but a cent or two per bushel. Is this true?

ANSWER: There are two provisions of law governing the milling of Canadian wheat in bond. The provisions now in force will be found in the Tariff Act of 1922. Under the one provision, commonly known as the drawback clause, the full amount of the duty fixed by law is paid at the time of importation and a refund of 99 per cent of the duty is secured upon the exportation of the flour or other by-products made from imported wheat. Under the Tariff Law of 1922, at least 30 per cent of domestic wheat shall be mixed with the imported wheat before a drawback can be allowed. The other provision under which imported wheat may be milled in bond for export requires that the entire mill, or part of a mill, be placed under bond. No duty is paid on the imported wheat, but the law makes it imperative that all the flour made from such imported wheat must be exported from the United States. The mill feeds and other by-products may be entered for consumption in this country upon the payment of the regular duty, which at the present time is seven and one-half per cent ad valorem.

QUESTION: Are there any figures to show the number of automobile deaths and murders in New York City, as compared with Chicago?

ANSWER: Latest figures available give the number of murders and homicides in Chicago for one year as 307, and for a corresponding period in New York, 390. During this period there were 684 persons killed by automobiles in Chicago, and 961 in New York.

QUESTION: Explain what is called the rule of 3.

ANSWER: The rule of three is the method of finding the fourth term of a proportion when three are given, the numbers being so arranged that the first is to the second as the third is to the fourth, which last is the term required to be found; then this is found by multiplying the second and third terms together, and dividing the product by the first.

QUESTION: What are the capacities of the largest stadiums in the United States?

ANSWER: Grant Park Municipal Stadium, Chicago, 100,000; Yale Bowl, 80,000; Venable Stadium, Baltimore, 78,000; Los Angeles Stadium, 75,000; Memorial Stadium, University of California, Berkeley, 72,800; Ohio State University Stadium, Columbus, Ohio, 63,000; Yankee Stadium, New York, 62,000.

QUESTION: What was the total area of the Louisiana Purchase, made in 1803?

ANSWER: 827,987 square miles.

QUESTION: How long must a naturalized citizen reside in the United States to be elected United States Senator, and what is the age limit?

ANSWER: No person can be elected a Senator who has not attained the age of 30 years, and been a citizen of the United States for 9 years, and who is not, when elected, an inhabitant of the state from which he is chosen.

QUESTION: Does the northern or southern half of the United States receive the most rain?

ANSWER: Since there is no geographical division of the United States as a northern and a southern half, we are listing below the average annual precipitation by states: Washington, 32.84 inches; Oregon, 25.10; Nevada, 8.11; Idaho, 17.89; Utah, 14.01; Arizona, 13.23; Montana, 15.81; Wyoming, 14.05; Colorado, 17.76; New Mexico, 15.15; North Dakota, 17.94; South Dakota, 20.23; Nebraska, 23.57; Kansas, 26.64; Oklahoma, 32.61; Texas, 31.07; Minnesota, 25.92; Iowa, 32.22; Missouri, 38.87; Arkansas, 47.83; Louisiana, 54.64; Wisconsin, 30.66; Illinois, 36.42; Mississippi, 54.84; Michigan, 29.13; Indiana, 39.21; Ohio, 38.14; Kentucky, 45.74; Tennessee, 49.56; Alabama, 53.91; Florida, 52.76; Georgia, 50.04; South Carolina, 47.79; North Carolina, 49.94; West Virginia, 43.82; Virginia, 43.14; Maryland and Delaware, 41.87; Pennsylvania, 41.66; New Jersey, 46.54; New York, 39.24; and for the New England states, 40.54.

In this department we shall do our best to answer questions concerning Government and kindred matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

QUESTION: I have written the Bureau of Justice with regard to how I may obtain information concerning criminal statistics, such as the name of city, state or place having the highest criminal percentage. Also the character of crime and the comparison with that of England. Is this the proper department to write to?

ANSWER: Figures are being compiled by the United States Census Bureau, but have not been completed as yet. They expect to have the report completed within the next two or three months and inquiry at that time will probably give the information you want.

QUESTION: Why is the getting of a patent such a burden (high cost and long wait)?

ANSWER: A patent is granted upon a regularly filed application, complete in all respects, upon payment of fees, and only after a determination of utility and completeness of disclosure of the invention, and a search to determine its novelty. The preparation of an application is a highly complex proceeding, and generally cannot be conducted properly except by an attorney trained in this specialized practice. The inventor should, therefore, employ a competent attorney, for without skilful preparation of the specification and claims, a patent grant is of doubtful value. Fees for filing application, et cetera, are set by Congress, but if an attorney is employed, his fee is not within the jurisdiction of the patent office. Length of time depends to some extent upon the division to which the application is assigned. After application is received, a thorough search must be made by the patent office to establish that a patent has not already been granted for a similar device. Due to the larger volume of work in some of the divisions, a longer time is necessary to secure action. Much depends on the promptness of the attorney employed by the inventor, in taking steps necessary to bring proceedings to a conclusion.

QUESTION: Was it ever proved that any United States emissaries induced Panama to secede from Colombia? Were United States Marines landed from our warships to protect or countenance them in this revolt?

ANSWER: Although charges have been repeatedly made that agents of the United States induced Panama to secede from Colombia, they have never been substantiated. Nor has it been proved that United States Marines were landed to protect or countenance them in this revolt. Instructions to the U. S. S. *Boston*, *Nashville*, and *Dixie*, which were sent to the scene of the trouble, were as follows: 'Maintain free and uninterrupted transit. If interruption is threatened by armed force, occupy the line of railroad. Prevent landing of any armed force with hostile intent, either government or insurgent, at any point within 50 miles of Panama. Government force reported approaching the Isthmus in vessels. Prevent their landing if, in your judgment, the landing would precipitate a conflict.' President Roosevelt, in his message to the Senate and House of Representatives, stated: 'No one connected with this Government had any part in preparing, inciting, or encouraging the late revolution on the Isthmus of Panama, and that save from the reports of our military and naval officers, given above, no one connected with this Government had any previous knowledge of the revolution . . .' During the Wilson Administration a treaty was negotiated with Colombia, to pay her the sum of $25,000,000 'to restore cordial friendship.' The treaty, as originally negotiated, contained an apology, which was stricken out when the treaty was finally ratified by the Senate during the Harding Administration.

I READ IN THE PAPERS

Some plain facts about the McFadden Banking Bill are told by the New York *Journal of Commerce*, a widely read financial paper. 'Congressman McFadden is indulging in some unnecessary worry,' it declares. 'In a speech before a local business organization he expresses the fear that unless the McFadden Banking Bill can be adopted at an early date, the failure to pass it "will strike a serious blow at the Federal Reserve System because the disintegration of the national system will continue." Mr. McFadden may spare his fears and content himself.'

McFadden Bill Comes in for Criticism

The editorial continues by discussing the 'main objection' to the measure. 'That objection has always been found chiefly in features which have received little or no attention from the public at large . . . Let us be perfectly clear about this matter. One of the central features of the McFadden Bill is a revision of Section 5200, Revised Statute, *which will perpetuate and render more dangerous hazardous conditions relating to lending which now exist in the national system* . . . [Italics are ours.]

'As for the rest of the McFadden Bill —its provision with regard to savings, its failure to restrict the growth of unsupervised chain banking, its admission of undesirable paper to Federal Reserve rediscounting facilities and all the other elements of the bill, there is nothing that can be said by any careful man except that they are completely anathema.

'It ought to be simply out of the question for Congress to do serious banking evil in the theory that some good may come of it . . . The McFadden Bill is neither a help to the Federal Reserve System nor to the national banking system, but will be a serious detriment to both. Congress should continue to pigeonhole it and let it expire with the short session.'

❦ ❦ ❦

General Andrews, who has for some time been threatening to make the United States bone dry, has not receded one inch. He is still threatening.—Des Moines *Register*.

❦ ❦ ❦

When William James, the philosopher, proposed that a substitute be found for war he was thinking how war has monopolized all the great emotions. Victory, triumph, glory, valor, courage—they are all war words, born of the sword and the slashing combat of the battlefield. They are words so ornate, so imbued with the lofty spirit of great occasions, that they seem utterly out of place in the world of daily humdrum. We do not say that the bricklayer shows courage, that the carpenter is armed with valor, that there is glory in going to work in the morning, that the banker and merchant win triumphs and victories.

The World's View of Courage

Before we can stop war James thought some miracle must be done to invest peace and the plodding ways of peace with the sparkling radiances of great behaviors. And that is hard to do. And it is strange that it is so. Of course, it is the element of danger that lends the startling character to shining deeds. If the bricklayer were to leap from his towering wall and save a life, he would instantly become heroic and his action one of courage. But such courage might be as nothing compared to the silent steadfastness with which he lays bricks and does his daily duty in the world.

A no-account man who jumps into the river to save a drowning person instantly achieves the renown of courage. Another man drubs along patiently at an obscure task and pays his way out of debt or meets some rasping obligation with cheerful faithfulness, showing a courage that is dauntless; but no one ever hears about it, and the man may even be regarded as a dub by those who know him.

The International Jew in 4 volumes: *The International Jew*, Vol. I, 235 pages; *Jewish Activities in the United States*, Vol. II, 256 pages; *Jewish Influence on American Life*, Vol. III, 256 pages; *Aspects of Jewish Power in the United States*, Vol IV, 246 pages. Price: 25 cents each; set $1. THE DEARBORN PUBLISHING COMPANY, DEARBORN, MICHIGAN.

As a matter of fact, the drudging industries in shop and field, the incessant faithfulness to daily duties, the patient loyalties of dependable labor and service everywhere, the trite and commonplace goings-on which have no lure of fame to inspire them, probably rank higher than all these shining gauds of occasional prowess. But how to make them seem so and to invest them with emotional content so that a man will feel it to be more glorious to lay brick than to go to war, more richly satisfying to be a good citizen than to be a soldier —that is the problem that Philosopher James could state but couldn't solve.

And so the world goes on, weary of the humdrum by which it lives, thrilled by the zeals and passions and glories which maim and kill and destroy. Peace is pacifism, while war still is courage, valor, victory and triumph.

—Philadelphia *Public Ledger*.

The word for 'peace' in French is pronounced 'pay' in English but otherwise the two are unrelated.—Detroit *News*.

❦ ❦ ❦

The following interesting dispatch from New York was carried recently by the Associated Press: 'Max Wunschauer, importer of Jewish Bibles, was brought to the custom house today for interrogation concerning twenty-four cases of Jewish Bibles seized after 454 bottles of cognac was found packed under the Bibles. The cases containing Bibles and liquor arrived on November 9 by the Hamburg-American liner *Thuringia*. Special Agent Luskie, of the Treasury Department, while inspecting the Bibles, opened several cases and discovered the cognac concealed in false bottoms. Wunschauser denied all knowledge of the liquor, of an estimated value of $2,300.'

It's all right to profit by your mistakes, but it's cheaper to profit by the mistakes of others.—Escanaba *Daily Press*.

❦ ❦ ❦

Including Sergeant Edward Perrin, shot early Saturday morning, nine Detroit police officers have been murdered since the first day of last January. Like several others of those killed, Sergeant Perrin was directly a victim of the bootlegging business. And that fact ought to weigh heavily on the consciousness of a good many thousands of people in this community.

Accessories Before the Fact

For every person who has been patronizing a blind pig or a bootlegger is morally, at least, an accessory before the fact. To a greater or smaller degree, drops of the shed blood sticks to his (or her) hands. In order to gratify his appetite, he has been encouraging and helping to maintain an outlaw, criminal class with a large percentage of utterly callous, brutal members who think little more of killing a man than most people do of killing a fly.

What Chicago needs is not the 'finest jail in the world,' which it is boasting it is about to build, but a method of getting the right sort of people to inhabit it.—Portland *Oregonian*.

❦ ❦ ❦

A controversy over mineral-bearing lands has arisen between the historic Hudson's Bay Company and the Canadian Government. It seems that in 1670 King Charles II granted a charter to the 'governor and company of adventurers trading in Hudson Bay' and this gave the company full possession of all the lands and resources, including 'gold, silver, gems and precious stones' found in this area which was really the entire watershed of Hudson Bay. This includes Western Labrador, Northern Quebec and Ontario, and the three Prairie Provinces. When in 1869 the area known as Prince Rupert's land was acquired by the government through negotiation, the company surrendered its privileges including mineral rights, save those rights about the trading posts. In this surrender the Hudson's Bay Company received $1,500,000 and one-twentieth of the land in the 'fertile area,' which was designated as that part bounded by the Rocky Mountains on the west, the international boundary on the south and the North Saskatchewan River on the north and the Lake of the Woods, Winnipeg River and Lake Winnipeg on the east. They were also to retain 50,000 acres about the trading posts. Now the Supreme Court must decide on the ownership of the precious metals in the area kept at the time of the surrender, and in the area consisting of one-twentieth of the fertile belt.

EVERY WEEK DAY in the year there are sold in this country 36,000,000 newspapers. The number of families in this country is officially stated to be about 24,000,000.

PROFESSOR NICHELSON, president of the National Academy of Sciences, announces that the exact speed of light is 186,284 miles a second.

RED IS THE COOLEST color for summer wear as it absorbs less of the rays of the sun than other shades. White is next, and black the worst. For winter clothing, dark colors are preferable.

MORE THAN A QUARTER of a million students in five eastern states receive instruction at the same time from the same teacher by radio.

A SUIT CASE ON WHEELS is a recent invention. The carrier folds up when not in use and only the small wheels project.

ROSES ARE GROWN in China for purposes other than ornamental. They are used to flavor confectionery and homemade wine, and to perfume tea leaves.

IN THE DEAD LETTER OFFICE annually about $60,000 in cash and negotiable inclosures, unreturnable to senders, goes into the exchequer of the office. Each successful claimant for advertised unclaimed letters is assessed one penny. These items make the office self-supporting.

Up From Slavery, the autobiography of the late Booker T. Washington, has been translated into the Turkish language, all the major European languages, the Braille system for the blind, Arabian and three East Indian tongues.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses the relation of work to education.

ɤ ɤ ɤ

With this issue THE DEARBORN INDEPENDENT enters upon its literary program for the new year, a program which is designed to make the magazine even better than before. New writers will be introduced, new features presented. Leaders in all lines of endeavor—in science, in the arts, in literature, in politics, in world relations, in agriculture—will be called upon to keep our readers informed as to the progress of the world and the development of world thought.

ɤ ɤ ɤ

At the same time the fundamental purpose—*The Chronicling of the Neglected Truth*—will be pursued as vigorously as in the past. THE DEARBORN INDEPENDENT has become the recognized spokesman for those elements of Truth which have become submerged; it is free to serve Truth in all its neglected aspects. And there is still much to be done in this direction. It might be said, indeed, that the magazine has only cleared a little space in which to begin.

ɤ ɤ ɤ

As the first phase of the new program, three famous writers this week are introduced to the magazine —Robert Frost, Hamlin Garland, Hugh Walpole.

Robert Frost is without question one of the greatest of contemporary poets. 'He is New England,' Amy Lowell once said, and the appellation is highly fitting, for Frost has done more to mirror the life and ideals of New England than any other writer of his generation. He is generally acclaimed the true heir of those giants of a former day, Lowell, Longfellow, Whittier.

ɤ ɤ ɤ

Despite his reputation and the great demand for his verse, Frost is not a prolific writer. Poems come from his pen but seldom, and 'The Same Leaves,' printed in this issue, is the first to be published by any magazine in many months. Other poems by him are, however, in store for DEARBORN INDEPENDENT readers.

ɤ ɤ ɤ

In opening its columns to poetry this magazine has a twofold purpose in view: to offer outstanding verse by the great poets of this and other countries; and to afford worth-while poets who have not yet gained recognition a medium by which their work can come before the public. Among the better-known writers whose verse will appear in the near future are Edward Davison, Carl Sandburg, Lizette Woodworth Reese, Hamlin Garland, Gamaliel Bradford, Marguerite Wilkinson, Lew Sarrett.

ɤ ɤ ɤ

For nearly forty years the name of Hamlin Garland has been synonymous with Americanism. Sterling historian of the Middle Border—that great territory which extends from Wisconsin through Minnesota and out onto the Dakota prairies—he has done an invaluable service: he has immortalized an heroic epoch in the life of the American people.

Here Hamlin Garland tells the story of White Weasel, an Indian gentleman of the old school. 'The story was told me by an old army officer,' Mr. Garland writes. 'It presents a side of the red man which is not well known. In his old age White Weasel became my friend. He was a fine man and a noble chief.'

ɤ ɤ ɤ

Prominent among British authors of the day is Hugh Walpole, whose novels and short stories have enjoyed as great popularity in this country as in England. Son of a bishop of the Church of England, Mr. Walpole has skilfully woven the cathedral towns he knows so well into a background for many of his stories. At the present time he is in America fulfilling lecture engagements.

ɤ ɤ ɤ

One of the most perplexing questions facing the public today is that of women and the ballot. It has been openly charged that women have not a single major reform to their credit, that they have forsaken the home for the political meeting without accomplishing anything worth while. Defenders of suffrage declare that women cannot be expected to accomplish in six years what men have failed to accomplish in as many centuries. They insist that many major reforms have been started and many incidental ones effected.

Because of the importance of the problem, THE DEARBORN INDEPENDENT prints this week the views of a woman, a former officeholder, who believes that women have failed in their use of the ballot. Later those who believe that suffrage has proved a success will be given opportunity to express their views. The present article should not be construed as presenting the views of this magazine.

ROBERT FROST is author of *A Boy's Will*, *North of Boston*, *Mountain Interval* and *New Hampshire*, the last named, published in 1923, being awarded the Pulitzer Prize for Poetry. In recognition of his literary genius, Yale University has bestowed upon him the honorary degree of Doctor of Literature.

MARIAN BRUCE CLARK served for ten years as chief investigator in the New York State Department of Labor. She now resides in Washington. (p. 1)

MAY B. WHITING, of Boston, has interviewed many of the leading authors of the day. (p. 3)

HAMLIN GARLAND, novelist and dramatist, is one of the outstanding men of American letters. His latest work, *Trail Makers of the Middle Border*, is being given unstinted praise by reviewers. Other well-known books by him include *A Son of the Middle Border*, *A Daughter of the Middle Border*, *Main Traveled Roads*, *Ulysses Grant*, *The Book of the American Indian*. (p. 4)

JULIAN HAWTHORNE, son of Nathaniel Hawthorne, knew personally most of that great coterie of writers that centered around Concord a half-century and more ago. He is himself the author of many books. (p. 6)

LADY CYNTHIA ASQUITH, daughter-in-law of the former Prime Minister of England and Lady Asquith, is earning a brilliant name with her sprightly essays. (p. 8)

WILLIAM C. RICHARDS is a well-known Middle Western newspaperman. (p. 12)

DOROTHY E. PILLEY, of London, is equally noted as a mountaineer and a writer, is a member of various Alpine clubs, and has climbed many of the most difficult American peaks. (p. 14)

HUGH WALPOLE is one of the most popular of present-day English writers. His current book, *Harmer John*, is listed as a best seller in this country where his work has been exceptionally successful. Among his other novels are *The Man With Red Hair*, *The Old Ladies*, *The Cathedral*, *The Young Enchanted*, *Jeremy*, *Jeremy and Hamlet*, *The Thirteen Travelers*, *The Secret City*. (p. 16)

JOHN ANSON FORD, newspaperman, traveler, is a member of the Adventurers' Club. His home is in Los Angeles. (p. 25)

Winter Sports

Where the Snow Lies Deep and Crisp

Sport for its own sake means the building of a hardy and venturesome race.

In learning to dance one can preserve decorum, but the snowshoe initiate finds it a different proposition. Soon she will learn the swaying stride of the 'coureur de bois' and find it delightful. —*Wide World.*

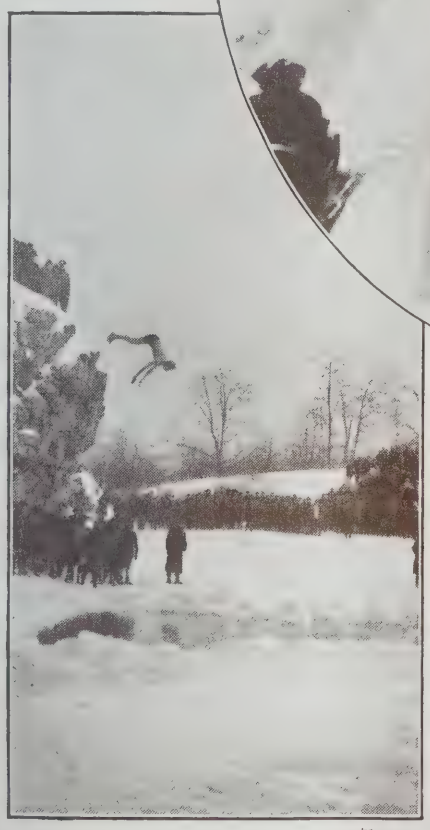
A leap on skis is not unusual but to do a jump such as this on a toboggan is a worthy trial of skill and endurance. —*Wide World.*

Oval—*The race is on! Down the long, swift slope they fly, bodies low to avoid resistance and heads up to see the goal. This is the long slide at Montreal.* —*Wide World.*

Below—

The Plains of Abraham witness another battle royal, but harmless snowballs are the only weapons used. Boston youths visit Quebec to indulge in winter sports for which that city is justly famous. Recreation in the cold, frosty north builds bone and muscle.

—*Herbert Photos.*



—*Keystone.*

Polar bears do it, so why not this 16-year-old boy? The leap is thirty-five feet. The water is icy cold.

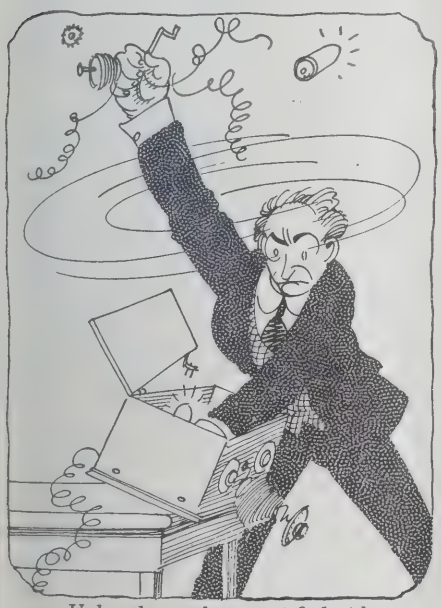
Public Demands That Congress Suppress PIRATES *of the* AIR

By ALLAN L. BENSON

THERE can be no satisfactory broadcasting unless both the public and the broadcasters are fairly well satisfied; but in seeking to please both of them, Congress should begin with the public. Nor does this follow merely because the public's financial investment in radio is far more than that of any corporation. If the 5,000,000 radio sets in this country cost, on an average, only twenty dollars each, the public's financial interest in radio is $100,000,000. Even the Radio Corporation of America has invested nothing like that. But the real reason for putting the public first is that unless the people are satisfied with radio, the thing must go to pieces. The broadcasters themselves would not be satisfied with that.

—Herbert Photos.

Symphony orchestra in the broadcasting room of a large station. Two microphones are in use here.



Unless the people are satisfied with radio the thing must go to pieces.

What do the people want? They want to hear. They want to hear one station at a time—not two or three at a time as is now the case when wave lengths are so close together that only the most expensive sets can separate them. They do not want to hear whistles and other sounds indicating interference. They want good, clear reception.

There can be no clear reception so long as so many broadcasters are on the air. They came in when there was no law. By coming in they have gained a certain legal status. Probably no court would say that having begun broadcasting when no law forbade them to do so, they must now scrap their plants and lose everything. If the present chaos were to continue the public's investment of more than $100,000,000 would be seriously impaired, but the public unfortunately has not, in this matter, much legal standing.

While the public has admittedly no legal standing, it nevertheless has great powers which it is beginning to use. In Chicago and some other places listeners' associations have been formed, the members of which have pledged themselves not to listen to stations that they consider to be operating in defiance of radio welfare. If necessary, more listeners'

The people want to hear one station at a time—not whistles and other interference sounds.

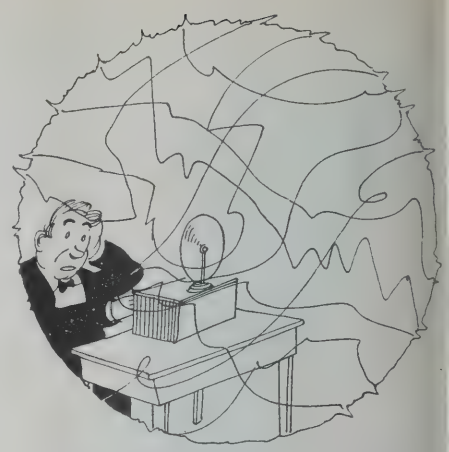
associations can be formed. The people are not to blame because too many broadcasting stations are on the air.

The broadcasting stations are themselves to blame. After the courts decided last summer that the Federal Government, because of the inaction of Congress, lacked the power to keep off the air anybody who had the desire and the money to get on, these gentlemen wedged themselves in where there was no room for them. They knew there was no room.

They knew that to insure satisfactory reception there must be a margin of at least ten kilocycles between wave lengths.

They wedged themselves in because they knew that to do so would give them a certain legal status when a new law was enacted and readjustment came. But the moment they turned on their power the inevitable interference began. To avoid the interference some of the older stations jumped to other wave lengths and they themselves became disturbers. Stations that had been assigned to low wave lengths jumped to higher ones, whether they had been molested or not, merely to get up where more receiving sets could get them. The air is now so churned up that reception is good nowhere except in small places remote from great cities. Even a superheterodyne, which is perhaps the closest tuner yet devised, cannot dodge the whistles and the general confusion, though it can separate the stations. Reception is so bad that, more and more, people are turning for entertainment to other things.

If radio is to be worth any further attention, Congress must prohibit stations from transmitting on waves less than ten kilocycles apart. This should mean that the stations that crashed the gate when the law was down should be compelled to get off the air, but it probably will mean no more than that they will be compelled to get back in line and cease interfering. In other words, the stations that crashed the gate will be assigned the wave lengths and part of the time of some of the older stations. This will be an injustice to the older stations that obeyed the law and an injustice to the public, but it is doubtful if that can be avoided.



The air is now so churned up that reception is good nowhere except in isolated points.

—Herbert Photo.

Amusing scene in a radio station during the broadcasting of 'Rip Van Winkle.' The sounds of rain and thunder are being simulated as Rip feels the urge to sleep.

Tune in wherever you will and you get the same stuff—not worth the current that brings it in.

The only hope of relief now lies in the chance that as broadcasting stations give up the ghost no new ones will be licensed to operate until the number of stations shall have been reduced to reasonable limits. The air is by no means a proper place for the installation of a monopoly, but neither is it a place for anarchy.

If radio is to be worth anything, the number of stations will have to be reduced even below the limit of what can operate without interference. No matter what anyone may say about the idiocy of striving for distance, everybody wants to do it now and then and he can oftentimes get something of interest one or two thousand miles away that is not, at the moment, available at home. But what sense is there in offering long-distance sets for sale if the set is to be so hemmed in by a barrage of local stations that it cannot reach outside the town? Many of the best stations in Chicago cannot be heard in New York until after midnight, when the New York stations have closed down, because the Chicago carriers cannot penetrate the encircling New York barrage. If radio is to be confined, to the most part, to a twenty-mile area there is no use having more than a twenty-mile set. But if radio is to be limited to such a small area it is going to lose much of its charm and a great deal of its usefulness.

Congress, of course, can do nothing less than enact a law compelling broadcasting stations to keep far enough apart not to interfere with each other. It was willing to do that last summer. The hitch arose over the question whether the law should be administered and the industry regulated by an individual or by a board. Those who favored a board did so because they were afraid of the development of a monopoly in the air. Nobody wants an air monopoly, nor is there likely to be one. But there is far more danger of air chaos than there is of air monopoly, and if anything could be worse than air monopoly it would be air chaos.

When laundries begin broadcasting, as they have done and are doing, it is time that attention was paid to something besides air monopoly. If radio is not to degenerate to a nuisance, somebody in Washington should be vested with power to keep the situation tightly in hand. A board is (Concluded on page 22)

The Divine COMEDY of NEWSPAPERS

By WILLIAM C. RICHARDS

Illustrated by W. W. CLARKE

THE book critic and the music critic of one of the largest newspapers in the United States recently sat at a desk in the local room of that newspaper.

The owner was a hound for art—the arts generally. One of his hobbies was music, and he was particularly fond of symphony music and a zealous backer of it, adjectivally in his newspaper columns and financially out of his newspaper's profits. He especially admired the city's nationally known symphony orchestra.

At the publisher's order the music critic made a trip around various metropolitan musical centers to size up similar orchestras. He had just returned. Incidentally, he was stuffed to satiety with symphony orchestras.

He said so as he sat opposite his friend and read the proof of an organ recital that was to appear the following Sunday. He made some markings on the proof and tossed it to the book editor.

'I'd like to run the thing like that,' he said, sourly.

The other read the interlineations, laughed, and threw the proof on the desk. They put on their hats and left.

In the composing room the music page was being locked up. Sunday music pages are usually printed early in the week.

A copy boy strolling through the room spied the proof on the critic's desk, picked it up and hurried to the foreman. The foreman recognized the critic's handwriting and handed the proof to a linotype operator.

'Joe, hustle these corrections. We're right on the dead-line,' he instructed. ('Dead-line' is the time of going to press.)

Now the setting of newspaper type is largely mechanical, as is the work of a telegraph operator receiving a message. Neither pays much notice to text unless something in the story catches his fancy. It isn't the compositor's job to inquire about the text anyway. That is the function of the editor or the sub-editors, or perhaps a proof reader. The operator's work is to run off on the machine anything given him.

The 'corrected' lines were substituted, and the page went to press. When the publisher turned to his pet music section Sunday, he found the following reading matter gracefully banked around a picture of Charles M. Courboin, noted Belgian organist.

'It is the purpose of the symphony society to bring to this city occasionally the world's most distinguished organists to play the DEVIL with the Murphy organ.'

Farther down, after introducing Mr. Courboin:

'Mr. Gabrilowitch has arranged a ROTTEN program.' And then after announcing that among the compositions, the organist would play a HOT sketch by Schumann, the story gave suitable fillip to the whole absurdity by saying:

'Widor, who did the Sixth Symphony, is eighty years old, still actively engaged in his profession, and still organist of St. Sulpice, in Paris. This Sixth Symphony was the work selected by Leopold Stokowski, director of the Philadelphia Symphony Orchestra, with Courboin as soloist, when the organ in the Wanamaker auditorium at Philadelphia was dedicated a few years ago. IT WRECKED IT!'

The speed of composition required by numerous editions results in ludicrous blunders. There is great haste to get the paper away quickly to the consumer. Moreover, compositors have the unequal mentality of men in any other occupation. This man is a thorough workman; the man at the next machine may be a witless ox.

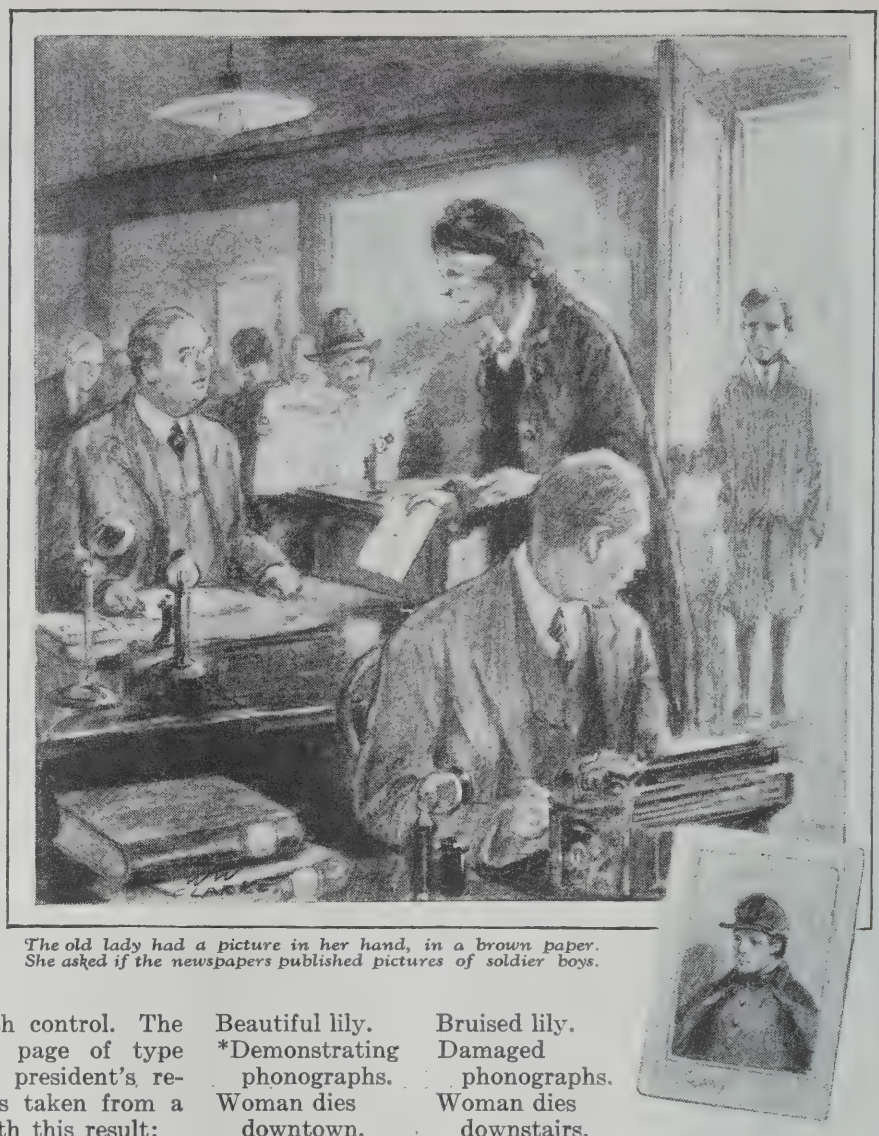
It is an unusual circumstance, and a strange one, that transposed type lines have a singular habit of arranging themselves into nonsensical statement but one in which the statement seems to be made in good faith because the

The guest repeated his story and rerolled his coat sleeve. 'How did you come to hit upon this ointment?' asked Eddie.

subject, verb and predicate appear invariably in proper order. Take for instance the following lines which appeared recently under a two-column picture which bore the heading, 'Queen Marie Faces Camera':

'This is the first time a monarch's consort has been photographed in bed, particularly before her hair was brushed. The young man in her arms is her *two-story frame building. The three stills seized are shown below.*'

The make-up man in putting the lines into the page had juggled two sets of cut lines. One applied to Queen Marie; the other had to do with a liquor raid on a two-story frame building.



The old lady had a picture in her hand, in a brown paper. She asked if the newspapers published pictures of soldier boys.

Some time ago the president of one of our universities spoke in favor of birth control. The man making up the page of type linked up the college president's remarks with some lines taken from a '[illegible]wave' story, with this result:

'[illegible] president came out for birth control yesterday before two oil stations, four chain stores and six blind pigs.'

In three months, in one newspaper alone, the following typographical errors got into print, utterly destroying the sense of the articles until they were caught and corrected. The publisher was not to blame. The hired human equation was:

As it was written.	As the printer set it.
Devil's disciple.	Devil's discipline.
Song recital.	Soup recital.
Symphony concert.	Sympathy concert.
Flood in lowlands.	Flood in landlords.
Virgin birth of Christ.	Virginia birth of Christ.
500 freshmen.	500 fishermen.
Greeted with applause.	Greeted with apples.
Wedding took place.	Welding took place.
Informal supper.	Improved supper.
Promotion of officials.	Prostitution of officials.
University smoker pleases.	University sucker pleases.
Pardon onus passed.	Pardon bonus passed.
Beautiful lily.	Bruised lily.
*Demonstrating phonographs.	Damaged phonographs.
Woman dies downtown.	Woman dies downstairs.

*This mistake appeared in a paid advertisement and, of course, delighted the advertiser.

Not long ago in a Chicago composing room, the make-up man accomplished a delightful welding of two stories. One was a cable from Biarritz. The other had to do with a severe storm in Wisconsin. With the printer's help, the paper came out with this strange information:

'"One wild party" is the way Americans described a revel Friday night at the Pavilion Royal, at Bidart, near Biarritz. They told . . . of entire circuits of wires down, whole communities in darkness, power plants out of commission, and a 90-mile-an-hour gale sweeping down trees and unroofing houses. Throughout Wisconsin trees and wires were down. Five of the six dead . . . won large sums at baccarat.'

Some years back in an eastern city Woodrow Wilson, candidate for President, was making a campaign speech. He was duly reported. A linotype operator, in setting the story, referred to him as 'Woodrow' in some places and as 'Woodroe' in others. When the proof reader went through the proof, he caught the mistake. He drew a circle around the correct name and a circle around the misspelled name, and he ran an arrow from the wrong spelling to the correct spelling. He ran a line from that point to the edge of the proof and wrote, 'Make uniform!'

A thoroughly witless operator did just as instructed. He ran through the story and wherever Wilson's first name was mentioned, he reset it to read 'Uniform Wilson'—and that is the way it ran in the first edition.

That a newspaper loses prestige through such individual stupidities is unquestioned, but many persons are required to get out a newspaper and the infallible workman is just as rare as he is in any other business.

Then there is the humor of the news supply end:

Salvatore Cortesi is as much as St. Peter's a monument of Rome. His office is the Fleet Street of the Eternal City, and he has been for years the correspondent there of the Associated Press. He has been friend of king and pope. One can therefore readily understand the wounded dignity of Mr. Cortesi one morning when he came upon a letter from the directing manager of the A. P. and in it announcement of a new ruling which required that henceforth all bureau managers of the news service furnish bond. 'Enclosed find blanks which please sign and return.'

Cortesi felt that this was equivalent to saying, 'You've got to show us that you won't walk off with the office furniture.' This to a man who for years had upheld the prestige of good journalism in Rome; a man who had done such excellent work that the Associated Press had retained him there for years as its trusted representative.

The injured Cortesi sniffed, especially when he came to the last clause of the bond application: 'Give as references two persons who will testify personally to your good character.' Well, Cortesi found a couple for them.

When the Associated Press opened its Rome correspond- (Concluded on page 23)

The Rise of an American Race

What Effect *Will the* 'Old Stock' *Have on the* People *of the* Future?

By AARON HARDY ULM

'I AM an American!' is a proud boast, but just what does it mean? Is there such a thing as an American race in the sense that there is a German race, an Irish race, or a French race?

An American race is evolving, say scientists like Dr. Ales Hrdlicka, famous anthropologist of the Smithsonian Institution.

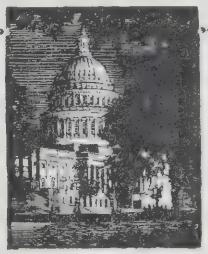
The vestiges of a distinct race, these hold, are found in old American stock. This stock when pure has certain characteristics which set it off from that of all other racial groups. Dr. Hrdlicka's studies show, for example, that the average 'pure American' is a taller person than is the average of any other large white group.

It is unlikely that the average 'pure American' of a hundred years hence will be so distinguished. For old stock has not been keeping pace with new stock which is now apparently in the lead. But as will be shown, old stock is apt to be the prime ingredient in the make-up of the American race of the future. It and its kind are far in the lead.

From now on the entire population—or at least the white portions of it—should progress definitely toward becoming a distinct race or racial group. For a mighty change has come about lately. The make-up of the future American is not being left altogether to chance, as was that of the present American. For once, the development of a race or racial group is to be guided by a measure of conscious control.

Before that can be done well, the ingredients for the making of this race must be determined. An interesting study toward that end has been purchased by a group of officials and experts in Washington. The findings may be given the force of law. For, unless the program now decreed is abandoned, they will be made the basis for distributing immigration quotas after June 30, next.

When the last immigration act was passed Congress decided that such immigration as is to be permitted should be made to conform as nearly as practicable to the present make-up of the population of the country. All Orientals are of course debarred. No numerical limitations apply to immigration from Canada, the West Indies or Latin America. That from Canada is probably more 'American,' in true racial make-up, than is the present total population of the United States. Should that of more or less colored peoples from the West Indies or Latin America ever become formidable, it no doubt will be restricted as is that from Europe.



'THERE is a geological survey which studies our material resources, a biological survey that studies our animals, but there is as yet no anthropological survey that would study the physical, physiological and mental development of our people. Yet no country is faced by greater problems as to its population than the United States; nowhere are there so many ethnic elements being melted together.'—Dr. Ales Hrdlicka, of the Smithsonian Institution, in an article in the Forum Magazine.

At present immigrants from Europe are limited to annual admissions from each country of not more than two per cent of the natives of the country that were here in 1890. Under that rule a total of about 165,000 quota immigrants can come in annually. The arrangement roughly approximates a distribution on the basis of the national origins of the entire present population of the country. But it was provided, when the act was passed, that the distribution be made more exactly in accordance with national origins. The authorities were allowed time for finding a way to do this. The period will expire with this fiscal year.

The total of quota immigrants will be limited to 150,000 and these will be distributed in ratio to each country's contribution to the American population as of 1920. This means that calculations must take account of arrivals at Jamestown and Plymouth Rock as well as those at Ellis Island as late as the year 1919.

Under either the present arrangement or the prospective one, the total of quota immigrants that can come in each year amounts to not more than one and one-half tenths of one per cent of the present population. It scarcely offsets emigration from the country. So in any event, European immigration is not apt to be sufficient, in future, to greatly affect the present ratio of ingredients for the making of an American race. So the make-up of the American race of the future might be forecast by weighing the ingredients in the make-up of the present population.

The weighing of those ingredients means a determining of the ancestral or national origins of all white Americans. That is, the hope is to find where all of us came from. It is no simple task.

Our annals are probably more nearly sufficient than are those of any other numerous people. But they are far from being complete. The rivulets of race that merge in the big stream which now comprises the American people have run tortuously from sources in many respects vague.

Those who have worked on the problem divide the rivulets into two main sections. One has to do with 'old,' the other with 'new' stock. By old is meant that which stretches back to the formation of the Federal Government; by new, that which since has come in from abroad.

Today, there is an almost fifty-fifty division between the two, when the negro element is omitted. This does not mean that immigrant strains of present prominence are dominant. In fact, they amount to less than is popularly supposed.

Old stock and its kindred still is preponderant in the make-up of the American people.

The statistical story of this old stock has rarely been told, though it is the most remarkable one of the kind in the history of the world.

The United States Census Bureau has estimated that in 1920 there were in the country the equivalents of 47,330,000 full descendants of the free whites who were here in 1790, when the first national census was taken. It

may be reasonably assumed that the number is now 50,000,000.

This does not mean that there are in the country 50,000,000 white persons who can claim a 100-per-cent Colonial or pre-1790 American ancestry.

'It is possible,' Census Bureau experts say, 'that not more than 20,000,000 persons in the country are of absolutely pure native (pre-1790) white stock, while the remaining 27,000,000 of the total of 47,000,000 (in 1920) estimated as the numerical equivalent of the native white stock may be mixed with varying proportions of new white stock in 45,000,000 persons.'

This phase of the subject will be discussed more fully in another article. For the present we sketch the old white stock factor alone.

The most remarkable thing, certainly to this commentator, about the old-stock factor is the statistics of its sources.

Most of us, the writer suspects, think of the settlement of early America as a mass enterprise, somewhat like modern-day immigration. It was no such thing.

It is probable that the equivalent of 50,000,000 old-stock white Americans now in the population descends from not more than 250,000 original incomers!

The figure can be an estimate only because the early settlers gave little thought to statistics. We know, it is true, how many persons settled originally at Jamestown or came on the *Mayflower* to what is now New England, and the statistics of other historically distinguished groups.

Numerically, however, the groups which knew they were making history, and therefore recorded facts in detail about themselves, were insignificant. Most of the early settlers came individually or in miscellaneous groups without any fanfare here or abroad.

The totals were amazingly small. James Truslow Adams in his recently published *History of New England*—one of the truly great works of the time—says that the bulk of original immigrants into New England arrived between 1620 and 1660. And the total, he says, was not more than 40,000. Keep that figure in mind so that the significance of some to be given later on may be fully appreciated.

In his *Notes on Virginia*, which state then, the most populous, had 567,614 inhabitants, Thomas Jefferson made statistical note of only 3,602 'importations' of persons. These were the arrivals in Virginia between the years 1607 and 1621. They comprised the bulk of the incoming Cavaliers, though others came later. 'After 1638,' says another historian of the period, 'scarcely any came but those who were brought as merchandise to make sale of,' that is, indentured servants. Some estimates are that the persons of the latter class made up at least half of all coming to the colonies in the early days.

Benjamin Franklin estimated that in 1741 only 80,000 whites from abroad had settled in the colonies, whose aggregate population he estimated at one million. All the colonies had then been set up, Georgia being the only one established after the 17th Century.

Old American stock as now existing goes back largely to the 17th Century, during which the prime influx of English blood took place. This blood is still the biggest single factor in the make-up of the American people.

Immigration into the country after 1700 was composed largely of non-English people. During the 18th Century the Scotch-Irish began to come in large numbers. In one generation half the population of Ulster emigrated to the United States. Some historians say that the famine of 1740 caused 12,000 persons to come to America from all parts of Ireland.

The probably biggest unit of immigration during the 18th Century was made up of Germans. The Mennonites, who still preserve much of their old culture, began coming in 1683 and in 1707 they were joined by the Palatines fleeing from the devastating armies of Louis XIV. Between 1727 and 1775, it has been estimated, 70,000 immigrants, chiefly from Germany, passed through the Philadelphia port. In 1750, some records indicate, from one-third to one-half of the population of Pennsylvania was composed of non-English-speaking immigrants. Even Franklin expressed the fear that the colony would be taken over by 'foreigners.'

In an encyclopedia, it is stated that between 1725 and 1768 the inflow into all the colonies 'rose from 3,000 to 6,000 annually,' and that when the Revolution began, one-third of the population of the entire country was of foreign birth. The statement as we as the ones repeated in the foregoir paragraph probably exaggerates th facts.

Censuses were taken in most of th colonies at different times prior to th Revolution. No division was mad between native and foreign born. Th head countings were resented by muc of the population because of a Biblic allusion to an act of punishment in posed by God on the Israelites on a count of a census-taking. Because this and also the patently fault methods employed, the figures are n accepted as more than approximate accurate.

From the record of those hea countings and other data, the Censu Bureau has estimated the total coloni white population at different perio as follows:

1690	185,000
1700	246,000
1720	247,000
1740	776,000
1770	1,840,000

The first national census in 17 disclosed a white population of 3,17 444. No division was then made b tween native and foreign born. On the names of heads of families we recorded. For all but four of the stat these lists still exist. Sever years ago the Census Bure made a study of the names r corded in the course of the ce sus of 1800, with the view estimating the racial make-u or national origins, of the whi inhabitants of the country 1790. The distribution arrive at is as follows:

National origins in 1790	*Number*	*Per cen all whites*
English	2,605,699	82.1
Scotch	221,557	7.0
Irish	61,539	1.9
Dutch	78,959	2.5
French	17,619	0.6
German	176,407	5.6
Others	10,664	0.3

The distribution in most of th states was approximately as for th country as a whole. The ratio of En lish was least in Pennsylvania, b names recorded in the census of 18 indicate that 59 per cent of the popul tion there derived from English a cestors.

The population was preponderate a native one then. In fact, the Amer can people as a racial entity we 'older' then than they are now wi practically one-third of their make-u not more than two generations r moved from Europe.

General Knox, when Secretary War in President Washington's fir Cabinet, estimated that there were on 76,000 foreign-born (Concluded on page

Crowd in mountain town of Syria welcoming French Mission girls (in white).

General Gouraud (seated) receiving submission of Sheik Saleh. General Billotte is shown standing.

With General Gouraud *In the Land of the Crusaders*

By HAL WALKER

ONE hundred and twenty kilometers over the mountains to the sea was our schedule from Hamah to Banais, in Syria, where we were to nch, and with General Gouraud leadg the caravan in a large touring car, ie only American one in ie party, we left the valy of the Orontes with the ater wheels of Hamah singg their different tunes and eaded almost due west aoss the plain. For the first our it was rough going over road which never had been rfaced, but soon we struck ie first of the mountain road.

Through the heart of a ountain range in which ie Alaouites have mainined their freedom since ie days of the Crusades, rench army engineers in a w months built a road wide nough in most places for vo automobile trucks to ass each other, opening up land where, since the dawn f history, only camels and ules had been able to ravel, and where in many laces even camels could not go. This work was done in spite of the hostility of the mountain people who had always preyed on such travelers as crossed their territory and who had been raiders on the coast towns as late as two years after the French assumed the mandate.

Massive castle in the Syrian mountains—one of the remnants of the Crusades.

The pacification of the country was accomplished almost wholly by the famous Foreign Legion.

We had just struck the foothills when we saw the first of the Légionnaires drawn up beside the road. There was only a squad of them, but General Gouraud stopped the whole caravan and talked to each of the privates and noncoms in the outfit, asking each of those decorated where he had won the citation.

The general on that trip wore a faded khaki blouse with his rank on the sleeve and only one medal of all to which he is entitled, the *Medaille Militaire*, which can be won only through great heroism by a general personally leading troops in battle, or by a plain soldier. No officer, with the exception of a general, ever wins this decoration. White sun helmet, faded blouse and riding breeches, General Gouraud filled the picture of a fighting colonial administrator. The Yanks of the

The Birthplace *of the* QUAKER Poet

By MAY B. WHITING

TO FIND the Whittier homestead we journey from Haverhill along the Merrimac River toward Amesbury about seven miles. Then we come to a monument beneath the trees, at first almost startling with its suggestion that the poet may be buried at the crossroads. But it is only a generous marker to show that the birthplace is near, so we turn down the country road and immediately the scene grows familiar. There are the rolling country, the hills, the woods, the appearance of isolation that Whittier has described so often. We cross Country Brook with its haunted bridge which the poet as a lad never dared approach at twilight, for a neighbor had seen a ghost bobbing for eels from it, and his own mother used to tell of a witches' meeting there, attended by six old women in sky-blue coats.

A few steps beyond, on the northern slope of Job's Hill, is the birthplace, a plain, white-painted farmhouse with lilac bushes at the corner. There are many such in New England, but none is held so dear. For Whittier is the poet of the people; his roots are in the soil and their flower as indigenous as the mayflower in the woods or the golden-rod that fringes the stone walls his hands have laid.

Thomas Whittier came from England in 1638 and settled in Amesbury where Witcher Hill still bears his name, preserving the old pronunciation. He built a log house at first, and when his family was old enough to help, erected the homestead. There was no road then, so the house faced Fernside Brook, and we enter by a little eastern porch that opens into the kitchen. By the path is a bridle post and steps for mounting, and for a doorstep there is the circular stone which for generations ground the Whittier corn.

More than the other rooms, the kitchen shows the life of the farmer's family, their toil and simple pleasures. Here is the old dining table, the mother's spinning wheel and her china, the cider mug and a bull's-eye watch hanging by the fireplace. In front of the wide hearth with its crackling fire of logs the household assembled on winter nights, as we have read in *Snow-Bound.* Whittier was an old man when he wrote the poem, and he looked back wistfully to the days of his boyhood. The change in rural life he could already foresee; the change in home life he could not dream of, but his own family circle was bright and beautiful in his memory.

There was the father, stern and just, with stories of the Canadian wilderness which he had traversed; the mother, busy with her knitting, recounting tales of Indian ravag in her girlhood hom or, as the light r flected in the narro windows from the snov darkness without, reci ing the rhyme abo the witches making te The uncle gave of his lore of woodcra the beloved Aunt Mercy added h words of peace, and the young fol actually listened—we have the poe word for it—finding pleasure in t experience and wisdom of their elde

There was the visiting schoolmast with his gay adventures in earning living, and that 'not unfeared, ha welcome guest' whose cultured mann contrasted with the homely spee of the family. This was Harri Livermore who years later, when s was an old woman, had that boon whi we may sigh for but seldom enjo 'to see oursel's as ithers see us.' Whi tier supposed her dead, for she h been absent from the neighborho for years, journeying in Palestine a Syria. On her return she went to Ne Jersey, and while waiting one day in drug store chanced to pick up a copy *Snow-Bound,* which had just be published. After a moment's perus she snapped, 'This book tells a pack lies about me,' closed it with a sla and marched out of the store.

MR. FORD'S PAGE

OF THE DEARBORN INDEPENDENT

IT IS natural, in the present limited degree of human experience, for men to insist on the continuance of their own special folly if only it seems profitable. They make speeches against the tightening vise of economic law, they hold conventions which pass resolutions against the inevitable effects of causes, as if Talk could accomplish anything, and Brag do duty for Progress. And all the time the Earth turns round and their mistakes come back upon them.

As a nation we are passing through a period when, as never before, it is necessary for us to face the facts; not to succumb before them, but to recognize and read them for what they are. Facts are unreasonable only when they are unrecognized, but recognized they become readable signposts from which directions may be drawn. But facing the facts seems to be constitutionally difficult for the majority of mankind. A strange and perverted psychology exists among us which suggests, if it does not say, that if we only ignore the fact we can thereby destroy the reality behind it. In the business world especially there is a pernicious doctrine which even finds its way into written statement that it is bad business psychology, as the phrase is, ever to acknowledge that things are not so joyous as the professional optimists paint them. Optimism in time of difficulty is not the blind denial that difficulty exists, but the confident declaration that every difficulty can be removed by retracing our steps to the point where we entered upon the course which made the difficulty possible. Wisdom is the result of analyzing our errors anyway, but the prohibition of such analysis is the decrease of wisdom.

Prosperity is held to be a fruit of the mind, and so it is, but it is not the fruit of the mind that blinds itself to facts. Blithe-mindedness on the wrong path is not sufficient to transform the wrong path into the right one. To maintain pretended belief in well-being until the very pressure of ill-being exposes the pretension as a falsity, is a device to hide from the people the true state of affairs for the sole benefit of those who can still accumulate a profit before the storm breaks.

Fortunately for those who live in this most fortunate land, the basic elements of prosperity are always with us. To supply the daily needs of our mighty millions of population is the biggest, best and most continuous business in the world. It insures a sort of perpetual motion in the region of supply and demand. It is the normal exchange of what we have for what we need, and the principal profit which accrues is the freedom to live, to develop the normal experience of human beings, and so beget wisdom. But when this exchange is tampered with, and the balance upset, difficulty comes and men's thoughts are forcibly turned to the under-side, away from the upper-side, of living.

If there is any warning which the American people need—and it is not being given them—it is that each family is, or should be, its own business manager. Economically considered, the material affairs of a family are as much a business proposition as the affairs of an industrial corporation. Fortunately, there is always a sufficient number of families who know this instinctively or have figured it out for themselves to guarantee the economic stability of the nation.

But there is a sufficient number of the other kind to threaten the balance. The family that does not keep itself solvent, that unduly mortgages its future for non-essential and unproductive things, for things that do not raise it toward a higher condition and greater independence, but create a burden under which it is impossible to rise, is not only endangering its own solvency and usefulness but is decreasing the margin of safety upon which the nation depends.

Any system of business in which the money-lender conspicuously thrives is not a truly prosperous system. The greater the spread between the supply and the need, the more middlemen squeezed in between production and use, the heavier the drag on the nation's prosperity. Credit may be an admirable device when it lessens this spread, but when it increases it, it becomes an enemy to national economic health. If the costly spread between Supply and Use could be abolished, or could be plowed back into productive life, there would be no more debate as to whether prosperity actually exists or is just a word.

There is all the difference in the world between investment and debt, and that should be learned by every American family. The first is a support, the second is a drain. The error of credit is that it makes no distinction, it encourages both with equal vigor. In the end the proper management of the country devolves upon every household; it cannot be handed over to profiteering finance.

THE American home, in its economic aspect, is as much a business proposition as any industrial corporation, just as dependent on good management, just as subject to failure through bad management. In all this talk about prosperity, we forget that the first point where insolvency begins is in the American Family, and that the origin of it is debt which represents no productive investment. Credit that burdens the family instead of releasing the family's energies is the initial blow at prosperity. To keep the American family solvent and independent, carefully protected by sound household management, is the first requisite of national prosperity.

'Ford Ideals,' 452 pages, cloth bound, contains 98 of these articles. Postpaid $1.00.

EDITORIALS

OF THE DEARBORN INDEPENDENT

Mr. Nathan Straus

MR. NATHAN STRAUS, formerly a well-known Jewish merchant of New York, one of whose department stores operated under the Christian name of R. H. Macy and Company, has found his way prominently into the Press with a challenge. This device has lost somewhat of its originality; issuing challenges was a favorite pastime with Jewish publicity hunters several years ago. They quite innocently assumed, or wished the public to assume, that to ignore the challenge was a confession of error. The interesting point which they overlooked was that a challenge has already been issued to them. The debate has already been started, and one side of the argument is in. THE DEARBORN INDEPENDENT in a very full and pertinent statement laid the matter before the only competent judges in this cause, namely, before the American people, and it is now proper for Jewish spokesmen to meet the issue by addressing their defense to the same judges. Issuing new challenges does not obscure the fact that a previous one still stands. To suggest, as Mr. Straus does, a smaller jury of New York clergymen and publicists who do not know that a Jewish Question exists and would not dare to say so if they did, is merely to pretend to be issuing a challenge while actually evading one already issued to whom it may concern.

Having, it is hoped, set Mr. Straus right as to the priority of the challenge issued by this magazine, we should like to continue our friendly service by straightening him out on other points where he seems to be misled. For example, he speaks of 'the campaign of slander against the Jewish people,' as if it were true that such a campaign was made. It is regrettable that Mr. Straus has not striven for accuracy of statement here. If every Jew were an International Jewish Financier, then Mr. Straus would be justified in saying 'the Jewish people,' and if telling the truth is 'slander,' then Mr. Straus would be justified in the use of that term to describe THE DEARBORN INDEPENDENT'S disclosures. But as neither of these suppositions can possibly be true, Mr. Straus's statement falls of its own weakness.

The 'slander' consists in calling attention to the claims which Jews have made for their own preëminence in the world. These claims are largely true and have been made by responsible Jewish leaders. To repeat these for the benefit of other people cannot possibly be 'slander.' Some of these statements are as follows: the International Jew invented our financial and interest system, and is today in direct control of all financial centers of government, including the United States Federal Reserve System which he organized and is now perfecting according to his original plan; he is a potent power in governments; he pulls so many strings in business that no banker or business man feels that it is safe to oppose him; he owns the Press or controls it so that only pro-Jewish facts are ever admitted to print; he influences the education of our youth to a degree unapproached by any other group; he is the most closely organized racial entity in the world with an espionage system that covers every village and every larger center in the country; he controls the revolutionary elements of the world on one hand, and the ultra-conservative elements on the other, so that he has equal power in communistic Russia and in capitalistic England; and, not to mention the theater or the motion picture or agriculture, the International Jew is the chief control in the making of war, of which he is also the chief profiteer.

All these are statements deducible from the most deliberate utterances of Jewish spokesmen and illustrated at large by Jewish history. To agree with the Jewish claim to preëminence in these matters is no more a 'slander' than to agree with their claim to preëminence in the clothing trade. Besides that, it is a service to the American people to tell them who their bosses are.

It might interest Mr. Straus's suggested jury to take up the above statements, find their numerous counterparts in Jewish literature, and then compare the claims with the actual facts.

This magazine will be glad to direct them to the sources.

To conclude this comment on Mr. Straus's interesting speech at Boston, we agree with him in all that he says about himself as a philanthropist. Philanthropy was a great thing a hundred years ago. Genuine philanthropy today means the payment of such wages as will render philanthropy unnecessary. It may be that Mr. Straus revolutionized the wage rate paid to employes of department stores which he controlled, and that he reduced all excess profits on goods, but if so he has neglected to chronicle it in the long list of his philanthropies as printed in *Who's Who*. Unfortunately for our full appreciation of that list, this magazine has always held that there is something disgraceful in receiving 'charity,' and something shameful in offering it. We have contended that the truest Charity was the effort to make 'charity' superfluous. But on this point we willingly accord to Mr. Straus the same freedom of opinion which we exercise for ourselves.

The Legislative Flood

WHEN Congress reconvened for the short session 12,000 bills awaited action; they were the leftovers from last July. By March 4, the date of adjournment, additional thousands will have been added. How Congress can give careful attention to 12,000 and more separate pieces of legislation in a scant three months is a problem to awe the lay mind, and yet our lawmakers must expect to do this, for every one of the multiple thousands of measures has of necessity been introduced by some Senator or Representative.

Hundreds of these bills are introduced solely for political effect, with no hope of passage or even serious consideration. Many of them are purely 'pork barrel' ammunition for the Congressman's defenses when he comes up for reëlection back home. Still others are 'crank' measures, introduced by the legislators at the behest of small cliques they dare not offend. Others are 'educational' measures, to accustom the people's mind to a certain kind of propaganda. Others are hardy perennials which bloom, regardless of defeat, year after year. And still others are put in for 'trading' purposes, to be withdrawn if certain favors are accorded in exchange. Yet every one of these bills must be read on the floor of Congress, every one must be printed and distributed, every one must be referred to some committee 'for action.' Every one must take up just so much of Congress's time—and that time is sharply limited. The legislative hoppers are so clogged with unimportant bills that it is rare when Congress pulls itself together to act on matters of vital importance.

Fifteen Million Words

EXCLUSIVE of the great press associations, nearly fifteen million words about the Hall-Mills murder trial were carried over the telegraph wires from Somerville, New Jersey—the greatest number ever written on any story in history. Many of these words were penned by so-called special writers, highly paid authors who were enrolled for the occasion to record their own reactions to the grim testimony. Others were by trained newspapermen, skilled in the art of adding a dash of flavor to stale facts to make them seem fresh. New York newspapers led the country in offering the tale to the public, even the most conservative printing whole pages dealing with each day's evidence. Just what justification there was for all this publicity is obscure. The threadbare excuse that the public demanded every gruesome detail could not be applied, for the public—as a whole—wearied of the story long before it dragged to a close. Even the most avid sensation-seeker could scarcely be expected to read every word printed.

Apparently realizing that some form of apology was needed, the usually unbending New York *Times* has attempted an explanation that is surprisingly lame. 'The chief motive of the newspapers,' it declared, 'was to help, if possible, in clearing up a baffling mystery. The court proceedings were minutely printed, not because the details were scandalous or salacious, but because of the wide and urgent appeal to human curiosity and intelligence which so extraordinary a crime, so long and so unaccountably unsolved, necessarily makes.' But *was* this the chief motive? In what way did newspapers help 'clear up the mystery'? Until the inescapable weight of evidence in favor of Mrs. Hall appeared, the moving spirits among the publicists conducted themselves very like persecutors of a woman whose singular self-possession seemed to madden them.

The trial is over and the sole impression upon the American mind, aside from that of unpleasantness, is the feeling that the murderers of Mr. Hall and Mrs. Mills probably have never yet been named in public.

Wooden Houses

BRITAIN has come to it at last—wooden houses. Thus is another tradition shattered. The change is more remarkable in Scotland than in England, for in England there is the tradition of the 'half-timbered' houses, a picturesque feature of some of the older towns and villages, but in Scotland for centuries the majority of the houses have been substantially built of stone from the nearest quarry. In some places sandstone has been used, in others limestone, in others the hard basaltic rock found on the seashore with trimmings of red or gray granite.

But it is the hardness and intractableness of this local stone that has caused the cost of building to mount so rapidly. Slates have also greatly risen in price, and in all kinds of buildings slated roofs have been in use for many years. And so the wooden house begins to appear.
